FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 28, 1887.

VOL. XXIX.—No. 1. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

SNAP SHOTS.

THE Niagara International Park Commissioners have succeeded in removing all the disfiguring advertising signs save one, a legend setting forth the advantages of a certain railway. This is painted on a board which, one winter when the ice was just right, was placed in its present position, where no one can reach it to remove it. The commissioners are reported to have offered a liberal reward for the removal of the offending sign. This ought not to be a task beyond the compassing by Niagara riflemen. An explosive ball properly aimed would put the reward in the pocket of the man holding the gun. If the park regulations forbid the use of firearms, an exception might be made for this occasion at a suitable hour of the day. The shot would make the rifleman famous and he would be gratefully remembered by Niagara visitors. He might go further and organize a corps of sharpshooters, to go about the country, and with explosive bullets annihilate advertising sign atrocities in other localities.

The intolerably hot and humid weather of the past fortnight has interfered with many a projected fishing excursion, anglers whom no ordinary weather can daunt being content to sit around hotel verandahs and try to keep comfortably cool. The heroic devotees of mid-summer woodcock shooting have had a hard time of it in the swamps this year. Moreover, the heavy rains have effectually scattered the birds, so that poor returns repay the hardships of the pursuit; and even if the fortitude of the gunner holds out, to run a dog in such weather is nothing less than cruelty to animals. When thermometer and barometer combine they can do more effective game preserving in a month than the strongest sportsmen's society in the country can accomplish in a year.

The perils of angling have recently been illustrated in two ways so diverse that they may well be contrasted. In one case, which is reported in the Bulletin of the United States Fish Commission by Mr. James G. Swan, of Port Townsend, Washington Territory, a Port Discovery fisherman found a flabby starfish entangled on his hook, and while taking it off, one of the sharp little spines or prickles pierced the skin of his left hand between the fingers. He paid no attention to it, but soon it festered, his arm began to swell, blood poisoning ensued, and the man died.

In the other instance no such insignificant thing as a starfish was the agency of destruction. Two residents of New York city were fishing in a rowboat in Prince's Bay, last Friday, when both were killed by a stroke of lightning. This phenomenon of lightning striking a small boat is one of very rare occurrence.

Agents of the Forest Commission are inspecting the State lands of the Adirondack region, and appear to be making an honest effort to stop the depredations of lumbermen. In a number of cases evidence has been secured to prove the guilt of timber thieves, and prosecutions are to follow. It is high time for such measures. The harm already done and destruction wrought cannot at once be remedied, but it certainly ought to be practicable to put an end to the work of forest cutting.

The first edition of the April number of the *Audubon Magazine* having been exhausted and constant demands made for copies, a new edition has been printed. The March number will also be rep inted to meet the demand for it. The new periodical is taking hold; and in its own special field is doing the work it was intended to accomplish. A rich store of bird lore is put into a volume of the *Audubon.*

The "merchandise shoots" at gun club tournaments present some interesting collections of prizes. We recorded one not long ago where a fortunate winner took a fish basket and a bottle of cologne. In the programme of the Johnstown Gun Club, now before us, the prizes run from repeating rifle and fly-rod to a pail of chewing tobacco, a counterpane and a $2,000 accident insurance policy.

Anglers who may have information respecting desirable points for fishing are invited to give through the columns of the FOREST AND STREAM particulars likely to be of use to other anglers.

"Uncle Lisha's Shop" is to be published in book form.

DRUGS AND FIELD SPORTS.

THE English are noted the world over for their sporting proclivities; and in popular conception the typical country gentleman of Great Britain is in one way or another a sportsman. From recently published statistics it appears that the Englishman's penchant for consuming patent medicines is about as strong as his taste for sport. The annual expenditure for game licenses amounts to £178,403, while the sum paid for licenses by manufacturers and venders of nostrums is £179,071, the slight difference being in favor of the latter. Now if the Government statisticians would undertake to determine the relation between the shoot ng license purchasers and the nostrum consumers, some profitable deductions might be drawn concerning the hygienic value of field sports. It is certainly not to be presumed that the classes which participate in shooting and hunting in any degree make up the army of those who support the pharmacists. There is a well recognized antipathy between drugs and field sports. Scores and hundreds and thousands of men have learned the curative properties of the wilderness, and the magic healing of the waters. The ruddy glow which comes of tramp with gun and dog, and the tan and bronze which come of days afloat, are tokens of health nature-given and not to be bought in a drug store.

We have no game licenses in this county, nor is there any way of estimating the numbers of the army which tents in summer camps and tramps in autumn fields and winter woods; so the proportion of field sportsmen to medicine consumers cannot be computed. One thing, however, is certain, with every succeeding year Americans are coming to a better understanding of the healthfulness of woods life; particip tion in it is increasing at an astonishing rate, and its beneficial effects are more widely distributed than ever before.

BITS OF TALK.

I.—DOG TALK.

THE talk came around again to dog stories—it had a way of swinging in that direction when the Major was present—and in reply to the question "Can dogs talk?" the AUDUBON Secretary gave his view in about these words:

"To this it may be replied that neither dogs nor other creatures, excepting man, are competent to intelligent discussion of metaphysics or palæontology, but not only are they capable of communicating their own simple ideas to each other, by speech and otherwise, but a dog is capable of so modulating his voice as to convey information on quite a small range of subjects to an observant master. I spent the greater part of my life in India, and a good half of that time in camp, and when the dogs barked at night their voices warned me whether this disturbance was caused by a man, a dog, by cattle trespassing, or by wild beasts lurking around the camp, as unmistakably as language could do; the voice was modulated to depict the emotion to which the intruder gave rise, and long experience enabled me to interpret it with confidence."

"It appears to me to be a foolish question," said the Major. "Everybody who ever owned dogs knows that they can talk, just as all other animals talk, in their own way."

"For instance?" suggested the Man from Long Island.

"Well, to give you one of a thousand, there was my dog Trim—"

"'My Old Dog Trim,' the one that you tell about in your book?" inquired the Fourth Talker.

"No, a little red Irish setter, the first one that ever I saw. I owned him long before I owned the other Trim. I think the first one knew the most. One day I'd been out hunting patridges; we had been at it a long time, and I was tired and hungry. I missed Trim after a while, and couldn't seem to make him hear me at all: so I went over to a farmhouse to get a bite, went into the kitchen, and there was Trim, just clearing away the remnants of what must have been a square meal. 'Been feeding my dog?' said I to the woman of the house. 'Oh, yes,' she answered, 'he came here and told me he was hungry, and I gave him something.' Now, maybe that dog didn't talk; I don't say he did, but he knew enough to make that woman understand what he wanted; and it is not every dog, not even a field trial winner, that will quit work and go to a strange house to ask for lunch. It takes pretty good sense—dog sense or man sense—to make yourself welcome between meals at a farmhouse kitchen."

"Did she give Trim's master anything to eat?" asked the Man from Long Island.

"Trust him for that," put in the Fourth Talker, "the Major would get it if there was anything in the cupboard. But to my mind in this case the dog's telling the woman he was hungry was not so creditable to him as her understanding the dog was to her. Among themselves other animals talk just as intelligibly as mankind. I was watching a robin out in Orange county—"

"I presume Trim was a remarkable animal in his way," said the Man from Long Island, choking off the Fourth Talker's robin story, which he had heard before.

"Remarkable! Why, there wasn't anything that dog didn't know or wouldn't do. He understood everything that was said to him. 'Trim, you're dirty,' would send him straight out of the house to the brook for a bath. That dog could count; he always knew how many birds were killed in a day's hunt. When we would get home after the day's shooting and I would take the birds out, he would manifest the greatest impatience until the last one was out; and you could not fool him about it, either; he knew how many there were in there, and though I often left in the last one and pretended the bag was empty, he knew better. When they were all laid out and the family were called in to see them, Trim would gloat over the display just as much as I did, and he took particular pains to let them all know that he had helped do it, too. When the game was hung up, if any of the neighbors came in of an evening, Trim would wag his tail and start for the game, and if he had used the best English in the world he couldn't have told us any plainer that he wanted to take the caller to see the birds."

"Dogs can count; there is no question of that," was the opinion of the Man from Long Island. "My father ran a farm and a country store at the same time, and it was the business of a big dog, Watch, to guard the store and

churn the milk. Well, sir, that dog knew every time when churning day was due, and the night before he would skip out and be gone all day. Finally, it grew so bad they substituted a sheep on the treadmill; Watch found it out, and he'd stay away until the poor sheep got fairly to work, then he'd come back again, stand there looking at the industrious old ram, and wag his tail and actually wink. You may not call it talking, but we all knew just what the dog thought about it, and if he had spoken he couldn't have said any more."

"A sheep in a treadmill is the right thing in the right place," said the Fourth Talker. "I have thought so ever since I saw the combination up on the farm of Capt. Sayres in Cairo. Capt. Sayres was an old ship captain. He commanded a vessel in those times when there *were* ships and ship captains. After a long life at sea he took to farming, and he did it well, too, even when he became blind. Well, he had a sheep to do the churning, whereby the Sayres farm dog always 'took the wall' of the churn dogs of that region. Of course Watch got away. No churn dog loves the drudgery of the mill, and the average animal of my acquaintance can keep account of the days perfectly, and when his count tells him that the morrow is butter day, he just naturally clears for the woods until the butter has been brought by some other agency than a dog-power churn. Out in Orange county there was a big brindle—"

"Count!" put in the Major, "why of course dogs can count. But for proficiency to the higher mathematics commend me to the crow. I was out shooting once with Dr. W. We were after regular good-to-eat game, but all we had to show for our pains so far was one crow. We were sitting down and the crow was lying beside us just as still as a dead crow ought to lie, when all of a sudden a hawk came sailing over. I up and let him have it, first with one barrel and then after a second with the other, when, sir, just as I shot the second barrel, that crow ups and gets away as lively as any crow ever you saw."

"Very good, said the Fourth Talker, "but that was because your shots woke him up."

"No it wasn't," responded the Major, "for Dr. W. said he saw the old bird open his eye on the sly when the first barrel went off, and get all ready and wait for the second one before he started. That bird knew how many barrels there were to that gun. He was no fool. No crow is a fool. Why, I was out crow shooting once—you know how I do it, put a stuffed owl on a stake or in a tree, and every crow and hawk within five hundred miles will come for it—I had grazed an old crow, and instead of flying off, she just rose up in the air—out of gunshot calculated to an inch—and circled around there, and every time another crow would start for that owl this old scarecrow up there in the air would sing out 'Man with a gun!' and you'd see the new comer turn and scoot. I didn't get another crow that afternoon, but I had just as much fun watching that old lady up there; and she staid just as long as I did, too."

"They say 'wise as an owl;' I never understood why you should not put it rather 'wise as a crow,'" said the Secretary, and then he related the crow and paper collar story he had written for the *Audubon Magazine*. "I've seen them the world over," he added, "and take them all in all, they are as wise as they are black, every time, and I believe a foolish crow is a good deal more of a *rara avis* than even a white one. The very way they've hung on in spite of your stuffed owls and thousand and one other devices to destroy them proves their circumspection. By the way, can any of you tell me why the New York Legislature one year makes a law to protect crows, and the next year rescinds it? Now as a fertilizer of the farmer's lands the crow—"

"I thought you were talking of dogs," said the Man from Long Island," and I was going to tell you about a smooth-haired yellow dog we had in the family once that was great on going to the store for meat and vegetables. We would give him the money, and he would go down to the village all alone and bring back the order all right. Once another dog pitched on to him, and he put down his package and walloped his assailant.

"Oh, that's been in all the papers; you find it in the school books," said the Fourth Talker, who did not like the way his robin story had been ignored.

"Well, but this actually happened. That dog did smarter things than that. He pulled my little sister out of the cistern once, when but for him she would have been drowned. We taught him to bring in the coal. One day he held the scuttle too low, it struck the doorsill and spilled the coal out, and we made him pick it up, every piece of it, and put it back into the scuttle."

"That reminds me," said the Major, "of a brown and white cur dog I knew when I was ten years old. Stuttering Charley Smith and I were out huckleberrying one day and had this cur dog along. He watched us a spell, then he went to a bush, stripped off a lot of berries in his mouth and took them and put them in the pail. Mrs. Smith used to say of this dog that he was the 'most knowledgeable' dog she ever knew."

"Speaking of picking berries," said the Fourth Talker, "reminds me of an intelligent hen I know out in Orange county—"

But here the meeting broke up.

The Sportsman Tourist.

THE ALL-FRIENDS OF THE BLACKFEET

IN previous numbers of the FOREST AND STREAM I have described something of the life and customs of the Blackfeet. To those papers I now add one or two more, hoping they will interest the general reader and be of use to the ethnologist. The recent act of Congress, providing for the taking of land in severalty by the Indians, is sure to break up all tribal relations. In a short time the ancient traditions and customs will have been forgotten. Before it be too late, then, let those of us who can save from oblivion such accounts of the religion, social life and language of the different tribes as we may be able to obtain.

Each tribe of the Blackfoot confederacy once had a society called the E-kûn-ûh' kăh-tse, *i. e.*, All-friends. This society was divided into groups, named respectively:

Stûm'-ĭk-ĭks—Bulls (buffalo).
**I-in-ăh-kĭks*—Seizers.
Sin-o-păks—Kit-foxes.
Kĭ'-o-ĭks—Bears.
Mâs-tŏ'-pă-tă-kĭks—Raven-Carriers.
Mât'-sĭks—Rashly-Brave.
Mé'-sĭns-kiks—Badgers.
**E-kûn-ûts'-o-me-tăks*—All-crazy-dogs.
**Sŭ-ŭs-ksĭsks*'—Flies.

Traditions say that this society is very ancient. In fact, the legends of its origin take us back to the time "when animals could take the shape of men, and speak their language, at will." For the following account of the origin and objects of this society I am indebted to Almost-a-Dog, the oldest member of the Piegan tribe.

The people had built a great pĭs-kăn, very strong they made it and very high, so that none might escape; but somehow the buffalo would not jump over the cliff; swerving to the right or left they would go down the sloping hills and cross the valley in safety. And because of this the people hungered. Now, one morning early a young woman went to get water, and she saw a herd of buffalo right on the edge of the cliff above the pĭs-kăn. "Oh!" said she, "if you will only jump off into the pĭs-kăn I'll marry one of you." This she said for nothing, not meaning what she spoke, and great her wonder then, for no sooner had she said than the buffalo came jumping, tumbling, falling over the cliffs.

"Ah!" said the old man, pausing in his story, "that was a sight; yes, those were times when every one's heart was glad. Many a time, even in my day have I seen it. Then great herds covered the prairie, and when one came grazing toward the cliff a young man went out and he called softly, 'Whoo hoo hoo!' and 'Wah hoo ah!' and he kept calling and appearing and disappearing, and the buffalo wondered and moved toward him, and those behind crowded and then they ran, and when they had come close to the cliff those who had been concealed on the prairie rose behind and shouted, and the leaders could not stop and they were pushed over the wall and the rest followed and the pĭs-kăn was filled. O, what a glad heart sight! Far up over the edge of the cliff came tumbling the great bull and the fat cow, the yearling and calf, and those whose horns had grown two, three and more winters. And some by the fall were killed, and some were leg-broken, and some dragged their hind parts, and others were not hurt at all. The people then sung, and they shot those which were living, and then all helped skin and cut up the meat. Oh, what a sight, there all along the pĭs-kăn walls and on the grass, and hanging on the bushes, and in all the camp, red and white, red and white, sheets of red meat drying, and strips of the white back fat, and the robes and those skins tanned white for the lodgers." Here the old man resumed his story.

Now much was this young woman afraid, for a mighty bull with one bound cleared the pĭs-kăns walls and approached her, changing into the shape of a young man. "Come," he said, taking hold of her arm. "No, no," she replied, jerking back. "But you said if the buffalo would jump over you would marry one; see, the pĭs-kăn is filled," and without more talk he led her up over the bluffs and out on to the prairie.

Now when the people had finished cutting up the meat many wondered where the young woman was, and her relations were sad at heart because of her absence. Then quickly grasped her father his bow and quiver saying, "Go I now her to find," and he too went up over the bluff and out on to the prairie.

After he had traveled some distance he came to a wallow, and a short distance off saw a herd of buffalo. While sitting by the wallow—for he was tired—and thinking, a magpie came and lit near him. "Ha! mă-mĕ-ăt' sĭ-kĭm-ĭ,†" he said, "help me, help me, go now on your beautiful wings, spread that shining tail, go to yonder herd, and if you find my daughter, tell her 'Your father waits by the wallow.'"

Then flew he to the herd, and seeing his daughter he lit near her, and picked here and there, turning his head this way, that way, and coming close, said: "Your father waits by the wallow."

"Sh-h-h! Sh-h-h!" said the woman in a low voice, and looking around scared, for her bull was sleeping close by. "don't speak so loud. Go back and tell him wait!"

"She says wait!" said the magpie, flying back to the old man.

After a while that bull waked up and he said to his wife: "Go get me some water." Then was the woman glad, and taking a horn from his head she went to the wallow. "Oh, why came you," she said to her father, "you cannot survive."

"I came to take my daughter home; come, let us hurry." "No, no," she said, "not now, they would chase and kill us; wait till he sleeps again and I will try to get away," and filling the horn with water she went back.

Then drank the bull one swallow. "Ha!" said he, "some person is close here."

"No one," replied the woman, but her heart rose up.

A little more drank the bull, and then rising up he bellowed *B-û-û-û! m-m-ûh-h-o-o-o!* Oh! fearful sound! up rose the bulls, raised their short tails and shook them, tossed their great heads and bellowed back. Then rushed they here, there, shaking their angry tails, and coming to the wallow, found they that poor man. There they tramped him with their great hoofs, and hooked him and tramped him, and soon not even a small piece of his body could be seen.

Then cried the daughter: Oh! Ah! Nĕ'-nă-ah. Oh! Ah! Nĕ'-nă-ah! (My father! My father!).

"Ah!" said her bull husband, "true, 'tis sad to have a father die. Yet now you see how it is with us. We, too, have seen our fathers die. Yes, we have seen our mothers, fathers, many of our relations, hurled over the rocky walls to become the food of people. Yet now one chance will I give you. If you can bring your father to life, you and he can go back. We will not harm you."

Then said she to the magpie: "Oh, bright eyes! Oh, shining feathers, go now and seek in the trampled ground, find even a little piece of him who was trampled out and bring it to me."

Quick flew the magpie to the place; with his sharp bill he tore the mud, and his eyes looked in every hole. Once he found something white; pick, pick, and then pulling he got out a joint of backbone, and with this he flew back to the woman.

Then placed she the bone on the ground and covered it with her robe, and then she sung. Removing the robe, there lay her father, but as if dead. Once more she covered with the robe and sung and then her father breathed and arose. Much surprised were the buffalo, and the magpie called and flew round and round. Then said he who was her husband, "Now, to-day have we seen strange things. He whom we caused not to live, who was tramped into many pieces, is in our sight. Very strong is the people's medicine. Now, before you go, we will teach you our dance, and your ears shall not forget our song, and you shall teach it to the people, and they will have our medicine for all the days beyond." [I would that I could put on paper a description of this song and dance. As is fitting to the dance of such monster beasts, the air is slow and solemn, and the step ponderous and deliberate.]

When the dance was over, the bull said, "Go now to your home, and forget not what you have seen. Teach it to the people, and when you dance you shall wear a bull's head, and a robe; all who are of the bulls shall wear them, and thus the buffalo medicine will be with the people for all the days beyond."

Great joy then, when the father and his daughter returned, and the people heard his story with wonder. In the-middle-talk-house the chiefs and old men counsel and they chose some young men who were of good heart and brave, and he who had been tramped to pieces and lived again taught them the buffalo song and dance, and named them Stûm'-ĭk-ĭks (Bulls), and when one died they chose another good person in his place.

After a smoke, the old man resumed:

For a long time the buffalo had not been seen. Useless were the pĭs-kăns, and the hunters found nothing for the living of the people. Then a man who had two wives, a daughter and two sons, said, "I shall not stop here to die; to-morrow we will move toward the mountains, there we will find perhaps deer and elk, sheep and antelope, or, if not, at least we will find the beaver, and those who fly [meaning grouse, etc.]. Thus will we survive."

When morning came they packed the travois and lashed them on the dogs and then moved out. It was yet winter and they traveled slowly. The second night came and they sat in the lodge; but no one spoke; those who are hungry care not for words. Then those who watch the night barked loudly, and soon, pushing aside the door curtain, a strange young man entered. "Welcome!" said the old man, and he motioned the stranger to a sitting place. Now looked they with surprise and fear at him who had entered, for there was a black wind [the "chinook"] and the snow had melted and water was all over the prairie, yet his moccasins and leggings were dry. They sat in silence a long time. Then said he, "Why this? Why set no food before the stranger guest?"

"Ah!" replied the old man, "you behold those who are truly poor. No food have we. Many days the buffalo came not in sight, and the hunters shot the deer and others which people eat, and when all these had been killed the people starved. Then said I, not here will I starve to death; and we started for the mountains. Now you behold us two nights on our journey."

"Ah!" said the young man, "then is your journey ended. Near by are we camped by our pĭs-kăn. Many buffalo have been run in, and the parfleches are filled with dried meat. The pĭs-kăn is red with that freshly cut. Let me go now, and ere the night is far gone, I will return with some for you." True his words. Soon he returned and brought the meat and pĭs-tsĭ-kō'-ăn* three. Then said he, "To-morrow move you to our lodges. What you see there fear not. All will be your friends. Now, one thing I tell you, be careful, touch not an arrow, those you may find in the pĭs-kăn, or on the ground outside, touch not, neither you, nor your wives nor children." And having spoken he departed.

Then took the old man his pipe, and having smoked he prayed, saying, "Hear now Sun! Listen Above People. Hear Ground and Under-Water People! Now you have taken pity. Now you have given us food. Now we go to those strange ones who walk through water with dry moccasins. Protect us among those to-be-feared people. Let us survive. Man, woman, child, give us long life; give us long life."

Once more the smell of roasting meat, and glad the children played. Talked and laughed those who had been so silent. Not far above the sun when they arrived at the strange lodge. Much then their wonder. There by the pĭs-kan, and far up and down the valley, and in the timber, were the lodges of those who eat meat. There was the Bear gens, there the Fox gens, there the Badgers, all the gens were there. The young man who had given them meat, his father was chief of the Wolf gens, and by that band they pitched their lodge. Ah! That was a happy place; food there was, plenty. All day and far in the night, shouted they the feast invitation. And everywhere the sound of drum and song and dancing.

Then went the newcomers to the pĭs-kăn for meat; and one of the children found an arrow lying on the ground. It was a beautiful arrow, long and sharp the stone point, round and straight the shaft. All around the people were busy: no one was watching; quickly the boy snatched the arrow and hid it under his robe. Then rushed the wolves at him and the coyotes, and they would

---

*An account of these groups, owing to vulgarity, cannot be published.

†The meaning of this word is "fish black," a queer name for a bird. Why so named no one can tell.

*An unborn buffalo calf. Considered a great delicacy.

surely have bitten him, but the chief Wolf said, "Hold! We will let him go this time, for he is young and not yet of good sense." So they let him go.

When night had come, they heard one who shouted for a feast, saying "Wo'-kā-hi-i-i! Wō'-kā-hi-i-i! Mäh'kwē-ĭ Kē'tûm-ok-ăh-wah-hī Kē'-tûk-kă pŭk-sĭ-pĭm." (Listen! Listen! Wolf you are to feast, enter with your friend). "We are asked," said the chief Wolf to his new friend, and they went to the lodge where the feast was given. It belonged to the chief of the Ravens. [Here the narrator is a little obscure, but from questioning him and others I learn that these ravens, wolves, foxes and others were supposed to take the shape of men at will.]

Within the fire burned brightly, and in the seats of honor sat the aged and wise of the Raven gens. Hanging behind the seats were the writing of many deeds, [meaning the painting on cowskin of the various battles and adventures in which the owner of the lodge had participated]. Then was food placed before them, pemmican of berries, and the thick white fat. And when they had eaten, the pipe was smoked around the circle. Then spoke the Raven chief: "Now Wolf, I am going to give our new friend a present. What say you?"

"'Tis as you say," replied the Wolf. "Our new friend will be glad."

Then the Raven chief took from a long parfleche sack a wand beautifully dressed with many colored feathers, and on the far end of it was fastened the skin of a raven-head, wings, feet and all. "We," he said, "are the Raven-packers [those who carry the Raven]. Of all the above animals, of all the flyers, where one so smart? None! Sharp the Raven's eyes, strong his wings. Hungry he is never. A great hunter he, far, far off on the prairie he sees his food, and deep hidden in the pines it escapes not his eye. Now the song. [Here the Raven carriers' song is given.] Then he handed him the medicine [the decorated wand] and said, "Take it with you, and when you have returned to the lodge of your people you will say: "Now there is the Bull's, and he who is the Raven chief thus says: 'There shall be more; there shall be the E-kûn-ûh'-kah-tse, that the people may survive, and of them shall be the Raven carriers.'" In-the-middle-talk house you shall call the chiefs and the old wise men, and they shall select the persons and teach them the song, and the medicine shall be theirs forever. Now again the song. [Here the song is repeated].

Then soon again they heard him who shouted for the feast, and going, they entered the lodge of the Sĭn-o-păh chief. Here, too, were the old men assembled. Now, after they had eaten of that set before them, the chief said, "Those among whom you are new arrived are generous. They look not at their possessions, but give to the stranger, and they take pity on the poor. A little animal the Kit-fox. What smarter than he? None! His hair is like the dead prairie grass. Sharp his eyes, noiseless his feet, cunning his brain; his ears receive the far-off sound. Here now our medicine. Take it." And he gave the wand. It was a long stick, crooked at one end. It was wound the entire length with fox skins and decorated at intervals with eagle tail feathers. Now again he said, "Hear the song. Hear and forget not. And the dance, too, you shall remember, and you shall teach it to the people; and the E-kûn-ûh'-kăh-tse shall have the Kit-foxes too."

Again they heard the feast shout, and he who called was the Bear chief. Now when they had eaten, the chief said, "What say you, friend Wolf? Shall we give our new friend something?"

"As you say," replied the Wolf. "It is yours to give."

Then said the chief Bear, "There are many animals; those who fly, and those who walk, and those who live under the water. They are of no force. The bear is the strongest one. Strong his teeth, long and sharp his claws, and his heart is brave. He fears nothing. That which he seizes he lets not go." Then he put on a necklace of bear claws, a belt of bear fur, and around his head a band of bear fur. "This," he said, "is the medicine. Now the song and the dance." When he had finished he gave the medicine to the new come one, and said, "Lose them not, nor forget the song and dance, for the Bears too shall be of the E-kûn-ûh'-kăh-tse."

It was now far into the night, yet again, from the far end of the camp they heard the feast shout. In this lodge the men were painted with streaks of red, and their scalp locks were long and carefully braided. After the feast the chief said, "We are no animal gens. We are the Mût-sĭ" [this word means as nearly as it can be expressed in English, rashly brave.] "We are death. If our enemies are like the grass [in number] we turn not away. Bows are good, spears better, but our weapon is the knife." Then the chief sung and danced and when he was through he gave the Wolf's friend the medicine. It was a long stone knife and scalps were tied on the handle. "For the E-kûn-ûh'-kăh-tse," he said, "is this."

Once more they were called to the feast and entered the lodge of the chief of Badgers. He, also, taught the Badger song and dance, and gave the medicine. It was a rattle, ornamented with beaver claws and bright feathers; and after they had smoked two pipes the Wolf and his new friend went to their lodges and slept.

Not yet had risen the sun, but the food was cooked; and when light they took down their lodge and prepared to return to the people. Then came many women and they brought meat and pemmican, and berries dried, for presents, and they were given so much that they could not pack it all away. The people, too, had moved away in search of buffalo, and many days were passed before they met. Then he who had been to the animals' homes told what he had seen; and, as they said, he taught those who were chosen the songs and dances. Thus was the beginning of the E-kûn-ûh'-kăh-tse. It was long ago.

The main object of this society, so far as I can learn, was to protect the village or camps from enemies and from internal strifes and quarrels. Without permission, no lodge of people could leave the main camp. If they did members of this society quickly overtook them, and not only destroyed the lodge, but also all the personal property of the owners. A like punishment was inflicted on those who stole out to hunt by themselves, thereby scaring the game away. Certain days were set for hunting, so all would have an opportunity to secure food. Another and by far the most important duty of this society was to protect the camp from surprise by enemies. Whether traveling or not, scouts were always out in all directions watching for war parties, and so ceaseless was their vigilance that, so far as tradition goes, it is said that a Blackfoot camp was never surprised. Of the fighting qualities of these people more will be said in another chapter.

At intervals the different bands of this society held a dance, when they appeared in full costume. At the medicine lodge they all took part. J. W. SCHULTZ.

Natural History.

THE WHIP-TAILED SCORPION.

DOWN along the Rio Grande, there is a great deal to interest the lover of nature, the naturalist, even if the true sportsman does not find the country a paradise in his own eyes. Through the region where this grand old stream finds its way in Texas, occurs an interesting representative of the armadillos (*Tatusia novem-cinctus*), numerous forms of indigenous squirrels, and others of the Rodentia, rare types of bats, and several of the rarer Mustelidæ, all among the mammals; while as we know it is the land of the coppery-tailed trogon (*T. ambiguus*), the lovely Texan kingfisher, the curious parauque (*N. albicollis*), some of the most beautiful of the hummingbirds, and the famous chachalaca (*Ortalis vetula maccalli*), among the birds. And when we come to the reptiles, fish, and insects, there is no end to the novelties and intensely interesting forms for study.

Among the last-named occurs the much-dreaded whip-tailed scorpion, as the writer pleases to call it, the "vinegaroon," as most of the people thereabouts designate the insect, which is the *Thelyphonus giganteus* of science. A few days ago I received a very fine adult specimen of this creature, from Steward Henry Bunger of the Hospital Corps of the Army, who collected it at his station, Fort Seldon, New Mexico, and forwarded it to me.

Upon receiving it, I immediately made a life-size drawing of the insect, the figure which illustrates the present article. Many reports have come to me about this scorpion, and those who have seen it in its native haunts are curious to know how it is regarded and classified by naturalists. Personally, I have never known of a case that proved fatal from its bite, though Professor Packard, the eminent entomologist, tells us that its bite is poisonous, yet seldom causes the death of the person who sustains it.

Upper view of a specimen of the Whip-tailed Scorpion (The "Vinegaroon") *Thelyphonus giganteus;* life size, from nature, by the author.

Scorpions, it will be remembered, are somewhat closely allied to the true spiders (*Arachnida*) and are characterized in possessing a liver, which organ is absent in the winged insects. They are likewise without antennæ, and have but one pair of jaws, and four pairs of legs. Usually the abdomen is of considerable size, while the head and thorax are more intimately united together than we find these two divisions in the bodies of most other insects to be.

We are all more or less familiar with the form of the true scorpion, with its pair of claws something like those of a crab, its segmented body, its elongated tail-like appendage which is also segmented, and is terminated by its sting, though the poison gland which supplies the latter is located at the base of the tail, the venom when called into use passing through a pair of ducts to it. Other investigators tell us, however, that the poison is contained in the bulbous enlargement at its extremity. At the present writing, it has never been my fortune to have carefully dissected one of these interesting insects, so I cannot personally decide this matter for you here.

Young scorpions are brought forth alive, and are known to travel about riding on the back of their mother. They possess, in common with their parents, the power of running backwards and sideways, as we have seen some species of crabs do.

Now our whip-tailed scorpion is structurally nearer the spiders than are the true scorpions, and the lash which gives it its name is but a feeble, segmented appendage to the abdomen, which does not harbor the sting at its extremity. It also has, as will be seen by the figure, four pairs of legs, but the anterior pair are considerably modified, being far longer and more slender than the others.

They each consist of four principal joints, and then distally are terminated by another section which is made up of eight more diminutive joints. The other legs also possess four principal joints but terminate by sort of a hand which has three minor segments and is finished off by a delicate claw. Anteriorly, the clawed-arms remind us very much, being exceedingly hard and firm, of the limbs of certain of the smaller species of crabs. Head and thorax have really coalesced in this insect, and no doubt exists as to the segmentation of its large abdomen, there being nine divisions in it, while a small protruding part behind, also segmented, supports from its extremity the lash.

This is one of the largest representatives of our insect fauna in the United States, and I trust the brief account of it which is presented here will prove of interest to those who desire to be informed in regard to the curious animals they may chance to met with in their rambles, and who can admire nature all the more for being in possession of such information. R. W. SHUFELDT.

FORT WINGATE, N. M., June 26.

AMERICAN FORESTRY CONGRESS.

THE sixth annual meeting of the American Forestry Congress will be held in Springfield, Ill., Sept. 14 to 16, in response to an invitation tendered by the Legislature of that State. A similar resolution was passed also by the Legislature of the State of Nebraska, but inasmuch as the last meeting of the Congress was held in the far West, the Executive Committee have preferred to locate this year's meeting more centrally, and to accept the cordial invitation of the State of Illinois.

A full attendance of members is urged to justify, and appropriately respond to the courtesy of the State of Illinois. Papers upon topics of interest are solicited from members and friends.

Those expecting to participate in the sessions are requested to announce their intention to the secretary before Sept. 1, and to transmit the titles of papers they wish to read.

Among others, the following topics are suggested as specially fitted for discussion at this meeting: *a.* Necessity of a change of policy on the part of the General Government in regard to its timber domain. *b.* Effects and results of forest legislation in the different States. *c.* Suggestions in regard to desirable forest legislation. *d.* Status of artificial forest planting in the Prairie States and suggestions in regard to the same. *e.* Methods of enlarging the effectiveness of the work of the Forestry Congress.

It is a gratifying sign of progress, that the Legislatures of two great States have recognized the value and given expression to their appreciation of the work of the Forestry Congress, by desiring it to hold its next meeting in their capitals.

Such recognition may inspire to renewed effort those who are laboring unselfishly in this work of reform, and fill them with the hope that at last their object will be attained; that progress, though slow, is assured.

It may be fitting on this occasion once more to state the reason of the existence and the object of the Forestry Congress, for in spite of the active propagandism which it has maintained or instigated in papers and periodicals, and by the publication of discussions and proceedings, the full scope of the work in hand seems not yet generally understood.

Although there are still large districts of our country densely wooded; although most of our forest areas possess such vigorous power of recuperation as to lend countenance to the belief that nature's efforts alone might suffice to repair the inroads made by man upon the forest growth; although substitutes for wood are possible in many cases and are already employed in some; yet we claim: That the present reported forest area of the country (less than 500,000,000 acres) cannot, in its present condition, and under present methods of utilization, furnish a continuous supply of wood of all kinds even to our present population of 60,000,000, the annual consumption being over 20 billion cubic feet; that the supply of building material, if slaughtered in the same manner as heretofore, without regard to recuperation, will be practically exhausted before any new crop now started can be ready for use; that our supplies will be inferior in quality and inferior in amount per acre, if left to nature's methods of re-forestation after the forcible interference by man, while an increased population will make larger demands on those resources; that in spite of the employment of substitutes, the consumption of wood is increasing with the increase of population all over the world. (In Germany the consumption of coal has increased 265 per cent. within 24 years, and yet the wood production has increased in a similar ratio).

We claim, that considered merely as regards material supply, the question of forest preservation has reached a stage where the earnest attention of the economist is called for.

We claim, that the equilibrium of the forces regulating water supply and soil conditions is beginning to be disturbed, to the detriment of agriculture, by a needlessly wasteful and improvident management of our forest areas.

We claim that every patriotic citizen, every thinking man or woman is concerned in the maintenance of a properly managed forest cover, sufficient both for material supplies and for the comforts of civilized life.

Our objects, then, are to eradicate the existing feeling of unconcern in regard to one of the most important factors of economic progress; to demonstrate the direct and indirect value of our forest cover in relation to the agricultural conditions and the civilization of our country; to convince our people that forestry is as much needed by a civilized and rapidly developing nation as agriculture; to show that immediate activity is called for in view of the present status of our forests and still more in view of the indifferent manner with which they have been and still are regarded and used; to prove that economy in the use of wood, careful protection and careful working of the natural forests, planting of new forests on waste places and in the prairie regions, have become a national necessity.

This is not a question that concerns only to-day or to-morrow; the consequences of to-day's action or inaction are visible only after the lapse of many years; they are not easily foreseen nor their time and extent foretold. The fool and squanderer marches along, heedless of the coming disaster; the wise man acts in time to prevent it. We appeal, therefore, to every good citizen to give thought to these warnings and to aid us in the endeavor to impress upon our people the need of caution, economy and a conservative management of our forest resources, the need of a timely beginning for future emergencies, the need of systematic planting for immediate effects in the treeless plains, the need of forest preservation on our hills and mountains.

Our work is the work of advocating and establishing principles. We meet once a year and by our discussions incite or enlarge local interest in the question of forestry; we encourage and assist in the formation of local forestry associations which will translate our teachings into practical results; we try to create a sentiment favorable to our objects by publishing our proceedings and appeals; we try to induce and support legislation looking toward forest preservation and the encouragement of forest planting; and incidentally we endeavor to give information for practical application. We are few in number, poor in funds, without a personal object, without paid officers, but we work faithfully, with the conviction that we forward the interests of our country. As there is no personal advantage in becoming a member of this congress we must rely for support upon the best impulses of an elevated citizenship, which prompts self-imposed duties and taxes for the advancement and welfare of the country.

We appeal to those who can raise themselves above the level of selfish motives in solving this national problem, to aid our work by joining us, lending their moral support and financial aid to a worthy object.

Applications for membership are received by the undersigned or any of the officers. B. E. FERNOW, Secretary.

WASHINGTON, D. C., June, 1887.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN. Purchased—Three American badgers (*Taxidea americana*), one Malbrouck monkey (*Cercopithecus cynosurus*), one green monkey (*Cercopithecus callitrichus*), two Illiger's macaws (*Ara maracana*), one purple gallinule (*Porphyrio martinica*), one mealy Amazon (*Chrysotis farinosa*), two blue-bonnet parrakeets (*Psephotus hæmatogaster*), two white-eared conures (*Conurus leucotis*), two pine snakes (*Pityophis melanoleucus*) and two horned lizards (*Phrynosoma cornutum*). Presented—Two jumping mice (*Jaculus hudsonius*), one raccoon (*Procyon lotor*), two flying squirrels (*Pteromys volucella*), one red fox (*Vulpes fulvus*), three screech owls (*Scops asio*), two pigeon hawks (*Accipiter fuscus*), two alligators (*Alligator mississippiensis*), six water snakes (*Tropidonotus fasciatus*) and three box tortoises (*Cistudo clausa*). Born—One fallow deer (*Cervus dama*).

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

IN THE CHEROKEE STRIP.—VI.

ON returning to camp in the evening after killing the buck, I found that the boys had not been idle. They had killed another wildcat, a perfect monster, and the largest I ever saw. He looked huge as he lay on the porch, and very beautiful, even in the grimness of death. He was lying very naturally, with his broad spotted legs stretched out and his bearded face looking sleepy with its half shut eyes.

I have a great passion for furs, and in my various wanderings have picked up a collection which is by no means a bad one; indeed, the boys have been disrespectful enough to call me the "Great American skin hunter," because I consider it wrong to let even a rattlesnake skin go to waste. By virtue of my title, therefore, I sat down by the cat and began to measure him, and admire his lovely coat, the finest I ever saw, and equal to a majority of the lynx fur sold by the furriers. From nose to tip of tail he measured a trifle over four feet, and the skin when taken off was forty-two inches wide from one fore paw to the other. We had no means of weighing him, but he must have scaled forty or fifty pounds.

The dogs came trotting up as I sat by the cat, and I noticed they looked as if they had been struck by a combination buzz-saw. The blue pup had an ear pretty near off; old Mike was deeply cut in the face, and Terry's nose was a sad spectacle. Evidently there had been war. Then I noticed that the cat had been shot twice; and knowing this to be a very unusual thing on a hunt with three hounds, I went in and learned about the battle.

It seems that Mr. Allison had got lonesome after dinner, and so he and Red took the foxhounds and a few of the best greyhounds and started down to the swamps which line the little creek known as the Wildcat. A trail was struck within a mile from camp, and only a short run made until the cat was bayed in the reeds. He was sullen and evidently "on his muscle," and did not seem to care for a run. He paid no attention to the horsemen and not very much to the dogs. When the latter closed in on him he made a short, sharp fight, then broke away and sprang up a leaning tree. One of the shepherd dogs —who always managed to be along when there was a hunt—crawled up the trunk of the tree after him for twenty or thirty feet, then fell off and nearly killed himself in the fall. Seeing the size of the cat, and not wanting his dogs to be torn up just at the time they were wanted for deer hunting, Mr. Allison determined to shoot it, and fired at it with a Winchester carbine. The ball passed through the base of the cat's ear and scored the top of his shoulder a trifle. Out he bounced among the dogs, and the yells of the latter at once announced that he was using them pretty roughly. The dogs managed to keep him strung out, so he could not rip with his hind legs—a thing which these greyhounds understand perfectly from having fought together so often—but the cat kept his teeth and forepaws going, and was gathering dog meat at every wipe. Mr. Allison—always an excitable man in a fight—rushed in and placed the carbine over the cat's head, firing down without any particular aim and at the risk of killing a dog. The ball carried off the tip end of the cat's chin, but he only smiled sarcastic like and went on with the previous question. Before the third shot could be fired he had left his record on three veteran fighters. The last shot struck him in the brain, and this being too much odds against him he gave up. It was almost impossible to get the body away from the hounds, so infuriated were they over their own hurts.

The utility of the foxhounds now began to be very apparent; indeed, we were dependent upon them for much of the sport we had upon the trip. Personally, I like foxhounds. Greyhounds are good, but you have to help them, and watch over them, and take care of them. Nothing is ever the matter with a foxhound. You put him on the ground, and he finds his own trail, and needs no looking after when he has found it. The brilliant, showy burst of the greyhound is talent; the continuous, tireless, invincible patience of the foxhound is absolute genius. The father of Buck, one of our foxhounds, chased a deer for forty-eight hours, and bayed him forty miles from where he started. A farmer heard the dog baying for the greater part of the night, and in the morning shot the deer, and brought the dog home to Mr. Allison, at Hutchinson.

A fine foxhound came down from the north on the 21 range last fall, following a chase which began no one knows where. He stopped by a dead carcass to get something to eat, and was so weak he could go no further, but lay by the carcass six days, allowing no one to come near him. At last Jack beguiled him into following him toward the camp, and succeeded in getting a rope about his neck; but on the way home a deer sprang up not far ahead, and the dog broke away and went after it, rope and all, and when last heard of was away down on the T5 range, and as Jack says, "a be lerin' like all ——, an' headin' straight for New Orleans."

In the dense reedy swamps of that rough country any number of the smaller furred animals find a home, and we could always strike a trail of some sort any time we chose to go out. We did not especially care to kill raccoons, but they were so numerous as to be almost a nuisance, for when we just got comfortably settled on an otter or wildcat trail, in would come some fresh coon trail or other, and Drum would switch off on to that, and Buck would follow Drum. I remember one dark night we started a wildcat out of the lower swamp, and ran it for a long time among the dry sandhills. We were on foot, but we had a grand chase, the dogs sometimes so far away we could barely hear them, and then again sweeping back on a double so close to us that we could see them. The dogs finally led down to the thick grass along the edge of the river, and there went at fault. We concluded that they had gotten upon an otter trail, and that the otter had taken to the river. The old dog Buck seemed to think so, for he swam across and began to hunt on the opposite bank; and sure enough he soon opened, and in less than a minute began to bay!

Alas! A certain unmistakable odor informed us what the quarry was. In a few moments we could see it coming out upon the thin crust of ice, plainly visible by the light of the moon, then just beginning to rise. To Ricker was given the honor of slaying the skunk; and taking a good hold on his much-prized three-barrel, he lay in wait in the grass, and when the creature got within forty yards or so, laid it low with a double charge of duck shot. But he didn't lay the perfume low. Oh, no!

Just as Ricker immortalized himself by killing the skunk, there arose right at our feet the noise of a mighty battle among the greyhounds, and a big splash announced that the fight was transferred to the water. That indefatigable little Drum had been running one stretch of the trail, about 100yds. long, for nearly half an hour. He would go back to the start, spit on his hands, open his mouth and then come booming up the path right by us, head and tail both up, a yellow, yelling demon in the night, with mouth open wide enough to take in a cheese box. When he got to the end of the trail he would turn around, go back and do it over again. As this seemed to amuse him we didn't disturb him, but attended to the skunk hunt. It now transpired that Drum had had some purpose as well as some method in his madness. It was a coon which he had been trailing, and this coon had taken to the water, unfortunately for himself, crawling out just at that spot on the bank where the greyhounds were standing. When they sprang upon him the whole mass rolled over into the water together, and a more animated scene than that moonlight fight in the Cimarron River I never beheld. Part of the time the dogs were swimming and part of the time wading, and the racket they made, blended with the squalling of the coon, added a wild excitement to the occasion. A coon fights well, especially in the water. He is more tenacious of life than the wildcat, and his teeth are no wise to be despised. Against six fighting greyhounds, however, a coon has little chance, and the fight was soon over. Thus ended a hunt which was rather a medley. We had started a wildcat, switched off on an otter, as we thought, and ended by killing a skunk and a coon.

The days passed very swiftly and very pleasantly at the camp; the boys treated us most royally. We found that visitors were not unknown at the ranch. At one time ten men sat down to dinner. Two of these were horse thieves, who were passing on through bound for Arkansas. They claimed to be railroaders, but appearances were mightily against them. They got their dinner all the same. One day a freight train pulled in with goods for one of the lower camps, and shortly after that Jack came back with the wagon from a trip to the Southwest Camp, over in the broken black-jack country, bringing with him a doe, a very large buck and one wild turkey, besides some fresh beef—the latter being more appreciated by the ranchmen than any kind of game. Jack reported considerable numbers of turkeys, but said they were wild and scattered, the extensive fires having broken up their old feeding grounds. As the chance for getting any turkeys seemed to be poor, and as the cold weather had beyond doubt made the bears all hole up, we concluded not to take the thirty-mile drive over into the cañons south of the river. Before the fires this was really the best game country in that region, though difficult to hunt in. Last year, over near the Southwest Camp, Mr. Allison saw a great plenty of bear sign, and his greyhounds killed one bear—stringing him out in great shape. Even had the bears been running we should not have dared to take the foxhounds over in that country, as the "beef cattle" were all held on that part of the range, and the unknown demoniac notes of the foxhounds might have filled the tender bosom of the Texas steer with alarm. In a stampede a wire fence is no good, and once through the wire fence on the south side of the range, the cattle would have been among the Cheyennes and Arapahoes, who know not aught of cattle leases, but do know how to skin and eat an ox.

Ricker and I shot ducks, along the spring branches, and increased our stores of sketches and photographs, and once in a while went out after deer still-hunting, thoroughly exploring the country for ten miles about, and nearly always seeing deer, but not getting another shot at them. Mr. Allison and Red went out one morning on the flats with the greyhounds, and had a course, but caught no deer. Mike lamed himself so much worse that he was laid up from further deer chasing, and Jim did not improve his sore ankle, and besides tore a toe nail loose. Jerry's nose had assumed wonderful proportions, from the effects of the wildcat's claws. Still, we did not really need any more game than we got. There was not, indeed, a single "blank day" on the whole trip. If the greyhounds failed, we could always take the foxhounds and kill a coon; and what with greyhounds, foxhounds and rifles, we added meat of some sort to the game rack every day.

One morning, Mr. Allison, Ricker and I started down the river to the lower swamp to kill a wildcat. We crossed the fresh trail of four big gray wolves. The stride (walking) of the largest was nearly three feet, and his footprint as large as that of a horse. We never allowed the foxhounds to follow the trail of a gray wolf, fearing that the chase might lead clear out of the country. Mr. Allison said that he should not like his greyhounds to attack one, for fear of their being badly cut up. I fear if I had had the management of the hounds that morning we would have followed that wolf trail if they went clear to British America. It's a long lane that has no turn.

Well, we were afraid to start after the wolves; but we soon had a fine large wildcat trail, and ran it to into a vast sea of rushes and grass known as the "dry swamp." We sat our horses about the edge for over an hour, and still the foxhounds could not come up with their game, though from their angry roaring we knew they were often close upon it. At last the chase confined itself to a little neck of swamp, not more than a hundred yards or so wide. We pushed our horses out into a little open place, and passed the word to shoot on sight, determined not to let the animal get back into the main swamp. It was a query of some interest in my mind how far my horse would run before we could lasso him, if I ever did shoot from his back. He was slightly "bronco," and afraid of the sight of a gun. Still, I resolved to try the experiment.

As we sat on our horses, the dogs were running almost under us; but though they often came within five yards of us they were entirely hid by the heavy growth of flags. The greyhounds, it should be understood, kept with the horses, but they evinced the liveliest interest in the chase and stood with ears straight up waiting till the proper note in the foxhounds' increasing challenge should tell them it was time to be in. The staghound pushed in among the reeds and nosed about a good deal, but whenever he got too close to the chase he broke cover and came bouncing out. He was a horrible coward, not a very good one of his sort, I take it.

Half a dozen times the foxhounds stopped their game, and at their changed note the greyhounds half a dozen times sprang in; but always the creature got away. At last, however, the enraged roar of the foxhounds right at our feet told us that they had "got a stand." In went the greyhounds, old Mike jumping clear over the tops of the flags. And then great double handsful of noise began to come up through the reeds. Old Mike's voice was recognized in loud complaint. The valiant staghound ran off about 40yds. and lay down. He hadn't lost any Bengal tiger. And judging from the size of the noise it couldn't be anything less than a royal Bengal tiger that had the dogs in there.

Mr. Allison went plum crazy, and shouting out to me to "hold his horse," he jumped off and tried to force his way in to save a few pieces of his dogs. Ricker also dismounted, and came running up with gore in his eye. The two horses both ran off as fast as they could. I tried to crowd my horse into the rushes where I could see the sausage factory at work, but the horse had no curiosity in that line, and forthwith treated me to a pyrotechnic display of "bucking" just at the wrong time, and then ran away for a hundred yards or so before I could stop him and make him face the music. The scene, altogether, was not without animation.

The dogs knew perfectly well that they could not fight in that dense tangle, so they began pushing and carrying their prey out toward the open. At last they burst out into plain view, and we could see something black and savage down among them, which they were not killing worth a cent.

It is not my fault that the animal was not a Bengal tiger. Personally I wish it had been. It might have been a wildcat, for the dogs certainly chased one into that swamp. But the fact is—and I hope I will not be blamed for it—the animal they had caught was nothing but a coon; a great big black coon, nearly as big as a small bear, and a fighter from away, way back. We were disgusted—just as disgusted as you are, gentle reader; so you can't complain.

Mr. Allison knocked the coon on the head with the butt of his whip, and ended the fight. I skinned the coon, and a very fine black pelt I got. When nicely fleshed down, the inner surface of this skin showed innumerable red spots, as if it had been shot with bird shot at 30yds.; but hardly a tooth had penetrated through the tough hide and the inch-thick rolling layer of fatty membrane which armored the back of this old timer. It was easy to see why it is a coon is so hard to kill.

Our forces were now part cavalry and part infantry, and I suggested that it would be appropriate for me to assume command and lead the march toward home. I even offered to go to camp and tell Buck to get supper ready for the infantry. But the boys couldn't see anything funny about that, and insisted that I should go and catch their horses, which were feeding about half a mile off. Although this is not always easy in a "pasture" which holds some twenty or thirty square miles, it proved not very difficult in this case, and we were soon all in the saddle again. If Ricker's horse and mine had not been stable mates accustomed to going together, the capture of the horses might have been a much more serious matter.

As we rode on down the river, we struck a fresh deer trail. The foxhounds diligently ran it just the wrong way. Sandy Jim began to trail it the right way. The staghound pulled out along it at full speed. Terry joined in. In a moment we were riding hard through the sandhills, down into the river bottom, following the racing greyhounds with not a deer in sight. We ran half a mile or so at full speed, when the deer jumped about 40yds. ahead of the dogs in the tall grass. We could see it plainly, but the dogs could not, and though we tried our best to lay them on, the deer dodged in and out among the grass and eluded them, finally escaping into the scrub and going clear off. Every once in a while a hound would bounce up over the top of the grass, get a sight and run a line for it, but by that time the deer would have turned again and thrown him off.

After some difficulty we got the greyhounds together, whipped the foxhounds off the trail—though Drum got away again and was gone for over on hour—and rode on down the river for four or five miles further. We did not start any more game, however, and after Ricker had made a few sketches of the bluffs across the river, which afforded us some fine views from the tops of the higher sandhills, we turned back toward camp, which we reached safely, the skin of the royal Bengal tiger dangling from my saddle. I have since been offered sixty-five cents for that skin, but I have stubbornly refused to take less than six bits.

E. HOUGH.

PORCUPINES.

Editor Forest and Stream:

Mr. C. F. Richardson asks in your issue of June 7 if any of us have ever seen "white hedgehogs."

I might have seen two, I suppose, in the year 1872 or thereabouts, as I very well remember that some of the sons of Mr. John Volk, of Oconto county, Wisconsin, (where I was living at the time) reported to me that they had killed a couple. I did not doubt the statement, and remember telling them that they would have done better to capture the creatures, and place them on exhibition. There is no sense in killing porcupines, unless near a farm, where they may do some injury, or snakes either, for that matter, as a rule.

According to Thoreau, the porcupine is an appropriate "small fruit" of the wilderness. I agree with him, and never hurt them if they will not molest my salt provisions or gnaw the handle of my hunting axe. Sometimes I have slain them for food, but not habitually; and I remember that a child who tasted one and wished to use accurate English pronounced it "rather muscular" in flavor.

The disposition inherent in the human family to take the life of every creature within reach, when unprotected by statute, is discouraging to many of us, and I often think that not the least among the good works of the FOREST AND STREAM is its persistent discouragement of profitless waste of life.

I have often wondered that I could never see a bittern upon the shores of the Intermediate, and lately I was

told by a friend in whom I have confidence that he saw one not far from here this spring. It was of the common sort. KELPIE.

CENTRAL LAKE, Mich., July 13.

DEER HUNTING IN PIKE.

NOT a great many years ago Pike county in Pennsylvania was *terra incognita* to even New York sportsmen. The writer had often heard of the abundance of game, both feathered and furred, but nevertheless felt that he was rather rash, when on a certain day he invited a stock brokering friend to go deer hunting.

After much dubitation and assertion of the impossibility of finding a wild deer so near New York, the invitation was accepted and we left by the Erie 4:30 train for Port Jervis. There, however, we were at fault. The person to whom the writer bore an introduction was not to be found, and not until after ten o'clock could a man and team be procured to take us, first in search of Archie Brink in Milford, and then to Shohola Falls. Found he was, and under a bright November moon we crossed the Delaware and bowled along over a wonderful road on our first expedition. This road, by the way, made from the crumbled stone of the bordering ridges, was as smooth as those in Central Park, and did not much favor our ideas of deer hunting, despite the glowing tales of the driver. Fortunately there was a light in one of Milford's taverns, and we were directed to Archie's cottage near the spring. Although Archie has long since joined the majority, the spring remains and doubtless continues to wash the roots of the large beds of watercress as it did then. This particularly struck us when, leaving the team in the road, I went cross-lots to Archie's cottage. My knock was answered by such a chorus of barks and growls that for a while nothing else could be heard. Soon, however, a voice inquired my name and errand. The first I replied was of no consequence, but the second was to get him to go with me to Shohola deer hunting in the morning. This being agreed to, I urged the unseen owner of the voice to ride out with me, but this proposition was declined with the assurance, however, that he would be at McCarthy's before I was up in the morning. Trusting to this promise, I returned to the team, and in due time waked up McCarthy, ordered breakfast before daybreak, and turned in.

Just as I got fairly asleep a tread on the porch under my window and the whine of a dog woke me, and there, sure enough, was Archie, with his friend Rosencrantz and two hounds. It did not take long to rouse McCarthy and start the breakfast, nor to take something with Archie & Co. to keep out the chill. To rouse my broker friend and get him into his clothes and prevent his audibly damning the split-pea coffee, was something more difficult; but when the daylight began to streak the ridges, we were off.

Of course you expect to hear that we plunged into some ravine, climbed over broken rock and dead trees and trod the moss with the noiseless step of the panther. That was something like what I expected to do; but I didn't. On the contrary, we four and the two dogs walked along a fair smooth road for half a mile, until Archie suggested making a drive on the right hand side.

The tract selected was nearly oblong and not unlike an avenue block in size, with a dip at the lower end and a ridge beyond. Stationing my friend and self on runways, Archie & Co. went round to and through the dip, and returned to us at our stations without having struck a scent. Again we promenaded, passing crossroads practicable for a buggy (the country round had been laid out for a city), until the turnpike, bearing off to the right from the top of a low ridge, allowed us to look down into the hollow, with a fine farmhouse and buildings at the upper end. On our side a crossroad ran along the top of the ridge; and on this my friend and I were stationed, while Archie & Co. went to begin the drive up by the farmhouse.

Luckily my friend was away from me, and so could not detect in my face my utter want of faith in the whole proceeding. Left to my own thoughts, I cudgeled my brain to invent an excuse for bringing him to hunt deer where he would be much more likely to find calves. It was utterly useless to try to get up a thrill, even of suspense. It was absurd to think of such a thing as firing a snap-shot from my rifle with the smoke from the farm house! Hallo! what was that? *Wow-wow* (very long, if you please), one of the hounds and then the other gave tongue, and the blood flushed up and my rifle came to a slope at the sound. Still I could not quite enthuse. Some dogs will run a sheep, but then again sheep don't get over ground as quickly as that baying indicated; and I began again to get quite excited and kept close in my cover —hoping—doubting—almost certain—when two quick reports and a shout told me that one act of the drama was played.

After waiting a due time and calling in my friend, I found my way through the bush to the seat of action; and there to my great relief found a splendid buck. Archie had shot him and had already removed the paunch. "Did I see the doe and yearling fawn?" "No, I had not seen either doe or yearling fawn." Then they had gone over the ridge to the pond; and I began to believe that either my friend or I should yet do a deer to death in this well laid out hunting ground. Alas! simple causes produce unchangeable disappointments. Archie and Rosencrantz had both carried soda bottles of turpentine gin in their pockets; and while we laboriously bore that buck from the hollow to the crossroad, the hounds had their way with the paunch. When at last we reached the road the bottles were empty and Archie and Rosie were full. When, too, after much hallooing and calling, only one hound staggered up to us, we learned the intoxicating effect of a deer's paunch full of laurel croppings in November.

This ended our deer hunt, and our team having been brought up, we loaded in the deer, dined (?) cheerfully at McCarthy's, and at half past six the next morning, deer and all, were back in the city of New York, after thirty-eight hours absence.

The tale is not exciting, but only absolutely true, and the reader will pardon me if I do not attempt to reproduce Archie's account of the desperate struggle he had with the buck. As he began by saying that he "let loose" his buckshot barrel first, and as the deer's heart had two holes in it made by buckshot, and as my day's experience disposed me to incredulity I fear that I would not in turn claim much faith from my reader. I know that I left him satisfied with me, and that for several successive years I passed pleasant days in the fall at Shohola, up the Rattlesnake and thereabouts. Of "Jerry Greening" and his tribe I may have something to tell, for Jerry has become in more senses than one a public character; but space is wanting now, and much space is required to do justice to such subjects. H. B.

NEW YORK.

CHAT OF GUN AND GAME.

EVEN now as I write I hear the peculiar note of Bob White, as he sits upon the top of a fence or upon a stump, and indicates to his mate that he has not forgotten her, and is ready to do his part in providing for the young which they have begun to rear. On the sides of all the roads which I travel, in the fields and woods, everywhere almost, there is evidence of the abundance of young coveys, to whom hatching the past season has been most propitious. All persons whom I have met concur in the statement that the bird prospect was never better. Unless some disaster befals them before the season opens, both sportsmen and dogs will have a joyous time during November, December and January in ranging over hill and valley, sedge and stubble, as well as along the ditch banks, in the vicinity of which the field pea was planted. If my health permits, I indulge the "pleasing hope, the fond desire" of taking many a tramp in this and other counties of the State, with my little gun and my little dog, albeit the short-tailed Argo is, like his master, "well stricken in years." What a wiry little fellow he is! With what untiring zest he courses over the ground, and how grandly he stops when near the game which he is seeking! What joy he exhibits when he sees me, with my "court costume" on, and my gun in hand. As I walk to the buggy, on my way he knows not exactly where, but feels sure it is to some field which is the home of the bird, whose odors are far sweeter to him than would be those of the famed "gardens of Eve in their bloom!" he does not sneak lazily forward as if he was under mortal dread of the lash, "like a galley slave," but bounds freely on ahead of me, watching closely every foot of the road to see which one I take. He does not get lost. If, perchance, as I travel along he searches some field and finds a covey of birds, he does not stay or point all day, to my great annoyance, breaking up the hunt, but after remaining a few minutes he flushes the birds and comes on. Does not this style of movement tire him? Perhaps it does, but he can circle around me while I travel twenty miles, and then make an afternoon's hunt without flagging. But then he has no known pedigree. None of his ancestors, as far as I know, ever had their names recorded in the books which are remembrancers of the royal family. And yet, old as he is, I do not hesitate to say that he can run the life out of four-fifths of the field trial gentry. Oh, he is a gamy little fellow, and hunts, not because I want him to do it, but because he loves the recreation. My friend G. T. L., who who can be found during the business season at No. 90 Hudson street, New York, knows Argo, and will say that I have not overdrawn the picture. But enough of the diminutive plebeian at present.

Now, a few words about my gun. Some of my friends say that I am a little cranky, or monomaniacal on that subject. Possibly they are right. I can't help it. But the gun is a gem, in its line. It was made according to my own directions, and the manufacturer thought I was a crank, because I had such extraordinary notions. But he was told that the man who gave the order thought he knew what he was doing: and, as the gun was for his own use, it would be wise to follow the directions with faithful exactness. It was done. The description is this: Weight 6¼ to 6⅝lbs., bore 14, cylinder, length of barrels 28in., length of stock 13⅜, 13⅝, 14⅜ drop, 3¼ at heel, 2 at comb. It will be seen that the stock is unusually short. In the summer, when the shooter at the trap is encumbered with but few clothes, he can use a gun with longer stock. But in the field, when the thermometer is below the freezing point, and the sportsman, consulting his personal comfort, covers himself with a quantity of woolen garments, the distance is much less from his shoulder to his finger, and he needs a corresponding reduction of the length of stock. Not being much of a trap-shooter, I had the gun made for the field. To enable me to do fairly at long range, I had an extra pair of barrels made, which are closely choked. With them, I can get a squirrel, out of a very high tree, and have contested successfully with ten and twelve bores at the trap.

The little gun is a so-called hammerless, and the firing arrangements are not of the Anson & Deeley patent. The gun has locks and firing-pins separate from the tumblers. I like them better. I have a gun where the tumbler is elongated and acts on the striker; but I have had five misfires with it with the Winchester and Lowell shells to when I have had one with the other. It may be that the mainsprings are not sufficiently strong. The shells were of the highest grade, and good caps (are not the Union primers No. 2 good ones?) do not require a heavy stroke to explode them. Most of the mainsprings, as I think, are needlessly strong.

While on this subject, I may as well say that I have tried Eley's, Lowell, Winchester and U. M. C. shells; and although some of these makers represent that their products are "sure fire," I do not hesitate to assert that some of them will not fire at all with any stroke which may be made. I recall the fact that in one day's hunt I had three misfires with shells reputed to be of the highest grade, and my companion who was using the same size tried them in his gun, the springs of which were uncommonly powerful, with failure as the result. Misled by the boastful pretensions of another maker, and liking the color of the shells, I was induced to get a thousand. With them I have had frequent snaps. Then "I came back to my first love," and shall continue to use the products of this maker or these makers until they debase the character of their work. It is but just that I say it is idle for any one to expect that all caps will explode and all shells will fire. We may be well contented if ninety-nine in a hundred meet our expectations.

In this vicinity there were, within the last twenty years, a large number of deer. Well do I recollect that about 1870, an uncle of the writer and my old friend Kinchen C., as well as quite a number of others, were on a hunt on the headwaters of a stream called Rocky Fork, with our headquarters in an old deserted dwelling, used at the time as a fodder house. From this point we had easy access to the drives on the Rocky Fork of Naked Creek (the other being the Rocky Fork of Hitchcock) on Paradise, on Job's Creek, and other places. By the kindness of the owner of the property we had the use of the fodder for our horses and for our bedding. One night Tom S. of the party, who was supposed to have a weakness for a black-eyed damsel in his neighborhood, whom he afterward married, was afflicted with what Shakespeare calls, "the child of an idle brain, begot of nothing but vain fantasy." His groans aroused all the sleepers, and so soon as they fully awoke, Tom was heard to cry out, "Take care, Sally, that big snake will bite you." And then with a stertorous snort he was relieved from the dangers which an imagination, rendered acute by a gorge upon strong coffee and venison steaks, had conjured up to blanch his soul with fear. How we did laugh at him because of his dreamy confession of the tender thoughts which warmed up his bosom, but whose existence he always denied when he was not in his "secure mood."

The two persons first named were as ardent sportsmen as ever lived. They loved the forest and stream and neither was selfish in his sports. Many a fine buck fell before their guns, and baskets of fish were caught by their hooks. They knew nothing of split bamboo rods and reels, but they did know something of bobbing. Alas, both have fallen, "like leaves in wintry weather," and been wafted away to "the undiscovered country, from whose bosom no traveler returns." Both were just men and generous men, the delight of the social circle. They "served their day and generation," for both were men of excellent sense and superior business capacity, often holding positions of trust, the duties of which were always faithfully performed.

It was during that hunt—unless my memory is at fault—that I killed the largest buck which ever fell at the discharge of my gun. The weapon was a 12-bore muzzle-loader, made by Wm. Moore—or rather it had such a name upon it. The right barrel had in it twelve No. 1 buckshot, and the left twenty-five of No. 3. The two gentlemen last named by me were on one side of the Rocky Fork of Naked Creek and had with them two excellent hounds, which bore the names of Bob and Rock. On my side I had as a companion and friend the Rev. Bum Gostick, a reputable Baptist clergyman and a keen sportsman. We had not taken down the creek more than one hundred yards before the melody of canine voices was heard, "which thickened as the charge drew nigh." Fearing that the deer would cross too far below me, I quickened my pace into as active a run as I could make, with the view of intercepting it. Having done my "speedy utmost," as the "gray mare Meg," in "Tam O'Shanter" was advised to when out of Kirk Alloway "the hellish legion sallied," and gone over a space of 70 to 80yds., I saw the old "monarch of the waste" emerge from the swamp on the bank of the creek, at a distance which many hunters would have called 60yds. It was from 35 to 40yds. on a "bee line." He gave me a broadside and the right barrel was discharged. I saw a shrug of the body, which plainly indicated that my aim was right and my gun had done its duty. He got nearer to me, and when I was again ready, he was on the side of the hill above me and not further than 30yds. My finger pressed the trigger, the crack of the left barrel was clear and sharp, and the buck dropped dead in his tracks. When I got to him I saw that he had hundreds of large ticks upon him, some of which were killed by my shot. From the abundance of them I feared that the animal was thin in flesh, and would make not very palatable food. This apprehension was groundless, for he was unusually fat for a male deer at that season of the year. I hit him with four shot with the first barrel and fifteen with the second. He netted, after being dressed, freed from head, hide, hoofs and entrails, 150lbs. He was a fine buck.

How hot it is! Thermometer up to 97 degrees. But for a nice breeze from the west there would be no comfortable place in this vicinity, except a pool in the spring house. As it is we manage to stand it. But the temperature is not very suggestive, except by contrast, of flannel blouses, woolen undershirts and the usual apparel of a sportsman during the season. But I have managed, since I began this rambling communication, to read the FOREST AND STREAM and some few other sporting papers which have fallen into my hands. These always interest me though they sometimes contain matters which do not command the approval of my judgment. Now and then I see an original anecdote which I heard more than twenty years ago. For instance: In one of these papers I read a very attractive piece descriptive of a bear, wild-cat and sow hunt in Texas. To a suggestion made to a metropolitan gentleman, who was one of the party, in regard to the music of the hounds in full cry, that representative of the famous ten miles square over on both sides of the Potomac said, "I can't hear any music, those blamed dogs make such a racket." Now that is old, and the city gentleman must have been nearly bankrupt in ideas to have been forced to gather up such garbage.

The same communication contains the following: "This reminds one of the story that Joaquin Miller got off on the Senator from this district to the National Congress." This was evidently written carelessly, for the writer of the article is a man of no mean intelligence. The State of Texas has two Senators in Congress, but there are no Senatorial Districts in that or any other State. The writer in question has, no doubt, read the Constitution of the United States, and knows that what I say is correct. If he had said a Representative, I should not criticise, for I am aware that there was once in Congress, from the South-western District of Texas, a gentleman of large brain as well as large person, a big man in many respects. He lived at Cuero and died in the city of Washington during his term as a Member of the House of Representatives. So much for that. WELLS.

ROCKINGHAM, N. C., July, 1887.

A GLASS FOR HUNTING.—Messrs. Queen & Co., No. 924 Chestnut street, Philadelphia, make a spy glass which is adapted to the needs of sportsmen tourists. It is substantial, compact and can be carried with comfort and safety. The lenses are powerful, bringing distant objects into close view in a manner positively startling. Such a glass would be of great service in Western large game hunting, where a wide territory can be examined and the game detected.

LARGE ELK HORNS.—F. R. Kaldenberg, of 371 Broadway, New York, received from L. K. G. Smith, of Portland, Oregon, a pair of mounted elk horns. Each horn measures 6ft. from the crown of the head to the tip. There are 13 prongs.

HARD LINES IN THE ADIRONDACKS.

FRED MANNING and myself had been classmates. The schoolboy friendship then formed had been strengthened by many a hunting and exploring trip subsequently made together. Though having paddled down some of the roughest rivers of the better settled parts of the country, despite the boisterous rapids, dangerous falls and numerous hair-breadth escapes, we instinctively longed for wilder scenes, and toward the Adirondacks we turned for the gratification of our desires. Here was plenty of game and fish, here, too, were numerous remote lakes and rivers, accessible only to the lightest craft and navigated best by a canoe.

Our ideas concerning this much talked of wilderness and the requirements of a journey through it were sadly upset and altered by experience. We had abundant confidence in our ability to go anywhere that water would float our craft. In this respect we made no mistake, for the waters of this region are as easily and pleasantly navigated as those elsewhere. Where we did err, however, was in supposing the connections marked on the map as existing between the different lakes to be practicable. Instead of having an easy communication between the innumerable bodies of water which are the beauty of this country, we found but dried up, shrunken brooks, along which it is customary to carry one's effects until the next lake is reached. The "carries," as they are called, are the great feature of the woods. The forests themselves are so dense as to make it utterly impossible to get a boat through them. To remedy this difficulty paths of all degrees of badness, according to the frequency of their use, have been cut. When a man reaches a portage he pulls up his boat, empties its contents, fastens in the neck yoke, and inverting the boat over his head, marches off along the trail. Now the fun begins. The seventy or eighty-pound boat, which to the novice did not seem light, even at the beginning, soon becomes an intolerable burden, which at the same time, unless assisted, it is extremely difficult for him to put down without breaking. Added to his difficulties is the character of the alleged path. It twists and turns with the most alarming frequency. Often in the sharp bends he knocks both bow and stern against encroaching trees, while under foot is a mazy entanglement of roots and loose stones, interspersed with an occasional boulder, all made slippery by their coating of pine needles, the monotony being enlivened by a tree trunk breast high lying directly across the path, or a quagmire of unknown depth, into which he must boldly wade. The frequency of these carries and the immense amount of labor they entailed soon made the canoeing part of the trip dwindle into insignificance. We discovered that the chief requisite of Adirondack travel was to possess as much as possible the qualities of a pack horse.

Persevering in spite of these difficulties, we found ourselves on the day of the occurrence which I am about to relate at Forked Lake, 30 miles from our entering point, Blue Mountain Lake, and in a spot as entirely given over to nature as any in the region. Between Forked Lake and Long Lake flows a small mountain torrent, dignified with the name of Racket River. At various points on this stream occur three portages, the first and longest beginning at the foot of Forked Lake and extending three miles. After traveling all day without having met with any sign of human proximity, at about an hour and a half before sundown we arrived at the first carry. It was late; we were tired; we were heavily laden; and, as this connecting creek seemed to be somewhat larger than those we had so far encountered, ignoring the dull smothered rumbling of the distant rapids and the impenetrable character of the evergreen jungle that lined the banks, it did not take us long to decide to float down, a feat looked upon by the natives as impossible. Though hoping to ride, we had not proceeded many feet among the breakers before we saw we would be obliged to adopt different tactics. Our river, which on a level was deep enough when care was exercised to be navigated, here became a torrent, a mountain trout stream filled with rocks of all conceivable shapes and sizes, occupying its bed so thoroughly that without pulling and pushing it was impossible to make progress.

Here the water would be a foot deep. Another step forward off the submerged ledge and the bottom could not be reached. It soon became apparent that there was but one mode of procedure, and we stripped to our work, retaining only our vests, which held our valuables. And now let me pay an humble and altogether inadequate tribute to the Adirondack mosquito, deer fly, gnat and the rest of them. The insect plague of these woods is utterly beyond the comprehension of those who have not been there. Multiply the mosquitoes of New Jersey by a hundred, add five times that number of gnats, and liberally sprinkle the swarm with half a dozen other kinds of sanguinary insects, and the winged blood-sucking population is but faintly outlined. To this vagabond horde we had to submit our tender cuticle. It felt as if one was flayed and red pepper rubbed in all over. How we longed for external paralysis!

I had better draw a veil over that journey. One of us took a paddle and guided his weary steps in the shallower water near the shore; the other, grasping the painter and letting the canoe float ahead, alternately climbed, slipped and swam along after, now shoving the boat over the rocks, now bracing himself in a roaring current to let it over a cascade.

In the midst of our troubles the sun set, and darkness began to confuse our already perplexed course, while we seemed to be as far from the end of the rapid as ever. Our journey for that day was soon terminated in spite of ourselves. Out of the gathering gloom, stretching from shore to shore, arose an immense indistinct mass. This, on a closer approach, proved to be a very large fallen tree, the branches of which were clogged and heaped with brush wood, the trunk being supported in the middle by a rock at just such a height as to prevent the canoe from passing under. The density of the forest precluded the possibility of landing. We could not go on without first unloading and drawing over our boat. Besides it was now dark.

"I've got the idea, Ralph," said Manning, "the rock in the middle is, at any rate, large enough to give us sitting room, while that splendid brush-heap will dry us and afford us light for hours. Let's pull up here."

Accordingly, after securing the canoe by wedging it in between two projecting stones near shore, we got our food and blankets, and by careful balancing on the log, crossed the flood that tore madly along. The rock proved on inspection to be just large enough to afford us both room to lie at full length. However, it admitted of no change of position. Had either of us attempted to turn over the probable result would have been that instead of continuing his dreams in warm blankets, he would have found himself, after a fall of five or six feet, swimming for his life in the deep water that swirled, eddied and roared on all sides.

To the rock from our boat, a distance of seventy-five feet, the tree trunk was straight, without branches, and free from drift-wood; at the other side of the rock, for an equal distance and partly on it, was a prodigious brush pile. Under the influence of the grateful heat and by the aid of the weird light, illuminating the angry torrent and the wild overhanging pines and hemlocks, we had an altogether romantic meal. Soon the fire began to encroach on our quarters, and after driving us into the far corner of our insular camping spot, we were obliged to get our pails and make a fight. While putting the tins back into the canoe I was startled by a snapping and crackling of the underbrush close at hand. Having left my revolver on the rock, I did some tall scrambling to get back. It could plainly be heard out there, even above the noise of the river. Now we both realized the utter impossibility of human presence, we also knew it could not be a deer, as our shouting would have frightened it away. From these circumstances as well as from the heaviness of the tread we were not slow in concluding that the noise was caused by a bear.

"Fred," I remarked, "if we are not in a dangerous situation it is at least very uncomfortable. Evidently this natural bridge has for many years been a thoroughfare for bears and other animals."

The noise had now subsided and my companion responded, "That may be, but I am too deucedly tired to keep awake. I shall sleep with my rifle across my knees and I don't think anything will get far on that log without our hearing it."

I felt about as he did and we were soon sleeping soundly In the midst of a dream of being in a menagerie, in which the animals were escaping on all sides, and just as the boss lion, to the music of horrible roaring, bit me in the side I awoke, very much relieved to find the roaring to be the sound of the water, and the bite, a dig in the ribs from my chum.

"What's the matter?" I exclaimed.

"Rain," was the laconic reply.

We fixed things in the canoe as well as possible, and each of us crawling under his rubber blanket, giving up all thought of sleep, simply doing his best to keep dry, lay still too full for utterance.

"Hist! What's that?"

"Keep quiet," I responded; "perhaps it's game. Are you ready?"

The animal which we had thought a bear and which was probably routed out by the rain that awoke us now crashed clear of the trees, and slowly picking its way among the wet rocks in the shallow water near shore, made straight toward our log. The last embers of our fire had been extinguished by the rain, and as there was no moon and the sky densely clouded, it was difficult to see an object many feet away.

"Now Fred," I whispered, "keep cool. We want to make sure work of this fellow. Wait until he gets well on the white log, so that we can plainly see him, then we'll fire together."

The animal now smelt our food. Digging its claws firmly into the bark, it advanced with deliberation, sniffing at every step. Waiting until it had covered a third of the distance that we might make out its form, we raised ourselves to take aim. With the movement the brute, evidently not having been aware of our presence, stood still, showing his teeth and growling angrily. It was where it could not turn around, and evidently had no desire to retreat. Whatever his intentions were, their execution was cut short by my command of "Fire." With the flash and report a heavy, shaggy body slipped partly into the river; and then there was clawing, scratching and flying of bark to regain the lost position. As the now infuriated animal, snarling frightfully, was about to reinstate himself, we rose to our feet and gave it another volley. This time a dull splash was the only reply, and a dead carcass drifted down the tide. We broke into a wild shout, which, had our foe been alive to hear, would certainly have made it beat a retreat.

"Well," said Manning, "a few minutes ago we were grumbling about the rain. For my part, I am very glad we had it. Were it not for the rain, I doubt not but we would have been awakened by having that fellow's black muzzle thrust right into our faces. Even with the chance we had, he was rather an ugly customer."

We now looked at our watches and found it to be only one o'clock. A month seemed to have passed since we had landed here. How the dull cold dark hours dragged wearily along, as we lay crouching beneath our rubber blankets trying to escape the steady pelting of the rain. Still we had our exciting experience to discuss, that was something to allay our suffering. At last came the gloomy, misty, dreamy dawn of a rainy morning. When we arose and stretched our stiff limbs prepartory to a start, there, only a few rods away among the rocks, lay the half submerged form of the bear we had shot during the night.

Our clothes were pretty wet, and we made "no bones" of plunging in just as we were. When we came up to our victim we hauled it upon a rock; and, as the carcass was too heavy to carry, merely stripped off the skin and removed some of the choicest meat. A mile more of the rough traveling of the day before found us once more on navigable water. This continued another mile to Buttermilk Falls, where there is a very short carry and we had been informed we would find an uninhabited "camp" or log shanty. We were soon ensconced in this, sitting on a floor of fragrant balsam boughs and trying desperately to make a fire out of wet wood. Here we camped all day and night, drying our effects, roasting bear's meat, and recuperating generally.

The next day we comfortably reached Long Lake. Here there is an hotel and a feeble attempt at a settlement. At this place we were the heroes of the hour. Here, while comfortably enjoying our laurels, we will leave you, merely remarking that though we staid a month longer in the woods and had many adventures, there was none of our experiences where the disagreeable entered so largely as in this one, in which we outdid and nearly undid ourselves.

RALPH K. WING.

MISSOURI BEEF MATCHES.

CAPE GIRARDEAU COUNTY, Missouri.—*Editor Forest and Stream:* Have any of your readers followed the sport of shooting matches, or shooting for beef, watches, guns, etc? It is our custom in this part of the world to meet generally on Saturdays during the latter part of summer and fall to shoot for cattle. As we gather, the owner of the beef asks the price he wants for his beef, and if agreed on the price, we fork over the money. Each one can go in as much as he wants; some go $1, some $2, some even more, according to the value of the beef and the number of the shooters. If more is made up than the value of the beef, the surplus will be a money prize. We divide the beef into five choices—two hindquarters, two forequarters, and the hide and tallow. We generally shoot six shoots for $1; one who puts in $1.50 will be allowed nine shots, and the rest in proportion. We shoot at 60yds. with a rest and 4yds. off-hand. Each of the shooters fixes his own target. We take boards, burn them black, and tack a white paper on the board. The center is cut in the board with a knife, a cross cut X. From the cross we measure to the center of the bullet. Whenever there are too many centers knocked out or the measurement very close, we cut a bullet in two and make a center on the bullet also. When all is ready for shooting some big, long-legged fellow steps the ground. Then we roll up an old log or drive a short piece of a plank in the ground to rest on, and go to shooting till all are out. Some five or six or sometimes a dozen or two watch the boards, set the boards against a tree, and a fence rail or a pole against the lower edge of the board to hold it there until the owner of the board has shot; then we take that board off and put up another man's, whoever hollows first. We shoot as much in rotation as possible, excepting that when some one has got three or four times as many shots as others, he has to hurry up or he will be in the night before he is done. When all are done shooting the boards are taken, and the nearest shots are measured either with a sharp compass or a fine stick on the point of a pocket-knife or Barlow. The best shot takes the first choice of beef or money prize, the second best shot takes the next best choice, and so on, until all the prizes are taken up. Then the next best shot takes the lead that has been shot into the tree during the match. The rest get none. If two or three are precisely alike we call it a tie, and they have to shoot over.

The main shooters here are W. Flügge, J. Young, Claus Kerstner, Henry Borgfeld, F. Kuehle, H. Wagner, Charley Ulrich, Jacob Fisher, Jim Ervin, Isau Strong, Morris Young, Hy. Gartung, Ernst Wagner, F. Kemnskey, J. Koesler, Charley Miers, Henry Lincecum, Henry Warner, Henry Müller, F. Hargens, and what little is left of me. In one match lately I had one old gun which I bought from H. Wagner for $4. The gun was called Old Meat in the Pot. The stock was all broken. It is in fact a bad-looking thing to go to a shooting match with; but still, one day I heard of a match for a big fat cow, not far off, at the farm of John Herstner. So I took Old Meat in the Pot and went too and put in a dollar. There were some fine guns, and good shooters, too; several from Gordonsville and surrounding country.

They were tickled at my old gun, but still all of them knew who was behind her, and had not much to say to me. The money was soon made up, the ground was chosen and stepped all right, in an old dusty road, and some of us went to the straw pile and brought on some straw to lie down on behind the rest. That just suited me. Among the shooters were Flügge, Lincecum, Kerstner, Allers, Wagoner, Ulrich, and several more of the boys. When we got through shooting and measuring, three choices came to me, among them the first. I had no conveyance to take my beef home that day, as I had come on foot, so I locked it up in the man's smoke house that night and got a team next day and took it home. Every one on the ground was astonished that my old gun knocked out so many centers; she shot a large ball.

In one match for beef I went to near Cape Girardeau, a man by the name of Spalding had the beef. It was a large stall-fed beef, put up at $40. The shooters gathered in, and the money was made up directly. I had a fine rifle then, which I sold directly after the match to one Jim Jones for $50 in cash. There were many good shooters and good guns from Cape Girardeau and vicinity, of whom the brag shooters were George Hopper, Ben McClerry, B. Bahn, the gunsmith from the Cape; L. Steamback Mease, W. Garrett, Hy. Vosterling, the two Joneses, W. Penney, and several others. It seemed that I had the best luck of any. I won the first three choices, so I took hide and tallow for the first choice and the two hindlegs (as we call them) for second and third choice. This match paid me well.

At another match at August Borman's for a good beef, I had just swapped off my target gun for a squirrel gun which carried a No. 1 buckshot; it had a good barrel, but an awkward home-made maple stock, too short in the breech for me and too crooked. As I had a week's time before the match was to come off, I took my gun to old Orrel, in Jackson, a splendid gunsmith; he cannot be beat for making an old-fashioned rifle shoot close. Orrel is a splendid marksman, wears "specs," and will shoot against any of them. He at once rebreeched my gun, cut it out and put new sight and bead on her, but left the old stock and lock, as I preferred it. I tried the gun the day before the match and she did well. At the match I could get no one to go in on me, so I shot out my dollar by myself, and won first, second, third and fifth choice. For the next Saturday a match was given out at Ulrich for a $17 cow. The boys began to look at my gun, and several asked me to shoot out a dollar for them, but I refused them. Some shooters told me that I would not carry away so much beef as I had the last Saturday. I answered that I did not know; but finally I took in one Henry Ulrich; he put in a dollar and I one; so I had twelve shots, and won first, second, third and fourth choice, all but hide and tallow. After this they would not let me shoot this gun at a mark any more; so I had to swap it off for the one I have now, and I got $5 to boot and a nice squirrel gun which carries a No. 3 buckshot and is worth more money than the one I gave for it. There was one match since in this neighborhood, when I shot this little gun and got one hindleg. C. W. M.

WRITE UPTHEGROVE & MCLELLAN, Valparaiso, Ind., for new catalogue of sportsmen's and civil engineers' wear.—*Adv.*

HELPFUL HINTS AND WRINKLES.

SOMERVILLE, Mass., July 23.—*Editor Forest and Stream:* I herewith inclose a few hints which I hope may be of some benefit to the reader, First and foremost is a simple method of circumventing that most diabolical invention of his satanic majesty, the barbed wire fence, which is a terror to most sportsmen. Procure a pair of strong cut pliers (Hall's Pat. No. 2 are good, as they are strong and light), and clip off a few of the points down close to the main or twisted part of the wire. This does not injure the fence in the least, and you may then pass between the strands with impunity and not tear either flesh or clothing.

How shall I keep my gun from rust spots? is a question which has been asked and answered in FOREST AND STREAM for several years. The best preparation that I have ever seen is simply this: Put a pint of benzine in a bottle and add 1oz. of pure beeswax; let it dissolve; then, after thoroughly cleaning, rub a little of the mixture over the surface with a clean rag, either inside or out, and that is all. The benzine soon evaporates and leaves a coating of wax, which most every good mechanic knows is absolutely waterproof. I have used this preparation on breech pins and nipples, on muzzleloaders, and after years of abuse, when they were one solid lump of rust, the pins and nipples would start as easily as when first put in. This is also useful for cutlery or any polished iron or steel surfaces.

The most simple and efficient pocket cleaner for a rifle that I ever used or saw is a piece of stout cord with a loop in one end and a piece of lead for a weight on the other. Pass a piece of flannel say 1ft. long, and for a .40-cal. 18in. wide, through the loop; insert the weight at the breech end of the barrel; let it drop through to the muzzle, then draw the flannel through. When it is dirty, wash it out in the first brook you come to. It does not pay to shoot a dirty gun.

How shall I make my wads stay in place and not start from the recoil of the other barrel? For a 10-gauge brass shell use No. 8 pink-edge wads. Take an old table knife and grind the end so that it will be sharp, with a long taper or bevel. Grind alike on both sides, and have the edge very thin. The end of the cutter for a 10-gauge should be $\frac{7}{8}$in. wide; for a 12-bore $\frac{1}{8}$in. narrower. Cut the wad through the center, and again at right angles to the first cut, leaving it intact at the edges. Load the shells in the ordinary way, with a funnel, of course. When the wad leaves the muzzle the four quarters fly as many different ways, and may be picked up close to the muzzle. This allows the shot to fly through the wad, virtually offering no resistance to impede its flight, and is claimed by some to give a better pattern, but as to that matter I cannot say. However, it holds the wad in the shell and gives a lubricated wad ahead of the shot, and that is a great improvement over cardboard wads in brass shells.

How shall I make my gun shoot close for long range? I have tried wire cartridges, thread wound cartridges, concentrators, regulators, and lots of bone dust, wax, and all sorts of villainous compounds that were said to improve the pattern and range, and after spending a good deal of time and money and experimenting a good deal besides, I find that a good chokebore gun with shells loaded as follows will produce the best results: Powder as usual, two pink-edge wads; then moisten the charge of shot thoroughly, but not too much, with good castor oil. Almost every one knows the superior heavy lubricating qualities of castor oil. This lessens the friction along the barrel, giving greater velocity and therefore greater penetration. The sticky qualities of the oil help to hold the charge of shot together and make a very close pattern, and therefore increase the range. I have tried it on the different sizes of shot ranging from No. 1 to No. 7, inclusive, and it works splendidly; have not tried it on larger shot, but my impression is favorable of it. To finish loading the shell, cut the wads as I have described (for brass shells) and seat them level. This will increase the range for from 20 to 40yds., and is very useful in duck shooting, etc. In another letter I may have something to say regarding a new rifle, where the shell is grooved to coincide with the groove in the barrel, and where the problem of the breechloader convenience with muzzleloader accuracy is solved. IRON RAMROD.

QUAIL IN KENTUCKY.—Newport, Ky., July 17.—In this part of the State the quail seem to be more numerous than for a long time. Indeed for several years we have had but few of these birds. Under a fairly stringent law which is generally respected, they are on the increase, and with moderate protection cannot fail to become very numerous. In driving over the hills south of here I hear the cheerfull call of the male bird on all sides and sometimes see the broods feeding in the fields. This is the natural home of the quail. Food is abundant and the storms of winter are rarely severe enough to do much harm to the bevies. This season having been warm and dry has been an exceptionally favorable one for the birds. A good many ruffed grouse are coming to be killed about here, something that we have not been used to in this vicinity.—THIRTY-SEVEN.

"THE FOREST WATERS THE FARM."—By M. Antonin Rousset. Translated by the Rev. S. W. Powell (New York: Forest and Stream Publishing Company). With a wise understanding of the necessity of appealing directly to the land workers the French Academy of Arts and Sciences at Aix offered, some years ago, a prize for an essay on the general subject of forestry, which should be suited to popular instruction. "The Studies of Master Peter," of which the volume before us is a translation, was the successful work. It is a series of familiar talks between Master Peter, a practical farmer, and the village schoolmaster. The former at the outset has the "practical man's" distrust of a theorist, and carries on his side of the debate with much spirit, but, like all men of straw, is at last beaten in argument by his opponent's Socratic methods, and is converted and instructed. The evils of deforestation are strikingly shown, and the French Government's plan of replanting the hillsides is proved to be of ultimate and substantial benefit to the peasant. The translator's introduction tells with point and force the story of the fight with the lawless torrents of the Rhone, stating among other things, that the great Garonne Flood of 1875, by which 1,000 lives were lost, and damage to the extent of 300,000,000 francs was done, could have been rendered almost harmless by this work if it had been begun earlier and carried out more speedily. The headwaters of the Hudson and Mississippi need protection as well as those of the Rhone and the Garonne, and no better treatise on the subject of forest preservation and restoration could be put into the hands of those who should be forced to recognize the importance of these measures.—*Christian Union.*

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

WHERE BOSTON ANGLERS FISH.

FRESHETS in the Maine and New Hampshire lakes and rivers are the rule this year. The daily papers are again full of accounts of a great rise in the waters of New Hampshire, and the last reports tell of higher waters in western Maine. All this means catching trout to the sportsman who is fortunate enough to be there just as the water has cleared and begun to fall. The freshet sets the trout in motion, and they bite vigorously as soon as the roil has settled and the waters are calm. The record of freshets in the trout waters of New England is a most remarkable one this year. There is likely to be a little fishing for the vacationist, provided he knows enough to catch the wily trout.

Some of the long-time sportsmen of Boston are seeking new spots—not willingly all of them; business compels them to take what they can get. Mr. Daniel Gunn, a veteran sportsman, and a warm friend of the FOREST AND STREAM, has been so closely tied to his printing business for the past three or four years as to be deprived of his annual trip to the Maine lakes. But every year his rods have been looked over as fondly as the veteran sportsman only can look them over, but circumstances have kept him at home. Last year he was a member of the Legislature, and the late session on Beacon Hill kept Mr. Gunn in Boston till the best of the trout season was over. But this year circumstances have begun to favor. Business called our friend to Pictou, Nova Scotia, and he took those fish rods with him. At Pictou he hired a team, and driving across a most pleasing country to the lover of nature, he reached Country Harbor, famous for its sea trout. Here he found them—the trout, of course—waiting for the tide to permit them to pass over the bar and up the river. He put on a red fly, according to instructions, and in his own words, "I didn't need any other." The sport was rare to the lover of the fly-rod. The trout were brought to the net after a deal of such fighting as the sea trout only is capable of. They ranged in weight all the way from ½ pound to 3 pounds. Mr. Gunn is greatly pleased with his excursion. I met him on the street a day or two ago, looking better for his outing. He grabbed me by the hand, with the exclamation, "I've gone and done it!"

"Done what? Been a-fishing, I suppose?"

"Y've hit it the first time! I knew you would."

And then he stopped me—most willingly on my part—till he had given me the above account.

A couple of Boston sportsmen—I am going to call them sportsmen, though they are still novices, but they have the love of nature and the right ideas—have just returned from an enjoyable excursion, and altogether somewhat of a new one. They left Boston by steamer for St. John. At St. John they took the train for a beautiful ride to Andover or Tobique, at the junction of the Tobique River with the St. John. At Andover they hired Indian guides at $1.50 per day including canoe, for a long trip up the Tobique to Tobique Lake. The distance in some 70 or 80 miles and it took seven days, on the water all the daylight, to reach the lake, but the run down the river was made in only about two and a half days. They describe the river as a grand stream at the start, but before the lake is reached it narrows down so as to be spanned by a fallen tree, which had to be walked around, and the canoes lifted over. The scenery they describe as grand in the extreme. The country is rough and mountainous. The borders of the rivers are all red sandstone, and in some places the cliffs are more than a hundred feet high above the water. But at the same time the river is wonderfully free from falls or rapids that have to be carried around. Only on one or two occasions were they obliged to leave the canoes by reason of rapid water, though it often took the full strength of the stalwart Tobique or rather Mirimachi Indian to force the frail craft up against the current.

As soon as they had passed the mouth of the Wapskehegan (I have spelled this name according to one atlas, but another has it differently) they begun to catch all the trout they desired. They rose freely to the fly; rather smallish fish for the backwoods, ranging from half a pound to a pound and a half. The river is wonderfully crooked. At first it runs a little to the east of north, and in this way generally for forty or fifty miles, when it turns abruptly and runs to the east for some twenty miles. Then it breaks abruptly to the right again and runs almost due south for some twenty miles more into the lake. At the lake they found rare fishing, but no very large trout. They were told that the larger trout could be taken in the spring by trolling or with a sunken bait; but they went as fly-fishermen, and did not try the bait. The lake is also called "Trousers Lake," from the fancied resemblance to a pair of pants. The legs of the trousers are some six miles long, while the body makes up a good-sized body of water. At the lake the young sportsmen—I will give their names right here—Mr. Henry Savage and Mr. W. P. Tenney, both well known in the coffee trade of Boston—found the trout to rise very freely to the fly, but they also found some difficulty in hooking them. All this is explained to the older fly-fisherman when it is remarked that the boys had never till on this trip had the pleasure of catching trout with the fly. On the downward journey to civilization—at the lake there is not a house within fifty miles—at the mouth of the Wapskehegan, they met Bishop Neally, of Portland, Me., and a Mr. Johnson, of Lewiston, both for salmon bent. But up to that time they had the luck that has usually come to the salmon fisherman in New Brunswick waters this year. The boys themselves caught a few small salmon.

In September the young men are determined to try the same river again. The trip they pronounce a cheap one, and the woods are full of game, moose, deer and caribou. They saw moose tracks and deer tracks, while the caribou are pronounced very plenty by the Indian guides. They assured the boys that they could get three a day in the winter, but the boys don't care for that kind of hunting. The Indians are noted crusters of moose and deer. It is the idea of these young men that it is about all the meat they get. It is also certain that these same Indians have caused the Maine Commissioners trouble enough by coming over the border and crusting moose and deer. But the government of the Province is after them. The Indians are good with paddle, but they are poor still-hunters, and as for moose calling, why, the best of them that the boys saw declared that such a thing was almost impossible; that only one had been killed in that way for a long time. When the snow is deep they follow up moose and kill them with a shotgun or revolver. Partridge and ducks the young men found to be very plenty, the former tame enough to be knocked over with sticks. In attempting to make a portage alone the young men were lost in the woods for a time, and they had nothing in the shape of food with them. They had begun to make up their minds to "take a beeline" for the river, which they were sure that they could reach by following a certain course for forty or fifty miles, but the question of food came up. After they had found the trail and got to camp they told the Indian guides of their resolution, with nothing but the want of food hindering them. The Indians coolly suggested that they might have knocked over partridges enough with stones to have kept them from starving. But the boys have hardly seen the possibility of obtaining food in such a precarious manner yet. Perhaps the trip this fall will show how it is done. It may be remarked that the Tobique Lake may be reached by a much shorter way by taking the Wapskehegan to its source, and then over a carry for 12 or 15 miles to the lake. SPECIAL.

MEMORIES THAT DO NOT FADE.—II.

WHEN I began writing these reflections of my early experiences in sporting life, I had promised myself to relate how I had succeeded with the various kinds of fish that abounded in the waters of the beautiful Connecticut, on whose banks I spent my early life. I thought of the yellow perch, pickerel, roach and striped bass (we had no black bass then in that vicinity), the bullheads (or horned pout, as they were sometimes called), ugly-looking things when caught, yet divested of their jacket and fried crisp and brown in pork fat, they are sweet and delicious fish. Then there were the suckers I used to spear (they seldom drew a hook into their round mouths) in a pool near the apron of the old gristmill wheel. Sacred old mill—it is silent now, moss-covered and crumbling, but would bring me many sweet memories could I visit it again, though the pleasant and good old man who guided its motions has long since passed beyond the veil. The shiner was there, combining the beauties of the silver and gold fish of the present day; and the eel which used to get my line into a fearful snarl, when I was so unfortunate as to hook one, for I could not get the hook from his mouth until I had killed him, a task not easily performed, as they are as tenacious of life as a turtle or cat; but the way to catch them is with a "bob." Did you ever go bobbing eels? if not you have lost lots of fun. Do you know how to do it? Fasten a broom splinter about six inches long to a strong linen thread; dig a panful of the largest and toughest angle-worms you can find and string them from end to end until you have two or three yards of the string filled, or rather until you have two or three yards of worms filled with string; then loop them together until you have a ball about the size of a goose egg, through which you fasten your line and sinker. Select a moonless evening, anchor your boat in about six feet of water, where the bottom is soft and oozy, and you can haul them up and drop them into the boat until you get tired of the fun, which is heightened considerably by having three or four girls in the boat, for the eels will not keep still and the girls cannot. This may not be artistic sport, but as I remember it, it was honest, homelike fun.

These and many more things, as I have before said, I had promised myself to rehearse, but my brother Yankee and piscatorial friend "C. L.," in his admirable article in your issue of the 14th inst., entitled "Pioneer Fishing," has taken the wind all out of my sails by going over much the same course I had marked out, and that too in a more interesting manner than I could have done. In referring to his article he will allow me to say that the dace he caught on the Potomac or its tributary must have been a better fish than the dace I caught in the Connecticut, for those were a soft and inferior fish, making good pickerel bait, but only fair eating when cooked soon after coming out of the water. My trout fishing was confined to small streams and usually small trout; there were no lakes containing trout, and as the streams were small and generally shut in by thickets of brush and trees, I never succeeded well with the fly, but often used it, putting a lively worm on the hook, making a sort of double attraction. Perhaps this was not the strictly scientific way of doing it, but it usually won.

Some of my amateur readers may wish to know when fish will bite best, or perhaps strike is the proper word, but we used to call it bite when the fish meant business and nibble when he was prospecting and fooling around the hook. In tidewater both salt and fresh, from half ebb to half flood is the best time to wet a line; but as a general rule (without wishing to seem witty) fish in small and large streams will bite best when they are hungry; this will occur when the streams are not swollen by floods, which stir up the beds and wash the banks, thus releasing worms, grubs and other food which the fish readily get in abundance, thus satisfying their hunger and making your fly or bait less attractive. I heard an old saw in my youth something like this, "Go fishing when it rains so hard you cannot work out door," but I never found any advantage in fishing for any kind of fish when it rained very hard; a cloudy or misty day has the advantage of preventing your being so readily seen by the fish, and it is more comfortable fishing in open water, than on a clear bright day. Probably most old sportsmen have noticed, as I have, that fish will not strike or bite so well during a full moon, which verifies my saying, that they bite best when hungry, and having been aided by the light of the moon to feed at night, are enabled to spend their time as best suits them during the day, without hunting for a hook which they have not lost. For reasons before stated I will not encroach further upon your space, with this subject, except to say that like "a thing of beauty," the memories of my early haunts by river, brook and lake, are still a joy to me, and fade not.

A.

[As no two persons see the same thing in precisely the same way, so too, no two will review it alike; and "A." need not give over relating his reminiscences.]

CAMP FLOTSAM.—The old camp has driven new stakes, and we are on Muskoka waters. Reports of the fishing would send some of our friends to an asylum for the dazed could they but listen to them.—WAWAYANDA.

THE GHOST OF STANDING STONE—I.

MARCUS DARRONLAY stretched out lazily on the grass, looking dreamily down on the river and the hills and pasture lands that sloped gently to the opposite shore. The vivid green of the foliage sparkled like emerald, and darkened as the afternoon sun alternately glared down upon it and passing on left dark shadows behind. A sober, sedate breeze rustled among the leaves and quivered for a passing second on the smooth surface of the river.

Marc was thinking intently, and even the perfect beauty of the May afternoon was wholly lost to him. From time to time he glanced at a letter that lay beside him. The year before a sportsman from New York had spent a week at the village, and under Marc's guidance had landed many a nice bass and salmon, and had filled his basket over and over again with trout from the deep brown pools that lay far back in the mountains. When the train whirled him away swiftly toward the busy metropolis he promised Marc that he would not forget him. And he kept his word, for now here comes a letter inclosing an advertisement clipped from a New York paper. A Broadway firm wanted a large black bass to put on exhibition in their window. No ordinary fish would do. It must be a monster, a veritable king among bass, with a mouth so large that you could thrust both fists clear in. For such a fish they would give ten dollars. "Now," wrote Marc's friend, "here is a chance for you. There are some big fish in the deep water around your neighborhood, so try to get one uninjured and let me know and I will send you a tank, and tell you how to ship it alive to New York. There is plenty of time yet, so hunt out a good place."

Marc had gone up on the hill to his favorite resting place to think it over. Money was scarce with him, and the prospect of earning ten dollars was very dazzling. It was just what he needed, too, for then he could try canvas and paint, and build one of those dainty little canoes that every summer passed down the river and went on into the unknown and mysterious world beyond. He had examined them carefully and knew just how to make them if he only had the material. But how to get the bass—that was the question. The more he thought over it the harder it seemed, and finally his wearied brain, and the drowsy hum of the bees on the locust blossoms overpowered him and he fell asleep. He woke with a start as the afternoon train dashed into the little station just below him. Two or three persons got off, and one solitary passenger climbed up with a consequential air on the platform of the last car. Heads were thrust out of the window for a moment and then drawn wearily back. Two men in silk smoking caps came out on the platform and looked eagerly out on the river. One pointed out on the water and then jerked both arms up with an expressive gesture. "He's tellin' the other fellow about the fishing," thought Marc. "All aboard!" cried the conductor. Dong! dong! went the bell as the train moved slowly ahead and then with increased speed rumbled over the rails and in a moment disappeared round the curve. Marc waited until the shrill whistle echoed among the mountains as the train approached Wysauking, and then made his way slowly down the hill. He walked along the street until he came to the post office. The usual crowd of village idlers occupied the steps and empty boxes that stood in front. They imagined, perhaps, that they were waiting for mail, though within the memory of man not one of them had ever received a letter, with one exception perhaps, old Bill Jenkins, the veriest loafer in the village, who several years before, while sitting on his accustomed soap box, had actually been handed a long yellow envelope. Strange to say he disappeared that day, and the next week stepped off the train one afternoon radiant in a new suit, and a pocketful of loose cash. A relative up in Elmira had died and left him a little money. So every afternoon from that day each and every individual that gathered to see the mail come in, had a vague hope that some day he would be handed a long yellow envelope from the executors of some distant unknown relative.

Marc sat down on the corner of the long porch. Everybody was listening too intently to pay any attention to him. "Yes," Dick Fagan was saying, "it's a blamed outrage. These ere swells wot can't go fishing till summer make these laws so us poor devils let the fish alone for them. Ketch me a doin' that. I'll fish all I want to an' I'd like to see the Warden a stoppin' me."

"Yes," broke in Mose Peters, "an' Dick's senterments are just mine too. We've been a ketchin fish fur years, an' now this ere Warden comes along an' says, 'Stop! You cant ketch no more fish till the first of June.' How is he going to prevent it, I'd like to know."

"Well, see here," interrupted a quiet looking man, "jest stop and think fur a minit. In a few years, ef everybody fishes all the time, why there won't be any more fish at all. They'll all be caught. That ere is the reason them laws is made."

"That's so," said three or four voices.

"Oh, shut up! Don't give us any of your chaff, Parsons," said Fagan, "we all know—

"Hussss-h!" said some one, "here comes the Warden now."

A tall muscular man with a very determined face came up the street and with a nod passed through the crowd, and entered the post office. Fagan and Peters slunk off round the corner, and in a moment the rest, each impelled by a sort of guilty feeling, had scattered and gone home. Marc remained alone. Through the open door he heard the Warden talking to the Postmaster. "Yes, Mr. Watson," he was saying, "I know these laws are not understood at all. Some day the people will come to their sense, and see how valuable they are. I know they bear me an ill feeling, but I am only an agent of the law bound to enforce my duties; and let me tell you I'm going to do it too, if I have to drag these fellows off in irons to jail!"

"Yes! yes!" assented the Postmaster gravely, though only a few moments before he had indorsed with an approving nod the rather questionable opinions expresssd out on the porch. Then the Warden came out and with a sharp glance at Marc, turned up the street.

Marc sauntered off again. He had hardly formed any opinion on the fish laws, and at any other time would not have troubled his mind about it. But now it conflicted with his plans, and he must give up catching any bass for a week yet, when it would become legal. For although it would be easy enough to take fish home undiscovered, yet to capture a large bass, and keep it alive and finally ship it to New York on the train, was simply impossible. Within the last few weeks the Warden had been very vigilant tearing out fish dams, and keeping a strict eye on the river. "Well, at any rate," thought Marc, "I'll have a whole week yet to hunt out a good place." As he reached the station the evening train came thundering in, and in the excitement and turmoil he forgot all about the bass.

The next day he wandered far up the river keeping along the steep mountain side, where he could look down into the deep holes below. But the water was a little too cloudy, and he only saw one fish—a ten-inch bass that rose up on top and with a twinkle in his eye, gulped down a white-headed bumble bee that had preferred swimming to flying. Then a sort of mistrustful feeling seemed to seize him, for he rapidly opened and shut his jaws, and then with a frantic splash and a splurge of his tail shot down into the shadows.

Marc was thirsty so he went on a little further till he reached a spring that bubbled spasmodically from under a big stone and flowing a few feet ran over a rocky ledge sheer down into the river fifteen feet below. He leaned down and drank his fill of the ice cold water. As he rose he heard a familiar sound near him. Creeping to the edge on hands and knees he peered eagerly over. Just below with his boat tied to a projection on the rocky wall was Dick Fagan intently fishing. A string of bass hung in the water from the side of the boat and the fish tugged together at the restraining line. Suddenly Dick got a bite, and with a quick jerk hooked and soon landed another fish. As he put it on the stringer he picked up a small brown jug from the end seat, and pulling out the cork stopper put it to his lips and threw his head back. Then Mark heard a gurgling. Finally he put it down reluctantly, and wiping his lips resumed his seat in the front of the boat. He had his back turned to Marc and the jug was just at the foot of the ledge standing on the end seat. Marc pulled a fishing line from his pocket, and making a running noose, let it down. Twice he missed, but the third time it slipped over the neck and caught firmly. Gently and with a trembling hand he lifted the jug up until it reached the top, and then grasping it eagerly he hurried back from the edge and hid it behind a tree near the spring, and noiselessly crept out of sight. All the way home he laughed to himself at the thought of Fagan's consternation when he found the jug missing. In the evening he went down to the post office and found the victim of his joke surrounded by an attentive audience.

"Why!" he was saying, "That ere were the strangest thing as ever happened to me. I took a drink an' set it down mor'n half full on the seat. Then I started in a-fishing, an' when I pulled one out, an' got up to put it on the stringer, the jug were gone. So I run the boat down a piece an' clum up on the rocks, an' arter looking round a while I found the jug a-settin' up behind a tree. It jest beats me how in tarnation it ever got up thar."

"Only half full, were it, Dick?" asked old Mose suggestively. This struck a responsive chord and everybody smiled. "Waal now, Dick," he continued slowly, "are you sure as you wasn't dreamin'?"

"Dreamin'," said Dick, savagely, "Dreamin'! Do you suppose I could dream that ere jug up into the bushes? Here, Marc Darron, what ere you a-snickerin' at?" and Dick relapsed into a sullen silence broken only by moody puffs at his corncob pipe.

That romance was a little too much for even such hardened cases as his cronies, and Dick's persistent story was set down to an hallucination produced by the first half of the contents of the jug. The next time Dick and the jug went fishing, the jug was manacled by a stout cord and fastened securely to the seat. He was ignorant enough to be superstitious, and took extra precautions against the jug's being spirited away again.

One morning when the sun was still below the horizon, and river and forest had a ghostly unnatural look in the faint gray light, he slipped down by a short cut through the fields to the river, plunged into the fringe of bushes that skirted the shore, and soon emerged dragging a nondescript looking craft behind him. It appeared to be half-boat, half-canoe, but it rested gracefully on the water, and when Marc stepping in sat in the stern and plied his paddles vigorously, it shot out with a steady, rapid movement toward the opposite shore. It appeared to slide over the water leaving not a ripple behind, and so noiselessly that the bass leaping and plunging in the cool of the morning, actually disregarded it and splashed vigorously on all sides. Mark headed obliquely across and soon neared shore far below his starting point. Just skirting the upper end of a course of rapids that roared and foamed below him, he ran into a calm eddy and paddled up the mouth of a small stream coming down through a mountain valley, and by reason of the back water navigable for some distance up stream. But he only went a few yards and running in under a mass of overhanging bushes, leaped out and leaving the boat hidden there; then he started rapidly down the river, crossing the level space of meadow land at the opening of the valley, and entering a rugged winding path along the steep mountain side and in places running sheer down to the river. Walking rapidly for some time he suddenly stopped and plunging into the rocks and tangled mountain growth made his way down to the river and in a few minutes stood by the water at the foot of Standing Stone. The great rock towered far above him, gaunt and gray in the early light; and then while he stood looking up the first herald sunbeam announcing the day struck the broad side and peaked top, and scattering the shadows, illumined with its effulgence the scraggy irregular dent that tradition says was inflicted by a cannon ball, fired by Sullivan when he marched up the river after the massacre of Wyoming. On clear calm days when the sun reaches a certain point, a smooth black object is visible to the eye far down in the shuddering depths that lie out from the Stone, and the country lads row over the spot, and peering down with a sort of mysterious fascination, tell each other that there lies the identical cannon ball. The spirit of the past hovers round this old monument. Surrounded by river and mountain looking proudly across to the opposite hills and forests, it stands to-day as it has stood for centuries. The Revolutionary shadows that cluster round and with various historical epochs mark it for their own, are but an atom to that antiquity which has seen the sun rise and set upon its gray old head. Marc pulled himself up with the branches of a large pine tree that stood back on the slope of the mountain. Climbing twenty feet he found himself just opposite the top of the Stone and only a few feet distant from it. Reaching in among the thick branches he pulled out a stout plank about two yards long, and placing one end in a niche cut in the tree, he dropped the other end into a little hollow on top of the Stone, with a couple of quick rapid steps crossed the chasm and stood on top of Standing Stone. This was a secret device of Marc's. He had invented this plan of reaching the Stone for the purpose of excelling his companions in their efforts to carve their names on the highest part of the rock. His name was above all, but unfortunately it was upside down, and every time he saw it Marc laughed at his stupidity in spending a whole morning with mallet and chisel carving his name where no one could read it but himself. Many a fish, too, he had hauled up on the Stone, reaching down with a long line, and watching the bass and sunfish seize the bait and dash off exultantly to a sudden untimely end.

This morning the water was a little cloudy and not a fish was in sight. A turtle came up for air, but at sight of Marc bobbed down like a flash, and scurried away to his hole. An ugly brown snake passed down the river with his head erect and his long lithe body undulating in graceful curves behind him. Marc went back over the shaky bridge and down the tree. Among the stones on shore he found three small toads, and stowing them in his pocket climbed up again. He dropped the first one within a yard of the Stone; before it had gone a foot a plump bass gobbled it up and looked expectantly for more. The second one went down easier still. Marc threw the last one five or six yards out. The same greedy fish darted straight for it, but suddenly turned and slunk back into the shadows as a monster bass rose up near the surface and stood motionless under the struggling toad, gently waving its broad fins. Marc trembled with excitement. Never had he dreamed that such fish existed in the river. And then the fan-like tail moved quickly, the gleaming striped side turned for an instant to the warm sunlight, the spacious jaws opened with a snap and like a spring they closed on the shivering little toad. With a disappointed air the monster swam round several times and then sullenly glided off into the depths, waving his piratical black flag of a tail with a savage merciless sweep. Marc waited in vain for him to appear again. The toads were all gone too, so he reluctantly climbed down and started up the river. If he could get that fish the ten dollars would be his. And in a few days more the law would allow him to catch it if he could. But he had a very feasible plan in his head, and all the way up the river and across in the noonday glare he revolved it in his mind. That evening at sunset he was down at the Stone again and six more toads were consigned to an early grave. The first three were gobbled up by a couple of frisky young bass, but the rest fell to the lot of the monster himself who regarded it quite as a matter of course and snapped them up without so much as winking and then opened his jaws expectantly for more. The following day Marc fed him three times, and had now begun to regard him as his sure and certain prey. What would be easier than to slip down there in his boat early in the morning, anchor above the rock and drop his line baited with a lively toad a few yards below? There would be a splash and a jerk, but what if he should swallow the hook? That would end all hope of the ten dollars. But Marc was naturally hopeful and dismissed such gloomy forebodings from his mind.

That afternoon he had a scare. He was coming along the mountain path whistling merrily, and conjuring up in his mind pictures of the dainty canoe he hoped soon to own. The sharp click of rowlocks fell on his ear, and looking up, he saw a boat out on the river coming slowly down stream. The sluggish current barely moved at this point, and the occupants were fishing as they floated down. Marc recognized them at once. It was Fagan and Mose Peters. What if they should stop at Standing Stone? Marc turned back, keeping even with the boat which was still moving down yard by yard and seemed to his anxious eyes as it drew near the Stone to be fairly flying through the water. He was entirely concealed from view, and running ahead reached the Stone and waited. He was determined that no one should catch that bass. The boat came slowly on and gradually worked in shore until it was within a few yards of Marc, who, crouching down in the bushes, could hear every word.

"Here!" said Fagan, "pull in thar in the shade an' we'll rest awhile. The sun is mighty hot to-day." Mose ran the boat in shore close to the rock; and a large string of bass dangled from the side. Fagan picked up the brown jug which was fastened to the seat, and took a long drink.

"Here Mose," he said, passing it on; "take a swig; it'll do yer good."

Mose, nothing loth, applied his lips, and never stopped till the last drop had gone down his throat. Fagan stepped shaking out of the boat and threw himself on the ground. "Mose, you fasten that ere jug agen. If you don't we'll wake up an' find it a-settin' up thar on yonder stone. I don' trust nothin' nowadays."

Mose intended to tie the cord, but a drunken stupor came over him, and he sank down in a heap in the bottom of the boat.

In a moment both were asleep, and creeping down cautiously, Mose removed all their bait. "That fish is safe for to-day," he thought. Then his eyes fell on the jug. "I guess I'll make Dick's prediction come true," he said softly. All the way up to the village he laughed to himself. The consternation of Dick and his worthy friend can be better imagined than described when they woke up with the setting sun and saw the jug looking benignly down upon them from its lofty perch.

"This 'ere place is ha'nted for sure," said Mose, trembling in every limb. "Cum on an' git out o' here."

They hurried home, and that night related the story with such effect that a deputation of villagers went down the next morning to see the wonder. But to the indignation of all the jug was not on top of the stone, but far down in the water at the base.

Dick incoherently tried to explain, but they turned on him scornfully. "Shut up, you blamed fool. You was lookin' down the water all the time an' thought you was lookin' up in the air." Dick's stories had gone too far, and after that he suffered a sort of social ostracism for a while.

The next day the loungers at the postoffice had an exciting topic to discuss. Marc strolled down at dusk and found them all trying to talk at once. He touched a

long, lanky youth on the shoulder and pulled him aside. "Say, Jim, what's the matter?"

"Why, didn't you hear, Marc? The Warden, he laid for old Mose and Fagan this arternoon, an' while they was fishin' down near the Stone he put arter them in a boat an' run 'em so close they dropped a hull string of fish."

"Say, Jim," said Marc excitedly, "did—did they have any big ones on the string?"

"Any big ones? Waal, no; leastways none wuth talkin' about. There was one weighted mebbe two pound. I seen the Warden a-bringin' them up."

Marc heaved a sigh of relief and breathed easier. They moved up and sat down on the end of the porch. Old Abe Martin, the quoted authority of the village, had the chair, or rather the sugar barrel, and was discoursing to an attentive audience. "I tell you what," he was saying, "this 'ere's a goin' too fur. Two of our rep'table citizens a-ketchin' fish ter satisfy their hunger bein' set on and raced like a pair of thieves an' made to drop their fish. Ef that had been me, I'd a gone down thar an'—" Just then, as if to emphasize his words, the speaker went down, down into the barrel, in his rapid transit crushing flat against the sides five or six outstanding nails and landing plump on top of one at the bottom. He was dragged out by the heels amid a roar of laughter. He had lost the thread of his discourse, and at once began a tirade against weak and insecure barrels.

The night train thundered past, the light from its belching furnaces gleaming like a stray volcano in the black darkness, as Marc turned out the long street that led to his home. A couple of faint lights shone behind him, but in front the darkness was intense, and only by his knowledge of the path could he proceed at all. A light step in front fell on his ear, and instinctively he turned aside and crouched down by the fence. Two men were coming slowly along, and Marc recognized their voices. It was Fagan and Mose Peters. Said Fagan, as they drew near, "Bill Jones, down at the hotel, wants a lot of bass day arter to-morrow. We'll get 'em to-morrow night. We'll run down to the Stone just afore dark. Thar's some big ones round there."

Marc rose as they passed out of sight, and shook his fist at their vanished forms. "You'll fish down at the Stone, will you? Not if I can help it, you won't."

W. MURRAY GRAYDON.

HUNTING IN THE HIMALAYAS.

Lights and Shadows of an Indian Forester's Life.

X.

THE death of the man-eating tiger described in the last stray leaves from my diary* relieved my mind from a great strain. Shooting generally, whether with rifle or shotgun, constitutes the principal recreation of a forester and can be indulged in to any desired extent without interfering with official duty. If the camp were moving daily game could be found on the way; if the camp was pitched for a few weeks there was work in progress within three or four miles which might be inspected daily, and this afforded sufficient excuse for getting out the elephant; but the man-eater was always in the east when one wanted to go west, and the pursuit of him had been too engrossing to admit of proper attention to other matters. My work had been, to a certain extent, neglected, and was now taken up with renewed energy.

On my way back from the Ganges to the Ramgunga, I went south of the line to the settled districts, and coming unexpectedly on the timber yards of the merchants who had contracts in the forests, got ample evidence to show that the Government was being defrauded of four or five thousand dollars annually, which was divided rateably among the native officials. I worked the case up carefully, took the confessions of the merchants one by one and made them sign them, and got up so clear a case against my sheristidar and the superintendent that they attempted no denial; but after all, what was the good of making scapegoats of my men while the system was universal in every department of the Empire? My chief was rather annoyed to find the evidences so conclusive, and the outcome of it all was the sheristidar got six months leave of absence to enable him to get an appointment in another department.

At length after about a week's march we reached the bungalow on the Ramgunga, where matters looked a little like business. There was my unopened English correspondence, the accumulation of a week, and a still heavier budget of vernacular correspondence; and in anticipation of my arrival there was such a crowd of workmen around the bungalow that I concluded a general strike was in progress. Sawyers, bamboo cutters, river clearers were all there to the number of several hundred men, wanting my decision on many points. It was no fault of Charley's that they would not do just what he instructed them. The natives of India always go to the final court of appeal.

We gave audience to the Khansaman first, and breakfast disposed of, the contractors were admitted, and after a free discussion, which lasted until four in the afternoon, they all went away satisfied.

This business settled, Charley and I took our rods and strolled some three miles down river. The channel had been cleared to within a mile of the outlet from the hills, but the road passing a hundred yards or so above the stream, I had been unable in the morning to see what sort of a job had been made of it. It showed better than I expected. There were so many large holes requiring no clearance, and in many of the intervening necks the removal of a score or so of big boulders and a few hundred smaller ones created such a good passage that I saw there would be no difficulty in getting out our timber. Charley reported that he had been down stream to the workmen only a few days before, and that there was no impediment in the channel anywhere. So, before the sun had fairly disappeared we got out our rods, and while Charley cast a fly I went ahead with a gold spoon bent on. Charley soon had a big fish on, as I judged from the way his line ran out and the curve of his rod, and I was about to lift my spoon when I struck a fish of 5 or 6lbs., which came to grass in as many minutes.

I then started leisurely for Charley, whose fish was taking him down stream, but I very soon had my own business to attend to. I struck a fish which went away for about fifty yards, when he paused, and taking a leap in the air, let me see that I should have enough to do to land him before dusk. This time he came at me, and kept me actively winding, until he was about ten yards of me when away he went down stream again, out of the hole and down the rapids. As soon as he slackened I put on the strain, he got away again after a little, but I had strong tackle and let him strain all it would bear, walking down stream after him. As he glided into the next hole, he gave up tugging, and winding in as I walked toward him, I soon had him in hand, and might easily have hauled him up a gentle slope, but the bank was a foot above water, and I had to summon my chuprassee with his landing hook. He made a miss, and away the fish went again, showing more fight than I thought he had left in him, but the next time he was very tractable, and taking the landing hook, I inserted it deftly in his gills, and drew him out, a good twenty-pounder.

It was now getting dark, and there was still no sign of Charley, who had disappeared round a bend in the stream just as I struck my last fish. I cooied, and to my dismay the reply came from nearly half a mile down stream. Our only attendant was with me, and putting up my rod and taking the rifle from him, I bade him take the fish and follow. In about a quarter of a mile I got a glimpse of Charley coming toward us, but with no fish. "It was the biggest fish I ever saw in the river," said Charley as he came near, "fifty pounds if he was an ounce. I had the landing-net under him, but he was too big to get into it. At last I got it over his head, got hold of the handle with both hands, and was just lifting him when you cooied, and the same instant away went the fish, smashing the rod first and then snapping the line." I showed him my big fish, which he said would have made good bait for the one he had on.

We climbed up to the road. There was a good starlight sky, and in little odds of half an hour we had reached the bungalow without adventure.

The next morning I had a letter from an old friend, Colonel W., telling me that he could get ten days leave and the loan of a couple of elephants, and asking when it would best suit me for him to bring a friend, a Capt. S., along with him, and what they should bring. I responded promptly that I wanted four clear days to work up arrears of office and monthly reports and accounts, that I had good bread and beer and venison, and the flesh of the "unclean," but as to mutton and turnips and such like delicacies of civilized life, I had none, and that if he and the Captain could not put up with jungle fare they would have to import their own luxuries.

SHIKAREE.

*See FOREST AND STREAM Oct, 7, 1886.—ED.

WORM AND FLY.

Editor Forest and Stream:

When I get home from my office this afternoon I expect to find the FOREST AND STREAM for this week awaiting me, and, unless the warm weather has affected the recent cord, pinhook and bait boom, another article upon the inefficiency of fly-fishing and the delights of "yanking 'em out." Of course there will be one or more about the best sort of cannon to use in hunting, and on that subject, or rather as to the use of a rifle in hunting, I have a half finished letter somewhere about my table now, which I will send you when I look it up and complete it. What I write for now is to say that I wish to be put down fairly and squarely as an advocate of the fly and a disbeliever in the boy with a pole and cord. I have been fishing for trout for over thirty years, first with bait, used always on snooded hooks, but sometimes with a cut pole, oftener with a rod; afterward, from 1857 on, for ten years or so, with fly or bait, as I happened to fancy, since that, with fly only, and the result of my observations may be put thus: Where the traditional or actual native and I fish together with bait I can beat him all to pieces, because I have better tackle and know twice as much about the business as he does. When he uses bait and I flies—I mean, of course, when it is possible to fish with a fly, not when the water is too high or the brook so small and buried in laurel or other underbrush so as to prevent the use of a rod—I can always catch as many, and in a majority of cases many more than he. I consider the boy with a pole and cord, who can catch fabulous numbers of trout while the poor fly-fisher gets none, an unmitigated humbug. There is no such boy. If there is he must dwell in the mysterious region where lies that "other creek," where the fishing is always "a great deal better than it is here;" but who ever gets to that stream?

CECIL CLAY.

WASHINGTON, D. C.

FARMER BROWN'S TROUT.

Editor Forest and Stream:

It is not my intention at this time to express an opinion as to the most likely place to find bristles, whether on the back of farmer Brown or the sportsmen who captured his fish, but to call the attention of your readers to the doings of a member of the Worcester Sportsman's Club that savors strongly of pork. There are several good fishing ponds within an hour's ride of our city that would afford ample opportunity for enjoyment to the lovers of the rod, whose business will not admit of their going far from home, were it not for the much-to-be-regretted fact that a gentleman whose name appears on the membership roll of the Worcester Sportsman's Club has for a few dollars or by some other means obtained permission to post nearly all of these ponds, or at least those most easy of access where the fishing is good for anything.

A club whose aim and object is to create a love for a pastime that is innocent and health-giving, whereby men are led to steal a few hours occasionally from the vortex of life's never ceasing round of toil and worry ought to be the last to countenance such selfishness.

Farmers as a rule are neither parsimonious nor discourteous. I have respect for the man who posts his land in self-protection against the wanton carelessness of the thoughtless hunter who, if he sees a rabbit go into a wall, will pull it down, or who will leave the bars down, when the cattle enter and destroy the cabbage, but none whatever for the city gentleman who is so devoid of those principles that go to make up a true sportsman, that in order to gratify his own selfish nature he will debar others the privileges he would have accorded to him, and then take a morbid satisfaction in telling the "boys" how many pounds of pickerel he has taken of a morning before breakfast.

Every man has his pleasures. To some it is in tossing a penny to a beggar; to others it is in erecting high fences around their gardens lest the winds of heaven should waft a breath of sweet perfume to the nostrils of a passer-by.

Let me tell your readers why a Worcester county farmer has posted his brook this summer. The story may seem incredible, but we have it from the farmer himself, and will give it in his own words: "Two men came out here from Worcester to fish. They put up their team in my barn, fed my hay and grain, and when they came up to the house to go home, called for some mik and a pie. We happened to have a pie on hand, and carried it out to them. After returning the empty dishes, they got into their buggy and drove off without even a 'thank you.' If that is a specimen of your city sportsmen, I will be hanged if they shall fish any more on my place." One of these parties is a thorough gentleman, and could not be hired to do such a thing, and his mortification can be more easily imagined than expressed, when he subsequently by mere accident learned that the two-dollar bill that he put on the empty pie plate for his companion to carry into the house found its way into that individual's pocket instead of into that of their host.

FRED.

WORCESTER, Mass., July 22.

BASS IN BAY OF QUINTE.—Bellville, Ont., July 23.—There are plenty of big black bass in the Bay of Quinte this year, and they are just beginning to bite freely. A week ago Mr. M. D. Ward caught one that weighed 4¾lbs., and yesterday Mr. Wm. Ormond took, among others, four which weighed 3½, 4, 4½ and 5¼lbs. respectively. There is no guess-work about these weights, as the fish were weighed on a correct scale in the presence of witnesses.—R. S. B.

Fishculture.

THE NEW YORK OYSTER COMMISSION.

WE have the second report of Eugene G. Blackford, Commissioner of Fisheries, in charge of the oyster investigation and of surveys of oyster territory for the years 1885 and 1886, dated Jan. 20, 1887. It is full of interesting material, and is fully illustrated with artotype plates of oysters in different stages of growth, and of their food, together with a map of the shellfish territories of the State of New York, showing the natural growth beds and the triangulation and surveys on planted beds as far as the work has gone.

The investigation has been conducted with a view to ascertain, first, the facts as to the decrease in the number of beds of oysters of natural growth in the waters of the State; secondly, as to the cause of such decrease; thirdly, as to the methods to be used to increase the supply; and lastly, as to how the planting of artificial beds can best be encouraged.

The delay for presenting the report of 1885 was occasioned by the death of Prof. Henry J. Rice, who was in immediate charge of the work, and whose sudden death left a great deal of unfinished manuscript. It is noteworthy that the result of the investigation has shown that there is a decrease in the supply of oysters in State waters, which has resulted from the depletion of the natural growth beds by excessive fishing, and by the pollution of the waters of the bays and sounds near the city of New York, and also by the lack of scientific culture of the planted beds. The damage done by such natural enemies as the starfish, the drill and the winkle, has been small compared with the above causes.

The experiments in oyster hatching at Cold Spring Harbor by Mr. Fred Mather have been conducted with entire satisfaction and success. The fact that oysters can be successfully propagated artificially has been clearly demonstrated, and the report of these experiments is given in full and have appeared in our columns.

The report of Mr. W. G. Ford, Jr., engineer appointed to make a survey of the oyster territory, will be found of great value to oystermen. It was necessary before any sale of lands under water could be made, that there should be a careful survey of the beds of natural growth, in order that they might be set apart and preserved as the law requires. Mr. Ford has done his work thoroughly as far as he has gone. The methods of surveying lots was as follows:

Suppose a given lot is bounded by four sides. The boat was placed over each of the four corners, in turn, and held in position while I took a number of sextant angles between the triangulation points I had already determined on shore. In this way each corner was determined independently of the others, and it made no difference how many corners there were. Just before leaving a station we bent a tag to the stake, of which the following is an example:

NEW YORK OYSTER SURVEY,
80 Fulton Market, N. Y.

Cor. No. 39A.
Owners:
ELMER DECKER, N. E. Cor.
TOTTEN & HOPPING, S. E. Cor.
E. P. MANEE, S. W. Cor.
SHERMAN DECKER, N. W. Cor.
Date, *August 23, 1886.*

And on the back, "Owners will please send word to the office whether this is correct or not." This saved an immense amount of time, for it was impossible to arrange it so that neighbors would always be present, when their lots were surveyed, as one man might own half a dozen lots in different parts of the Bay. For instance, if Black and White were neighbors, and I surveyed Black's property first, when I took White out it was only necessary for him to verify the tagged stake and pass on to those not common with Black. In some cases a man's property was surveyed by his neighbors having designated theirs on all sides, in which case it was only necessary for him to write to headquarters that the designations were correct.

There is some magnificent land available for oyster culture in different sections of the waters of the State, and comparatively little of it is in use. There are many places in Long Island Sound where it is only necessary to throw in shells in order to get a fine set, and the beds thus sown will produce in a few years large quantities of marketable oysters. In talking with oystermen Mr. Ford found that many would avail themselves of this territory had they the assurance that their interest would receive the proper protection and the lands made valuable by their labor would not be taken away from them. In marking out the limits of the natural beds I have followed your instructions, to give benefits of doubt to the masses of poorer classes of oystermen.

The area of the natural beds is fifteen thousand five hundred and eighty-six (15,586) acres. Area of lands available for shellfish cultivation, three hundred and ninety-three thousand six hundred (393,600) acres.

The report of the food of the oyster and of the fresh and salt-water diatoms found in them, by Mr. Bashford Dean, instructor in biology in the College of the City of New York, is a very important paper and will repay careful perusal. Mr. Dean made analyses of quantitive rather than chemical qualities of waters from different portions of Long Island,

and discusses the influence of weather, temperature and locality on the fattening of oysters in fresh water, and other interesting questions.

The report of Mr. Joseph Mersereau, oyster protector for the six months ending Nov. 30, 1886, is given. He treats of the dumping of garbage in Long Island Sound and of his arresting some of the captains of tugs for this offense, and also of the dumping of sludge acids and other refuse from oil refineries, which has become not only a source of great injury to the shellfish and other fishes of New York Harbor, but is also a source of great annoyance to yachtsmen. Samples of water containing refuse matter from the oil works were obtained, which, together with a sworn complaint in each case where it could be traced to its source, caused the Grand Jury of Richmond county to indict several parties charged with these offenses. Three of these cases have been called for trial, the parties pleading not guilty, with the proviso that they might amend their plea and plead guilty, if so disposed, at the next term of court in February.

Newtown and Gowanus creeks, North and East River water fronts of New York city and Brooklyn have been visited and the pollution of the water at different points noted. There are now on hand forty samples of refuse, and on each it is expected to make complaints in the near future.

The following is an extract from certain affidavits made by Garret P. Wright, Jacob I. Housman and William H. Van Name, who are among the largest oyster planters and wholesale dealers doing business at the foot of West Tenth street, New York city, viz.: "Whenever the oysters pass through this film or scum, in being put into or taken from the floats, the shells get covered with the scum and smell of kerosene, and in the process of opening the oysters are spoiled by getting a kerosene taste. I have taken oysters to market and had them complained of or refused on account of this smell and taste, and the oysters from Port Richmond may have gotten a bad name for this reason. If the soiling and covering of the Kill Von Kull with this scum or film continues, I believe that my trade will be broken up or that I shall be obliged to go elsewhere to practice it."

Concluding this report Mr. Mersereau says: "In respect to the emission of sludge acid or other refuse matter from the oil refineries located on the Kill Von Kull and Staten Island Sound (Arthur Kill), I have to say, that the offense proceeds from establishments located on the New Jersey side of said streams. I would therefore respectfully suggest that an effort be made to bring about a conference between a committee to be appointed by the Legislature of the State of New York, and a committee to be appointed by the Legislature of the State of New Jersey, to the end that each State enact a law of the same tenor and purport, to effectually eradicate the aforesaid evil."

Taken as a whole this report of Mr. Blackford's forms a most valuable addition to the literature of the oyster, and deals with questions to which little attention has so far been paid, but which will surely claim the attention of enterprising oystermen in the future.

MASSACHUSETTS LOBSTER LAW.—There has been much dispute about the proper way to measure lobsters to determine whether they come in the 10½in. length. By an amendment of the law, passed at the last session of the Legislature, the mode of measuring is made definite. Section 84 of Chapter 91 of the Public Statutes is amended so as to read as follows: "Whoever sells or offers for sale or has in his possession a lobster less than 10½in. in length, measuring from the extremity of the bone projecting from the head, to the end of the bone of the middle flipper of the tail of the lobster, extended on its back its natural length, shall forfeit $5 for every such lobster; and in all prosecutions under this section, the possession of any lobster not of the required length shall be *prima facie* evidence to convict."—F. R. SHATTUCK, Dep. Fish Com'r State of Mass.

ADULT CARP FOR STOCKING.—We often have inquiries for adult carp for persons who do not wish to wait for the growth of the small fish distributed by the U. S. Fish Commission. Once in a while we hear of a few being offered for sale, but they are usually bought at once and that is the last of it. It would pay those who have them in quantities and can furnish them from one to two pounds' weight, to advertise them.

FIXTURES.

DOG SHOWS.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

AMERICAN KENNEL CLUB METHODS.

Editor Forest and Stream:

If there is a trifling error, as claimed by Mr. Elliot Smith, in my letter in your paper of June 30, there certainly is a flagrant one in Mr. Smith's communication in reply thereto. Mr. Smith claims that it was none of "Wacouta's" business what he (Mr. Smith) ruled or did not rule at a meeting of the A. K. C. In other words, because I am neither a delegate nor even a member of a club belonging to that august body, the A. K. C., whatever it does or leaves undone is none of my business.

In this respect Mr. Smith is in error; and if there be many of the delegates who hold the same opinion as the president, it is small wonder that they act as they so often have done when sitting as a court of inquiry or of appeal. As a breeder and an exhibitor it necessarily is a matter of concern to me what the A. K. C. does or does not do. Mr. Smith seems to think that whatever a majority decides to do is right, and the result concerns no one else but the parties directly interested. On the contrary, every exhibitor in the country is interested, and every exhibitor has a perfect right to question any decision that appears so flagrantly wrong as the Beaufort-Patti M. case.

In the letter that Mr. Smith objects to I stated that I was informed that Mr. Smith ruled there would be no objection to the change of proxy. I am sorry that I was misinformed on the subject, but at the same time surprised to learn from Mr. Smith that he considers it no concern of his at all what was done with the proxy or who held it. I said that Mr. Smith's approval was not the only necessary thing. Mr. Smith says his approval was of no consequence at all—that it did not matter to the A. K. C. who held the proxy. If so, then the A. K. C. and its president hold queer notions as to what is customary in such bodies. Such a statement must have been made by Mr. Smith in a moment of irritation at being criticised, for he must certainly know that it was the duty of the meeting to see that every vote cast was a qualified one, which includes the duty of seeing that the delegation of the proxy was authorized, for if not authorized such a vote cast would invalidate the entire proceedings of the meeting. Mr. Smith's presentation of the case would imply that he considers himself, as president of the A. K. C., merely a figure head, for he says it was none of his business how the proxy was transferred or who held it. Furthermore, I did not claim that Mr. Vredenburgh was not entitled to vote at the December meeting. I said he was not entitled to vote at the last meeting. In December Mr. Vredenburgh held a proxy, in May he did not, and the fact that he was qualified at the December meeting gave him no power to move a reconsideration at a meeting where his functions were purely of a clerical, not a representative nature.

It would appear strange to any one not posted on the methods of A. K. C., that the president, when he made a ruling, notwithstanding that it was correct in its effect, or any other of the delegates, never caught on to the nonsense propounded by Mr. Munhall when he gave as a reason for his motion the point that officers were not allowed to vote upon proxies, he giving Article IV. of the constitution as authority. Of course it is highly improbable that such a thing as a copy of the constitution would be found at a meeting of the A. K. C., but had there been a loose copy lying around, any of the delegates having curiosity to look at Article IV. would have found that it said nothing about proxies. What it does say is that officers shall not vote upon business before the executive committee unless regularly elected delegates from their club. It necessarily follows that any one entitled to become a delegate is fit to hold a proxy.

But what is the use of going more fully into the details of this folly any more. This final reconsideration will, no doubt, settle it in a proper manner, notwithstanding Mr. Richard's ridicule of Mr. Drake's manly way of moving for a reconsideration as soon as he saw the true state of the case, for as Mr. Wade justly remarks, "there is good material in the A. K. C., and I think there is enough of it to leaven the whole body in the future." It is to be hoped so, at any rate, for if the A. K. C. fails what indeed is to take its place? If there be no central body with jurisdiction over show matters, or that can sit down upon the knaves and the fools, dog showing will be at the mercy of little cliques, and showing dogs will become a farce if there be no authority to prevent fraud, misrepresentation and trickery. WACOUTA.

ST. PAUL.

Editor Forest and Stream:

Mr. Watson's digs at me in yours, 14th and 21st, call for short replies. The Sans Souci opinion is "famous" because "Porcupine" has constantly referred to it in inverted commas. As to the opinion itself I refer the case to your readers, as it was published in FOREST AND STREAM of Sept. 30, 1886, and ask them to read it dispassionately, and find fault with it if they can. Don't go off at half cock with the impression that it means this, that or t'other, but take it for just what it says. I never said aught in extenuation of "incorrect" descriptions; I maintain that "incomplete" descriptions should not disqualify; the difference is so broad and palpable that it does not need pointing out. On the proxy transfer I have nothing to say, as that belongs to "Wacouta," and that noble savage has a scalping knife of his own and knows how to use it. I am sorry that Mr. Smith got so far off the track on this point. I am not and never have been Mr. Smith's apologist, but I can say, and prove that he publicly expressed his opinion that Mr. Mason was entitled to the Waverly special. Put that in your pipe and smoke it! I do not propose to undertake any such job as Mr. Watson gives me, but can say that the correctness of the Pittsburgh catalogue was entirely due to Mr. Whitman. Does Mr. Watson suppose that it was evolved from "100 cents on the dollar?" I know that Mr. Whitman changed the entries from the way the exhibitor made them, in one case, wrongly as I think. But the idea that Mr. Whitman's accuracy proves that the rule is comprehended by the public generally! And this in an article showing up the blunders of the A. K. C.! Well, well, well!

Now just take this identification rule: It prescribes that the dog must be identified by name, and if known, date of birth, name of breeder, name of sire and dam, and that if any of these are not known, it must be entered as "pedigree unknown." Mr. Watson's point is that the most trivial failure to comply with every minutia of the rule must work disqualification; that a rule that requires inference as to its meaning must be administered with the most Draconian severity; I dispute; I maintain that where the obligations and directions of the rule are not clearly and unmistakably pointed out, the spirit of the rule must govern in the application of penalties. On this point I appeal to such dog-showing lawyers as Messrs. Peshall, Dudley, T. B. Dorsey, McKennan, etc. (I do not include Mr. Smith, as Mr. Watson might deny the authority.) Now what is the spirit of the rule? Does it not plainly point to the securing of plain and sufficient identification of the dog, so that there can be no evasion or deceit as to its identity? And do not the name, date of birth and names of sire and dam, clearly establish this without name of breeder? Or are we justified in haggling over every letter of the law, and casting its spirit to the winds? Remember that a majority of exhibitors know but little of dog show rules, and characterize, if you can, the justice of punishing them for the most trifling omission.

My dear Mr. Haldeman, "Let us proceed to business." You are the prosecuting attorney, please state your case and name the instances wherein the A. K. C. has deliberately and purposely gone wrong since the days of "construction," "hole in the wall" meeting and "setter standard." I maintain that the following clubs can always be relied on to go right (right in intent, if they do make mistakes), viz., New England, New Haven, Hartford, Providence, W. K. C., Hornellsville, New Jersey, Philadelphia and St. Paul. Detroit has not yet fully shown its hand. For the wrong may always be counted Pittsburgh, Cincinnati and Cleveland. Nine to three, with one not proven, although the expectations of those who know Mr. Newberry are all in favor of his right course. Cannot such a roster be trusted to mean right and do right on the average? I may say that the very worst episode of the Beaufort-Patti M. case is the last, in Mr. Munhall's motion to have the reconsideration laid on the table. This out-Herods Herod. The only honorable course to effect this end is a voting down of Mr. Drake's motion, but to smother it under the table! Great snakes! I have complete confidence that it will be rejected by an overwhelming adverse vote, for its adoption would sound the knell of the A. K. C. It will be instructive to note the votes in favor of this burking dodge. W. WADE.

HULTON, Pa., July 23.

WAVERLY SHOW.—New York, July 21.—The New Jersey Kennel Club claims the dates Sept. 20, 21, 22 and 23, 1887, for holding their fourth bench show. This show is to be held in conjunction with the New Jersey State Agriculture Society's fair at Waverly, N. J.—PERCY C. OHL, Sec'y Bench Show Com.

MASTIFFS AT THE KENNEL CLUB'S SHOW.

BELOW will be found the comments of the judge, Mr. M. B. Wynn, upon the mastiffs at the recent show of the Kennel Club, which we copy from the *Kennel Gazette:*

"Thinking of Ranelagh as I sit down to write, I may say with Virgil,

Sævitque canum latratus in auras:

The challenge class for mastiff dogs contained collectively the highest merit. Of Beaufort, the winner, we shall have to mention further on. He was not only a long way the best all-round specimen in the show, but is perhaps the best mastiff at present in existence. Montgomery begins to show signs of having had his day, but just won the second place by his typical head. He is a better mastiff, but not so good a dog as the well-grown Victor Hugo, who shows too much of the boarhound, and is too long in head to be typical; nevertheless is a grand specimen, possessing what many have not, namely, great size and symmetry combined. The challenge class for bitches contained only the superb Cambrian Princess, too well known to need further comment on. In the open class for dogs Wodan, shown in bad condition, just managed to score first, owing to the really good points he possesses. We gave him the benefit of the doubt for possessing soundness and robustness of constitution, of which his condition caused us to have grave doubts, and we hardly know if we were justified in placing him so forward under the circumstances. He is not sufficiently massive for his size, and still shows the cone, being very deficient in the temporal muscles. Alfgar made a good second. He is not a large dog, but possesses fair size, and except for a slight want of length is very symmetrical. His worst faults are his over large ears and full eyes, but his hindquarters are a credit to either Hotspur or his brother—whichever is his sire. The dark brindle Lionel came well up for third. He is a dog we have always admired. His light eye is against him, and he might be a trifle larger, but is not spoilt like so many by faults suggesting the hound or boarhound crosses. Admiral (Beaufort excepted) the heaviest and best bodied dog in the show, seems a trifle weak in one of his hocks, and is spoilt by his pointed (but not long) muzzle, in line of profile looking wedge-shaped rather than square, and possessing no pendulosity of lip to cover it. In fact, what with his capital skull, he possesses a type of head far too common in low bred pug dogs, a type of head that cannot be too well guarded against in a mastiff dog. Hotspur, by far the best headed mastiff in the class, is so dwarfed in his hindquarters that it is a pity so valuable a dog for stud purposes should be entered for competition, otherwise had we felt justified in so doing, we should have liked to have placed him first for head and shoulders alone. Ormonde, who promises to grow into a fair specimen, is rather full in eye, is too large in ear, and is at present somewhat hollow in back.

"After these there was nothing worth mentioning, the quality being below the average, and we missed such specimens as Minting, Orion and Boatswain, and mastiff fanciers need not be afraid to breed, for evidently the quality in the open class for mastiffs is weak. The open class for mastiff bitches was a very good one. The winner, Princess Ida, we have always liked, and, though other judges may differ with us, we consider she has those qualities which should be looked for in a brood bitch, and is superb in coat and color. Gerda, the second prize, except for want of blackness about the ears, is a little model, well grown, thoroughly symmetrical, and reminded us greatly of Mr. Lukey's once famous Beauty. Gerda is every inch a mastiff, but is small; still, while breeders should ever cultivate size, remembering a good big one should always beat a good little one, a judge can only go by merit, however disappointing to owners of larger specimens when those specimens betray faults, and those faults of mongrelism rather than bad rearing. Frigga, the third prize, and full sister to Gerda, is a trifle larger, but is not so good in muzzle, color or bone; still, she is thoroughly symmetrical. The brindle Zillah III. is spoilt by her bushy stern, pointed muzzle, general coarseness, and similarity to the St. Bernard in type; still, she is strong in some points calculated to make her a useful brood bitch. Holda, again, is thoroughly good in body, but is spoilt by her long, narrow head and houndy ears. In mastiff dog puppies Constable made an easy win, taking also the prize for the best brindle in the show (which, by the way, were the most respectable collection of brindles that we have seen got together). Constable is a big puppy, good in color and bone; his head, although a little long at present, should fill out, and he looks like making a worthy successor to old Cardinal. In bitch puppies Queen of Scots was the only one, but looked to be considerably over age—was, in fact, the oldest looking puppy we have ever seen, suggesting some mistake as to her age. Young Gipsy showed plenty of size. The brace class was a very close thing, and difficult to decide either way. In stud dogs Orlando had it all to himself. He was looking more active and better than when we last saw him, and his head simply smothered everything in the show except that of his nephew, Beaufort; and Gerda, Frigga and Holda satisfactorily prove that he can beget good-bodied, symmetrical offspring. Gytha II., alone in brood bitches, is light, but is otherwise a good stamp, possessing no mongrel points. In the novice class Alfgar had an easy win with Ormonde (second), an improving dog.

"The prize offered from America by Mr. W. Wade for the best mover, while it afforded great amusement to many, was to myself of considerable interest and of some little surprise, and as we know a report of the result will be looked forward to with considerable interest by many mastiff fanciers in America, we feel sure the space it will occupy to detail it will not be grudged; and I may here take the opportunity to say, thanks to the untiring assistance of the ring stewards and useful suggestion of Mr. Gambier Bolton, I was enabled to carry out what at first appeared a very difficult task. As, with the sun blazing overhead, I sat (the autocrat of the hour) under the shade of the tent erected for our use with men and dogs panting around, the words of Augustus recalled themselves, 'Ego sum inter suspiria et lacrymais;' and the lines of Ovid, 'Et hic *prædam* pedibus petit, ille salutem; Alter inhæsuro similis,' might have been written to describe the scene. From among the prize winners I selected among the best movers Gerda, Alfgar, Beaufort, Admiral and Constable. After considerable walking and running about (in which the owners showed signs of distress far more than the dogs) I thought Constable, although limber enough, showed somewhat the weakness of puppyhood, and I was glad to be able to reduce them to four. Alfgar next went the least regularly, leaving only three in it. Beaufort, in spite of the immense amount of flesh he carried, went in splendid form, trotting really well, showing the best stifle action of the three, and I could not detect his hocks or legs failed him in the least; and I must own I was considerably and agreeably surprised to see him move so nimbly, considering his great weight, and should have felt bound to have awarded the prize to him only for the straddling of his hind legs, so generally seen in specimens born with dew claws. In a bulldog this formation would be approved by some judges, and it recalled Mr. F. Adcock's excellent description in 'Webb,' p. 275: 'Stifles turning out so as to bring the hocks near together, and turn the feet out.' However, the trial convinced me there is no decrepitude or want of activity about Beaufort. Admiral walked in good form, but I noticed while in the ring he showed a slight weakness in one hock, and when galloping slung one hind leg out; still, it was but very slightly. Gerda's grand hindquarters and muscular thighs pulled her through, for she walked and trotted as square as possible, and it was very evident, both in her and her owner, a lack of wind was all that was needed. I have before now carefully watched race

horses as they galloped past, and greyhounds at play, as well as owned some very active mastiffs and fast fighters, and the trial the five were subjected to I trust will set the matter of ability to move at rest. What with the amount of flesh they carried, and want of sharper regular exercise, not one would have been fast enough to have stood any chance with a bear. Still, 'Caius' mentions the slowness of the mastiff owing to their cumbersome bodies, and I could detect no amount of leg weakness among the prize winners (Hotspur losing place through this fault partly), and altogether they were superior in hocks to many of the larger deerhounds. In conclusion, a certain lack of size among the winners was the chief defect, but I felt good little ones should ever beat indifferent larger ones, and seeing the disproportionate, untypical, ill-gaited animals the rage for size some time since produced, breeders cannot do wiser than bear in mind the warning of the late J. W. Thompson, recorded in page 188 of 'The History of the Mastiff,' for judges are sure to insist on character and symmetry combined, if they are judges, having bred good ones themselves.—M. B. WYNN."

A FAITHFUL DOG.

THE high-blooded dog is not the only one that shows at times intelligence and excites our admiration. Some years ago, when employed as express messenger, I was on the run through Wilton, in Maine. One evening in passing the packages from the train a package fell between the rail and the station. I called the attention of the agent to the fact, and he intended to pick it up but forgot to do so.

One of the section men owned a black cur dog which passed over the track with him when on duty, which was only in the day time. This animal belonged to no breed in particular. He was homely and rough. His coat was black, with occasionally a white hair, and it stood up straight all over him as if each hair was repelled from its neighbor by a battery. He was long-legged, long-bodied, and his ears and tail were set on high. His eyes shone dimly through the hair. If placed upon the bench he would be a drawing card for his many faults.

In moving about that evening this dog discovered the package beside the track. He knew it did not belong there and comprehended the situation. He took charge of it, lay down beside it and remained there until morning. A man came along and tried to pick it up, but he forbade with a low growl, and refused to give it up until the agent came, to whom he "checked out his run" and gave up the goods with a knowing wag of his tail. In the night it had snowed and his back was covered with snow, but the ground beneath him was dry, showing his faithful vigil. I praised and patted the dog when the train passed in the morning, and thereafter he met me at the train with a wag of recognition as much as to say, "I will look out for your goods."

This was a common parcel of dry goods. How did this dog know it was more valuable than a bunch of paper? Does this not go to show that animals know much that we do not give them credit for, and that they reason?

EBENECOOK.

BEAGLES FOR BENCH AND FIELD.

Editor Forest and Stream:

I am gratified to observe that my short item upon "Beagles for Work and Show," published in your issue of 14th inst., has drawn out a most interesting note from another admirer of the beagle. Now that there has opened up a discussion upon this subject—interesting as it must be to every owner, breeder and lover of the beagle—I sincerely hope, with Mr. Clark, that we may hear from some of our well-known breeders of beagles as to their experience in this direction.

It is true that the columns of our kennel department have contained less matter pertaining to our little gamesters than their rightful position in the class of sporting dogs seems to warrant. I firmly believe they are more susceptible to training, and better results can be obtained in the direction of field work than from any other class of game dogs. It is surprising how easily they can be taught to retrieve, answer when called, give warning where rabbit has gone to burrow, and many other as interesting acts.

I am half convinced that from Mr. Clark's explanation of the working of his beagles, taken in connection with the closing portion of his interesting letter, viz., "that I like the little dog best, only I want him to be able to last all day," he entertains the same doubt as the writer, whether we possess the beagle—restricted under the present rules—as near perfection as is possible. I would prefer the smaller size if I could obtain equally as satisfactory results, but my experience with a kennel of thirteen beagles directly contradicts the theory. I find in hunting the largest species of rabbit the smaller beagle in a day's work finds it too "fast a pace," and after two or three hours of work comes to heel. I cannot blame the little fellows. In the spirit willing but in the flesh weak—they do all that is in their power; they drive their little machinery at as high a rate of speed as is possible, but they are handicapped in not being able to generate as much steam as their larger companions. With unequal motive power it is impossible to perform equal amount of labor.

Mr. Clark's statement that show winners have been petted too much and not given a chance to do as well as they might do, strikes one nail squarly on the head, and confirms the statement in my letter that beagles were being bred soley for the bench without regard to their field requirements. The fact that field work in no wise enters into their requirements for bench winning has been responsible in a great measure for the present ignorance as to what size and proportion we can obtain best results with the beagle. If the bench winners of '87 were compelled to go to the field and defend their laurels how many of them would come to fully realize that it is a somewhat different task winning glory on bench and in the field. If there are qualities in a beagle that can only be perfected by careful as well as constant work and discipline, and those qualities allowed to remain dormant, will the defect not show itself in their progeny? If a beagle has even a fair nose his scent can be encouraged to a sharp, keen one; he may have a good voice, and yet it can be trained into a grand and very deep one. Constant work will bring him out a hunter, sure and as faithful as untiring. Now let us give him the form and marks as required under present bench ruling and leave out the qualities in their improved and superior condition, and we have still a beagle eligible to the highest honors on the bench without a single consideration in its favor toward making it a great breeding hound for the field

If more of our breeders would just give a small share of their time to the field work of their beagles with a view of improving in every possible way their qualities of endurance and activity, they would be surprised at some of the results obtained and be in position to give us the information we have a right to expect from them. My experience with beagles under 14½in. is a failure. I have now two in my kennel whose blood, as traced by pedigree, is as good as flows in the beagle breed, and upon which as much time has been consumed as upon my larger hounds, with but one result—they cannot stand the work.

My best results have been obtained with four beagles in my kennel whose sizes and proportions are very nearly the same. They stand 17¾in. in height, with chests measuring about 26¾in., length of bodies and heads 24 to 25in.

These beagles are wonderful stayers and by far the fastest in kennel, which I believe is due to their great depth of chest and ribs well sprung out, while their loins and hindquarters are well developed. These dogs are very hardy and possessed of great amount of bone and muscle. They seem apparently never to tire and I have yet to see them shirk or desire to come to heel even on the fifth consecutive day of hard solid work. It is for the one reason that my pleasure in possessing beagles is for their work in the field, that I have never given any attention to obtaining bench exhibitors and I cannot, I find, combine under present laws both qualities and obtain a beagle that will do the work.

H. H.

A RABBIT HUNT BY MOONLIGHT.

IT was one evening in the month of December; the air was bitter cold and the moon shone bright. Jack S. and Harry C., both of whom owned beagles, asked me to join them in a moonlight rabbit hunt. A young Irishman, fresh from the Emerald Isle, accompanied us. Presently the ringing music of the beagles announced that a rabbit had been started. Placing ourselves along the edge of a thicket, in which the dogs could be distinctly heard, we breathlessly awaited the rabbit's approach. "Hark!" exclaimed Harry, "I hear it coming; there, it has stopped to listen; now it is approaching again. Be ready. Pat, get down off that fence, and quit making such an infernal noise." The last injunction was given to the Irishman, who had clambered upon the topmast rail of a worm fence, the better, I suppose, to see the fun, or it might have been to avoid the contents of our guns. The rabbit no sooner appeared in an open space than a stream of fire belched forth from three guns. The noise that accompanied the shooting was simply terrific. I really think the country people for miles around must have thought that a powder mill had burst. To the best of my knowledge, that rabbit still roams at his own sweet will. We saw nothing of him after the smoke had cleared away.

"Confound the luck," says Jack, after he had recovered somewhat from his astonishment; "that comes from not chalking the ends of our guns. When I took aim, I could not tell whether I was pointing at the rabbit or at that tree-top yonder. Harry, just go through your clothes and see if you can't find a piece of chalk."

H. soon brought forth the desired article. We in turn chalked the ends of our gun barrels and then proceeded to hunt up another cotton tail. In going across a field Pat surprised one in a squat and as it bounded away it was neatly stopped by Jack. The dogs soon gave tongue in a neighboring corn field, so we hurried thither at once. Such a scampering to cover the intervening space that separated us from our quarry. I was the first to get in a shot and scored a miss. Harry took him on the jump and laid him on his back. We started four rabbits in the cornfield and killed three. I should say that they did the killing, because I missed every time. With all my chalking I could not see ahead of my gun when pointing it. It requires a great deal of practice and this occasion was my first experience. My companion chaffed me considerably; I felt somewhat annoyed, but appeared to take it coolly. "Why, Dave, I don't believe you could hit a flock of barn doors flying with the moon shining on them; let's see you hit my hat." With these words he shied his beaver into the air, and I, in a spirit of revenge, brought the gun to my shoulder and fired. The hat was picked up and the closest scrutiny failed to find a single shot hole in it. I came to the conclusion right there that as a moonlight gunner I was a complete failure and resolved never to go on any such fool's errand again. Couldn't hit a hat twenty paces away. Why Pat, who never had a gun in his hands during the whole course of his existence, could have done no worse. How consoling it was to hear Jack remark, "Dave, I don't believe you have any shot in your cartridges." "No shot! I am willing to swear that I put an ounce of No. 6 in each one of them," exasperatedly returned I. "Let's move on, it's getting too cold to stand here."

During the evening ten rabbits were found, seven of which were killed. About 10 o'clock we took up our homeward march. Pat was directed to go ahead and tell the folks at home to have a blazing fire and lunch ready for us. He hurried forward and disappeared over a hill. Before we had reached the top we could hear him returning in great haste, hallooing lustily. Pushing on we beheld him coming toward us holding something in his hand. "Begorra, and phat's this I've caught?" exclaimed he. "Phew! how the dirty baste smells. I seen it squattin' anent the stone wall and picked it up. Won't some of yees take it away from me? Devil a bit do I want the nasty crature." There stood Pat, as pitiable looking an object as I ever saw, still clinging to his "catch."

He had seen a skunk, and not being acquainted with its chief characteristic, captured it. We gave him as wide a berth as possible. "Drop that cussed thing and strike a bee line for home," shouted Jack, "you'll know a polecat when you see one, I'll bet."

Throwing the skunk down he obeyed his employer's command with alacrity. We laughed until our sides fairly ached. Verily it must have been a very green Irishman who could mistake a polecat for a rabbit, even in the moonlight. When we reached Jack's house we found Pat in the stable. Other clothes were brought him, and his perfumed ones laid aside for burial. "Indade, I thought it was a rabbit, but the blessed minit I caught hold of it, sees I to meself, Pat, sure, yees made a mistake," explained he, when questioned on the subject the next day.

J. H. T.

STERILITY IN BITCHES.

THE facts that are being brought forward in connection with the above subject are so serious as to make it quite a question of the day among breeders; and if scientific investigations can do anything, such means cannot be applied too quickly. About seven years ago there were general complaints that an unusual number of bitches missed; one huntsman asserting that they had done so in the ratio of six out of nine among those under his charge. The very same season it was found difficult to get mares in foal, and an unusual number were barren. The following season, and for some years, there was nothing particularly notable in these sort of statistics; but last year they were worse than ever. The Duke of Beaufort, it was said, had fifteen or sixteen couples of bitches that missed, the Fitzwilliam nine couples, and the Atherstone, Oakley, Rufford, and other kennels suffered more or less. It is now ascertained that the spring of 1886 was just as disastrous among horses, and that some of the stud farms devoted to blood stock had the worst season ever known. One very large stud, perhaps the largest in England, sent out thirty-two mares to various stallions at a distance from home, at a cost of over 2,000 sovs. in fees, and the crop of foals from these has been only fourteen. This year it has reached us both from studs and kennels that the results will be still more deplorable, as it is rumored that the Oakley have not a bitch in pup; and an owner of a stud has told us within the last few hours that he has never experienced such a season for mares giving the most unwelcome signs that they have yet to be in foal.

The same features being apparent among two sets of animals of totally different natures must set people thinking for a cause touching these disasters. The season some years back that we have alluded to was put down by the stud owners at the time to the quantity of rain that had fallen during the previous year; but this could have been no reason, to judge by what has been done in more recent times, as there have been very dry seasons, hay and all provender has been particularly well saved, and stock of all kinds has been generally healthier. There must be some more direct atmospheric influence, and the currents of excessive cold that have disturbed our climate late in winter and early spring seems the most probable cause of anything to be suggested. Will the weather specialists think so, and can they define the currents of cold in a way to give some reasons for the effects we are ascribing?

To accept that our suggestion is correct, the object in the future will be to find a remedy for one of nature's freaks; and the two elements of air and water must be regarded as the main points of attack. It requires no arguments to prove that the changes in the condition of water are due to atmospheric causes, and animal life especially will drink and breathe the same factor of health simultaneously. It will be necessary as a precaution for the future to regulate temperature, both in stabling and kennels set apart to accommodate breeding stock, and at the same time water must be under the same sort of control. We feel convinced that this will be the right track to follow, as from close inquiry we find that the above epidemic, if we may call it so, has not been noticeable among house pets, such as toy dogs, etc., but among all other sorts kept in outside kennels or allowed to run about loose. Among foxhounds it has been specially prevalent, and we have heard of it in cases of collies, setters and fox-terriers. A six-year old collie bitch that had never missed before was the victim of an accident in getting loose, when she should have been closely guarded, and in that case fruitful impregnation was almost a certainty, but it did not prove so, and ten out of thirteen fox-terrier bitches have proved barren since January the first. These were mostly kept in outside kennels with the usual kind of yards for running about in. As a sign, too, that it is an ailment attributable to the weather, there have been no complaints from greyhound owners, and this may be accounted for by the fact that greyhounds are invariably kept in warm kennels, and they are clothed at exercise in cold weather.

It cannot be difficult to keep a kennel at one temperature, or to have covered-in exercising grounds for pregnant bitches under the same conditions. Whether full or partial precautions of this kind may be necessary remains to be proved, as it may be simply the temperature of the sleeping houses that has anything to do with it. For the correct temperature of water there is the easiest of remedies, as various contrivances are in existence to chill water to any temperature, and at the South Coast Stud Farm (Lord de Rothshild's) one has been so fixed that all the troughs from which the mares can drink are filled with running water just tepid, and so influenced by pipes in connection with a very small fire. For foxhound kennels it would be the easiest thing possible to have such a contrivance from the boiling house, or it would be equally applicable to every sort of kennel by the aid of the smallest saddle room fire. That some consideration will have to be paid to this subject is clear enough, as from all indications the same kind of late severe winters will visit these shores for many years to come.—*Kennel Gazette.*

WAS THE DOG MAD?

HERE are two reports of the same occurrence. The *Sun* and the *Times* are both on Park Row, the scene of the excitement, and each presumably got its information at first hand:

From the Evening Sun, July 22.

SOMEBODY'S PET DOG KILLED.

A poor little dog created a terrible amount of excitement on Park Row, in front of the Post Office, this morning. He was a brown-eyed, amiable animal of the fox-terrier breed, and the only thing that troubled him was to find his owner, for he had evidently got lost. The dog ran up and down looking at every one it met, apparently in the hope of finding its master. Pretty soon the young lads began to notice it, and before long the cry of "mad dog" was raised. A stalwart policeman from the corner of Beekman street ran after the dog with his revolver in one hand and his club in the other. He saw that there was no sign of madness in the dog and put up his revolver, but made an effort to capture it. The crowd, seeing the officer in full chase, became excited and so did the dog. The dog ran up and down, stumbling between the feet of the pedestrians, until it seemed almost crazed with terror. The man who switches the tracks for the horse cars happened to be standing near where the dog ran. He raised the iron bar with which he operates the switch, and with one blow stretched poor doggie dead in the street. For the next few hours the switchman was the hero of the hour, and hundreds gazed on the poor little animal and told each other how fortunate it was that no one had been bitten by it.

From the New York Times, July 23.

MAD DOG IN THE STREET.

There was a mad dog in Park Row yesterday. It came running up Broadway at 10:30 o'clock in the morning, with a short, sharp, terrified yelp, so peculiar as to attract attention. A number of pedestrians on the crosswalk below the Post Office heard the peculiar yelp and looked around to discover a gray and black mongrel, a cross between a terrier and a spitz, snapping at their heels. They jumped out of his path with white faces, and the alarm being given the brute was allowed a wide berth. It ran up Park Row snapping at men here and there, and pursued by a crowd of yelling boys throwing at it everything movable they could lay hands upon. One little boy, an Italian match peddler, who was directly in its path, put out his hand as the dog ran toward him, and the cur snapped at it, sinking its sharp teeth deeply in the flesh and causing a profuse hemorrhage. Doors were slammed as the beast ran by, and whenever it tried to run into a store or down a flight of basement stairs it was blocked by somebody. Half way up the square it turned and ran back toward the Post Office corner. As it approached there Michael Bennett, the switchman of the Fourth avenue line, stood in readiness and struck it a blow on the head with an iron rod that crushed in its skull and laid it limp and still on the pavement. Its body was pushed into the gutter and remained there throughout the day.

ST. PAUL DOG SHOW.—We have received the premium list of the St. Paul and Minnesota Kennel Club for their first dog show, to be held at St. Paul, Sept. 13 to 16. Champion prizes of $10, both for dogs and bitches, are offered in the important classes, with $10 and $5 in the open and $5 and $3 in the puppy classes. Six kennel prizes of $20 each, and eight of $15 each are offered by the club. There are also nearly one hundred special prizes. Entries close Sept. 1. For premium lists and entry blanks, address W. G. Whitehead, 174 East Fourth street, St. Paul, Minn.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Clifton's Burt, Clifton's Choice, Clifton's Dettie, Clifton's Eva, Clifton's Fancy and Clifton's Girleen. By Clifton Kennels, Jersey City, N. J., for liver and white pointers, two dogs and four bitches, whelped July 14, 1887, by Graphic out of Clover (King Bow—Dot).

Clifton's Al. By Clifton Kennels, Jersey City, N. J., for liver and white ticked pointer dog, whelped July 14, 1887, by Graphic out of Clover (King Bow—Dot).

Jeune Obo. By W. L. Dearborn, Dorchester, Mass., for black cocker spaniel dog, whelped April 28, 1887, by Perrin's Shady (Obo II.—Darkie) out of Judy Obo (Obo II.—Daisy Zulu). Wrongly printed Junio last week.

Naso of Bergen, Luck of Naso, Royal Naso, Gem of Naso, Beaufort Naso, Lady Naso, Belle of Naso and Beauty Naso. By Floyd Vail, Jersey City, N. J., for liver and white pointers, five dogs and three bitches, whelped July 25, 1887, by Naso of Devonshire (Nick of Naso—Devonshire Queen, A.K.R. 3127) out of Lady Isabella (Beaufort—Fanny Turner).

Prince Roy. By Nelson McIntosh, Providence, R. I., for red Irish setter dog, whelped April 18, 1887, by Jim (Elcho—Mag) out of Nell II. (A.K.R. 2684).

NAMES CHANGED.

Keystone Kennels to Myrtlewood Kennels. By R. E. Westlake, Waverly, Pa.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lakme—Otho. Frederic Kimball's (Worcester, Mass.) St. Bernard bitch Lakme (A.K.R. 5077) to The Hospice Kennels' Otho (A.K.R. 483), July 8.

Kader—Eiger. The Hospice Kennels' (Arlington, N. J.) St. Bernard bitch Kader (Wotan—Reka) to their Eiger (Bello—Gemma), July 6.

Madge—Dublin Scot. McEwen & Gibson's (Byron, Ont.) collie bitch Madge (Highlander—Hasty) to Chestnut Hill Kennels' Dublin Scot (The Colonel—Jessie), May 31.

Lucy—Racer. F. C. Rochester's (Logan, O.) beagle bitch Lucy (Drive II.—Fanny) to Geo. H. Hill's Racer (Rally—Lill), July 14.

Belle Randolph—Naso of Kippen. H. L. Rice's (Quincy, Mass.) pointer bitch Belle Randolph (Duke of Westminster's Sam—Juno III.) to Westminster Kennel Club's Naso of Kippen (Naso II.—Maggie), May 25.

Friza—Otho. Wm. Montgomery, Jr.'s (Waverly, Md.) St. Bernard bitch Friza (A.K.R. 4069) to The Hospice Kennels' Otho (A.K.R. 483), July 6.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Lady Isabella. Floyd Vail's (Jersey City, N. J.) pointer bitch Lady Isabella (Beaufort—Fanny Turner), July 25, eight (five dogs), by his Naso of Devonshire (Nick of Naso, A.K.R. 4391—Devonshire Queen, A.K.R. 3127).

Little Bess. A. S. Hoffman's (Morrisville, Pa.) English setter bitch Little Bess (Antic—Bartlett's Dream), July 13, nine (six dogs), by Wm. A. Poland's Rex Gladstone (A.K.R. 2167); three dogs and one bitch since dead.

Queen of Sheba. The Hospice Kennels' (Arlington, N. J.) St. Bernard bitch Queen of Sheba (A.K.R. 4429), July 18, three (two dogs), by their Hector (A.K.R. 4425).

Beau Beaufort. Myrtlewood Kennels' (Waverly, Pa.) pointer bitch Beau Beaufort (Beaufort—Grace), June 11, seven (five dogs), by Highland Kennels' Robert le Diable; all liver and white.

Rosa. J. P. Cartwright's (Augusta, Ga.) pointer bitch Rosa (Boon—Rena), July 19, twelve (seven dogs), by Field Trial Kennels' Mainspring (Mike—Romp).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Ajax II. Brindle, black points, mastiff dog, whelped April 23, 1887, by Turk II. (A.K.R. 2222) out of Sylvia, by Richland Kennels, Wahpeton, Dak., to A. E. Sunderhauf, same place.

Atlas. Dark fawn, black points, mastiff dog, whelped April 23, 1887, by Turk II. (A.K.R. 2222) out of Sylvia, by Richland Kennels, Wahpeton, Dak., to W. H. Willardet, same place.

Abel. Brindle mastiff dog, whelped April 23, 1887, by Turk II. (A.K.R. 2222) out of Sylvia, by Richland Kennels, Wahpeton, Dak., to Chas. E. Wolfe, same place.

Garryowen. Red Irish terrier dog, whelped April, 1880 (A.K.R. 3991), by Lawrence Timpson, Red Hook, N. Y., to W. E. Morris, Lexington, Mass.

Mary Dell. Black and white English setter bitch, whelped 1883, by Dash III. out of Dashing Jessie, by Chas. A. Neal, Trenton, N. J., to A. S. Hoffman, Morrisville, Pa.

Cameron's Racket—Marjory whelp. White, black and tan beagle dog, whelped March 25, 1887, by Geo. H. Hill, Madeira, O., to F. C. Rochester, Logan, O.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

L. A. L., Saylesville, R. I.—Your bitch needs depletion. You must give an active purge, compound cathartic pills one night and morning, or 15grs. of compound jalap powder night and morning. Feed milk, oatmeal and Indian meal mush, with a bit of lean meat boiled in. Give but one meal daily. Exercise regularly. The principal treatment must be directed to keeping the bowels free. You may commence treatment by giving a calomel purge, 10grs.

H. O. B., Conn.—My setter dog's throat is swollen very much, caused by a false growth under the tongue. The dog will not eat. Eyes look strange; drools at the mouth. None of the sportsmen in this vicinity have ever seen anything like this. Please advise. Ans. Your dog probably has an epulis or cystic tumor, due to the blocking of the ducts leading from one of the salivary glands to the mouth, or possibly a solid growth. Consult a veterinary surgeon.

T. B. G., Dover.—I have an English setter puppy about 5mos. old, which seems to be afflicted with constant shaking or twitching of his right foreleg, and sometimes he is lame in this leg. Otherwise he is healthy, good appetite, playful, and no signs of worms. Some weeks ago I found in your paper a prescription for chorea, for a dog just in the condition of mine, and I have give mine twenty pills as prepared by an apothecary, but I do not see as they have had any effect upon the dog, and I write to inquire if there is anything else I can do for him? Ans. Watch the passages and satisfy yourself that your puppy does not suffer from worms. Give a teaspoonful of syrup of buckthorn every other day. Get the following:

℞. Syr. ferri quin. et strychnin. phosph.. .. .. .. ʒiv.
Sig. One teaspoonful night and morning.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5206.**

MILFORD, Mass., July 21.—At the recent meet of members of Co. M, 6th Regiment, M. V. M., at their range, T. J. Donohoe was added to the list of qualified marksmen. At the practice each man had five shots with a possible 25. The totals of each man were as follows: F. W. Wilcox 22, T. P. Kane 22, G. A. Moore 20, G. McLaughlin 19, J. F. Barrett 18, P. J. Donohoe 17, W. P. Clark 17, N. E. Tongas 15, W. Aunette 15, W. L. Tongas 14, G. Kelley 14, R. C. Hussey 14, A. B. Montague 14, J. E. Andrew 12, S. Bradford 12, J. T. Berrill 10.

STILLWATER, Minn.—The militia in camp here are giving much attention to rifle shooting, and the range is in use throughout each camp day. There is a great deal of enthusiasm over the work in hand, and the guardsmen are very well pleased with the range.

BOSTON, July 23.—The rain and high wind occasioned a smaller attendance than usual to-day at Walnut Hill, but several fine scores were made by those present. The best scores made are given below:

Decimal Off-hand Match.

J A Frye	10	9	6	6	7	6	5	9	6	10—74
	10	6	7	6	10	6	6	7	6	9—73
W H Oler	7	8	8	6	6	6	6	7	8	7—69
	5	5	8	5	7	4	8	10	6	6—64

Rest Match.

Revolver Match.

F Bennett	10	9	9	9	9	10	10	8	9	10—93
	8	9	9	10	10	9	10	7	6	10—88
	10	10	8	8	6	8	10	10	10	7—87
	9	8	9	9	10	7	10	9	7	9—87
A C Gordon	8	9	8	10	10	8	8	8	10	10—89
	7	9	10	10	10	10	7	10	9	6—88
	9	10	9	7	8	6	8	8	9	10—84
J R Missane	6	10	10	9	7	9	8	9	7	9—81
	6	8	10	7	10	10	8	6	9	7—81
J B Fellows	6	10	10	7	7	7	6	10	6	8—77
	8	7	7	7	6	8	9	6	7	8—73

F. Bennett shot a 100-shot revolver match to-day for record at the Walnut Hill range. The match was under the direction of the editor of *The Rifle*, and Mr. Bennett conformed to all the conditions under which Captain Paine shot his record score, using the same arm and ammunition, a .44-cal. Smith and Wesson, government ammunition, at the distance of 50yds., on the standard American target. Mr. Bennett's score is better than the one Captain Paine made in his first attempt to average better than 80. Mr. Bennett is a brother of the W. Bennett who, several weeks ago, made so fine a showing with the same kind of arm. Following is the detailed score:

Bennett	9	8	10	8	7	7	7	9	7	8—80
	8	10	9	5	7	9	8	10	7	8—81
	10	7	10	5	8	6	9	10	10	8—83
	7	7	10	8	8	9	9	7	7	10—82
	6	10	5	10	6	10	5	9	8	7—76
	7	10	10	5	9	8	9	7	10	5—80
	6	6	8	6	6	10	10	6	7	7—72
	6	9	10	7	6	10	6	9	10	10—83
	9	8	9	9	10	7	10	9	7	9—87
	10	10	8	8	6	8	10	10	10	7—87—811

WALTHAM, Mass., July 15.—Lieut. Robert B. Edes, inspector of rifle practice, 5th Infantry, and W. C. Johnson, Jr., of the 1st Corps of Cadets, shot a match to-day at the Waltham range for the gold medal of the Bullard Arms Co. in individual match No. 4, which is to be won three times before it can become the property of the holder. There are contestants in several different States. The conditions are: Off-hand shooting at 200yds., standard American target, 50 shots without cleaning rifle, allowance 5 points on each string of 10 shots for use of military rifle. Gen. B. F. Peach, Jr., 2d Brigade, M. V. M., was referee and R. B. Dawson, secretary of the Lynn Rifle Association, recorder. The score:

Lieut R B Edes	5	9	4	8	5	5	8	6	7	5—62
	9	4	5	5	6	9	7	5	3	4—55
	8	7	7	7	5	7	8	9	3	8—68
	7	6	8	5	6	7	7	9	8	7—70
	9	8	5	8	6	5	10	10	6	4—71—326
Allow military rifle, 5 points, 10 shots										25
										351
W C Johnson, Jr	6	2	7	9	4	4	4	6	6	4—53
	7	6	8	4	5	4	5	5	9	9—62
	2	3	7	9	4	10	4	6	5	6—56
	7	7	5	5	8	6	5	6	9	7—65
	6	4	6	9	10	4	6	6	5	6—62—298
Allow military rifle, 5 points, 10 shots										25
										323

MANCHESTER, N. H., July 12.—Two of the riflemen, who are competitors in the Bullard Arms Co.'s individual match, each contestant being allowed 50 shots, put in their strings this afternoon with the result as appended:

W M Boothby	3	6	5	6	4	4	3	3	3	10—47
	6	5	6	7	6	4	8	8	8	5—63
	5	4	5	9	5	6	6	6	7	4—56
	5	8	6	10	6	5	5	8	10	6—69
	9	5	6	8	6	5	3	7	7	8—64—300
C W Temple	6	7	5	5	7	9	7	7	6	8—67
	5	4	5	8	9	4	8	5	5	5—58
	7	4	3	5	3	4	3	8	9	4—50
	5	7	7	7	4	7	2	9	6	6—60
	9	5	6	8	6	5	3	7	7	8—64—299

Mr. Boothby made an average of 6 per shot and Mr. Temple an average of 5.98 per shot. Other shooting consisted of the making of a 67 card in the prize match by R. Dillingham.

THE WIMBLEDON MEETING.—The 28th annual gathering at the Wimbledon Common opened on July 11 and ran for two weeks. The magnitude of the meeting is something hardly realized by those who have not visited the common. The following statement of the number of entries for the principal matches this year and last may give some idea of this. It will be observed that there is this year a considerable increase. The figures given are up to the first closing dates, but there are always post entries:

	1886.	1887.		1886.	1887.
Queen's	2,380	2,419	Windmill	1,523	1,567
St. George's	2,283	2,315	Daily Telegraph	1,606	1,616
Alexandra	1,596	1,655	All Comers' Aggreg'e	1,071	1,139
Alfred	1,341	1,389	Volunteer Aggregate	1,241	1,319
Martins	1,483	1,567	Grand Aggregate	1,018	1,083

Besides the Canadians, colonial teams from India and from Cape Colony were entered for the Kolapore cup competition, to shoot against the mother country team. Lieut. Warren, of the First Middlesex Regt. won the Queen's prize.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CLUB BY-LAWS AND RULES.

IN response to numerous inquiries for a set of gun club rules the following, adopted by the Gotham Gun Club, are printed:

BY-LAWS.

ARTICLE I.—Name.—The name of the organization shall be the Gotham Gun Club.

ARTICLE 2.—Object.—The object of this organization is to improve the members in the art of shooting and for mutual enjoyment.

ARTICLE 3.—Officers.—The officers shall consist of a president, a vice-president, a secretary and treasurer, a captain, and a lieutenant, who shall be elected by ballot at the annual meeting, to be held the second Saturday in May, and hold office for one year.

ARTICLE 4.—Duties of Officers.—1. The duties of the president shall be to preside at all business meetings, decide all points of order, and when necessary cast the deciding vote. 2. The duty of the vice-president shall be to preside at meetings in the absence of the president. 3. The duties of the secretary and treasurer shall be to keep a correct record of the proceedings of all business meetings, to obtain and file a copy of the scores made at each tournament, to receive money, collect dues and assessments, and pay bills when certified to by the president. 4. The duty of the captain shall be to take charge of all tournaments. 5. The duties of the lieutenant shall be to assist the captain and take charge in his absence.

ARTICLE 5.—Membership.—1. Applications or propositions for membership may be made at any regular business meeting. 2. The membership fee shall be $3, payable upon notification of election. 3. Election of members shall be by ballot. Three black balls rejecting a candidate.

ARTICLE 7.—Amendments.—These by-laws may be amended at any regular meeting by a two-thirds vote of the members of the club.

RULES FOR TRAP SHOOTING.

RULE 1.—Judge.—A judge shall be chosen whose decision shall be final. If the judge does not see the shot, or from any cause is in doubt as to what his decisions should be, he shall allow the contestant another bird. If agreeable, the judge will also act as scorer.

RULE 2.—Scoring.—The scorer shall announce a broken bird as "dead bird;" he shall announce a miss or unbroken bird as "lost bird," and a bird broken by the trap as "no bird."

RULE 3.—Rise.—The rise shall be 18yds. for 10-gauge guns. Guns of 12-gauge, weighing 8lbs. or under shall be allowed 2yds.

RULE 4.—Position.—The gun shall be held below the armpit until the shooter calls "pull," otherwise, if challenged, it shall be declared a "lost bird," whether hit or missed.

RULE 5.—Loading.—Charge of powder, unlimited; charge of shot not to exceed 1¼oz., Dixon's standard measure.

RULE 6.—Pulling.—When shooter calls "pull," the trap shall be instantly sprung or the bird may be refused. The trap puller shall stand 4 to 6ft. behind the shooter.

RULE 7.—Misfire.—In case of misfire, through no fault of the shooter, another bird shall be allowed.

RULE 8.—Broken Birds.—Birds shall be scored "lost," unless broken distinctly in the air.

RULE 9.—Imperfect Birds.—If a bird be broken by the trap, it shall be optional with the shooter to accept the same; if accepted, the result shall be scored. If the bird is sprung before, or at any noticeable interval after the shooter calls "pull," and he does not fire at it, he shall be allowed another bird, but if he fires the bird shall be scored.

RULE 10.—Danger.—If a bird is thrown so that to shoot in proper time would endanger life or property, the judge shall allow another bird. Contestants shall not stand closer than 5yds. behind the man at the score, except the shooter next in turn who, upon having his name called, shall step to a position beside the trap-puller while awaiting his turn.

GENERAL RULES.—It shall be incumbent upon each member to avoid any of the following acts:

a. Pointing a gun at any one, under any circumstances.

b. Firing off a gun, except when the shooter has been called to shoot and is at the score.

c. Closing a gun with a cartridge in before arriving at the score, or when in the act of closing it, pointing it toward the shooter or the spectators.

d. Quitting the score without extracting a loaded cartridge.

e. Having a loaded gun anywhere on the ground except when at the score.

FINAL DECISIONS.—For any interpretation of the rules or for decision on points of dispute which may arise, not included in or decided by these rules, the judge shall consult and be guided by the rules of the National Gun Association.

THE PHILADELPHIA TOURNAMENT.

THE gun club men are making extensive preparations for the big clay pigeon shooting tournament, which is to be held in this city on Aug. 4, 5 and 6. Philadelphia has long been noted for the number of its gun clubs, and its "cracks" with the shotgun have not only local but national fame. The marshes in the "neck," the pine woods and the sandy coast of New Jersey and the wildest parts of Delaware, Maryland and the Virginias resound with the reports of the shells exploded by the Quaker City gunners during the game season. Out of season these sportsmen are not idle. Nearly all of them belong to the gun clubs, and when not shooting at live game they are practicing at glass balls or clay pigeons. The gun clubs in and within fifteen miles of this city are said to have a membership of over two thousand.

The proposed tournament to be held next month is in charge of a committee of the Philadelphia gun clubs, and Charles A. Bragg, of 18 North Sixth street, has been selected as the manager. It promises to be the most important and interesting tournament of the kind that has taken place in Pennsylvania. It will be held at Olympic Park, Eighteenth and Cumberland streets. At least fifteen teams of ten men each are expected to enter, and it is proposed to have three sets of traps, five traps in each set, for the team shooting contests, so that visiting clubs need not be unnecessarily detained. All the contests will be at Ligowsky clay-pigeons, under the rules of the National Gun Association. The first and second days of the tournament will be devoted to team shooting and the third day to the individual championship and double bird championship contests. All the events are open to residents of Pennsylvania, New Jersey, New York, Maryland and Delaware.

Among the clubs which have signified their intention of entering teams are the following:

Middlesex Gun Club, Dunnellen, N. J.
Wawasett Club, Wilmington, Del.
Woodbury Club, Woodbury, N. J.
Jersey City Club, Jersey City, N. J.
Matsunk Club, Conshohocken, Pa.
Wingohocking Club, Germantown.
Penn Club, Norristown, Pa.
Eureka Club, Norristown, Pa.
Baltimore Gun Club, Baltimore, Md.
Luther Gun Club, Syracuse, N. Y.
L. C. Smith Gun Club, Syracuse, N. Y.
North End Gun Club, Philadelphia.
South End Gun Club, Philadelphia.
Quaker City Gun Club, Philadelphia.
The Item Gun Club, Philadelphia.
Thos. L. Briggs Club, Chester, Pa.
Passyunk Club, Philadelphia.

There are a large number of other clubs yet to hear from. The Riverton and Philadelphia gun clubs will not enter the tournament, as they do not use the inanimate target, but shoot only at live birds.

The managers have decided that the team entrance fee shall be $15 and that guaranteed cash prizes shall be given to first, second and third. The team match will be at fifteen single birds and five pairs doubles per man. The individual championship entrance fee will be $2 and the prize a handsome trophy, with cash added. The shoot will be at ten singles and five pairs doubles.

A long list of special prizes will be scattered through the team and individual contests. There will also be a consolation prize for visiting clubs. The full list of prizes has not yet been decided upon by the committee and will not be until the entries have closed. No time has been set for the closing of the entry list, but all the teams and individuals who expect to compete in the tournament will probably be heard from before Saturday, July 30, when the full list will be published.

WORCESTER, Mass., July 23.—At the regular meet this week of the Worcester Sportsmen's Club the principal event was the ninth of the series of prize shoots. In the classification score each man had a possible 10 blackbirds, B.; 10 blue rocks, B. R., and 10 clay-pigeons, C., and in the prize score a possible 7. The work of each man was as follows:

	Classification score.			Prize Score.	
Class A.	B.	B.R.	C.		
M D Gilman	8	9	7—24	1111111—7	11111—5

Dr Frank	2	3	2— 7	0010001—2	
C S Day	7	5	2—14	1010111—2	

In Class A, M. D. Gilman received first prize of $5; Bowdish, Smith and Russell divided second prize of $4.50, and Webber received third prize of $3. In Class B, A. L. Gilman received first prize of $5; Kilburn second prize of $3, and Day and Dr. Frank divided the third prize of $2.

The sweepstakes included 9 events. In the first, 5 bats, there were 25 entries; second, 5 blue rocks, 24 entries; third, 5 clay-pigeons, 24 entries; fourth, 5 bats, there were 24 entries; fifth, 5 blue rocks; sixth, 5 clay-pigeons, 24 entries; seventh, 12 blue rocks, 20 entries; eighth, 20 clays, 13 entries, and ninth, 4 pairs double.

WASHINGTON, D. C., July 16.—Capital City Gun Club, match at American clays. No. 1, 5 traps, shot under N. G. A. rules, record for club prizes. As a thunderstorm was coming up light was very bad:

Wilson	0101110111100101— 9	Green	1110011010000110— 8
Meyers	1100101111011000— 8	Cunningham	0101101111111111—12
Mills	1110010111111011—11	Whitman	0001101010101100— 7

July 19:

Wagener	0101111111—8	Collison	0111111110—8
McLeod	1001001101—5	Cunningham	1111111110—9

Second match:

Wagener	0111111101111111—13	Cunningham	1101111111101111—13

SECRETARY.

JOHNSTOWN, N. Y.—The third annual tournament given by the Johnstown Gun Club began Tuesday and is concluded to-day.

WAYNE VS. WINGOHOCKING.—Germantown, July 23.—The Wingohocking Club had the pleasure of meeting the Wayne Gun Club this afternoon in a friendly contest (15 clay pigeons per man; 3 traps, 18yds. rise), on the grounds of the former at Germantown. It rained most of the afternoon and sometimes so hard as to almost obscure the flights and make it very hard shooting; some of the shooters had umbrellas held over them while shooting. The Wayne boys made a very good score considering the bad birds and that it was the first time most of them had faced 5 traps; most of the birds flew very low:

Wingonocking Club.		Wayne Club.	
Wm Garvin	110011101111111—12	H P Kane	110001100101111— 9

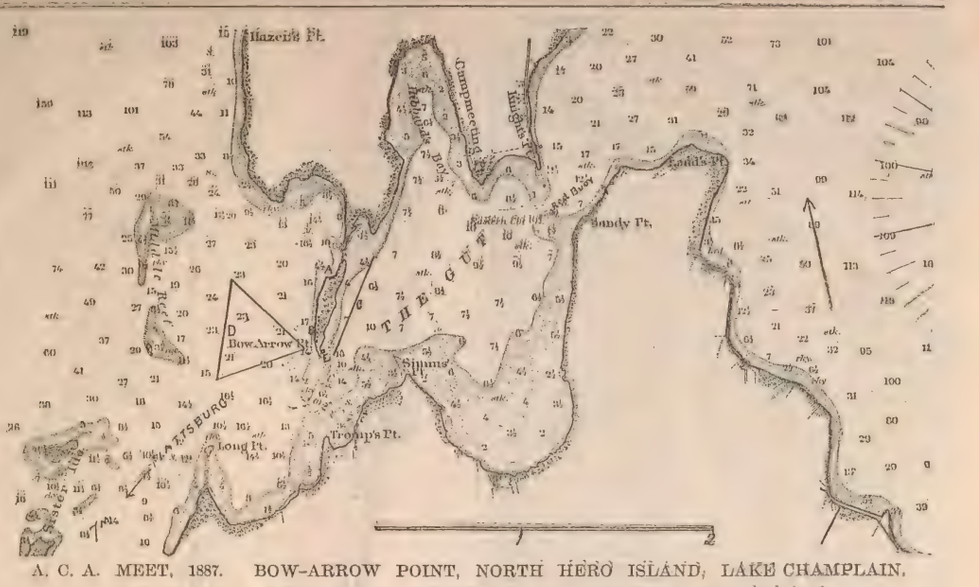
	111		79

MILFORD, Mass., July 21.—At the last meet of the Milford Sportsmen Club they had present sportsmen from West Medway. They had six events, the first, fourth and fifth were at 5 clay-pigeons, the others were at 5 blackbirds. The totals were as follows:

Warren	4 5 5 5 2 4	G Whitney	3 4 3 5 2 2
Smith	4 4 2 4 2 3	Desmond	3 4 4 2 3
Fletcher	3 4 5 2 2 4	C Whitney	2 3 4 3 4 4

SAN FRANCISCO, July 17.—The traps at Birds Point were faced to-day by John Kerrigan and Pete Walsh. The match, arranged for 50 birds at 30yds. rise, $150 a side, was not remarkable for fine shooting by either men. Kerrigan from the start had the best birds and did not hesitate to drop them almost as quickly as trapped. His second barrel did not figure as prominently as usual. For Walsh "tailers" were trapped in abundance, and he got but very few easy birds. Following is the score:



Kerrigan.....2110122020111101112101212110101111110211022022 11—40
Walsh.....1211111010100111010101012001110111101122010111 20—35

Both men have agreed to shoot another match in the near future.

CARVER'S TIME SHOOTING.—Dr. W. F. Carver, the champion gun and rifle shot, yesterday broke the glass ball record, at the East State street base ball grounds, by shattering 1,005 glass balls in 41½ minutes. His best previous record was 40¾ minutes, made at Columbia, Pa., last Saturday. By his exploit yesterday, Dr. Carver gets from the Spencer Arms Company, whose weapons he uses, $1,000, offered by them for lowering the record under 45 minutes. The exhibition, of which the breaking of 1,005 balls was a part, was given by Dr. Carver and John L. Brewer. It began with the shooting of clay pigeons thrown from traps according to the English rules. Each shot at 2C. Brewer broke 19, requiring a second shot for 6 of them, and missing one at both shots. Carver also missed one, and required a second shot for 3 others. The champions then shot at glass balls, thrown into the air singly as rapidly as one man could do it. Brewer broke 24 out of 25, and Carver 27 out of 28. Two balls were then thrown up at once and both broken by each of the men. Dr. Carver with three shots broke as many balls thrown into the air at once, but Mr. Brewer did not succeed in breaking more than two, although he made several trials. Successful exhibitions of shooting with the gun at the right and left shoulder alternately, and standing with back to the balls, turning and shooting, were then given. In shooting at 5 balls thrown simultaneously, Dr. Carver succeeded in breaking all 5 at his second attempt, and Mr. Brewer broke 4 only, although he shot twice at the fourth ball. Dr. Carver several times shot with a rifle at bricks thrown into the air. Under favorable circumstances, he said, he had first broken the brick, then broken a large fragment, then a fragment of what was left, and finally blown into powder with a fourth shot the largest piece remaining. In his attempts yesterday he at no time succeeded in striking more than one piece after having first broken the brick, but pieces the size of a baseball were blown into a powder. A dozen shots at small oranges were made with the rifle. All of them were struck and of several only the stem remained, but one or two pieces of pulp the size of a dime. Silver dollars, halves, quarters and other coins were marked with a bullet as mementoes for several of the spectators. The attempt of Dr. Carver to lower his record at glass ball shooting was the most interesting feature of the exhibition. Three guns were used by the marksman—a 5, a 6 and an 8-shooter. Mr. Brewer and an assistant were kept busy in loading the guns, but so rapid was the firing of the champion that at times he was compelled to assist in loading. The barrels of the weapons became so hot as to be very uncomfortable to the touch, although a thick buckskin glove was worn on the hand that was extended under the barrel; and the heated iron at times swelled to such an extent as to interfere with easy working of the firing mechanism, and several minutes were lost in remedying it. Of the 1,079 balls shot at, but 24 were missed. The highest records made without a miss were 167 and 133. Twice 97 balls were broken consecutively. Several of the misses were due to the heated gun barrels, which prevented the prompt ejection of the shell. The balls were thrown into the air by Manager Forbes, who, when the trial was ended, was almost as exhausted as Dr. Carver. Mr. Forbes stood beside the Doctor and the glass balls were thrown about 10ft. high, out directly in front. Nearly all of them were broken before they began to fall to the earth. Representatives of the *State Gazette*, *True American* and *Times* acted as scorers and Clarence Briest as time keeper. The attendance at the exhibition was about 500 and generous applause was bestowed upon both the champions when good shots were made, and an extra amount upon Dr. Carver, when it was announced that he had broken the record. There is no doubt that the record can be still further lowered by several minutes, if the marksman is provided with more guns and enough assistants to load them. The exhibition is to be repeated to-day.—*Trenton (N. J.) Gazette, July 20.*

NEWARK, July 23.—Dr. Carver had announced that he would to-day give an exhibition of fine shooting at Erb's ground and attempt to beat his record of 1,000 glass balls broken in 41m. 30s., made by him at Trenton, N. J., July 19, and for which feat it is said he was to receive $1,000 from the Spencer Arms Co., whose gun was employed. Owing to the rain the shoot to-day was postponed to the middle of next week.

TORONTO, July 16.—The Toronto Gun Club held a shoot at the Woodbine this afternoon, the conditions being 15 artificial birds to each man. Captains Briggs and Worden chose a team from the club, the losing side to pay for a supper. Captain Briggs's team—Townson, Pearsall, Leroy, Baylis, Felsted, McDowall, Martin, Jr., Morten; total, 101. Captain Worden's team—Kidd, Martin, Sr., Kidd, Ayre, Foreman, Mullen, Mearson, Gardner; total, 100.

A. C. A. MEET, 1887. BOW-ARROW POINT, NORTH HERO ISLAND, LAKE CHAMPLAIN.
A—Squaw Point. *B*—Main Camp. *C*—Paddling Course. *D*—Sailing Course. *E*—Wharf.

Canoeing.

TRANSPORTATION TO BOW-ARROW POINT.

THE Committee on Transportation have made the following report:

Commodore R. J. Wilkin, A. C. A.:

Your committee having in charge the matter of transportation have to report that owing to the non-receipt of any response to our request for special rates from many routes, our work is not so complete as we desired. However, the following arrangements have been made:

The steamer Maquam, Capt. Hawley, plying between Plattsburg and Maquam, will touch at the camp each trip, fare, 25c., baggage and canoe free.

The following lines, forming the Trunk Line Association, viz., Baltimore & Ohio, Pennsylvania, Delaware, Lackawana & Western; New York, Lake Erie & Western; West Shore and New York Central will carry members of the A. C. A. from points in Trunk Line territory, *i. e.*, Niagara Falls, Buffalo, Salamanca, Pittsburgh, Bellaire, Wheeling and Parkersburg, and points east thereof at one fare for the double journey on round trip tickets; canoes to be carried free on trains that can accommodate them. Rome, Watertown & Ogdensburg Railroad will sell round trip tickets from Aug. 10 to 20, inclusive, good to return up to Aug. 30, at one fare for the round trip; canoes free at owner's risk when there is accommodation for them. Tickets will be on sale at the following stations: Niagara Falls, Rochester, Oswego, Syracuse, Rome, Utica, Watertown and Canton, and the route will be R.W. & O. to Norwood, Central Vermont to Rouse's Point, and D. & H. C. Co. to Plattsburg. Central Vermont will issue tickets on same rate and terms.

Delaware & Hudson Canal Co. will issue round trip tickets at one fare, and will provide transportation free for canoes. Members taking this line at its western end will save a transfer by taking it at Albany. Grand Trunk Railway and Canada Pacific Railway will carry members of A. C. A. over their lines at one and one-third fare for the round trip, on the certificate plan. Certificates may be had on application to our secretary and from J. B. McMurrich, Oswego, N. Y. It will be necessary to have these certificates signed by agent of the railroad at starting point before starting, and have them indorsed by the secretary of the Association at Bow-Arrow to entitle the holder to one-third fare for the return trip. Connecticut R. R. Co. will issue tickets from Springfield, Holyoke, Northampton and Greenfield at one fare for the round trip, but do not offer anything as to carriage of canoes. Through the courtesy of Mr. Shanahan, Superintendent of Public Works, New York State, free use of the canals is extended to the members of the A. C. A., two or more canoes to lock through at one time. The arrangements with the Grand Trunk R. R. and Canada Pacific R. R. are based on twenty-five full fares going being paid, otherwise the return fare will be two-thirds.

Trusting that the above arrangements may be of benefit to our members, and be the means of a large attendance at Bow-Arrow,

We are yours fraternally,

J. B. McMURRICH,
F. A. NICKERSON.

OSWEGO, N. Y., July 25, 1887.

W. C. A. MEET, BALLAST ISLAND.

IT had been a very hot week in New York. Sunday, July 17, was a scorcher, tempered partly by two rain squalls, and Monday was not much better. As the 6 P. M. Western express rounded the curve at Spuyten Duyvil and rolled along the shore of the Hudson, a very cool and delightful north wind was felt—a good wholesail breeze, as the downward-bound schooners and sloops testified by the "bones in their teeth." With the cool breeze, "Rider Haggard" and "Allan Quatermain," the lucky canoeist who was off for a vacation, spent a delightful evening, and was quite ready to turn into his "lower" when the train reached Albany. He found himself in Buffalo when he awoke. Breakfast in the dining-room car, from a window of which the green waters of Lake Erie could be seen for miles east, west and north, was a mentally and bodily-filling meal. It was nearly 1 o'clock when the train stopped at Sandusky and dropped the canoeist—a veritable hot cake and a Jabberwock. He expected to meet at the station the Jabber (Geo. A. Warder, the first member and the founder of the Jabberwock C. C.), but he didn't, the Alaska from Ballast Island not having arrived. When she did get in, at 2:30, the Jabber appeared, "the observed of all observers" and the girls, in a creamy flannel suit and white Tam. The two canoeists looked about Sandusky for an hour and then embarked on the Alaska for Ballast Island, where they arrived at 7 o'clock, having dropped from the gangway of the steamer into a rowboat pulled out to meet them as the Alaska went by the canoe camp. The Jabberwock's steward called all to supper just as the rowboat touched the island, so the tired traveler made up his mind to attend to business first and pleasure afterward.

The camp was in full blast, all the tents pitched and the canoes polished and waiting for the morrow's races. The member from the East was at home in an hour and knew nearly every canoeist on the island. There are advantages in a small meet (comparatively speaking). It is impossible to meet, know and remember two hundred men in two weeks as at the A. C. A. meets. But knowing ten beforehand it is a simple matter to take in forty or fifty more in a very short time when all are camped together in a small area and not stretched a mile or more along shore. For sociability the W. C. A. meet resembles the '84 Hudson River meet more than it does that of the A. C. A. Many voted that meet the best they ever attended.

The first and second meets of the W. C. A. were held at Ballast Island had proved so successful (from the location point of view especially) that it was decided to meet at the same place this year. The island is the property of the Ballast Island Club, of Cleveland, Ohio—Hon. Geo. W. Gardner, Gen. James Barnett, John B. Smith, W. H. Corning and C. A. Brayton, and these gentlemen are all honorary members of the W. C. A., and the only ones. The club gives the use of the island to the association for the two weeks meet rent free. The island contains about fifty acres of land. The steamboat wharf is on the sheltered side toward Put-in-Bay—the western side—and near it is Commodore Gardner's cottage. There are several cottages along the northern and eastern shores of the island. The occupants of the cottages all take their meals at Ward's, a large dining hall on the east side of the island. The hall is owned by the club but run by Mr. Ward, who pays no rent and furnishes board for a nominal price. Many of the canoeists took their meals at Ward's, a few did their own cooking, and the rest had club stewards who attended to the cooking and providing department. A large ice house on the western side of the island, one compartment of which was empty, made an excellent shelter for canoes, sails, cushions, etc., the landing stages being directly in front of it and on the most sheltered side of the island. Surf continually breaks against the bold rocks on the northern and eastern shores of Ballast, but the western shore is low and the water usually quiet, making canoe landing easy.

Among the cottagers are Mrs. Gardner and her party, three young ladies of which are active members of the W. C. A., Miss Gardner, Miss Huntington and Miss Holland. With Commodore Ellard are Mrs. and Miss Ellard. Ex-Gov. J. D. Cox occupies a cottage with his party, including his son Kenyon Cox, the artist. Mr. Cox, Sr. was much interested in the races and acted as timekeeper for many of them. Cleveland, Cincinnati and Sandusky people were coming and going daily, and the little boat running between the island and Put-in-Bay brought many day visitors.

The prize flags were presented by the lady friends of members of the association. Many of them were quite original in design, and all were pretty. Sixty members of the association were present and about forty canoes. The clubs represented were: Cincinnati, Tippy and Kenwood (of Chicago), Sandusky, Cleveland, Toronto (Can.), Bay City (Mich.), Fremont, Stillwater, Ruckawa (Dayton), Jabberwock, Oakland (Cal.), New York and Knickerbocker. The tents of the canoe camp were pitched on the southern slope of the island among the trees, and but a few rods from the ice house and landing stages, but quite a distance from the cottages, so the canoeists were not expected to be on their very best behavior all the time. The cottages made a very excellent substitute for Squaw Point, as established at the A. C. A. meet.

G. Harry Gardner, of the regatta committee, arrived at Ballast early in the week previous to that of the meet, and buoyed the courses, which had previously been laid out. Lane Lockwood, Wm. Ford (Sandusky), C. J. Bousfield (Bay City), and G. Harry Gardner, the regatta committee, were all present at the meet. C. F. Pennewell, of Cleveland, was superintendent of camp and an early arrival. Geo. Warder was the forerunner of the Jabberwocks and pitched their tents the Thursday before the formal opening. The members from Cleveland put in an appearance Friday; Cincinnati and Chicago came in a body Sunday. The meet was fairly opened on Monday with Com. Geo. B. Ellard as the presiding officer and his subordinate officers all present. The event of the day was a cruise to Put-in-Bay and a dinner at the Toledo Club House. The fleet included eighteen canoes. By Tuesday the campers had pretty well shaken themselves down and felt at home with everything shipshape. T. J. Kirkpatrick, a Jabberwock from Springfield, O., and the president of the League of American Wheelmen, together with his wife and little daughter Hazel—the favorite of the camp—occupied a tent under the flag of the Jabberwocks—a large silk banner with the Jabberwock himself beautifully worked upon it in red and black worsted. The tents of the other club members were grouped around the flag pole. Geo. Warder occupied a large A tent, and with him as his guests were W. W. Blow, of Oakland, Cal., and C. B. Vaux, of New York, both minus their canoes, of course. Mr. Blow had taken a journey of eight days to reach camp, coming by way of Puget Sound, the Canadian Pacific Railroad, through Winnipeg and thus to Chicago. He arrived Wednesday morning, the 20th, just as the first race was being started. California had never before been represented at a canoe meet, but Mr. Blow thinks it will be again, and soon. Messrs. Leys and Jaques came from Toronto and brought their canoes with them to enter the races.

Commodore Ellard reviewed the fleet on Tuesday, thirty canoes sailing in the squadron, and a pretty sight it was, at least all the visitors and cottagers thought so, for they were very demonstrative in their expression of delight and appreciation.

Early on Monday afternoon, when there was more than half a gale of wind blowing and a big sea running out in the "open," the campers made out two canoe sails in the direction of Kelly's Island, evidently coming toward Ballast. No little astonishment was expressed that any one could have the pluck to sail on the open lake in such weather, and great was the desire to make out who the canoeists were. Glasses were levelled at the white specks, and finally the sharpest pair of eyes picked up the numbers on the sails, 125 and 127. No one knew to whom these numbers belonged, so a grand rush was made for the association books with members' lists. 125 was J. R. Bartlett and 127 was Andrew Moos, both of Fremont, Ohio. This did not greatly help matters, as no one present knew either of the gentlemen. Every canoeist in camp made a break for the landing as the canoeists came nearer, and just as they rounded the point and ran under the lee of the island some one shouted out, "What's the matter with Bartlett?" The entire party joined in the answer, as is usual in such cases, and chorused at the top of their voices, "Oh! he's all right," and then the same thing was repeated for 127, and the hardy canoeists came alongside the staging—and true canoeists they were. Captain Bartlett is an elderly man weighing considerably over 200lbs., but having a splendid figure and physique, and gray hair; Mr. Moos is younger and of lighter build.

"Where did you cruise from?"

"Left Fremont yesterday, took in twenty miles of river and twenty more of bay and brought up at Sandusky about 2 o'clock. Sailed from there this morning and reeled off another twenty on the lake; and here we are, come down to see what a canoe meet is like and if you are going to give the old fellows a chance. Wet? Well, a little; you see we got into a good bit of a sea coming across. Do anything for us? Yes; show us where to pitch a tent; we've got everything aboard, pretty sizy canoes, you see, and they help a pile." And they did, twelve wheelbarrow loads. In less than an hour after landing the jolly captain and his mate were set up in A-tent up, mosquito netting under the flaps, cots in position under it, carpet on the floor of the tent, small stove as a final beds made, fly spread out as a porch roof with a table and chairs under a tree in front with cooking utensils near it, so it could be touch of civilization a cuspidor was placed and 127 were "at home" to everybody.

That makes an old canoeist from the start did not hesitate to drop them almost as quickly as trapped. His second barrel did not figure as prominently as usual. For Walsh "tailers" were trapped in abundance, and he got but very few easy birds. Following is the score:

Kerrigan.....2110122020111101112101212110101111110211022022 11—40
Walsh.....1211111010100111010101012001110111101122010111 20—35

Both men have agreed to shoot another match in the near future.

CARVER'S TIME SHOOTING.—Dr. W. F. Carver, the champion gun and rifle shot, yesterday broke the glass ball record, at the East State street base ball grounds, by shattering 1,005 glass balls in 41½ minutes. His best previous record was 40¾ minutes, made at Columbia, Pa., last Saturday. By his exploit yesterday, Dr. Carver gets from the Spencer Arms Company, whose weapons he uses, $1,000, offered by them for lowering the record under 45 minutes. The exhibition, of which the breaking of 1,005 balls was a part, was given by Dr. Carver and John L. Brewer. It began with the shooting of clay pigeons thrown from traps according to the English rules. Each shot at 2C. Brewer broke 19, requiring a second shot for 6 of them, and missing one at both shots. Carver also missed one, and required a second shot for 3 others. The champions then shot at glass balls, thrown into the air singly as rapidly as one man could do it. Brewer broke 24 out of 25, and Carver 27 out of 28. Two balls were then thrown up at once and both broken by each of the men. Dr. Carver with three shots broke as many balls thrown into the air at once, but Mr. Brewer did not succeed in breaking more than two, although he made several trials. Successful exhibitions of shooting with the gun at the right and left shoulder alternately, and standing with back to the balls, turning and shooting, were then given. In shooting at 5 balls thrown simultaneously, Dr. Carver succeeded in breaking all 5 at his second attempt, and Mr. Brewer broke 4 only, although he shot twice at the fourth ball. Dr. Carver several times shot with a rifle at bricks thrown into the air. Under favorable circumstances, he said, he had first broken the brick, then broken a large fragment, then a fragment of what was left, and finally blown into powder with a fourth shot the largest piece remaining. In his attempts yesterday he at no time succeeded in striking more than one piece after having first broken the brick, but pieces the size of a baseball were blown into a powder. A dozen shots at small oranges were made with the rifle. All of them were struck and of several only the stem remained, but one or two pieces of pulp the size of a dime. Silver dollars, halves, quarters and other coins were marked with a bullet as mementoes for several of the spectators. The attempt of Dr. Carver to lower his record at glass ball shooting was the most interesting feature of the exhibition. Three guns were used by the marksman—a 5, a 6 and an 8-shooter. Mr. Brewer and an assistant were kept busy in loading the guns, but so rapid was the firing of the champion that at times he was compelled to assist in loading. The barrels of the weapons became so hot as to be very uncomfortable to the touch, although a thick buckskin glove was worn on the hand that was extended under the barrel; and the heated iron at times swelled to such an extent as to interfere with easy working of the firing mechanism, and several minutes were lost in remedying it. Of the 1,029 balls shot at, but 24 were missed. The highest records made without a miss were 167 and 133. Twice 97 balls were broken consecutively. Several of the misses were due to the heated gun barrels, which prevented the prompt ejection of the shell. The balls were thrown into the air by Manager Forbes, who, when the trial was ended, was almost as exhausted as Dr. Carver. Mr. Forbes stood beside the Doctor and the glass balls were thrown about 10ft. high, out directly in front. Nearly all of them were broken before they began to fall to the earth. Representatives of the *State Gazette*, *True American* and *Times* acted as scorers and Clarence Briest as time keeper. The attendance at the exhibition was about 500 and generous applause was bestowed upon both the champions when good shots were made, and an extra amount upon Dr. Carver, when it was announced that he had broken the record. There is no doubt that the record can be still further lowered by several minutes, if the marksman is provided with more guns and enough assistants to load them. The exhibition is to be repeated to-day.—*Trenton (N. J.) Gazette, July 20.*

NEWARK, July 23.—Dr. Carver had announced that he would to-day give an exhibition of fine shooting at Erb's ground and attempt to beat his record of 1,000 glass balls broken in 41m. 30s., made by him at Trenton, N. J., July 19, and for which feat it is said he was to receive $1,000 from the Spencer Arms Co., whose gun was employed. Owing to the rain the shoot to-day was postponed to the middle of next week.

TORONTO, July 16.—The Toronto Gun Club held a shoot at the Woodbine this afternoon, the conditions being 15 artificial birds to each man. Captains Briggs and Worden chose a team from the club, the losing side to pay for a supper. Captain Briggs's team—Townson; Pearsall, Leroy, Baylis, Felsted, McDowall, Martin, Jr., Morten; total, 101. Captain Worden's team—Kidd, Martin, Sr., Kidd, Ayre, Foreman, Mullen, Mearson, Gardner; total, 100.

A. C. A. MEET, 1887. BOW-ARROW POINT, NORTH HERO ISLAND, LAKE CHAMPLAIN.
A—Squaw Point. *B*—Main Camp. *C*—Paddling Course. *D*—Sailing Course. *E*—Wharf.

Canoeing.

TRANSPORTATION TO BOW-ARROW POINT.

THE Committee on Transportation have made the following report:

Commodore R. J. Wilkin, A. C. A.:

Your committee having in charge the matter of transportation have to report that owing to the non-receipt of any response to our request for special rates from many routes, our work is not so complete as we desired. However, the following arrangements have been made:

The steamer Maquam, Capt. Hawley, plying between Plattsburg and Maquam, will touch at the camp each trip, fare, 25c., baggage and canoe free.

The following lines, forming the Trunk Line Association, viz., Baltimore & Ohio, Pennsylvania, Delaware, Lackawana & Western; New York, Lake Erie & Western; West Shore and New York Central will carry members of the A. C. A. from points in Trunk Line territory, *i. e.*, Niagara Falls, Buffalo, Salamanca, Pittsburgh, Bellaire, Wheeling and Parkersburg, and points east thereof at one fare for the double journey on round trip tickets; canoes to be carried free on trains that can accommodate them. Rome, Watertown & Ogdensburg Railroad will sell round trip tickets from Aug. 10 to 20, inclusive, good to return up to Aug. 30, at one fare for the round trip; canoes free at owner's risk when there is accommodation for them. Tickets will be on sale at the following stations: Niagara Falls, Rochester, Oswego, Syracuse, Rome, Utica, Watertown and Canton, and the route will be R.W. & O. to Norwood, Central Vermont to Rouse's Point, and D. & H. C. Co. to Plattsburg. Central Vermont will issue tickets on same rate and terms.

Delaware & Hudson Canal Co. will issue round trip tickets at one fare, and will provide transportation free for canoes. Members taking this line at its western end will save a transfer by taking it at Albany. Grand Trunk Railway and Canada Pacific Railway will carry members of A. C. A. over their lines at one and one-third fare for the round trip, on the certificate plan. Certificates may be had on application to our secretary and from J. B. McMurrich, Oswego, N. Y. It will be necessary to have these certificates signed by agent of the railroad at starting point before starting, and have them indorsed by the secretary of the Association at Bow-Arrow to entitle the holder to one-third fare for the return trip. Connecticut R. R. Co. will issue tickets from Springfield, Holyoke, Northampton and Greenfield at one fare for the round trip, but do not offer anything as to carriage of canoes. Through the courtesy of Mr. Shanahan, Superintendent of Public Works, New York State, free use of the canals is extended to the members of the A. C. A., two or more canoes to lock through at one time. The arrangements with the Grand Trunk R. R. and Canada Pacific R. R. are based on twenty-five full fares going being paid, otherwise the return fare will be two-thirds.

Trusting that the above arrangements may be of benefit to our members, and be the means of a large attendance at Bow-Arrow,

We are yours fraternally,

J. B. McMURRICH,
F. A. NICKERSON.

OSWEGO, N. Y., July 25, 1887.

W. C. A. MEET, BALLAST ISLAND.

IT had been a very hot week in New York. Sunday, July 17, was a scorcher, tempered partly by two rain squalls, and Monday was not much better. As the 6 P. M. Western express rounded the curve at Spuyten Duyvil and rolled along the shore of the Hudson, a very cool and delightful north wind was felt—a good wholesail breeze, as the downward-bound schooners and sloops testified by the "bones in their teeth." With the cool breeze, "Rider Haggard" and "Allan Quatermain," the lucky canoeist who was off for a vacation, spent a delightful evening, and was quite ready to turn into his "lower" when the train reached Albany. He found himself in Buffalo when he awoke. Breakfast in the dining-room car, from a window of which the green waters of Lake Erie could be seen for miles east, west and north, was a mentally and bodily-filling meal. It was nearly 1 o'clock when the train stopped at Sandusky and dropped the canoeist—a veritable hot cake and a Jabberwock. He expected to meet at the station the Jabber (Geo. A. Warder, the first member and the founder of the Jabberwock C. C.), but he didn't, the Alaska from Ballast Island not having arrived. When she did get in, at 2:30, the Jabber appeared, "the observed of all observers" and the girls, in a creamy flannel suit and white Tam. The two canoeists looked about Sandusky for an hour and then embarked on the Alaska for Ballast Island, where they arrived at 7 o'clock, having dropped from the gangway of the steamer into a rowboat pulled out to meet them as the Alaska went by the canoe camp. The Jabberwock's steward called all to supper just as the rowboat touched the island, so the tired traveler made up his mind to attend to business first and pleasure afterward.

The camp was in full blast, all the tents pitched and the canoes polished and waiting for the morrow's races. The member from the East was at home in an hour and knew nearly every canoeist on the island. There are advantages in a small meet (comparatively speaking). It is impossible to meet, know and remember two hundred men in two weeks as at the A. C. A. meets. But knowing ten beforehand it is a simple matter to take in forty or fifty more in a very short time when all are camped together in a small area and not stretched a mile or more along shore. For sociability the W. C. A. meet resembles the '84 Hudson River meet more than it does that of the A. C. A. Many voted that meet the best they ever attended.

The first and second meets of the W. C. A. were held at Ballast Island had proved so successful (from the location point of view especially) that it was decided to meet at the same place this year. The island is the property of the Ballast Island Club, of Cleveland, Ohio—Hon. Geo. W. Gardner, Gen. James Barnett, John B. Smith, W. H. Corning and C. A. Brayton, and these gentlemen are all honorary members of the W. C. A., and the only ones. The club gives the use of the island to the association for the two weeks meet rent free. The island contains about fifty acres of land. The steamboat wharf is on the sheltered side toward Put-in-Bay—the western side—and near it is Commodore Gardner's cottage. There are several cottages along the northern and eastern shores of the island. The occupants of the cottages all take their meals at Ward's, a large dining hall on the east side of the island. The hall is owned by the club but run by Mr. Ward, who pays no rent and furnishes board for a nominal price. Many of the canoeists took their meals at Ward's, a few did their own cooking, and the rest had club stewards who attended to the cooking and providing department. A large ice house on the western side of the island, one compartment of which was empty, made an excellent shelter for canoes, sails, cushions, etc., the landing stages being directly in front of it and on the most sheltered side of the island. Surf continually breaks against the bold rocks on the northern and eastern shores of Ballast, but the western shore is low and the water usually quiet, making canoe landing easy.

Among the cottagers are Mrs. Gardner and her party, three young ladies of which are active members of the W. C. A., Miss Gardner, Miss Huntington and Miss Holland. With Commodore Ellard are Mrs. and Miss Ellard. Ex-Gov. J. D. Cox occupies a cottage with his party, including his son Kenyon Cox, the artist. Mr. Cox, Sr. was much interested in the races and acted as timekeeper for many of them. Cleveland, Cincinnati and Sandusky people were coming and going daily, and the little boat running between the island and Put-in-Bay brought many day visitors.

The prize flags were presented by the lady friends of members of the association. Many of them were quite original in design, and all were pretty. Sixty members of the association were present and about forty canoes. The clubs represented were: Cincinnati, Tippy and Kenwood (of Chicago), Sandusky, Cleveland, Toronto (Can.), Bay City (Mich.), Fremont, Stillwater, Ruckawa (Dayton), Jabberwock, Oakland (Cal.), New York and Knickerbocker. The tents of the canoe camp were pitched on the southern slope of the island among the trees, and but a few rods from the ice house and landing stages, but quite a distance from the cottages, so the canoeists were not expected to be on their very best behavior all the time. The cottages made a very excellent substitute for Squaw Point, as established at the A. C. A. meet.

G. Harry Gardner, of the regatta committee, arrived at Ballast early in the week previous to that of the meet, and buoyed the courses, which had previously been laid out. Lane Lockwood, Wm. Ford (Sandusky), C. J. Bousfield (Bay City), and G. Harry Gardner, the regatta committee, were all present at the meet. C. F. Pennewell, of Cleveland, was superintendent of camp and an early arrival. Geo. Warder was the forerunner of the Jabberwocks and pitched their tents the Thursday before the formal opening. The members from Cleveland put in an appearance Friday; Cincinnati and Chicago came in a body Sunday. The meet was fairly opened on Monday with Com. Geo. B. Ellard as the presiding officer and his subordinate officers all present. The event of the day was a cruise to Put-in-Bay and a dinner at the Toledo Club House. The fleet included eighteen canoes. By Tuesday the campers had pretty well shaken themselves down and felt at home with everything shipshape. T. J. Kirkpatrick, a Jabberwock from Springfield, O., and the president of the League of American Wheelmen, together with his wife and little daughter Hazel—the favorite of the camp—occupied a tent under the flag of the Jabberwocks—a large silk banner with the Jabberwock himself beautifully worked upon it in red and black worsted. The tents of the other club members were grouped around the flag pole. Geo. Warder occupied a large A tent, and with him as his guests were W. W. Blow, of Oakland, Cal., and C. B. Vaux, of New York, both minus their canoes, of course. Mr. Blow had taken a journey of eight days to reach camp, coming by way of Puget Sound, the Canadian Pacific Railroad, through Winnipeg and thus to Chicago. He arrived Wednesday morning, the 20th, just as the first race was being started. California had never before been represented at a canoe meet, but Mr. Blow thinks it will be again, and soon. Messrs. Leys and Jaques came from Toronto and brought their canoes with them to enter the races.

Commodore Ellard reviewed the fleet on Tuesday, thirty canoes sailing in the squadron, and a pretty sight it was, at least all the visitors and cottagers thought so, for they were very demonstrative in their expression of delight and appreciation.

Early on Monday afternoon, when there was more than half a gale of wind blowing and a big sea running out in the "open," the campers made out two canoe sails in the direction of Kelly's Island, evidently coming toward Ballast. No little astonishment was expressed that any one could have the pluck to sail on the open lake in such weather, and great was the desire to make out who the canoeists were. Glasses were levelled at the white specks, and finally the sharpest pair of eyes picked up the numbers on the sails, 125 and 127. No one knew to whom these numbers belonged, so a grand rush was made for the association books with members' lists. 125 was J. R. Bartlett and 127 was Andrew Moos, both of Fremont, Ohio. This did not greatly help matters, as no one present knew either of the gentlemen. Every canoeist in camp made a break for the landing as the canoeists came nearer, and just as they rounded the point and ran under the lee of the island some one shouted out, "What's the matter with Bartlett?" The entire party joined in the answer, as is usual in such cases, and chorused at the top of their voices, "Oh! he's all right," and then the same thing was repeated for 127, and the hardy canoeists came alongside the staging—and true canoeists they were. Captain Bartlett is an elderly man weighing considerably over 200lbs., but having a splendid figure and physique, and gray hair; Mr. Moos is younger and of lighter build.

"Where did you cruise from?"

"Left Fremont yesterday, took in twenty miles of river and twenty more of bay and brought up at Sandusky about 2 o'clock. Sailed from there this morning and reeled off another twenty on the lake; and here we are, come down to see what a canoe meet is like and if you are going to give the old fellows a chance. Wet? Well, a little; you see we got into a good bit of a sea coming across. Do anything for us? Yes; show us where to pitch a tent; we've got everything aboard, pretty sizy canoes, you see, and they help a pile." And they did, twelve wheelbarrow loads. In less than an hour after landing the jolly captain and his mate were set up in A-tent up, mosquito netting under the flaps, cots in position under it, carpet on the floor of the tent, small stove as a final beds made, fly spread out as a porch roof with a table and chairs under a tree in front with cooking utensils near it, so it could be touch of civilization a cuspidor was placed and 127 were "at home" to everybody.

That makes an old canoeist from the start did not hesitate to drop them almost as quickly as trapped. His second barrel did not figure as pr

The ice house was a scene of bustle early Wednesday morning, as nearly every one desired to enter for the first event. Grand opening, sailing, 3 miles, twice around the half mile side triangle, open to all canoes, no limit to ballast, hull or rig. The day was clear and warm with a light breeze blowing, not strong enough to kick up any sea. Twenty-seven canoes entered and started, thirteen finished. The Nethla, a canoe quite similar to Lassie, was loaned to Mr. Vaux to sail in and he was allowed to sail in the race as a test of speed, his position at the finish not being officially counted as he was not in his own canoe.

The races are given in the order in which they were called, and not as they appeared on the programme. The first race was started at 9:50 A. M.:

	Name.	Canoe.	Club.	Time. M. S.
1.	N. B. Cook	138	Kenwood	45 30
	C. B. Vaux	Nethla	N. Y. C. C.	50 15
2.	W. A. Leys	Dawn	Toronto	52 00
3.	B. W. Wood	Vitum	Tippy	52 30
4.	J. O. Shiras	Albatross	Cincinnati	53 00
5.	D. B. Jaques	Dottrell	Toronto	54 30
6.	A. W. Kitchen	53	Tippy	55 00
7.	R. P. McCune	Kabeyum	Tippy	55 08
8.	C. J. Bousfield	Peggy	Bay City	57 15
9.	Geo. B. Ellard	Kelpie	Cincinnati	61 00
10.	C. W. Lee	Dolphin	Tippy	62 00
11.	J. R. Bartlett	Emma	Fremont	62 45
12.	H. Theabalt	120	Stillwater	64 45
13.	D. W. Ruff	Zerubbabel	Sandusky	65 00
	C. F. Latham	Lorna Doone	Tippy	Did not finish.
	W. D. Bruce	Kid	Cincinnati	Did not finish.
	H. D. Crane	Laura	Cincinnati	Did not finish.
	G. C. Messer	Kathryn	Tippy	Did not finish.
	A. Moos	127	Fremont	Did not finish.
	T. P. Gaddis	Siren	Ruckawa	Did not finish.
	C. F. Pennewell	Algonquin	Cleveland	Did not finish.
	G. M. Clark	Ada L.	Cincinnati	Did not finish.
	C. W. Schaeffer	123	Stillwater	Did not finish.
	C. J. Stedman	Janet	Cincinnati	Did not finish.
	G. Hessert	Undine	Tippy	Did not finish.
	O. A. Woodruff	Jauty	Ruckawa	Did not finish.
	E. M. Johnson	Cora	Sandusky	Did not finish.

The starting line for the sailing races was too short to allow so large a fleet to get an even start, yet the canoes got off well together, the windward boats having the advantage, as they were able to make the first flag on one tack, while the others were obliged to make three to clear it. Cook got a good start and sailed the entire race making a side of the triangle in one leg every time. On the first round Nethla was blanketed badly at the start and had to make three tacks to clear the flag, giving Cook a good lead. The wind held steady all through, though light.

Race No. 6 was called as soon as all the canoes in Event 1 returned. Paddling, Class I., one mile—half mile and turn.

Name.	Canoe.	Club.	Time.
D. B. Jaques	Dottrell	Toronto	10 52
John Dover	121	Stillwater	11 03
G. C. Schaeffer	123	Stillwater	11 30

Directly after this race Event No. 5 was called. Paddling, Class III., half a mile. It was started at 12:05:25.

Name.	Canoe.	Club.	Time.
A. M. Kitchen	53	Tippy	5 03
R. P. McCune	Idler	Tippy	5 08
G. Hessert	Undine	Tippy	5 20
C. J. Bousfield	Peggy	Bay City	

By this time the breeze had almost died away and the heat was too great to make paddling agreeable, so the races were postponed till evening, and everybody rushed for shade and dinner.

The annual business meeting was announced for 3 P. M., to gather under the Jabberwock flag. Commodore Geo. B. Ellard called the meeting to order, and Secretary Shiras read the minutes of previous meeting and also a treasury report. The association is free from debt and has a substantial balance in the treasury. The letter from the A. C. A. asking the W. C. A. to join it as a division was discussed, and the question "Shall the W. C. A. join the A. C. A. and become the Western Division?" was put to vote—35 no to 11 yes was announced by the tellers as the result. The W. C. A. therefore remains independent of the A. C. A. The secretary was instructed to formally notified the secretary of the A. C. A. of the result of the ballot. The officers for 1888 were then elected, as follows:

Commodore—C. F. Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlettt. Fremont, O.
Rear Commodore—T. J. Kirkpatrick, Springfield, O.
Secretary—George A. Warder, Springfield, O.
Executive Committee—Harry Hodge, C. F. Pennewell and C. J. Bousfield.

Votes of thanks were passed to the Ballast Island Club for courtesies shown the Association, and to the lady friends of members who had made the prize flags. The meeting then adjourned.

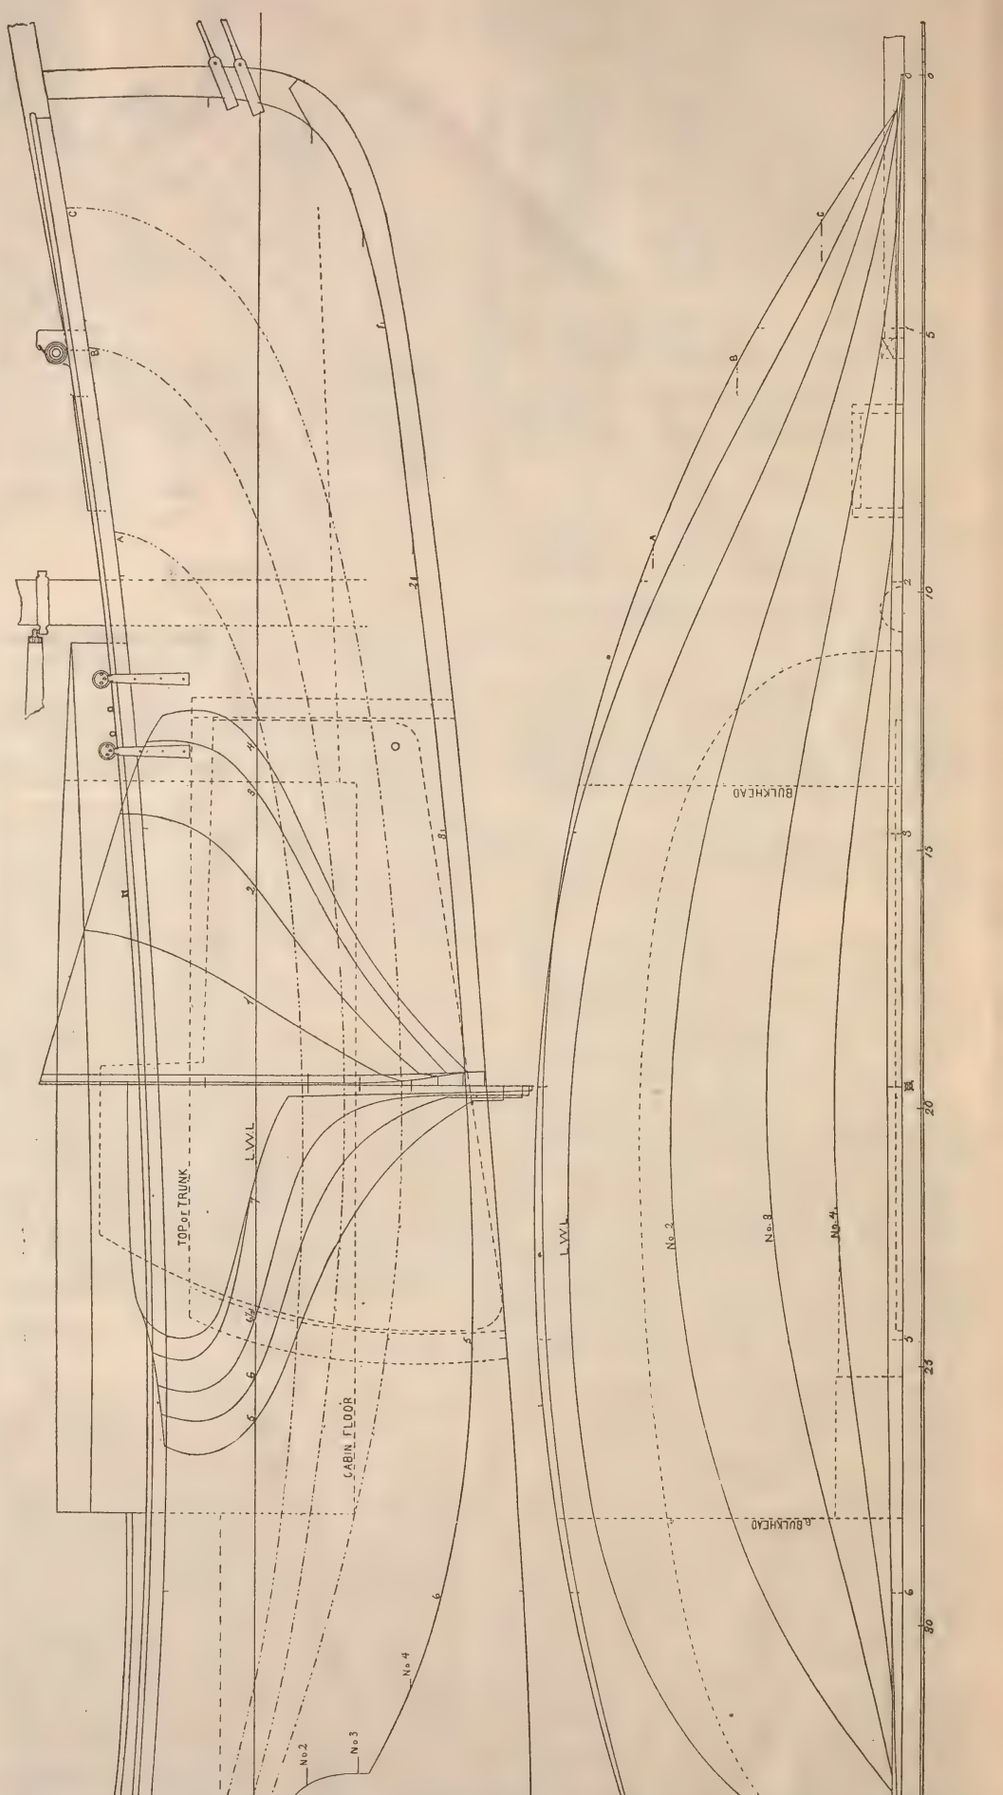
After supper, in the cool of the evening, before dark, two paddling races were called.

Event 11—Paddling, Class IV., half-mile straightaway. Started at 7:16:15:

Name.	Canoe.	Club.	Time.
W. A. Leys	Dream	Toronto	4 55
R. P. McCune	Kabeyum	Tippy	4 59
G. Hessert	Undine	Tippy	

Event 4—Paddling, Class II., one mile with turn. Started at 7:49:30:

C. L. Rest	No name	Stillwater	9 55
H. G. Hodge	124	Stillwater	10 15
L. H. Vinson	122	Stillwater	
R. Dewese	No name	Stillwater	
F. W. Keith	Psyche	Cleveland	



This wound up the racing for the first day.

SAGAMORE C. C., LYNN, MASS.—The Sagamore C. C. have held the following races this month: The Fourth of July races were for prizes given by the city, and were as follows: Sailing—First prize, silver water pitcher; second prize, silver cup. Paddling—First prize, pair silver vases; second prize, silver medal. Tandem paddling—First prizes, two pairs silver goblets; second prizes, two silver medals. The winners are as follows: Sailing—J. E. Raymond in the Loyola took first prize, with F. E. Passmore in the Ibis second. Paddling—Triton, F. I. Pettingell, first; Curfew, E. Bellatty, second. Tandem paddling—J. Campbell and F. I. Pettingell in the Triton took first; E. Bellatty and F. E. Passmore in a Peterborough second. A gale of wind was blowing during the races, which made fast time out of the question. In the sailing race, each man being afraid of the others, no discretion was used in reg rd to sail, and as a result five out of nine starters capsized before the finish. The Triton is a light canvas canoe, 16ft.×26in., with a light deck and centerboard, and that alone accounts for her winning the two paddling races, all of the others being heavy canoes, built for sailing. The Curfew was the first to finish in the sailing race, but was ruled out for crossing the line outside of the judges' boat at the start. A canoe capsized under her lee, and her captain, not having room to clear her without going about, took the only chance he thought of, and as a result lost the race. A race for the club pennant, held by the Curfew, was sailed over the club course of three miles on July 10, with the following results: Curfew first, Chrystal second, Wenuchus third. The first of a series of six sailing races was held by the club on July 16. The wind was very light and no time was taken. The winners were: Curfew first, Ibis second, Loyola third. These races are for three prizes, the one winning the most to take first, the next the second, and the next third. This race also included the club pennant, which is a perpetual challenge trophy, and has been held by the Curfew since October, 1886. Most of the members are taking more interest than ever in canoeing, and are busy making new sails and rigs. The only difficulty that we labor under is the lack of wealth to experiment as much as we would like; yet for home talent we can display as good a fleet as any club in the country. Every effort will be made to secure a good representation at the A. C. A. meet at Bow Arrow Point in August.—WHITE WINGS.

A. C. A. CENTRAL DIVISION, Albany, July 23.—The general business meeting of the Central Division will be held at the A. C. A. camp on Thursday, August 25, at 10 A. M., (or at such other time as the officers in charge may announce). The nominating committee for officers for the ensuing year will meet on Wednesday evening, at 8 o'clock, and will report to the Division meeting as above. It is desirable that the officers be elected before the A. C. A. meet is called on Friday following.—R. W. GIBSON, Vice-Com. Central Division.

A. C. A. MEMBERSHIP, Trenton, N. J., July 25.—A. C. A. applications to date: Joseph E. Hill, Boston, Mass.; Webster Spencer, Springfield; Joseph E. Hill, Boston, Mass.; Webster T. Bell, Hudson, N. Mass.; J. B. Shea, Pittsburgh, Pa.; Philip ——. WM. M. CARTER, Sec'y.

SINCE ladies have been accustomed to use Glenn's Sulphur Soap in their toilet their personal attractions have been multiplied, and it is seldom they are seen disfigured with blotches and pimples, or rough or coarse skin. HILL'S HAIR AND WHISKER DYE, black or brown, 50 cents. Sold by all druggists.—*Adv.*

SHADOW.

OF late years the name of Herreshoff has been so closely associated with steam that the earlier successes of the firm are little thought of, but none of the latter efforts of the famous brothers have brought more fame, nor more deservedly, than the yacht Shadow, whose lines, never before published, we give herewith. Built in 1871, she is still in the racing after seventeen years, during which time she has fully proved her superiority to all the centerboard boats of her class, while to-day, when the American centerboard sloop has disappeared from racing, Shadow alone remains to represent the type. Why she has held the first place for so long, and why she still is in the racing, when the rest have withdrawn in favor of more modern craft, are questions of the greatest interest, but the answer to both is evident on an inspection of the lines. Speaking broadly to-day, when all minor distinctions have disappeared in the great issue of sloop vs. cutter, Shadow may be taken as a typical American sloop; but if we look into her characteristics more closely and compare her with the best boats of her day, the sloop of fifteen years since, the great difference between them is apparent. The draft for a yacht of Shadow's length at that time was about 3ft. or 3ft. 6in., while the leading characteristics were shoal body, moderate deadrise and a hard bilge. In marked opposition to these are the distinctive features of Shadow, an extreme draft of 5ft. 4in., a great proportionate depth of body, a large angle of deadrise and a light bilge, while her lead ballast stowed close to the skin was very much lower than in the flatter boats. With this strong combination of inital elements selected the builders added their skill and knowledge in arranging all minor details of the design, so that the boat was not only of a far more advanced type, but she realized more fully the inherent advantages of her type. Her large area of load water plane, great depth of body and the consequent low position of her ballast and high center of buoyancy insured a maximum of stability, while the form itself is easy with fair waterlines and a clean run on the buttock lines.

DIMENSIONS AND ELEMENTS OF SHADOW.

Length over all	37ft. 1in.
Length l.w.l.	34ft. 2in.
Beam, extreme	14ft. 4in.

Area of club topsail	342sq. ft.
Area of jib topsail	370sq. ft.
Area of lower sails	1342sq. ft.

While her record entitles her to be called a racing boat, Shadow has been used by all her owners as a cruising craft, and she has good accommodations for a boat of her type. The cabin is large, with double berths on the two lockers and about 5ft. 6in. headroom. The centerboard rises through the trunk as shown, the opening being closed by a hinged lid when the board is lowered. The galley is fairly roomy, though of course lacking in the matter of height. There is a large cockpit aft, the steering being done with a wheel. The rig is that of a sloop with single jib, a storm jib being set on a shifting stay, set up at will to the eye on the band of the preventer bobstay. The jib sheets lead from an eyebolt between the shrouds, through block on jib, then through fairleader on rail, as shown, and to cleat aft. The present topmast houses and is rather long for the old sloop rig, but in other respects there is little departure from it. It would be interesting to know all the influences that worked on the builders to produce a boat so different from the majority at that time, but the accounts all vary. At any rate they produced a boat that was not only better than any of her contemporaries, but that has held her racing life after the others have ended theirs and withdrawn from the contest. Shadow was built at Bristol, R. I., in 1871, for Dr. E. R. Sisson, of New Bedford. He sold her to Mr. C. S. Randall of the same city, who in turn disposed of her to Mr. Tucker Daland. For the past dozen years she has been owned by Dr. John Bryant, of Boston, a member of the E. Y. C. who, with other amateurs, has sailed her in most of the races open to her during that time. Her skipper for some years has been Capt. Aubrey Crocker, of Puritan fame, and to his skill and care a part of her success is certainly due. Shadow enjoys the distinction of winning the only match lost by the cutter Madge, beating the latter in one race off Newport in 1881, and losing one race to her.

MONATIQUOT Y. C. FOURTH CLUB REGATTA, JULY 23.—A club race was sailed in place of the open race set for July 23. The courses were first and second classes 9 miles, third class 7 miles. Weather squally, rain and clear. Wind S.W., heavy. Tide quarter ebb at start.

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Cor.
Posy, R. G. Hunt	22.02	1 50 40	3 29 13	1 38 33	1 06 40
Folly, J. F. Sheppard	26.07	1 51 56	3 29 55	1 38 59	1 11 36
Secret, E. F. Linton	22.06	1 52 50	Did not finish.		

SECOND CLASS.

Diadem, L. Hayward	18.06	1 55 14	3 48 12	1 52 58	1 15 48
Tartar, J. B. Forsyth	19.06	1 55 30	3 48 00	1 52 30	1 17 15
Snarleyow,GMaybury	18.00	1 58 27	4 01 32	2 03 05	1 25 40
Maud, G. M. Lincoln	19.02	1 57 52	4 00 32	2 02 40	1 26 54
Hester, P. Blackmar	19.07	1 55 34	4 00 50	2 04 56	1 28 47
Spray, C. F. White	19.03	1 56 33	4 07 20	2 50 47	2 15 05
Spider, A. E. Pratt	19.02	1 56 22	4 07 24	2 51 02	2 15 55

No third class started. First prize, class one, Posy; class two, Diadem. Second prize, class one, Folly; class two, Tartar. Third prize, class two, Snarleyow. Secret broke her gaff on third leg of course, Spray carried away bowsprit. Regatta committee: T. D. Bagley, A. W. Blanchard, G. W. Bicknell, C. F. Colby, R. G. Hunt, C. G. Sheppard. Judges: T. D. Bagley, Henry Gardner.

SOUTH BOSTON Y. C.—A regatta will be sailed on July 30 and another on Aug. 27, open to club yachts only.

HALIFAX JUBILEE REGATTA.

THE following invitation has been sent out by the R. N. S. Y. S.:

Halifax, N. S.—I have the pleasure to send you herewith the official programme of the yacht races to be sailed here on Aug. 16, 17 and 18, together with form of entry. The above dates have been fixed upon with the view of enabling yacht owners to be back in New York waters in ample time for the trial races. The fixtures immediately preceding the Jubilee regatta here are: The N. Y. Y. C. cruise, Aug. 3, the Goelet Cup races at Newport, Aug. 6 or 8, and the E. Y. C. regatta at Marblehead follow immediately after the Goelet cup races. Yachts may then sail directly for Halifax, take part in the regatta and other festivities here, and, if desired, touch at Bar Harbor on the return trip and race there on Aug. 25. A number of yacht owners in New York and Boston have already intimated their intention of cruising to Halifax, either to race for the prizes offered or to simply visit the port, and the officers and members of this squadron trust you will also decide to proceed to this port and join in what promises to be a notable reunion of American and British yachtsmen. The committee of this squadron have made arrangements to have letters and papers, addressed to yacht owners or their friends, delivered at the club rooms, and on the arrival of each yacht the squadron steam launch will meet her and put the mail on board. Letters, telegrams and papers should be directed to the care of the secretary R. N. S. Y. S. Competent pilots will be secured by the committee, and owners wishing to have their services will be able to obtain them by applying at the club rooms. Owners are requested on arrival to enter their names, and those of their friends on board, in the visitors' book in the club rooms, Halifax Hotel. The rooms are open to all visiting yacht owners and their friends. The club house of the Lorne Amateur Aquatic Club at Richmond, will, through the courtesy of the president and members of the club, be open to owners and their friends. Yachts' boats may land at H. M. Dockyard, at the Queen's Wharf, at the Royal Engineer's (lumber yard) Wharf. The latter is the rendezvous of the R. N. S. Y. S. The appended extract from an interview with Mr. H. Marquand, schooner yacht Ruth, N. Y. Y. C., will no doubt prove of interest to you. "I think," he said, "it will be a good thing for our boats to come down here, as they will see what a pleasant cruise it is, and it will also be a good thing for Halifax. I might say that it is a very easy run down here in good weather. We came from Newport to our anchorage in 62 hours and had not a particle of fog, at least nothing to stop us. There is no trouble about getting here." I have to express the hope, on behalf of our citizens and yachtsmen, that you will do us the pleasure of visiting our port during the coming regatta week, and to tender you the courtesies of the squadron during your stay here. I am, yours sincerely, H. M. WYLDE, Sec'y R. N. S. Y. S.

Notice of your intention to come would be considered a favor by the committee.

The programme is as follows:

First Day, Tuesday, Aug. 16.—No. 1, race open to all yachts. First prize, Jubilee Cup, presented by the citizens of Halifax, value $1,000. To be won by first yacht in saving her time. Second prize, $250, presented by residents of New York and Boston. To be won by first yacht of different rig from winner of Jubilee Cup, saving her time. Course—Starting from a line below George's Island, between flag buoy on western shore of the harbor and a steamer anchored three-quarters of a mile due east magnetic, thence to Inner Automatic Buoy (red) leaving buoy on port side, thence E.S.E. 9 miles to mark boat, leaving it on starboard hand, thence S.W. 9 miles to mark boat, leaving it on starboard hand, thence to Inner Automatic Buoy N. by W. 10 miles, leaving it on starboard hand, and finish off H. M. lumber yard. Total length, 41 miles, 7 cables. Flying start, 10:30 A. M. Rule of measurement, time allowance and sailing regulations of the New York Y. C.

Second Day, Wednesday, Aug. 17.—No. 1, race open to all yachts over 70ft. load waterline. First prize, cup presented by the Roya Nova Scotia Yacht Squadron. To be won by first yacht in saving her time. Second prize, $100, presented by residents of New York and Boston, to be won by first yacht of different rig from winner of first prize, saving her time.

No. 2.—Race open to all yachts not exceeding 70ft. load water line. First prize—Cup, presented by A. B. Sheraton, Esq., of the Queen Hotel. To be won by first yacht in saving her time. Second prize—Cup, presented by the Royal Nova Scotia Yacht Squadron. To be won by first yacht of different rig from winner of first prize, saving her time. Course, as on first day. Start, as on first day. Rulo of measurement, time allowance and sailing regulations of the New York Yacht Club.

Third Day.—Thursday, Aug. 18. No. 1.—Race open to yachts belonging to the Royal Nova Scotia Yacht Squadron only. First prize—Cup, presented by residents of New York and Boston. Value $600. Second prize—$60, presented by residents of New York and Boston. Course—Starting from H. M. lumber yard to flag buoy in Dartmouth Cove, thence to Mars Rock buoy, thence to flag buoy in Dartmouth Cove, thence to Mars Rock buoy and finish off H. M. lumber yard. Leaving all marks on starboard hand; 21 knots, 6 cables. Flying start, 10.30 A. M. The race will be sailed under the rules of the Royal Nova Scotia Yacht Squadron.

The prizes, presented by residents of New York and Boston, were to have been raced for at Passamaquoddy Bay as a return compliment to the citizens of Halifax. The regatta at Passamaquoddy has been abandoned and the prizes offered for competition at Halifax. Sailing directions, charts of the course and distinguishing numbers will be handed to the owner of each yacht on her arrival at Halifax. Entries to be made on the inclosed form, addressed to the secretary of the Royal Nova Scotia Yacht Squadron, up to noon of Monday, Aug. 15. Entries by telegraph will be received up to that time.

VOLUNTEER.

THE trial trip of the Volunteer took place on Thursday last the yacht towing away from Lawley's in the afternoon and casting off from the tug when well out in Boston Harbor. Some trouble was met with in shipping the centreboard pin, but all was finally adjusted and she set her new canvas with a good southeast wind when once clear of the harbor. She sailed to Marblehead passing Bedouin on the way. On Friday there was a heavy rain in the morning, but at 2 P. M., Captain Haff had her again under way, running out under jib and setting her mainsail outside the harbor. She sailed all the afternoon, dropping Gen. Paine at Nahant and returning to Marblehead. On Saturday there was more rain and the yacht lay at anchor while her compasses were adjusted. On Sunday it was expected that she would try tacks with Priscilla, but the latter was under way quite early and was half a dozen miles distant before Gen. Paine was on board and the anchor up. Volunteer was sailed all day, returning to Marblehead at night. She will be sailed as much as possible this week, hauling out at Lockwood's to prepare for the Goelet Cup race, in which she will enter in spite of her new canvas. The trials thus far have given rise to much sage comment and have grown into victories over Priscilla and Bedouin; but the simple facts are that the new yacht has shown only good qualities, being evidently fast, quick in stays, and quite stiff. This in itself is a great deal, but there is much to be done in the way of trim, stretching sails and minor jobs, before she is in racing condition, and then she must sail beside one of her class before an accurate gauge of her position can be had. To compare her with Bedouin, a much smaller boat, or with Priscilla when the two have barely sailed in company, is absurd. The trials, however, seem to be perfectly satisfactory, and Mr. Burgess and Gen. Paine are to be congratulated on the success of their latest effort. On July 22 a slight mishap occurred, which was at once magnified into a serious disaster, the turnbuckle on the bobstay unscrewed, but it was noticed in time and no damage was done.

CAPSIZED CENTERBOARDS.—Sunday's list so far is not up to the average. One catboat upset off Fort Hamilton, the crew of two being picked up by a rowboat; an open boat capsized in the Narrows and the boy who was sailing picked up by two men in a rowboat, who barely reached him in time; and another catboat capsized in the same locality, the crew being picked up by a tug. The catboat Romana came to grief off Whitestone, and the two men on board were taken off by a tug.

THE PREVENTION OF COLLISIONS.—Rear-Admiral Daniel Ammen, U. S. N., who will be in New York shortly on business connected with the Nicaragua Canal, has written to Com. Gerry expressing a desire to confer with yachtsmen over the best means of preventing collisions and also of saving life when collisions occur.

YORKVILLE Y. C.—The second pennant regatta of the Yorkville Y. C. was sailed from Oak Point to Fort Schuyler Buoy and return on July 24, in a good S.E. breeze. Six yachts started, but only Happy Thought covered the course, her time being 2h. 35m.

WORKING SLOOPS IN RARITAN BAY.—On July 23, the second annual regatta of the working sloops about Keyport, N. J., was sailed. Gracie won in 6h. 29m. 36s. elapsed time, with James Tuckwell second and Ida Virginia third.

COLUMBIA Y. C.—The second of a series of matches was sailed on July 22, Mystic winning by 8m. 37s., her competitor, Daisy, having won the first race of the series.

THE SHADOW TYPE OF SLOOP.

Editor Forest and Stream:

It is certainly through no desire of mine that I am led into bothering your readers further with either the drubbing of cutters by sloops in so-called "cutter weather" or mere personal controversy with the editor as to whether I have or have not during seven years past believed in and consistently supported sloops of the Shadow type as opposed to the deep, narrow, lead-loaded cutter; but your somewhat unfair method of treating and commenting on my letter published by you last week compels a reply, otherwise, at some future date, you would probably be charging that "Mr. Clapham made no reply."

The fact is, that in my letter published in your paper of Oct. 14, 1886, I clearly proved my claim that, so far as type of model, depth and displacement were concerned, Puritan and Mayflower were only enlarged specimens of a type of sloop represented years before by such boats as Shadow, Sadie, Julia, Nepenthe, and, I might have added, Mr. J. R. Maxwell's original Daphne, also Vixen and others; but, as I remarked at the time, only one good example of an old-time sloop of great displacement compared to the "skimming dish" kind would be needed to prove my claim as made. Your remarks on my letter were not replied to, because I felt that enough had been said, and that those of your yachting readers who possessed common sense did not need to be treated like children. You now challenge the constancy of myself and others to the Shadow type of sloop during the past seven years. In reply, allow me to state that, on referring to my scrap book, I find that in *Brentano's Monthly Magazine*, dated, I believe, November, 1880, appeared an article by myself in which occur the following remarks: "Rig as you please, so that your canvas is properly balanced. Deepen the midship section a little if you like, without overdoing it. Even substitute a keel, approaching a centerboard in principle, if your water is deep enough, and you will never fail to vanquish the English type of cutter yacht so long as you retain the honest American bilge close to the top of the water."

Speaking of this reminds me to add that I have no desire to step on your pet keel, Mr. Editor. In fact, I advise you to use more keel, so that your very large and narrow cutters like Genesta and Galatea will do their sailing endways instead of sideways.

ROSLYN, L. I., July 22. THOMAS CLAPHAM.

THE SAILING OF THISTLE.

ON July 25 at 10 A. M. Thistle sailed from Gourock, Scotland, for New York, in command of Captain John Barr, with Captain Kerr, an old Atlantic sailor, as navigator. She will steer a northerly course, her night signals being a rocket and two blue lights, one at stem and one aft. She is under jury rig, short mast, topmast and bowsprit, gafftrysail with a boom, staysail, jib and gafftopsail. Her crew numbers 21. Her racing spars and sails will be shipped to New York by the Anchor Line. She may be expected about Aug. 15. Mr. and Mrs. James Bell, with Mr. Watson, will sail on Aug. 31 in the City of Rome, for New York. The members of the syndicate which built the yacht are John Clark, of Paisley, owner of the Mohican and Bessie; his brother, William Clark, of Paisley and Newark, N. J., part owner of Mohican; Andrew Coats, cutter Pansy; William Coats, lugger Hebe; James Coats, cutter Cruiser; Geo. Coats, cutter Nancy Lee; Robert Wylie; James Bell, schooner Amadine, and his brother William Bell.

The New York *Herald* this week repeats the absurd yarn which we have before denied about Mr. Watson spending three months in America studying the racing yachts, together with other fabulous information as to him giving his services freely, and also being aided by the syndicate as an advisory board. During Mr. Watson's stay of two weeks in America he did not see one of the four large yachts, and his aim thus far has been not to study the yachts that Thistle will meet, in order to beat them, but rather to so master the conditions, natural and artificial, under which the matches will be sailed, as to produce a fastest possible boat. He is paid for his design and superintendence of Thistle as every naval architect is for similar work, and as for the advice and experience of the syndicate, the members knew enough not to interfere, but gave Mr. Watson carte blanche as to design and details; an example which some syndicates on the other side of the water would have done well to follow. The general design was worked out by Mr. Watson and his aids before his visit to America and was shown to one or two reliable men at the time, but no design or model was ever submitted to the syndicate.

LAKE ONTARIO.

BELLEVILLE, Ont., July 23.—The Bay of Quinte Y. C. met on July 21 and arranged their prize list for the coming regatta as follows: Class A, $100 and champion flag, now held by Norah, to first, $50 to second. First class, $100 to first, $50 to second. Second class, $80 and champion flag, now held by Minnie A., to first, $40 to second. There will be no entrance fee, but 10 per cent. will be deducted from winners. Two to start or no race; three to start or no second prize. Open boats and yachts without fixed cabins barred. This is a good programme and ought to attract a large list of entries, but it is found that as ours is the last race of the circuit the number of competitors will be small. This was the case two years ago, when the B. Q. Y. C. races were at the foot of the list, but I hope for better things this year.

The club have decided to contribute $50 toward the purchase of trophies to be awarded by the association to the yachts which score the greatest number of points in their respective classes during the L. Y. R. A. circuit. It is probable that a local race for third class craft, including open boats, will be held later in the season. The Norah, which returned from her two weeks' cruise around Lake Ontario on Tuesday evening last, has realized the expectations of improvement which were founded on her recent alterations. She proved abler and stiffer than before, and as to her speed I need only state that she lugged 12 knots under lower canvas in a breeze in which she would have carried some of her kites if she had been racing.

Our club will be represented in the races at Toronto on Tuesday and Wednesday next by the Atalanta, in Class A, and the White Wings in the first class. I venture to predict that, bar accident, both will be winners if there is a breeze of fair sailing strength.

PORT TACK.

ATLANTIC Y. C. CRUISE.

A GOOD part of the fleet failed to get into harbor at New London on Tuesday night and anchored outside, but in the morning all were ready for the race to Shelter Island. The start was ordered for 12 M., but it was nearly half an hour later before the fleet was under way. The start was from off the Fort Griswold Hotel and the finish off Prospect House, Shelter Island. The wind was S.E. during the race, a good working breeze. The fleet was timed at the finish as follows:

Atlantic	12 34 55	3 09 33	2 34 58
Magic	12 21 05	3 09 18	2 48 13

CLASS B—SCHOONERS UNDER 75FT.

	Start.	Finish.	Elapsed.	Corrected.
Southern Cross	12 24 00	4 10 33	3 45 33	3 45 33
Haze	12 24 35	3 31 05	3 06 30	3 05 28
Azalea	12 21 55	3 53 07	3 31 12	3 29 27
Gevalia	12 25 00	3 35 55	3 10 55	3 09 05
Leona	12 25 00	3 36 35	3 11 35	3 01 05

CLASSES D AND E—SLOOPS 56 TO 65FT.

Fanny	12 22 30	3 08 18	2 45 48	2 45 48
Hildegarde	12 23 40	3 17 18	2 53 38	2 52 18
Mischief	12 22 40	3 18 18	2 50 38	2 48 55
Thistle	12 21 55	3 17 19	2 55 24	2 53 08

CLASSES F AND G—SLOOPS 48 AND UNDER 56FT.

Anaconda	12 30 00	3 31 30	3 01 40	3 01 40
Onward	12 30 00	3 45 26	3 15 26	3 14 52
Athlon	12 30 00	3 43 15	3 13 15	3 14 32½
Roamer	12 28 18	3 41 25	3 13 07	3 10 02

CLASS G—SLOOPS 41 AND UNDER 48FT.

Concord	12 29 25	4 09 14	3 39 49	3 39 49
Christine	12 29 25	4 12 07	3 42 42	3 42 28½
Vixen	12 26 35	4 08 47	3 42 12	3 41 37½
Adelaide	12 27 05	3 43 55	3 16 50	3 16 15½
Rover	12 29 00	3 50 50	3 21 50	3 16 15½
Fanita	12 26 24	3 39 15	3 12 49	3 12 03½
Enterprise	12 29 12	3 54 56	3 25 44	3 24 27
Stella	12 29 00	4 12 09	3 43 09	3 40 57
Ariadne	12 29 10	4 06 25	3 40 15	3 36 43
Nirvana	12 29 40	4 02 00	3 32 15	3 28 32

CLASSES H AND I—SLOOPS 30 TO 35FT.

Rival	12 34 20	4 07 40	3 32 50	3 32 50
Nomad	12 34 50	4 19 10	3 44 20	3 48 40
Daisy	12 35 00	4 15 53	3 40 53	3 35 07½

CLASS J—SLOOPS 26 AND UNDER 30FT.

Arab	12 33 45	4 22 02	3 48 17	3 48 17
Nyssa	12 35 00	Did not finish.		
Kangaroo	12 32 11	4 28 00	3 55 49	3 55 02

Leona wins in Class B, beating Haze 4m. 23s.; Fanny in Classes D and E, beating Mischief 3m. 7s.; Anaconda in Class F, beating Roamer 8m. 22s.; Fanita in Class G, beating Adelaide 4m. 12s.; Rival in Classes H and I, beating Daisy 2m. 16⅝s., and Arab in Class J, beating Kangaroo 6m. 45s.

There was a hop and the usual fireworks in the evening.

Thursday's run was across to Stonington, nearly all the fleet taking part. Magic left the fleet, as her owner was dissatisfied with the ruling of the regatta committee. The boat is in first class and had no competitor, so no prize was given. Atlantic, Azalea and Mischief also left the fleet. As Magic sailed away she fired a gun, which was mistaken for the starting signal, some of the yachts going over the line, while some did not follow the proper course, so the times are of little value. The S.E. wind was strong and squally at times. Adelaide grounded in Fisher's Island Sound, but came off safely. The yachts indicated by a * did not go the correct course. The times were:

CLASS B—SCHOONERS UNDER 75FT.

	Start.	Finish.	Corrected.
Gevalia	11 10 00	2 59 00	3 49 00
Haze	11 10 00	3 06 00	3 56 00
Southern Cross	11 10 00	3 27 40	4 17 40
Leona	11 10 00	3 33 50	4 23 50
Wivern	11 10 00	3 52 50	4 42 50
Signal	11 10 00	4 18 50	5 08 30

CLASSES D AND E—SLOOPS 56 TO 65FT.

Thistle	11 10 00	3 02 50	3 52 30
Fanny	11 25 00	3 05 00	3 40 00

CLASS J—SLOOPS 26 TO 30FT.

Arab	11 05 00	3 16 00	4 11 00
Kangaroo	11 05 00	3 25 30	4 20 30

In Class B Gevalia wins, beating Southern Cross 28m. 40s. In Classes D and E Fanny beats Hildegard 1m. 30s. In Class F Athlon beats Anaconda 55s. In Class G Adelaide beats Fanita 15s. In Classes H and I Rival beats Daisy 2m. 20s., and in Class J Arab beats the Kangaroo 9m. 30s.

It was the intention to continue the cruise to Newport, but the weather was bad on Thursday night and Friday and there was some dissatisfaction among the owners over protests, so on Friday noon a meeting was held on the flagship and it was decided to disband at once. A part of the fleet sailed for New York, while the others continued to Newport and other eastern ports.

Fanita has challenged Adelaide for a match over the New York Y. C. course, for a $200 prize.

CEDAR POINT Y. C.

THE first pennant regatta of the Cedar Point Y. C., was sailed on July 23 at Cedar Point, off Westport Harbor.

The wind was S.S.W. and quite fresh, with numerous rain squalls during the race. The course was from a stakeboat off Cedar Point to and around Buoy 20 (Cankeen Island Reef), thence to and around Sunken Island Buoy, thence to home stakeboat, leaving everything on port hand. Distance, about 13 miles. Judges, Messrs. P. G. Sanford and Eli Bradley. Preparatory gun was fired at 1:10 P. M., and Class B was started at 1:15. Gia Softly was handicapped 10 seconds at start. Puritan carried away peak halliard block; she was leading at the time, having passed Daisy on the wind:

CLASS B—SLOOPS 45FT. AND UNDER.

	Start.	Finish.	Elapsed.
Imperia, H. C. Eno	1 16 00	3 01 30	1 45 30

CLASS C—SLOOPS 35FT. AND UNDER.

Teal, Com. Francis Burritt	1 22 10	3 08 00	1 45 50
Marda, Sidney Watts	1 21 00	3 28 05	2 07 05
Delphine, J. B. Nash	1 22 30	3 15 30	1 53 00
Helene, W. E. Bond	1 23 25	3 34 00	2 10 35

CLASS D—OPEN JIB AND MAINSAIL, 25FT. AND UNDER.

Alice, Ed Smith	1 25 10	3 20 00	1 54 50
Number Four, W. Smith	1 25 30	3 27 15	2 01 45

CLASS E—CAT-RIGGED, 21FT. AND UNDER.

Go Softly, E. S. Wheeler	1 35 00	3 47 30	2 12 30
Peggy, A. D. Sanford	1 30 45	3 45 10	2 14 25
Anna, Vice-Com. J. H. Jennings	1 31 05	4 03 01	2 31 56
P. K., Sec. Edwin Thorne, Jr	1 31 00	4 21 30	2 50 30

CLASS F—CAT-RIGGED, 18FT. AND UNDER.

Daisy, W. R. McCready	1 38 40	4 14 00	2 35 20
Puritan, S. S. Dayton	1 39 00	Did not finish.	

The pennants must be won three times by one boat to be held, so we anticipate a number of very interesting races. Class B will have three or four starters in the next race, and Mr. Meeker, of Southport, is expected to enter his crack yacht Ada in Class C. She is a Kirby boat, and is very fast. The Delphine is a McGiehan boat, supposed to be a duplicate of the celebrated Susie S. She is to be fitted with a new racing rig. With these boats in, Commodore Burritt must hurry the Teal all he can to win. Go Softly will sail in Class D (open jib and mainsail boats under 25ft.) in the future, and if she comes up to her owner's expectations will accept the challenge of the Americus, of Bridgeport. Daisy and Puritan are likely to sail a match race in the near future. The club will hold an open regatta later in the season, and all boats eligible to the regular classes belonging to any recognized yacht club will be invited to enter.

PHOENIX Y. C. JULY 16.—The annual regatta of the Phoenix Y. C. of Chicago was sailed July 16, the course being from the opening off Van Buren street, thence S.S.E. to stake boat off Forty-second street, thence northerly around the Crib and from there home, making about a 17-mile race. The judges were H. C. Bradley, John McConnell and Ike Canney. Time keeper, J. J. Wilson. Eight yachts were to go but for some unaccountable reason only the Minnie M., owned by Miller Bros., and the Ina, owned by T. M. Bradley, put in an appearance at the start, the race was for a fine ship barometer, and was won by the Ina, beating the Minnie M. 4m. 22s. The starting signal was to have been given at 1 o'clock, but as usual it failed to go off on time, being nearly half an hour late. The water was in good condition for fast time, the wind southwest, veering at times to nearly due west and blowing quite fresh. Minnie M. is 46ft. long, painted black; Ina 39ft. long and painted white, they were both in good trim; and Miller Bros. were bound to beat the Ina if possible, having imported Capt. Bussey from Detroit for the occasion. Tim Bradley sailed his own boat as he always does, never yet loosing a race with Ina. They remained at their moorings until the signal to start was given when Minnie M. set her jib and jibtopsail and crossed the line at 1:28, Ina following over with mainsail, gafftopsail, jib and jibtopsail set at 1:29:20. Both yachts soon had all the wind they cared for, at times the main boom of Minnie M. dragging in the water. The gafftopsail of Ina was setting very badly and it was soon apparent that Minnie M. was out-footing her. There was no use in trying to get Ina's topsail to do anything so it was soon taken in, and then she began to lessen the gap, but she was unable to catch Minnie M. before reaching the stake boat, she rounding at 1:55:04 Ina following at 1:57:18. It was here that Ina partly made up in gibing what she had lost by hanging on to a worthless topsail. She dropped her peak and made as close and pretty a turn as was ever seen, clearing the stake boat by only a few feet. She must have gained fully 30s. by the operation. Both yachts now had the wind on their quarter and went for the Crib at a lively pace, giving the judges' boat all she could do to keep alongside. Minnie M. soon set her gaff and jibtopsail. Ina set her clubtopsail but it fouled on going up and Monkey Ed went out on end of gaff to clear it, and it was soon drawing in big style. In the run to the Crib Ina made a gain of 20s., Minnie M turning at 2:35:10, Ina 2:37:08. Soon after leaving the Crib Ina's centerboard came up, and she had to luff up twice before getting it down to place, thereby losing nearly 2m. time. Ina soon began to show that she could out-foot Minnie M. if her crew would only keep her board down. And keep it down they did for the rest of the race, and she was fast picking up her rival and bid fair to cross the line a winner without using her time allowance, but there's many a slip, etc. Minnie M. crossed at 3:09, Ina being about 30s. behind her. The wind at this time being quite tricky Ina got a puff from about northwest, causing her to pay off so much that she was obliged to make another tack before crossing the line at 3:11:13, thus ending as close and hotly contested a race as is usually seen.

	Length.	Start.	1st Buoy.	Crib.	Finish.
Minnie M.	46.00	1 28 00	1 55 04	2 35 10	3 09 00
Ina	39.00	1 29 20	1 57 18	2 37 08	3 11 13

E.

FORTUNA IN SCOTLAND.—The *Glasgow Evening Times*, o July 4, speaks of Fortuna as follows: "The Fortuna, Yankee schooner, straight from New York, was at the Tail of the Bank this morning, and a right smart craft she looks. It was supposed she had come across for a pleasure cruise, but there are cruising waters on the other side of the Atlantic, and there was just a doubt if the Fortuna had come across on downright pleasure. The surmise that some other purpose was intended promises to be correct, it having leaked out that the racing mainboom of the Fortuna had been shipped on board an Allan liner on the other side, and, since the spar is a good bit over 70ft. in length, the schooner is bound to do a bit of reaching. What is wanted with such a racing boom for a cruiser has led to further inquiry, and it is believed the Irex will be called upon to sail for the Brenton Reef cup the Genesta won so gallantly in America, and delivered up so chivalrously to the Irex. The Fortuna has a standing bowsprit with long jibboom, and very stout headgear, with a high spring and a hansome look forward. Her quarters are heavy, and her stern not quite so light as our fashion is, but she looks a 'likely' vessel, and, with her masts well stuck together, is more Scotch than English in her style. A match between the Irex and Fortuna for the cup would be a famous wind-up for the Clyde tournament. Apart altogether from racing, it is to be hoped the warmest welcome will be given to the Fortuna by Clyde yachtsmen, and some return be made for the more than brotherly kindness shown to the Genesta and Galatea on the other side of the Atlantic." The *Bailie*, a Scotch *Puck*, welcomes her in the following strain:

A yacht arrived in Gourock Bay.
And but few people knew, na!
In time for Independence day,
Her name is the Fortuna.

Let's give a hearty welcome all,
To owner, skipper, crew, na!
And let us hope, whate'er befall
She'll have a good fortune, ah!

For yachting is a liberal art,
And generous and true, na!
Therefore we wish at least some part
Of good luck for Fortuna.

TAGG'S PATENT CAULKING.—The evil of leaky decks, as well as the imperfections of the old system of caulking the seam with oakum or cotton driven in with an iron and then paying the seam with pitch or marine glue are only too well known to all yachtsmen; but few on this side are familiar with the new method of laying decks invented by Thos. Tagg, to remedy these evils. The caulking is prepared by soaking long strips of felt or canvas in a mixture similar to varnish. The planking is prepared by a special tool that works a groove for the core of the caulking, and also the bead on lower side of plank, and at the same time bevels the edge to suit the round of the deck beam. The prepared strip is laid against the side of the plank already in place, this side being flat, without a groove. The next plank has a groove on one side, and in this groove is laid another strip of felt, doubled, with a cotton thread as a core. The felt is held in place by a few tacks until the two planks are forced together, when the felt adheres strongly, a force of 4 to 6lbs. per inch being necessary to separate them. By this means the injurious action of the caulking iron, especially in careless hands, is entirely avoided, there are no hollow places in the seam, and the core and felt expand and contract with the planks, keeping a perfect joint. The planks are easily and quickly laid, the prepared caulking, in long strips, being tacked to each plank as it is put in place, the subsequent dirty and troublesome operation of paying the seams, as well as the time lost in caulking them being entirely avoided. The patent caulking has been tested for several years in yachts and larger vessels in England, as well as in cisterns, tanks and other structures where the caulking iron has been hitherto used, and the results have been entirely successful. Those interested can see a sample of the caulking at this office.

COMING RACES.—The rendezvous for the New York Y. C. cruise is at New London on Aug. 3, so that the Goelet cups will probably be sailed on Saturday, Aug. 6. The citizens of Newport, aided by Providence, are raising money for cups to be sailed for immediately after the Goelet cup race, but nothing is definitely settled. The cruise will continue to Marblehead in order that the fleet may take part in the E. Y. C. regatta, the date of which depends on the arrival of the united New York and Eastern fleet. It will probably be on Aug. 11 or 12, after which the fleet will disband, a part sailing for Halifax for the races of Aug. 16-18.

NEW YORK Y. C.—At a meeting on July 21 Rear-Com. Lawrence offered his resignation and Mr. E. D. Morgan was elected in his place. Thirty new members were also elected and the following resolution was passed: *Resolved*, that the New York Y. C., in accepting the cups offered by Ogden Goelet, Esq., for the August (1887) race at Newport, thank him most heartily for his repeated princely liberality in affording the yachts of the squadron not only an opportunity for a day's glorious sport, but also for such splendid trophies of victory.

LARCHMONT Y. C., OYSTER BOAT RACE.—The annual oyster boat race of the Larchmont Y. C. will be sailed on Aug. 20, starting at 10:30 A. M. The prizes are: Class I., cabin sloops, $75 and $35; Class II., open sloops $50 and $30; Class III., catboats, $40 and $25. The entry is free. Full particulars may be had or the regatta committee, H. B. Willard, F. C. Griffiths and George L. Forman. The judges are Com. W. S. Alley, Augustus Monroe and E. J. Greacen.

LAKE GEORGE Y. C.—A club under this name has just been organized at Lake George with the following officers: Com., J. Buchanan Henry; Vice-Com., H. B. Moore; Sec., R. H. Warren; Treas., Louis S. Chanler. Among the members are G. H. Cramer, Gen. Robert Lennox Banks, A. E. Claflin, J. B. Henry, H. Le Grand Cramer, R. H. Warren, J. A. Hayden, Louis Stuyvesant Chanler, Robert Glendenning and J. B. Simpson.

HULL Y. C., LADIES' DAY, JULY 20.—The fleet of the Hull Y. C. turned out on July 20 for a review and a ladies' day sail, each yacht having a party of ladies on board. During the afternoon a tub race took place and in the evening there was a reception with dinner and dancing.

RAMBLER.—This schooner, one of the largest of the New York fleet, being 128ft. 6in. l.w.l. and 25ft. beam, was sold on July 19 at auction, by order of the executors of her late owner, Mr. W. H. Thomas, realizing only $4,800. The purchaser was Mr. P. G. Sandford, for account of other parties.

BEVERLY Y. C.—A race was sailed on July 23, Beetle winning in first class, Sprite in second, Coyote in third and Dolphin in fourth. Psyche capsized.

MORE BRITISH YACHTS.—It is reported that Sir Roderick Cameron and Mr. Amos Van Wart have both purchased steam yachts in England.

JEFFRIES Y. C.—A race was sailed on July 23, the winners being Judith, Good Luck, Vesper, Zoe and Victor.

LYNN Y. C., ANNUAL REGATTA, JULY 23.—Winners, Eyvor, Ruth, Tom Cat.

WEST LYNN Y. C., JULY 23.—Winners, Lark and Wild Cat.

FOR SALE.—The cutter Bayadere, designed by Geo. L. Watson, designer of the Thistle, will be at Newport from Aug. 1 to 7 for inspection by persons desirous of buying. The Bayadere was built in Glasgow in 1885; she is 45ft. waterline, 54ft. over all, 10ft. wide and draws 8ft. Everything belonging to her is practically new, as her owner having the Puritan has been unable to sail her.—*Adv.*

A curious fact in natural history is noted in the fisheries report for England and Wales. A pike was captured last year on the "run" at Christchurch which had audaciously attempted to stuff itself with a salmon weighing 10½lbs. There must have been a severe struggle to overpower the victim, and the pike had succeeded to a certain extent, but had choked itself in the effort.

QUAIL OUT OF SEASON.—While asleep on a bench in Battery Park, New York, the other night, Richard Quail was robbed of $12 by John Mulvey, age 17. Officer Cosgrove saw the theft. Arraigned before Justice O'Reilly in the Tombs Police Court to-day, Mulvey was held in $500 bail for trial.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

R. B. K., Newark.—We cannot refer you to location of a heronry.

E. B., New York.—The freeboard of a vessel is the side out of water, from waterline to deck, rail not included.

W. N. W., Baltimore.—Pilgrim's dimensions are: Length on deck 24ft. 6in., l. w. l. 20ft. 10in., beam 7ft. 2in., draft 4ft. 9in.

D. M., Scranton, Pa.—1. What kind of a rifle does Dr. Carver use in his glass ball shooting? 2. Is the Lyman sight a good one? Ans. 1. A Winchester repeating rifle. 2. Yes.

N. W. D., Mansfield.—An express bullet is one which is light in proportion to charge of powder and so flies with great velocity and a low curve. An explosive bullet is one in which an explosive is contained, to be exploded when the bullet strikes.

E. E. V., ALBANY.—Where can I obtain carp for stocking a pond without applying to the U. S. Fish Commissioner? Ans. No person is advertising adult carp now. Sometimes they are offered to Mr. E. G. Blackford, Fulton Market, New York, and he may know of a few, but the supply is intermittent.

CROOKED TAIL.—I have a red Irish setter puppy now nine weeks old. When I bought him he was but one week old, and I then saw the parents. They are both well-bred dogs, fine looking, and said to be extra good hunters; but this puppy's tail curls over his back and at times touches, forming almost a true circle. Now, I am a kind of crank on the straight-tail question and would not care for a dog that did not have one. Perhaps that this tail may come out all right, and, not having had any experience with such young dogs, would like your opinion. Do you think that the tail will straighten out as he grows older and at maturity develop into a straight tail? Ans. The malformation may be inherent or due to accident. Possibly it may improve somewhat as the dog matures, but it is not probable that it will ever come right.

W. Y. P., Tuscarora, N. Y.—1. Is it illegal to fish with set lines in Silver Lake, Wyoming county, N. Y.? 2. Is it illegal to draw seines in the creeks of this State to catch pickerel, bass and bullheads? 3. Is a silk line for trolling better than linen? 4. Will the silk outwear the linen? 5. Are owls, hawks and crows protected now by law in New York? 6. When does the law allow squirrel shooting? 7. Who is State Game Protector for Livingston county? Ans. 1. Not unless inhabited by brook trout. 2. Yes. 3. Yes, if used on a reel in fresh water; for hand trolling a larger line, of cotton, is best, as it does not cut the fingers. 4. Yes, if properly cared for and is waterproofed. 5. Chap. 641, laws of 1887, declares that English sparrows, crows, hen-hawks, owls and blackbirds are not protected. 6. Aug. 1 to Feb. 1. 7. Geo. M. Schwartz, Rochester.

NEW YORK CITY, May 18, 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

POT-LUCK FROM EXCHANGES.

Mr. James Bailey relates the following to a reporter of the *News:* On June 2, while passing through my field, I witnessed a singular sight. Under an old fence rail that had fallen partly to the ground, a quail had made its nest. On the eggs a large snake had coiled, and resting on the top of the snake was the mother quail. The snake did not seem disturbed in the least and the quail was apparently equally composed. When the bird saw Mr. Bailey it flew away and the snake crawled off of the eggs and was killed by Mr. Bailey. The next day Mr. Bailey passed the same spot and the quail was on the nest. The eggs hatched in the latter part of June.—*Denison (Tex.) News.*

Col. H., of Virginia, had some negroes quarrying rock, with old Uncle Ned as foreman. One morning the Colonel rode over to the quarry, and after the usual good morning, said: "Well, Ned, how are we getting along?" "Dar 'tis ag'n. We!—how's we gittin' erlong? Marse Chawles, I's er quarryin' dis here rock. You 'minds me uv er passel er coons ez wenter huntin' deer in de swamp. Long Sam—you 'members him—Marse Torm's Sam?—well, he wuz boss er de batch, an' arfter dey done set up deir pine-knot torches, an' wuz er waitin' in de brush, Sam he spied sumpin' ermovin', an' he up wid's gun, an' bimb! sumpin' drapped, an' one er de boys sez, 'Ump! ain't we lucky? dar's one a'ready; we's got one, shuah.' An' Sam he tu'ned round, he did, an' sez, sez he, 'Not so much we, ef yer please—I kilt dat ar deer.' An' dey all went to holp skin it, an' lo an' behold! it war Marse Torm's pet colt, out er der gray mar' what he fotch from Richmun, an' Sam he looked kinder skeert, he did, an' sez, sez he, 'Boys, ain't we jes played h—ll' An' ebry one uv 'em answered, 'Not so much we, ef yer please; you done kill dat colt.' An', Marse Chawles, I's er-quarryin' dis here rock, an' we's gittin' er long only middlin'."—*Harper's.*

CHICAGO, Ill., June 23.—Giles Busby, a Toledo fishmonger, was cleaning whitefish last Monday, and in the larger intestines found a diamond ring. It was engraved upon the inner surface "J. A. B.," Chicago, '69." Busby forwarded the ring to the chief of police of this city. Yesterday Mrs. Julia A. Lennox identified and recovered the ring. In 1869, she, then Miss Bennett, became engaged to marry Mr. Lennox. He gave her the ring, for which he had paid $450, upon their bridal trip in 1871. Mrs. Lennox lost the ring while washing her hands in the toilet room of a Pullman car. The ring slipped from her finger and dropped through the waste pipe as the train happened to be crossing a bridge over the St. Lawrence River near Montreal. There are no whitefish in the St. Lawrence. The theory is that a small fish seized upon the ring, and that at some later time this small fish, while cruising about in the lakes, fell a prey to the whitefish in which the long-lost ring was discovered. The Toledo fishmonger received from Mr. Lennox a check for $100 as a reward for his honesty. [The theory that the whitefish swallowed a small fish that had the ring in it is too beautiful to be spoiled by any skeptical fisherman who may know that the whitefish feeds on crustaceans and does not eat fish.]

A man was seized by a tiger. The victim's son took his bow and pursued. "Hit him in the leg," cried the father, "else you'll spoil the market value of the skin."—*Chinese Story.*

"I say, Gawge, what do you think of Mrs. Gustwilliam's style?" "Hawwid style, Oscah. 'Pon me honnaw, the woman awctually appeawed in society yestawday dwessed in a purple dwess and a blue dawg."—*Whitehall Times.*

THIEVES AND FIGHTERS.—A red-breasted robin flew down to the soft ground near one of the miniature lakes in Lake View Park shortly after the rain storm, Tuesday. Selecting a satisfactory spot, red-breast thrust his long bill into the earth, and, after somewhat of a struggle and a display of engineering ability, succeeded in pulling from its lair a long, fat angle worm. Red-breast posed a moment and then threw back his head as if to swallow the worm. He closed his eyes in ecstacy as a preliminary to his luscious meal. As he did so a little English sparrow flew rapidly from a neighboring branch and wrenched the worm from red-breast's mouth. The latter opened his eyes and looked surprised and disgusted. The sparrow swallowed the fish-bait and chattered at its enjoyment. Red-breast recovered his self-possession, burrowed for another worm, got it, and prepared to swallow it. Again the sparrow flew rapidly down, secured the worm, and soon placed it where it would do the most good. Again red-breast tried to obtain a meal, and again was he robbed by this sparrow. Several times was this repeated, and finally red-breast flew away in disgust and the sparrow waited for other victims. At noon Wednesday a flock of sparrows escorted a young fledgling from its nest on Church street and attempted to teach it to fly. The fledgling made poor work of it, and alighted exhausted on the porch of a neigboring house. In the house was a hungry cat. The cat saw the fledgling and determined to eat it. The little bird saw the tabby approaching stealthily, and so did the fathers, mothers, sisters, cousins and aunts of the fledgling who were perched in a tree. Immediately there was great chattering and considerable excitement on Church street. Tabby was cool and walked deliberately toward her prey. The fledgling attempted to fly, but failed and dropped down between the lower blinds and the window, which reached to the floor of the porch. Tabby congratulated herself on having the fledgling sure. She approached the blinds, pushed open the slats, and put her right paw inside in an effort to reach the frightened fledgling. The sparrows in the trees chattered louder. Suddenly they flew rapidly from the tree, in solid company front, and directly at the head of tabby. Then the fur flew, and tabby pulled her paw from the blind in order to defend herself from the vicious onslaught. The birds flew back to the tree, and chattered again, while tabby tried to smooth her ruffled fur. Again she reached for the fledgling and again did the sparrows descend in a body. The commotion attracted the attention of the lady of the house, and she opened the window. The fledgling flew in and tabby ran away to hide her diminished and almost hairless head. The sparrows are the Blinky Morgans of the bird kingdom. They can fight or steal, as the occasion seems to require.—*Cleveland Telegram.*

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in. × 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

40 Park Row, New York.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

FOREST AND STREAM PUBLISHING COMPANY,
39 Park Row, New York.
LONDON: DAVIES & Co., 1 Finch Lane.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 96 pages Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 39 Park Row.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.
BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.
Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

WOODCRAFT.
By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well of old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.

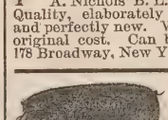
Wanted.

MIRAMICHI SALMON AND TROUT ANGling Association.—A club is being organized to control certain valuable salmon and trout pools on the Miramichi River and tributaries, New Brunswick. An excellent chance for men of moderate means to enjoy fine fishing at a minimum of expense. Application should be forwarded at once to Messrs. J. A. & W. VANWORT, Fredericton, New Brunswick. jy14,tf

COPIES WANTED.—JAN. 4, 11, 18 and 25. FEB. 1, March 8 and Sept. 13, 1883; Feb. 7 and 14, March 6, 1884. We are short of these issues, and would be obliged if any of our readers having one or all of these numbers that they do not want will send to Forest and Stream Pub. Co., 39 Park Row, New York City. mar26,tf

For Sale.

GREEN RIVER.—THE SUBSCRIBER OFfers for sale a ten years' Government lease of the exclusive right to fish in about 30 miles of the main Green River in the Province of New Brunswick, Canada. It is thus named from the purity of its waters. One day by rail from Fredericton will place the sportsman at its mouth, where men and canoes can be had; it is navigable for these and light boats to its sources; it runs through picturesque forests, and is probably the best river for trout in Eastern America. Full information given on application to the subscriber. Reference is given by permission to J.H. PHAIR, Esq., Fishery Commissioner for New Brunswick. EDWARD JACK, Fredericton, New Brunswick, Canada.



THE ATTENTION OF SPORTSMEN IS called to a most desirable tract in Essex County for hunting and fishing; eight hours from New York City; 12,000 acres in one parcel, or can be divided; Hudson and Indian Rivers unite on the tract, which has also three large trout ponds (¾ mile to 1½ miles long); deer and winged game; land well wooded with hard timber. Offered at extraordinary bargain.
A. V. DEWITT,
Or GEO. D. KRUMBHAAR, Albany, N. Y.

THE SECOND ANNUAL YACHTING SUPPLEMENT *published from this office is now in press, and will be issued in a day or two. There are original drawings of the Thistle, the Volunteer and other boats, with descriptions of them, a history of international yachting, and other material.*

IN A CIVILIZED LAND.

THERE was nothing startling in the recent cable report that Stanley had been killed by the natives on the Upper Congo. The explorer who turns his back on civilization and penetrates the wilds of a barbarous country, deliberately takes his life in his hands; when tidings come of the final catastrophe the world says, "We told you so," and goes on about its business. But though death by violence is a contingency perfectly well understood and always seriously to be taken into consideration when one ventures among savage tribes, it is not a possibility that at present receives much thought when one is setting out on a hunting or fishing expedition in a highly civilized land like our own. There soon must be a change in this regard, however, if Mr. Bill Star and other border ruffians, together with New Jersey menhaden fishermen and other coast pirates, are to have their way about it.

Four Arkansas hunters were camped on one of the streams of the Choctaw Nation, in the Indian Territory last week when, on Friday night, Mr. Bill Star and fellow desperadoes swooped down upon them, opened fire at short range and fatally wounded two of the four. The press dispatches intimate that Mr. Star and his friends may have mistaken the game hunters for some other persons against whom they had a grudge, or whom they suspected of having designs upon them. This suggestion, even if well founded, is not particularly comforting, nor does it alter the case for the better. If a sportsman in camp is to be liable at any moment to be called upon instantly to prove his identity or be shot on the spot by a frontier bandit, it is perfectly clear that the zest of oing hunting will be materially diminished. Under such circumstances the timid camper, who is not an expert in getting the drop on an assailant, or who does not enjoy these adventitious excitements of the chase, will do well to curb his passion for field sports and stay at home; or if he must go, he may provide as a part of his camp equipage a large and legible sign, setting forth his name and the peaceable nature of his mission, the same to be displayed in a conspicuous place in camp, where it will be likely to catch the eye of any attacking party of bandits in time to avert bloodshed—provided the bandits can read.

The New Jersey incident was less tragic only by reason of the defective marksmanship of the attacking party. Messrs. J. F. Zimmerman, of Philadelphia, and Wm. Millwood were in a rowboat sea fishing at Grassy Bay, when a menhaden schooner rounding a point inclosed their small boat in the sweep of the net. As the purse-strings tightened, the boat tilted and threatened to capsize. The two anglers shouted to the schooner's crew to be released in vain, and saw before them only the alternative of cutting their way out of the net or being drowned and hauled in as a constituent ingredient of the schooner's fare to be converted into "cod liver oil." They cut a buoy line of the net, which released them and several bushels of fish at the same time, whereupon the enraged fishermen trained their guns on Messrs. Zimmerman and Millbrook, who escaped with their lives in their bullet-splintered boat. This adds to the list of angling perils incurred in sea fishing the novel danger of being scooped up as a legitimate "catch" by the menhaden men, or resenting this of being bored by bullets. The incident is not without its moral as illustrating on the part of powerful moneyed interests a growing disregard for the rights of individuals. Menhaden fishermen, or for the matter of that any fishermen who conduct their calling after the manner of pirates, are afloat on the wrong waters when they sail within the three-league limit of jurisdiction on this coast. The mooted question of the destruction of food fishes by the menhaden crews is insignificant in comparison with the graver question of whether a peacably-disposed angler shall be allowed to follow his recreation without being subjected to wanton outrages of personal rights perpetrated by lawless ruffians in the public waters of a civilized country.

LIFE-LONG SPORTSMEN.

A GLANCE over a Wimbledon report of 1887 notes the old time names of Fenton, Rigby, Halford, Milner, and many others who may be found mentioned as leading marksmen far back one or two decades ago. These long-range experts find a perennial source of enjoyment in the rivalry and keen competition of the rifle field. They do not think they have exhausted all the pleasure a good rifle can bring when a single season's shooting is over. Each opening year brings a new zest for the sport and each closing season only brings a determination to be ready prompt and early for the following year of pleasurable duty. Again and again they meet, and undismayed by defeat they press on convinced that victory must come to the one who works long and faithfully.

How different here. Where is long-range shooting? Where are the team men who, but a few short years ago, were fêted and petted by the public? Where are Gildersleeve and Bruce, Blydenburgh and Jewell, and all the others who did so well and promised so much? They seemed to be content with a sky rocket career, and after the sudden dash into notoriety have flung aside the implements of their sport and lost their character as sportsmen in the more prosaic one of fortune hunters.

The difference between the long-range men of Creedmoor and Wimbledon is clear, sharp and nationally characteristic. The American marksmen shoot through their meteoric career and drop from sight. The British marksmen shoot on, and are finding always something new and fresh in the game, and when finally they drop out of the active front line it is to become advisers and coaches to the rising company of young men who have learned to respect the "old uns" for the long and honorable record they have earned for themselves. In the one country fine marksmanship of this type languishes and dies. In the other a challenge shield flung open for competition over twenty years ago is still fought for with the true, vigorous sportsman's spirit. Creedmoor exists, Wimbledon flourishes, and solely because of the different sort of support given them.

SNAP SHOTS.

THE long continued period of extreme heat and humidity has been favorable to the development of mosquitoes and other insect pests, and campers out this season are finding more than usual vexation from them. Could the statistics be collected the list of outings converted by this cause into sojourns of protracted misery under canvas would be a long one. Old woodcock shooters who penetrated the swamps in July in those States where summer shooting obtains report that they never knew anything equal to it before; the attacks of the insects were irresistible, and combined with the sultry atmosphere effectually disposed of what pleasure there might have been in midsummer pursuit of woodcock. Canoeists who repaired to the Dundee Lake, New Jersey, meet, and camped on the shore, found that sleep was quite out of the question, and spent their nights in a battle where the victory was not to the strong.

It is an extremely low grade of thrift that recognizes in a stream of water only an agency for carrying off sewerage and waste; but just this grade of thrift obtains in the average community of this country to-day. Towns and villages empty their poisonous drainage into the nearest stream, and mills and factories are erected on sites chosen with special reference to a watercourse to carry away the refuse. That the stream contains valuable food fishes which will inevitably be exterminated by the introduction of this poisonous material is not for a moment deemed worthy of consideration. Tons upon tons of food fish have been sacrificed by this improvident penny-wise system. We referred recently to the fish mortality in the Loyalhanna River, Pennsylvania, which ensued from poisoning by sewer and factory drainage; and in the last report of the Pennsylvania Fish Commission, extracts from which are printed in another column, this subject of the pollution of streams is discussed in terms which prove that the fish commissioners in one State at least recognize the folly of attempting to stock waters with food fishes, only to see the fry destroyed by poisonous drainage from mills and mines. There are perfectly practicable modes of disposing of these waste products without permitting them to pollute the streams and destroy the fish, and State Legislatures will do well to make this a subject of legislation.

One day last week three men were in a boat on Croton Lake, the source of New York city's water supply, when, after some boisterous scuffling, they managed to upset the boat and one of them was drowned. An evening newspaper heads its report of the occurrence "Drowned While Fishing," and incidentally mentions that the trio had a bottle along. Would it not be more correct to head such an account "Drowned While on a Drunk?" and sink the fishing part of it to the subordinate place it really holds? There is all the difference in the world between an angling excursion and a drinking spree, though some folks appear not to know it. The silliest of the silly jokes of the modern newspaper humorist hinges on the notion that fishing and drunkenness are intimately connected.

The insect plague has not been confined to outdoor tourists. Summer hotels on the Atlantic coast and elsewhere have suffered, and the receipts of the proprietors have been diminished in consequence. The miseries of a nocturnal combat with mosquitoes are cumulative. The guest who is subjected to it once will not endure it for a second night if he can get away. The landlord then finds himself in the cheerful financial situation enjoyed by the shoe dealer who moved into a New Jersey town and laid in a large supply of low cut summer shoes, only to discover that his customers in that mosquito-plagued region would have none of them.

Bears are migrating in a degree, their movements being governed by the mast supply. In certain Adirondack localities where bears have been plenty in recent years none are to be found this season. In the Androscoggin region of Maine the bears are reported to be very numerous; more pelts have been brought in to the furriers than in any previous year for a long time.

Do not give a boy a kitten for a playmate; give him a puppy. Boy and kitten will grow up into a molly-coddle and a cat. Boy and puppy will grow up into a young man and a dog.

The Sportsman Tourist.

GRAND LAC MACKINAC.

THE Laurentian Club of Montreal has recently been organized for the purpose of preserving numerous lakes in the Province of Quebec for the benefit of its 200 members. Both game and fish are carefully protected and about 100 square miles of territory has been leased from the Provincial Government for an unlimited period. Mr. Chas. E. Levey, a member of the club, who takes a great interest in its welfare, while visiting the club house at Lake à la Pêche with his friend and camping companion, Mr. Norman Whitehouse, upon having a conversation with the very able organizer of the club, Mr. Wm. Parker, decided to push as far as the new region, brought under Laurentian rule by Mr. Parker's efforts, the Great Lake Mackinac, which had never been visited by any member of the club before, or, as far as could be learned, by any sportsman. The reports as to its size, the variety of fish that it contained, and as to the best and easiest way of reaching it from the village of Grands Piles, were most conflicting. It was at last decided to attempt it by way of the rivers St. Maurice and Mackinac, which latter stream empties from the Mackinac Lake into the St. Maurice River, and the following account of the trip is given by those gentlemen:

We hired a guide from the Laurentian Club at Lac à la Pêche and were most generously provided with two more by Mr. Wm. Parker, and, having packed our traps and been wished *bonne chance* by him, started off for the Grands Piles, from which place we were to make our start. We found an excellent man who had been to the Lake Mackinac some years before in the capacity of a lumberman, Pierre Barry by name, and a godsend he afterward proved to us. The start on Monday morning was not very favorable, owing to a high wind blowing down stream, which, when combined with the swift current, made progress extremely slow. After much hard work, however, we arrived at the mouth of the Mackinac River, fifteen miles from Grands Piles, and found the ascent quite easy for four miles in our barge and canoe; but there the rapids began and soon became unpleasantly frequent. In places they were very long and shallow, and it was only with considerable difficulty that the boats could be forced up. We remained for the night at George Forqué's, at the top of the Rapide Blanc, which is nine miles from the mouth of the river. Up the Rapide Blanc a boat cannot be drawn, as it is full of huge rocks and a mile and a half long, and we consequently had to make a portage of the distance of our boats and baggage. The road is good, and a horse and sled can be hired from Forqué. By these people we were led to suppose that the water was fairly high and that there were not many severe rapids to be encountered from that point to the mouth of the lake, which they considered to be between six to nine miles distant.

We started at 8 o clock in the morning, full of life and spirits, thinking that we had an easy day before us. Had we known what awaited us we should have turned back and not thought of attempting such an arduous undertaking. After a mile of still water some small rapids were encountered, and then rapid succeeded rapid, until after five hours terrible toil, up to the shoulders in water at times and to the waist most of the time, we came to a tremendous shallow, which seemed to extend for a long distance. We had managed to advance at the rate of about a mile an hour, and judged, from the information that we had received, that we were not more than a mile or two from the mouth of the lake at this point, and that this was the last rapid before reaching it, which they had warned us was extremely bad. After partaking of food and stimulants to prevent cold and encourage the men, we attacked the shallow. Hour after hour we toiled on, at times nearly exhausted with fatigue and literally hardly making any progress at all. The shallow resolved itself into one of the nastiest rapids to be encountered anywhere; and, with only slight breaks, we calculated that it must be very nearly five miles long. At times we began to doubt whether any lake existed at all, and almost despaired of being able to reach it if it did exist. None of us, nor anybody else, as far as we could find out, had ever been up before by the river to the lake, people usually going round by St. Thècle and Lac Long, which way presents no particular difficulties.

Night began to descend upon us and a hopeless feeling crept into our hearts. We could not turn back, as it would have been impossible to descend the rapids which we had only ascended with such infinite labor. Roads, or even the slightest paths could not be found in the woods, and the banks of the river were at times very steep and always thickly overgrown. At last our spirits rose, as Pierre Barry stated in rather an uncertain sort of way, it is true, but still did state that he thought that the lake was behind a hill covered with dead timber about a mile distant. He remembered that just such a "brulé" stood at the end of the lake and thought this the same one. The drooping heads lifted themselves with hope and we bravely struggled along once more for this hill. A shout of joy arose as we saw the first opening pond, and we began to forget our fatigue and soaking clothes. We had been twelve hours hard at work with only three resting spells of half an hour each, when at last we reached the first point at the mouth of the lake. We judge the distance from Forqué's to this point to be between eleven and twelve miles and consider this way of approach to the lake, by means of the Mackinac River, to be utterly out of the question. By the time we had set foot on the welcome shore rain began to fall; and everything being saturated in the boats we were unable to obtain any dry clothing and spent a most wretched night, naming the place Point Misère.

In the morning the weather cleared and we started upon our voyage of discovery. The lake ran due north and south and seemed very large. We found it afterward to be thirteen miles long and in places between two to three miles broad and hedged in by precipitous rocks and cliffs, which rise to a very great height, and at the foot of which the water is extremely deep, a rope with a weight attached to it, when let down 900ft., failing to find bottom. The mountains and rocks are grand in the extreme, and the lake superb. Most unfortunately winter fishing through the ice and the nets of one or two enterprising individuals from St. Thècle, have done much to ruin the fishing, which must, a few years ago, have been magnificent. The only two fish which seem now to inhabit its waters are the doré (wall-eyed pike) and the brochat doré (golden pickerel). They all ran about of a size, from 3 to 5lbs., and we caught without trouble a fair quantity. In one day's fishing we landed 30 fish, 12 of which were dorés and 18 brochats, weighing together 91lbs.

About seven miles from the head of the lake a long bay runs in on both sides, forming a cross, and is called by that name, Baie de la Croix, and upon the west side of it Mr. Ritchie, the lumberman, has built a shanty, which now is inhabited by a curious man-hater, whom we afterward found to be at heart a most excellent fellow, George Billet by name. He has lived in this place for eight years and often does not see a human face for months together. At times he goes down to St. Thècle to fetch provisions, and seems quite contented with his lot. We let our men sleep in the shanty and we spread our tent near by and made ourselves entirely comfortable with beds made of balsam boughs. We made our exploring excursions from the bay and found George an excellent guide and a mine of information in regard to distances and everything connected with the lake and its surroundings. He accompanied us on some of our trips and fishing excursions, and it would have been impossible for us to have procured much satisfactory knowledge without his help.

The small lakes round Lake Mackinac are very difficult to reach, being all four to five miles distant, with no portages cut through the woods. In one of them, Lac la Truite, the speckled trout are very numerous and take the fly well, and the lakers run very large; but these latter can only be caught with a spoon. Caribou tracks are to be seen in every direction, and we heard a moose call while at Pointe Misère. Bear also seem to be plentiful, but keep themselves hidden from the eye, although their "ravages" are constantly being met with. We consider it the grandest lake that we remember having seen in this vicinity, and if properly preserved it would abound with fish. On the east side, M. Baptiste has erected a large depot, which was used for storing goods in lumbering days. It is placed on the bank of the river Brochat, which feeds the lake, and which in winter is an excellent fishing ground. The west side of the lake opposite this depot is now undoubtedly the best spot for the noble sport. We trolled round the whole lake and found very indifferent sport elsewhere.

We spent four days upon the lake, two in fishing and two in explorations' and explored as thoroughly as two amateur surveyors well could, sparing no pains. The flies were very thick and dreadfully ferocious and our experience with them was most unpleasant. We started upon our return journey on Sunday morning, July 17, at 5 A. M., and were at St. Thècle village at 5 o'clock in the evening. To leave the lake we returned to Pointe Misère, opposite which the creek is situated, running into Lac Long. We ourselves preferred to walk over by the portage; but sent our men with the boats round by the creek. It has but a few rapids and presents no difficulties, being not over a mile in length. Embarking once more we pushed through a succession of narrows and small rapids for about another mile and then found ourselves at the dam at the head of Lac Long proper. This lake is divided into two parts; the total length of both being nine miles. At the end of the lake there is a portage of 1¼ miles to Lac Encoeur, which is but a small pond in comparison with the large lakes that we had left behind us. A horse can here be procured and the three miles portage to the village of St. Thècle accomplished without any difficulty. From the village a train runs once a day at 6 P. M. to St. Tite, on the Grands Piles Railroad, and consequently there can be no choice as to routes in seeking access to Grand Lac Mackinac, which we both once more vote to well deserve the title of Grand.

CHAS. E. LEVEY,
NORMAN WHITEHOUSE.

THE FLYING CLAM.

ONCE and only once I went into the boat building business, but I had such lots of fun out of the venture that I transcribe the results as an inducement to others to go and do likewise. There was the Housatonic River close by me and Hatch's Pond not a great way off, and pickerel and black bass were fattening up on minnows and calling out to me to come and have a shy at them. I took two 12ft. boards, a chestnut stem into which they fitted; then covered these boards with ¾in. pine on the bottom; cut down a good slot through the center; fitted it up with casings and trunk for a centerboard; added seats, thwarts, rowlocks, paddles, a basswood pole for a mast, a lug sail with a jack yard to slide up and down the mast, a 14ft. mainboom, with sail made of unbleached American domestic, run through a sewing machine; and here was a home-made article costing almost nothing, "a rum thing to look at but a good one to go." I impressed my old chum Charley into the service as an able-bodied seaman; half a dozen village boys helped us lift her up on an old wagon, and with a "g'lang Bill" we started up the road, bound north by east, I at the helm, Charley on the lookout, and a grand chorus of whoops and cheers ringing out after us from every one in the village. The send off was good as a circus. An hour's ride brought us to our destination. Driving down close to the pond we backed old Bill down to the water's edge, and knocking away the chucks "the beautiful yacht glided into her native element." I believe that expression is considered "the correct thing."

"Looks just like an old flatiron, Captain." Well, there was no denying the fact; still, with her glistening black sides, and two shining clam shells on each side of her bow (from which she was named) like a Chinese junk, she had a long, low, raking look, and she seemed able to carry us.

Hatch's Pond, some three miles from Kent, in Litchfield county, Conn., is a lovely sheet of water, fringed on its western side with pines and beech and maples. There are fish in its waters, which are clear and sparkling, that I know. There are quail and ruffed grouse not many along the borders. It was a pleasant sunny, breezy day in July, so hauling on my main halliard so that I could hoist the sail or let it go in an instant, I made sail on her, and stood out boldly to sea. Everything had been prepared for the trip beforehand. I was sailing master and Charley was to attend to the fish. Paying out on the two lines with their glittering spoons, the breeze just fresh enough to take us along as fast as we could paddle, the fun began. How the pickerel did go for us, and we for them. Tacking across the pond and up to the head, I would let out on the mainsheet and run down past the lily pads, keeping my companion hard at work pulling in the fish and throwing out the lines. I am free to confess that I have strong likes and dislikes. Cats and pickerel I hate cordially. I have eaten both of them, and rather prefer cat, though I do not "hanker" after him. Both are beasts of prey, both treacherous, revengeful and cruel, always ready to kill and feed on better animals than themselves, always hungry. The black bass can whip the pickerel any day in a fight, and that is not the least of his good qualities. So it was with great satisfaction that I saw how we were getting the best of these pond sharks.

My boat, as far as I knew, was the first sailboat ever put on the pond, and as the down express from Pittsfield flew by the engineer gave me a rousing toot on his whistle and the fluttering handkerchiefs waved in welcome to my craft. We had sailed four or five miles in an easy way, and now, by mutual consent, we headed the boat for shore, and getting our lunch basket, "fell too" with such an appetite as only hunters and fishermen can appreciate. Nineteen nice large pickerel all present and accounted for and more to come in the afternoon. Down on the grass under a wide-spreading maple near a lovely bubbling spring we threw ourselves full length, lit our pipes and gave ourselves up to the full enjoyment of the scene. Then later on we again hoisted sail, stood out to sea, and cruised round for pickerel.

Some few men there were in two old leaky boats anchored near what they fondly deemed good fishing grounds, but in fishing they were nowhere. Charley was a handy Yankee and I soon showed him how to steer the boat and promoted him to be skipper, while I set to work fishing. We would swoop by the men in the tub, a bite, a yank, haul him in, and a wild yell of triumph as the pickerel found himself pulled in; and so away we would set sail in pursuit of fresh victims, until we both cried "Hold, enough." What was the use of further fishing—40 odd fish—as many as we could eat and give away. The Flying Clam, luckier craft than many others, had more than paid for herself on her first voyage. So mooring her with stout padlock and chain we drove home in the cool of the evening delighted with our first cruise.

When I moved away from the Housatonic to the dear old Hudson I took my old boat with me. Go back on such a tried and trusty friend? Not much. Baggagemen and brakemen on the Housatonic Railroad came to know the craft as far off as they could see her, she was worth a dozen Saratoga trunks. They had to "lift her up tenderly, handle with care." She was practically "non-smashable." So, too, over the Poughkeepsie railroad, he fame had preceded her. Long will the captain of the Poughkeepsie ferryboat remember her, for when the man drove on board with an immense van loaded with my impedimenta, and the dear old lady perched up on the top of all, her rowlocks got caught in the roof, and there was a time when it seemed as if the roof or the boat would have to come apart; it was a tight squeeze, but the horse pulled her through in safety. And so up and down the river from Rondout to New Hamburgh, the dear old Flying Clam was almost as well known as the Mary Powell. In all times and all weathers, blow high, blow low, with my favorite setter Duke—of whom I shall write more fully one of these days—and my Parker gun, I have chased ducks up and down from "morn till noon, from noon till dewy eve," a whole fall day, and with what pertinacity and endurance North River men will chase all day up and down that river such unhappy ducks as per chance come that way, will always remain a mystery of mysteries.

Brother boatmen of the North River who go sailing in small craft, let me give you a wrinkle. If you want to make friends with the tows, carry along a lot of newspapers with you. I have sculled that famous river for many a year, in the Undine in the olden time, the famous Gypsey, the bewitching Louisa, the saucy Doris and the peerless Bedouin; yet have I had more fun in my little boat. I always had a supply of papers and if I wanted a tow I would run up alongside, throw them a rope, get safely hitched on and then go on board and have a talk with the skipper and leave them something to read. If there's a tow on the river that does not know me or my boat all I have to say is they must have come on very lately; and I recall while now hard at work writing up my log how one fall day I had hardly hooked on to one of my friends, when a weather-beaten old boatman roared out to me, "Say, Cap, has Lousyanna gone for Hayes?"

One feat I performed with my boat that may prove interesting. I had skated over one morning in December to Poughkeepsie, when in the afternoon there came a break and crack in the ice, leaving clear water all the way across—at that time I was living on the opposite shore and the Flying Clam was stowed away in the boat house close by. Calling out to two or three fishermen to bear hand, we launched her into the water, made sail on her, sailed across and back and put her up in her winter quarters. Not many boats have done this.

On another memorable occasion I crossed over in her, tied her up at the dock, and while uptown some urchin went off in her on a sail and left her so carelessly tied that away she presently floated down the river all by herself. My old friend the captain of the Hudson Taylor was coming up from New Hamburg that morning and keeping a bright lookout, and well he had to, for they were building the West Shore road then, and not long before had let off a blast and sent a rock weighing half a ton just over his pilot house; had that struck the boat she would have gone down in ten seconds with all on board. Well, Captain Bill saw my sailboat and saw her suddenly transferred to the deck of a three-masted schooner, and made up his mind something had to be done, and quickly, too; so he steamed up alongside. "Hello! hello! I want that boat." "Does she belong to you?" "Never mind, I want her." "Who is going to pay me for my trouble?" "Nobody." "Well, take your boat." And the inhuman monster launched my boat over the taffrail, sails, oars, mast, etc., slap dash into the river, and sailed away, cursing all creation. So the Captain towed her up to the dock for me. But when did Captain Bill ever hesitate to do an act of kindness?

Once while looking at the old boat I heard a splash in the water, and the next moment a cry, "My brother is drowning." There was a boy 9 years old struggling in the water; one of 12 on the dock crying out lustily with fright, and I with a gorgeous new gray suit on fresh from the tailor's. Rough on me. No time for howling. In I went. Down went the boy, and down I went after him.

I clutched him and swam to the dock, but while I held him up with one hand, I vainly strove to clasp the oozy, slimy dock logs with the other. Help soon came, they flung me a rope; in a twinkling I had it over him and myself with a bowline. "Haul carefully, boys;" and up we went on dry land. I never from that day to this, and it was several years ago, heard one word from that lad, good, bad or indifferent. Whether his big brother went back on him, and his mother spanked him to death, or whether he still lives, I know not; I only hope he will never regret I pulled him out of the water. I never have.

I may say I am a little inclined to be superstitious, how else can I explain how ill luck always pursued me after that memorable ducking whenever I donned the gray. Let the sky be cloudless when I sallied out, I was sure to get a soaking. If I were out sailing, overboard I would go. There seemed no escape from a drenching. I turned it into a hunting suit with no better luck; still the rain marked me for its own, until despairingly I gave the clothes away, and that seemed to break the charm—as far as I was concerned.

But all things come to an end, and the Flying Clam and myself were soon to part company. I had sought fresh hunting and fishing grounds, and my dear old craft still followed my fortunes. I had taught my youngest boy how to row and fish, and had had many a joyous frolic in the old boat with him, when it pleased God in his wise providence to take him from me. In a moment, in the twinkling of an eye, a fatal accident left me childless. I gave the boat to an old farmer who had been very kind to my boy. But "the tuck" was all out of me and I never put foot in her again; nor have I ever seen her since.

Some of the happiest days of my life were passed on board the boat. She was inseparably connected with the tenderest associations, but the cruise was for ever ended of the Flying Clam. CAPT. CLAYTON.

HUNTING IN THE HIMALAYAS.

Lights and Shadows of an Indian Forester's Life.

XI.

ABOUT a week after I had written to the Colonel, I sent my tent and bed down river to the plains; and having got as many bamboos and as much sawn timber together as was necessary for a trial raft, I seated myself on it and dropped down stream, taking Charley along with me. We dropped down the eight miles without difficulty, in less than three hours, much to the amusement and delight of the raftsmen and natives at the depot. It was still early in the afternoon, and finding the superintendent there with his elephant, and my own elephant ready, Charley and I were soon mounted and away in quest of small game. We secured five brace of black partridge, a brace of jungle fowl and a peafowl, and returned to a cold collation, the cooks having been left behind to provide breakfast for our expected guests. The next morning we were out again at daylight, bagged a brace of hare, another four brace of partridge, three jungle fowl, three peafowl and a hog deer. The last shot was at a peafowl, and was at once followed by the report of a rifle above the road, warning us of the approach of our visitors. We immediately struck a beeline for the camp, but before reaching it we sighted and joined our guests, who were in high glee, having bagged a stag and, *horribile dictu*, two fat hinds. I gave them a hearty welcome, a few words sufficed to make us all known to each other, and in ten minutes we were at the tent, where we just stopped for a glass of beer and then pushed on to Boksar, passing their camels *en route*.

Liberal encomiums were passed on the viands, but for myself I was beginning to detest the sight and smell of both venison and peafowl. A few recent scratches on my hands had resulted in nasty sores, which I had no hesitation in characterizing as scurvy spots, and I was not sorry to learn from the Colonel that they had brought half a sheep along with them, for my last mutton had long since gone the way of all flesh. I had realized the desirability of a change of diet only a week earlier, and had sent in a camel for a couple of cases of bottled fruit, and green peas, asparagus, and other canned luxuries, which I expected daily, and meantime I confined myself mainly to fish and birds.

The afternoon was given up to fishing. Charley and S. commenced operations near the bungalow, fishing up stream. The Colonel strolled with me a mile or so up river, where I dropped him to fish down stream, and I went on another half mile before I took my rod apart. Bending on an artificial minnow, I succeded after half an hour in hooking my first fish in some rapids, where he fought very gamely for a small fish—he was a six or seven pounder—but my 18ft. rod with a trolling top was too much for him, and he was soon landed. The next cast at the entrance to a hole, hooked a whopper, which set my wheel spinning at top speed, until some forty yards had run out. There was a pause, for the fish had reached a sand bank on the opposite side of the hole, I wound in carefully, there was a drag but no living elasticity about it. I increased the strain; the bait came slowly for a minute and then broke free—not from the fish, but from the sand, into which I suppose he had dived to rub off the hooks, which must have struck his lips only. I did not see him, but I guess he was the biggest fish I had ever had on. Dropping down stream I hooked four more fish from six to ten pounds, after which I put my rod together, and set off to see what the others were doing.

I found the Colonel busy with a fish, now winding in now running along the bank, and shortly after my arrival he had him safely stranded—a 15-pounder or thereabout—making a good brace with one he had previously caught. He too was satisfied with his achievement, so we strolled on together to S., who had seven fish running from 6 to 12lbs. Charley was in sight nearly half a mile lower, and as we approached we saw that he had a fish on and that his chuprassee was stirring him up with stones. S. told us that he believed Charley had been playing the same fish the whole afternoon, an opinion which Charley confirmed. The "beast" as he called him stuck to the bottom, and when stoned out took only a short run before he would be down again. Just then he started, and Charley keeping a tight rein on him soon turned his head in shore, and suggested that some one put a charge of shot in him as soon as he came near the surface. The Colonel took the gun, the fish came in quietly to within ten yards, when he put his head up; the Colonel fired; there was a flounder; the next moment all was still and Charley landed the fish of the season, which he had no means of weighing but which certainly was not less than 40lbs., and some estimates placed him as high as 60. Returning to camp there was a general distribution of fish among the servants, who, with the exception of the new arrivals, were tired of venison.

The next morning we were seated at our coffee at pale dawn, but as I had not yet found time to inspect the more distant sawing and fire line operations since my return to Boksar, I had arranged over night that Charley should get my elephant for the first day out after "shipes," while I took Govind Ram, the superintendent, along with me on a day's inspection. Charley took his faithful shikaree, and providing the others with a good man each and a sketch map of the country they were to beat up, and advising them to return at 3 in the afternoon as there was no fodder within easy distance of camp, I saw them set out with stern resolve to account for anything they might run across. I went straight up the valley seven miles to the limit of sawing operations, and, taking a sawyer along with me, struck into the forest and spent the rest of the morning wandering round from pile to pile of timber, swept round to the top of the range, getting back by one of the fire lines to the sawyer's camp about noon. I put up a dozen or more hinds and fawns, and saw one big troop of probably a hundred and fifty deer, the latter out of range. I rested and had a little chat with the sawyers, who were doing good work with the hollow trunks, and then started for camp. We had gone two or three hundred yards when a brace of pheasant rose to my left, and, passing behind me, were out of range before I could get my fowling piece to bear. I saw them drop in a little solitary patch of tree jungle not more than seventy or eighty yards off. The clump was only about a quarter of an acre, with a dozen or so of small trees, interlaced with giant creepers, with a dense prickly undergrowth. All around was the bare plain, with the young green grass shooting vigorously and almost concealing the charred stumps of the previous season's crop. The road was fifteen or twenty feet above the plain; so calling a halt, I dropped a couple of No. 5 cartridges into my pocket, loaded my gun with another two, and jumped off.

Raising the hammers I made straight for the clump, and taking up my position close to a tree, began to peer round for a few moments. I saw nothing, and then as my eye took in more details, I was suddenly aware of another pair eyes fixed on mine. I suppose it could not have been more than a few moments, but it appeared to me quite a measureable time that the tiger and I—for tiger it was—looked quietly in each other's eyes, whether it was because he looked so gentle I cannot say, but although I rapidly revolved chances in my mind, I was scarcely conscious of any excitement while I brought my piece up and took a steady aim between the eyes. I pulled, sprang on one side, and with a roar of rage that sent my blood beating wildly enough in my veins, the beast charged, dashed against the tree by which I had stood, fell over, and then in impotent rage sat and commenced rubbing his eyes with his forearms. I was not three yards from him, and no sooner had he reached a sitting posture than aiming at his ear I gave him the second barrel. He fell instantly, and by this time, the elephant being close at hand, I went for it and got into the howdah, not knowing whether the shot had done more than stun the beast. We were alongside immediately, and conscious of being excited, I handed my rifle to the superintendent and told him to take a steady shot at the middle of the forehead. He did so, and as the ball crashed into the brain the extension of the hind limbs, followed by a wag of the tail and a slight shudder of the whole frame, proved my surmise correct. I had aimed my first barrel between the eyes; the whole charge nearly was in his right eye. One shot only had penetrated the left.

A shout soon brought a score of sawyers to our assistance, and after numerous Wah-wahs of admiration from them and some demur on the part of the elephant we got the beast loaded and made the best of our way to camp, which we reached at 4 o'clock.

The others were ahead of us, and long before we had alighted the tiger was sighted and the news passed from mouth to mouth. Amid numerous exclamations I heard the Colonel charging me with having sent them out of the way while I stole off and killed the tiger.

"I have only got this one," I replied, "how many did you get?" They had nothing to show, but a great Gerao stag and a small bear, but they had put up three tigers—probably a tigress and a pair of full grown cubs—over one kill*, and got much excitement out of it, but they brought home no skins. I gave orders to have the tiger skinned, but the Colonel insisted on having him first measured; so we laid him out, extended tail and nose and driving in a tent peg at either extremity, the Colonel next proposed a fifty-cent pool on the measurement; by arrangement each of us wrote his estimate on a scrap of paper. When we had done Charley called 8ft. 6in., the Colonel 9ft. 6in., S. 9ft. 3in., and I 9ft. 4in. The tape gave 9ft. 4¼in., and the Colonel declared laughingly that I measured him before I brought him home.

My arrival had disturbed the party at luncheon, at which I soon joined them; there were beer and claret on the table, both contributed by our guests, who insisted on providing the liquids as a fair set-off against the solids, an arrangement on which I proposed to contract for the rest of the season. As the claret circulated and tongues wagged freely over the adventures of the day, I thought of a witty suggestion of Cardinal Richelieu's, and thought it probable that we were a party whose beards would all grow gray before the hair on our heads.

The man eater had been well discussed at table, and her identification by the human hair in the fæces, and S. said he should have thought it would have been too much digested for identification. A reference to the carcass outside was proposed, and lunch being over and our pipes lighted, we adjourned to Ram Buksh's camp, where the tiger was being skinned. We waited for the completion of the task, and then opening up the long gut, imagine my surprise at finding a ball of what I recognized in a moment as human hair. I picked it out, and bidding the party adjourn with me to the bath-room I washed it out, uncoiled it, and afforded them all unmistakable evidence that it was a long thin tress of human hair, probably a woman's. This then was a cub of the man-eating tigress, and was probably chargeable with a fair half of the depredations laid to her charge, unless indeed there were another cub of the same litter still alive. When I came on the beast he was unquestionably lying in wait for the sawyers, watching for a stray man to get far enough away from the party. There was no clue to his last victim, no kill having been reported, but if is a common saying among the villagers on the outskirts of the forest that when a farmer gets tired of his wife he sends her alone to the forest to cut grass for the cows.

The Colonel suggested that it might be hair from a horse's tail, and although I knew it was too fine for that, I sent it to headquarters for microscopic examination. I requested that it might not be talked of to the natives, but they had recognized it already for what it was, and when we went out again they had another half dozen hairs straightened out. SHIKAREE.

CAMP BOKSAR, Sewalik Ranges, Upper India.

*Kill, *i. e.*, the carcass of an animal killed by them; it is usual here to speak of a tiger's kill.

Natural History.

HUMMINGBIRD AND SPARROW.

Editor Forest and Stream:

Among the hundreds of accounts of battles between the English sparrow and other birds received at the Department of Agriculture during the past year, the following is one of the most remarkable, and at first sight seems almost incredible: "BROOKLYN, Conn., Oct. 20, 1886.—The following facts have been furnished me by Mr. Geo. Harris, of this town, on whose land they occurred. He noticed a hummingbird, near its nest, darting repeatedly at an English sparrow and apparently plunging its bill into its antagonist. Although he did not see the sparrow killed, he afterward found the sparrow and one or two other birds (one of which was a kingbird) dead on the ground beneath the hummer's nest. He did not examine the dead birds particularly and so cannot describe the nature of the wounds they may have received, but has no doubt the hummer caused their death. There were no telegraph or telephone wires near the spot, and no other assignable cause for the death of the birds than the attack of the enraged hummer when its nest was threatened. The nest eventually came into my possession.—RICHARD KING."

The reckless courage of the hummingbird during the breeding season is well known, but I confess to much doubt as to the dead birds having been killed by the bill of the hummer, and it is difficult to imagine how the bird could in any way have killed such well-known pugilists as the kingbird and English sparrow.

It is possible that the kingbird and sparrow killed each other, and that the place of death, close to the hummingbird's nest, was merely an accident. Yet this explanation is not entirely satisfactory.

The account was sent to the Department in all good faith, and is published not only on account of the interesting facts, but in the hope that it may elicit others, more or less similar, which will help to simplify the matter. WALTER B. BARROWS, Ass't Ornithologist.

U. S. DEP'T OF AGRICULTURE, Washington, D. C., July 29.

MALE QUAIL ON THE NEST.—Nottoway County, Va., July 29.—*Editor Forest and Stream:* I have witnessed a strange phenomenon in bird life this summer and these are the facts. On the lawn or front yard and distant from the front door not over two hundred paces, one afternoon in June, in company with two of my sons, I discovered a partridge's nest containing apparently eighteen or twenty eggs with neither hen nor cock bird upon it at the time, but upon visiting the nest several days afterward I saw a cock bird sitting upon it. I have visited that nest from two to three times a week ever since, always finding the cock bird sitting upon it, save once, and then no bird was upon it. I was there again this afternoon in company with one of my sons, and not only did we see the cock bird upon the nest, but we saw little birds peeping out from under the old one. So I am as well convinced as of my own existence that the cock partridge (or as often called, the cock quail) and he alone has in this particular case done all of the incubating and is at the time of this writing hatching out the young brood. I have known for many years that in Virginia the cock partridge sometimes sat upon the eggs, but thought he only did that while the hen was off feeding. But in this instance I am perfectly certain no hen bird has ever sat upon the nest since she finished laying the eggs.—T. E. EPES.

THE BLACKSNAKE.—Milford, Del.—*Editor Forest and Stream:* This cutting I take from the Philadelphia *Record*. The story came from New Jersey: "Miss Alwelda Cresse resides with her parents a short distance on the mainland from Cape May. Returning from church last Sunday night she went to her room, where to her horror she discovered a huge blacksnake coiled on the mantel. It sprang at her, and coiling about her person paralyzed her with fear. Her screams brought her father to the rescue, and after a five-minutes' fight with the loathsome reptile it was killed and found to measure six feet." I do not believe the above statement at all. I have frequently irritated blacksnakes and have never been able to make them spring at me; I doubt if they could spring clear of the ground if they wanted to do so. I caught a blacksnake a few weeks ago which was probably 5ft. long; it did not even attempt to bite me, as I picked it up in my hand, I wished to see if it would coil about my arm, but the reptile could not be persuaded to do so. In fact the snake was only anxious to get away, but as it was a fine specimen I kept it for its skeleton. The blacksnake is a harmless and useful creature to the farmer. I will not allow them killed, but encourage the belief, prevalent here, that by killing snakes you bring much rainy weather.—VICTOR M. HALDEMAN.

RAIL IN CAPTIVITY.—Trenton, N. J., July 28.—*Editor Forest and Stream:* I saw this morning in Ribsam & Son's (florists) window a female Virginia rail bird and four young about as large as one-day old chickens. The young were caught in the marshes of the Delaware opposite this city, where they were drowned out almost by the heavy rains and consequent high water. The young were then put into a trap and the mother sought them out and was captured. They are all very fine, lively and healthy, and the young follow the mother as chickens do a hen. I think it very rare to see rail and young.—C. J. RUTGERS.

THE "GILA MONSTER."

BY R. W. SHUFELDT, C. M. Z. S., ETC.

FOR a number of years past the writer has been collecting together anatomical material and alcoholic specimens illustrating several groups of our United States reptilian fauna, with the view of describing and publishing accounts of their morphology. It was not until quite lately, however, that I came into possession of two fine living specimens of the far-famed "Gila monster" (*Heloderma suspectum*), the largest by all odds of our North American lizards.

A soldier, Private Charles Ruby, of the 9th U. S. Infantry, whose company is serving at San Carlos, Arizona, forwarded me my first live *Heloderma*; and the second, a considerably larger one, I purchased from an old hunter of Phœnix, Arizona, who captured it for me at the kind request of Lieut. Edgar A. Mearns, of the Medical Corps of the Army. Both of these reptiles are at the present writing before me, and this article will be devoted to a few remarks about them.

Zoölogists, as a rule, have awarded a separate family, the *Helodermidæ*, to contain this species of lizard, of which it is the only representative genus and species in our fauna; the *Helodermidæ* falling in the group DIPLOGLOSSA, which has in it two other families of lizards, besides.

I have been much surprised at the amount of interest that people of all sorts evince in regard to this reptile, not only those living in the Southwest, where its home is, but people passing to and fro through the country. Yet, no less surprising is the wide circulation of erroneous notions in regard to it, both as to its size, and general appearance; while salamanders, and even "horned toads" (*Phrynosoma*), and other reptiles all have at various times been pointed out to me, as Gila monsters.

Now there are but a few good illustrations of this very important form extant, and this, no doubt, has something to do with the fact that so many are unfamiliar with the appearance of a *Heloderma*.

There is a plate of one in the old U. S. Boundary Survey (Pl. XXVI.), and *Nature*, of London, published a small but excellent woodcut of this lizard, two or three years ago; neither of these figures, however, are easily accessible to the vast majority of the good readers of FOREST AND STREAM, so, with the view of presenting to them a faithful representation of the "Gila monster," I made the accompanying pen and ink sketch of the smaller of the two specimens in my possession, or rather from my colored plate of it, which I trust to have figured in another connection, some time in the future.

The smaller of my specimens is eleven inches long, while the larger one measures rather more than sixteen inches; I have heard that they attain a length of twenty-six inches, but have never seen one anything like as big as that. No two of them are exactly alike in their markings, and the one in the figure is an exceptionally handsome specimen. From tip to tip they are covered by raised and bead-like scales, disposed in rows around the body and tail, being closer together on the latter, while on the head, where they are the largest, they are arranged for the most part upon a definite plan, as in other lizards. In color these scales are of a deep, jetty black, or a bright salmon orange, or, as in some specimens, a pale orange or even a dirty yellow: but both of these of mine are brilliantly colored, especially the one I have figured for you. It, as you will see, has all four of its legs, black, as is the fore part of the head or its face; this contrast with its other markings lends to the reptile an exceedingly elegant appearance. Some of them, as my larger one, have the legs and feet mottled like the body, but not upon any special figure plan. The tail is round, really conical, as it tapers gradually to a pointed tip; and in some specimens the tail is very large and thick, almost a cumbersome appendage.

If we take the orange color as the ground color of the animal, as it seems (being the lighter) to be so, then we find the black on the body to be arranged in some four or five circular rows around it, of the most bizarre pattern imaginable; these variegated bands are sometimes continued clear along the entire length of the tail, but in the figure it will be observed that they are there reduced to simple black ones. *Helodermas* have a broad and deeply-forked, black tongue, which they are constantly thrusting out, and whipping back into their mouths as they move along.

This, however, is not the dangerous part of the animal, as *Helodermas* are very venomous, they having grooved teeth in their jaws and a well-developed poison gland, something like a rattlesnake's. Several years ago, the writer, who was at that time on duty in the Herpetological Department of the Smithsonian Institution, was severely bitten by one there, which had been sent alive from Arizona, and suffered extremely in consequence; while one that they had not long ago in the Zoölogical Gardens in London, bit a guinea pig, which latter animal died in five minutes. Doctor Mitchell of Philadelphia has analyzed this poison and finds it nearly as venomous as the fluid taken from the poison glands of a *Crotalus*. Professor Cope seems to think that this lizard has slowly developed its venomous apparatus from being sluggish in its movements, and consequently ill-adapted to get out of the way of larger animals and not be trodden upon; this constant source of irritation and danger has in long ages gradually rendered its saliva poisonous, and eventually given rise to the development of a special gland and apparatus for the purpose. This is my belief also, in the premises, and I am inclined to think that the same feature in venomous snakes came about pretty much in the same way.

My *Helodermas* will eat hard-boiled hens' eggs, or even raw ones, but it is difficult to get them to take anything; the one they had in London was, upon one occasion, at least, induced to swallow a small rat. No doubt in nature they feed upon the eggs of ground-nesting birds, and very likely upon the nestlings of the same species. These reptiles can walk quite rapidly, using as they do so, the fore and hind feet of the alternate sides, and keeping the head low down near the ground. When suddenly interrupted one will quickly raise its head, and to some degree its body by its legs, and wheeling rather sharply round, gives vent to a threatening, blowing sound, jerking in and out by rapid movements its broad black tongue, and withal presenting quite a defiant aspect.

Not as yet having had the opportunity to examine into their mode of reproduction, I can add nothing here to this part of my subject, for I am not informed as to whether they lay eggs or bring forth their young alive.

THE GILA MONSTER (*Heloderma suspectum*).—From a drawing by Dr. R. W. Shufeldt.

Among the various species of "horned toads" (*Phrynosoma*) of this region, both ways exist, for these latter lizards lay eggs as well as bring forth their young alive.

Gila monsters do not occur in the country about Fort Wingate, and one to find them in their native haunts must resort to the low river bottoms of southwestern Arizona, more especially the low, sultry banks of the Gila River, which I am told is the most famous locality for them.

FORT WINGATE, New Mex., June 30.

THE WHIP-TAILED SCORPION.—I notice with interest and pleasure the article in the FOREST AND STREAM of July 28 on the whip-tailed scorpion (*Thelyphonus giganteus*). The insect is very common in Florida, where it is called "grampus" and "mule killer," and credited in some sections with deadly powers, though I never knew of a fatal case. I have known of very severe poisoning of a friend from the bite or sting of this scorpion, but he was unable to tell just how the poison was injected, and I notice that Dr. Shufeldt fails to inform on this point, though presumably it is done by the anterior clawed arms. The insect emits a very fetid odor when disturbed, elevating its body and going off stiff-legged or armed in an amusing manner, spreading its anterior claws menacingly. I think I have written before in this paper of this scorpion, but now for the first time am I made acquainted with the proper name and other interesting information which Dr. Shufeldt gives us.—O. O. S.

Game Bag and Gun.

IN THE CHEROKEE STRIP.—VII.

WE were much pleased one pleasant evening at the 21 ranch to see a light rig drive into camp, whose two occupants were recognized as Mr. Kirkpatrick, the foreman of the 21, and Mr. D. R. Streeter, owner of the Z brand, with range just below Kiowa, adjoining the Territory line. We had left Mr. Kirkpatrick ill at Kiowa and Mr. Streeter was absent from his range on business when we passed through, but we more than half expected them to come on down to 21 sometime, as both are ardent greyhound men, and as fond of a big hunt as anybody well could be. The appearance of these two gentlemen infused new life into our party, as indeed it would into any party.

Mr. Kirkpatrick is an old cattleman, who has been all over the cattle country, from Texas to Montana. He is perhaps the most popular man on the Southern range, and any boy in that whole country will fight if one but looked so much as cross-eyed at "ole man Kirk." He is the most restless man I ever saw. His first move was to grasp a broom and begin to sweep out our not over-tidy boudoir; that finished, he carried in wood and then went down and amused himself carrying hay to the big black Galloway bulls. He talked very little, but we could see he looked pretty happy, though much to our sorrow he informed us that he was not well enough to ride after the hounds.

Mr. Streeter was looking well enough for two, and the event proved that no hunt was so long that he was not first in it. Cattleman *par excellence*, blessed beyond care for this world's goods, of abundant health and spirits, and a sportsman as useful as ardent, Mr. Streeter is not only a comfort to himself but to others—one of the rare men whom one instinctively indorses. I don't know that I would spill over so much in so personal a matter if I had not noticed one particular thing about this gentleman, he always went in for the greatest amount of sport for the greatest number, and though he had an honest pride in his own dogs—as well he might have—he didn't argue that they were the best dogs on earth, or insist that it was his dog that caught the deer every time. I say a man like that deserves a public monument.

The newcomers brought down two more greyhounds, both grand ones, one the big blue dog of the Eagle Chief Pool, and the other Mr. Streeter's great fawn dog, Prince, the sire of the pups we had already seen do such good work on the 21 range.

I do not know better how to describe Prince than to call him enormous. He is the largest greyhound I ever saw. While the massive build of his huge head indicates rather courage than great speed, he has a good foot (as do all of his progeny), is well-limbed, and has a well set-up back, which clears him of all appearance of awkwardness. Not so fast as perhaps many smaller dogs, he is just tireless, and of such courage and strength that he will seize and hold any animal that runs in that country. For the purposes required in a ranch dog, I should say Prince would be hard to beat. The proof of the pudding is in the eating. Prince's record for the month of December, 1886, is twenty-six coyotes, three deer, and one gray wolf. I do not know that he has been beaten, although my great favorite, Mr. Allison's Mike, has caught eleven antelope in one week. We did all we could to induce Mr. Streeter to bring Prince up the coursing meet at Great Bend next fall, and hope to see him there. He may be beaten, but I will wager he will be running when the other dog catches the rabbit; or if that latter does not happen within three miles, it will not happen at all for his competitor.

We now had nineteen dogs in all at the ranch, including what are doubtless the very best game dogs in the whole western country, as well as the champion dogs Sandy, Jim and Terry—themselves not by any means to be excluded from the list of game dogs. I don't go much on champions; but Jim and Terry I have seen afield too often not to like heartily.

Barring us younger men, it was a party of veterans who lounged about the big ranch room that night, and blew big clouds of smoke, and gravely told stories of experiences which would set a novice all afire. Were it good journalism to speak too much of things whereto one can not speak himself, or to fill up columns already overtaxed by me, I could tell for the novices much of interest heard at our symposiums on the Cimarron. Mr. Kirkpatrick, Mr. Streeter and Mr. Allison were each well on to fifty years of age—though none looked it by ten years—and all had been long "on the front." The ranch boys had all lived lives so full of event that nothing seemed other than matter of course. Naturally, there were some experiences in that crowd.

At length Mr. Kirkpatrick quietly arose, took down a long buggy whip from the wall, opened the door, and began gen ly to stir around under the bunk with the whip. Great exodus of greyhound puppies followed, all yelping lustily, thinking it was Red who was after them. The latter was sometimes vigorous in his way of saying good-night to them, but Mr. Kirkpatrick would not hurt anything. The puppies were not allowed in the house. I think they came in through the keyhole. Old Jack, a retired and pensioned shepherd dog, was always permitted to remain, a fact which he thoroughly understood; and an exception was made for the crippled greyhound Boots, whose wounds would not do well out on the cold ground.

At the good-night signal each man gave his roll of blankets a flip, and presto! there were a row of sleepers. Fiend Business, where wert thou then? Sure not by the Cimarron.

In the morning we scattered in various quests. I tried to photograph nineteen dogs and five horses all at once with the little 4x5 camera, and caught a whole horizon full of ears and tails. Mr. Streeter and Mr. Allison took three pairs of hounds and rode off for the flats for a deer hunt. Mr. Kirkpatrick and I made some landscape views. Ricker disappeared, but whether he was sketching or reading up the rules on still-hunting, I never knew. He had a pretty good lot of sketches when we came up out of the Nations, but he was also suspiciously well posted on the rules and duties.

At a little after nightfall the deer hunters got in. They thought they could give account of two deer. The big blue dog had killed one, and just at dusk Mr. Streeter saw Terry throw another twice, and though the chase was lost in the dark after that, Terry was so long gone and came back in such condition that it was considered beyond doubt that he had killed his deer. This deer we never found, though we looked for it afterward. It is almost impossible to locate a spot in that country, among sandhills which are all nearly exactly alike, and with no landmark to distinguish one place from another. Deer were reported plenty. Over twenty-five had been seen, usually standing around in full view on the buffalo grass, like antelope—a rather unusual thing.

I wish I could tell all the excursions we made and all the fun we had; but I can't do that, you know. We certainly did have a pleasant time. The weather came off very fair and warm. Meadowlarks and robins appeared, though it was midwinter; the streams broke open; all the life of the wood seemed to bestir itself; "sign" of all sorts grew plentiful. In crossing one little hollow in the sandhills, Mr. Kirkpatrick and I found the fresh trails of two wilcats, a coyote, three raccoons and a skunk. We didn't care for the latter so much, but determined to try the foxhounds once more along the Wildcat swamps. The country anywhere without a mile from the camp was fairly alive with small "varmints," though the hounds had killed most of the coyotes. Only one coyote was killed by the hounds during our stay on the 21. Red killed that with the puppies, who did the business in great shape.

The coyotes, and worse yet, the gray wolves, make such havoc among the calves that the ranchmen in that country are forced to make persistent war on them. One coyote is good for about ten calves; and one ranchman told us that on his range alone the gray wolves had killed twenty yearlings during the past season, and he did not know how many calves, though probably a hundred. No poisoning was allowed on 21, though some ranches poison systematically (a fact which hunters should bear in mind, if they are in that country with dogs). As to the efficacy of keeping a pack of hounds—a plan quite generally growing in favor on the ranches—it will do to say that we had fresh eggs at the 21, often two or three dozen a day. Kill the hounds and the chickens would last about one week.

Well, we did saddle up and go down along the Wildcat with the foxhounds one fine afternoon, and we had hardly gotten near the creek before Drum began to sing, and as Buck joined him and both tailed out on the full jump down the creek we saw that it meant business and followed on the run. Just as we were engaged in the delicate operation of crossing a wire fence with our horses (a thing often necessary on the range, where gates only happen every forty or fifty miles) we heard the yelp of the little shepherd dog Frank, who never opened unless game was in sight; and a moment later the foxhounds were baying and all the greyhounds racing to their assistance. We hurriedly put up the fence again and got down to the creek where the dogs were swarming in the rushes as thick as bumble bees.

There was a big log lying out in the swamp about half out of the water. Ricker and Streeter sprang out upon this and soon called out that the dogs had treed a coon.

The coon sat in the mouth of the log and calmly chewed the anatomy of any dog which was fool enough to try to make the log carry double in that end. The uproar of the dogs was fearful—we had nearly the entire pack with us. Wanting to get a little nearer I sprang out on the log, slipped and got wet. The log proved to be hollow throughout, and by a good shove with a long pole we managed to shunt the coon out into the water, where the dogs were swimming, floating and wading, and breaking down the tough cover of wild flags. The whole dozen and a half of dogs tried to get hold of him at once—all but the staghound, who discreetly withdrew to the bank and looked on. One valiant puppy caught the coon by the tail and began to drag him out of the swamp. In turn the coon caught the shepherd dog by the nose and pulled him along with the procession. The young foxhound Druin went entirely crazy with lust of battle, and seeing the shepherd and the coon in such close relations suspected there was something wrong, and promptly jumping upon the unfortunate shepherd, was proceeding to do him up, while the coon yet held him by the nose. This mistaken zeal of Druin's set us all off in a peal of laughter, and even Mr. Kirkpatrick roared with merriment. The coon seemed in a fair way to lick the whole pack, until Mr. Streeter stooped over and caught it by the tail, throwing it out on the bank, where it was soon despatched. After it was dead Druin seemed still to have some sort of an idea that that coon belonged to him, and he pitched into one of the big greyhounds to drive him away from it. The latter would probably have bitten him in two if we had not interfered. This funny notion of Druin's was something new to us. It seemed a case of genuine "Berserker madness."

Ricker and I being desirous of obtaining some views among the broken timbered cañons on the south side of the Cimarron, an expedition was organized one lovely morning, Mr. Streeter and Mr. Allison going along as guides for us. We hitched up our Black Maria for this trip, Mr. Allison taking old John along, and Mr. Streeter riding his black hunting horse. This last animal was so well trained that one could shoot from his back with perfect steadiness. As we crossed the Cimarron Ricker shot at some ducks, and one falling crippled in the shallow water he mounted Mr. Streeter's horse and rode out to retrieve it. The duck flew again and Ricker killed it from the saddle, the black seeming rather to enjoy the fun than otherwise. Yet he was by no means a slow or stupid horse, but to the contrary very fast and spirited.

Following up the cañon of "Greever Creek," some four or five miles, and being then about twelve miles from camp, we left the wagon, saddled up, and each shortly taking a separate cañon were soon far away from each other, each man leaving his horse tied at the head of navigation in his cañon and then going on up afoot.

The entire country over in that region appeared to have been burned off in the recent great fires. The fine ashes, caught up by the strong wind, were indescribably trying to the eyes. The game appeared all to have left for the time, though we did see a good many fresh deer trails in the cañons and also some fresh turkey signs.

I had put my "photograph machine" in the pockets of my shooting coat, all but the legs, which I left at the wagon. I passed through a series of lovely and striking views, and at last, coming out on a hillside which gave a grand panorama of the entire system of cañon-heads, I determined to bottle up that landscape for my own private use. As I had no tripod, I set the little camera on my knee, and tried to get the focus on a certain bold bluff in the middle distance; but as fast as I could pull the dark cloth over my head the wind whipped it off again. Then the camera fell off my knee and rolled down the hill just as I got the cloth over my head nicely, and by the time I had got that and pounded the brass things out straight again, or part way straight, old Bugler, my horse, commenced trying to break away, and nearly walked on the woodpecker gun. I administered corporeal punishment to the horse and sat down again.

You know Rachel refused to be comforted, don't you? Well, it was just that way with Bugler. He sighed for his absent one, the little wall-eyed, pigeon-toed, pot-bellied thing that Ricker was riding for a horse, and that we drove on the right hand side of Bugler, going south (I never could remember which was the "near" horse, and which the "off." But I think Bugler was mostly "off").

When Bugler sighed, you could hear him about four miles on a still day. Same way with his mate. By and by I heard an answering neigh, and saw Ricker riding on the opposite side of the creek, about half a mile away. He soon joined me, and between us we took the photograph.

Separating again, Ricker and I left our horses, and pushed on further south yet, he getting over very nearly to the southwest camp of the 21 range, among the blackjacks. Among the rough cañons of that region he got some very interesting sketches. I spent several hours in exploring some of the roughest and most picturesque cañons, and found some very striking views indeed. Great masses of limestone rock often blocked up the cañon, sometimes at a point where the walls were a hundred feet or more in perpendicular height; and these cedar-covered, ragged defiles were unique enough in their peculiar characteristics to catch the eye of any artist. That region is a country of caves. I crawled down into several caves as far as the light permitted, and some of them must have been very extensive. The caves are the natural home of the predatory animals of that country. It is said that panthers occasionally are found about them, and beyond doubt a great many bears winter in them. I did not see any bear sign, but nearly every cave had plenty of wildcat tracks in it. There must be a great many of these animals over in the cañon country. Mr. Streeter struck the trail of a mountain lion, a very large one, but as he had no dogs, he did not attempt to follow it.

In so rough a country I could not put up any game; so, after looking about for a time, I returned to my horse, and stopped in front of a peculiarly picturesque little side cañon, and was trying to get an interior view of it, with old Bugler in the foreground, when Mr. Streeter and Ricker came up. Ricker asked me if I had "got his eagle?" I didn't know what he meant. He said he had killed a big eagle and left it near his horse, but it was gone when he came back. We found the eagle at camp, Mr. Allison having brought it in. He said it was trying to get off when he passed by, and he killed it with his Winchester carbine. Ricker had shot it with a load of buckshot. It was a large golden eagle.

We now started home, it being late. Mr. Streeter rode on ahead. The sun was warm, and we threw off our coats, though there were heavy clouds in the west and north.

As we passed the bluffs which guard the mouth of Greever Creek we asked each other how far they were. We guessed the distance at half a mile. They looked about 500yds. In response to a request to try my .45-90 on the face of the bluff, I held about half way up the bluff and let go. The ball seemed lost for a moment, and then, to our surprise, a faint puff of dust appeared, apparently not much over three-quarters of the way over to the foot of the bluff. I repeated the shot, with the same result. Ricker fired the rifle of his three-barrel, but we failed to see any dirt fly at all. Mr. Allison had a stop-watch with him (he being something of a horseman as well as a greyhound man), and we concluded to time the ball of the .45-90. I slipped up the leaf several notches, and this time held on the top of the bluff. After an unconscionable time the puff of dirt showed just at the bottom of the bluff. The stop-watch showed just six seconds. I tried it again, and again the watch said six seconds. It may be seen how great the distance was.

While we were shooting, Mr. Streeter, who had been off on a little side hunt of his own, came up with us. We told him he couldn't hit the side of the mountain with his sawed-off .45-60 Winchester. Nor could he, apparently, though he fired several times. He thought that he shot over the top of the bluff; but that could not have been.

And now a very strange thing happened, and one whose like I never saw. It got cold! Not gradually, nor in a little while, but all at once. The wind whipped square around from the south to the northwest, and its breath was icy cold. So sudden a change in temperature was never seen, perhaps. The boys at the camp saw the thermometer drop twenty-two degrees in twenty minutes; and the rate of fall must have been much more than that for the first few moments.

We bundled into the wagon and started for home, trying to outrun the furious rainstorm which we could see coming and which soon shut the bluffs out of sight. Ricker wrapped himself up in the saddle blankets. He had on only his canvas shooting coat and canvas shell-vest for overwear. In the morning he had laughed at me for taking two coats. If his nose hadn't been so blue I would have had a laugh at him, th n.

We found the Cimarron rising fast and nearly swimming-deep for our horses. We did not get there a moment too soon. The rain, pitiless, drenching, icy cold, struck us as we were in the middle of the river. Our curtains were of little service and we were wet through in a moment. We drove into camp on a gallop, hustled our team under shelter and broke into the house about as wet and cold as any four fellows ever got in half an hour. To this day I can wake Ricker out of a sound sleep by saying that I believe his darling three-barrel got a spot of rust in it on that trip.

E. HOUGH.

A CHANCE AT THE CHICKENS.—A Michigan man (whose name we will not give, for to give it would be to deluge us with applications) will go prairie chicken shooting with a party and will furnish the dogs up to three brace. The terms are reasonable, and it is a rare opportunity for a number of friends who want to try the grouse.

AN EXPERIENCE WITH DEER.

A WINTER'S TALE FOR SUMMER READING.

OCCASIONALLY I have heard it remarked by some of the self-constituted readers of my copies of FOREST AND STREAM, that "among the multiplicity of hunting reminiscences published, the greater number present such a striking similarity as to make them tame and uninteresting matter for perusal." However much convinced that such indiscriminating purloiners are not to the manor born, it nevertheless has sought to remind me of the incidents connected with an experience in deer hunting which, be it said, furnishes a chapter of happenings somewhat out of the usual line, as we leave the reader to judge.

I was living in a city noted for its wonderful thrift and enterprise, being the undisputed metropolis of the great and growing oil industry. The city is situated near the most northern section of the extensive mountain forests of Western Pennsylvania. During the winter deer, bear and other game had been reported unusually abundant, and many of our local sportsmen had been successful in bringing in—during the few days of the opening season—some fine large specimens.

Yielding to the all-inspiriting influence that had stimulated the ambition of my fellow hunters to seek such rare and attractive fields of sport, I set about making preparations for a day's outing. A chance acquaintance who had attained an enviable reputation as an all-round sportsman, and a then active member of a leading gun club, kindly volunteered to share the events of the day as well as to generously insist (in view of his reputation and long experience as a hunter) upon an equal division of the spoil. Curly was not only an excellent rifle shot, performing many of Carver's difficult feats with dexterity and skill, but was widely known as having but few equals as a wing-shot; and withal was not over-timid in referring, on all opportune occasions, to his skill and adroitness in luring the wary deer within the realm of his keen eyesight and never-failing marksmanship.

A light, flaky snow having fallen to a considerable depth, making it an exceedingly favorable time for still-hunting, we found the day had dawned in all that perfection which is so welcome and gratifying to the heart of the hunter, and our spirits rose. Our route lay up the extreme right branch of the Tuna to the great wilderness of woods that have become so famous as a favorite rendezvous for hunters. On the way Curly told us his coon story. I have often since heard him repeat it, and always with the same degree of earnestness and enthusiasm that never fails to impress one with a sense of its truthfulness, even if it were not known to be vouched for by persons cognizant of the facts.

"Some years ago," he said, "while yet in the somewhat advanced stage of boyhood, I was on one occasion returning from a neighboring farmhouse, and in passing through a neck of woods, some distance from any inhabitation, I was startled by the fierce barking of the neighbor's dog, that had left me but a few minutes before. On reaching the spot I found him partly within the trunk of a hollow tree, growling and snapping furiously as if in close proximity to some animal that had been driven into close quarters, and was endeavoring to resist the attack of the dog. Upon my arrival the dog commenced to force the fighting, and in following up his advantage quickly crowded within the opening and gradually working himself upward, to my great surprise, soon passed out of sight. Up to this time I had been constantly urging him to keep up the attack, but now, fearing in his extreme eagerness to capture his adversary he might force himself into some crevice or tight place above and be unable to extricate himself, I quickly changed my tactics and tried by all manner of coaxing to get him to back down and out, but without avail. The only response I could get would be an occasional 'yip,' which soon began to grow indistinct and finally ceased altogether, leaving no further proof of the existence of either combatants than the falling now and then of a splinter or piece of decayed wood down through the interior.

"After standing some time contemplating the peculiar situation of affairs, at the same time intent upon devising some plan to rescue the dog from his supposed perilous position, I chanced to look up to take a survey of the tree, and observed it had been broken off fifty or sixty feet from the ground, leaving but a single limb on the standing portion, and that just at the point of breakage. A moment later I noticed a movement at the top, and soon after an enormous coon came out and took his position on the extreme end of the limb. Well! here was an unlooked for denouement on the part of one of the principal actors, carrying with it an air of mystery that puzzled me sorely in trying to unravel. What had caused his coonship to leave a comparative place of safety, and perch himself out on the limb as far as possible from the body of the tree—in open daylight? But the solution was nearer at hand than I had anticipated, for soon after the dog's head protruded from the opening the coon had just made his exit from, and drawing himself up until his forelegs projected over the broken top, anchored himself in that position; then glancing wishfully down upon terra firma, was undoubtedly as greatly surprised a canine as I was dumbfounded in beholding his highness so far heavenward.

"He had thus far shown such surprising capabilities in overcoming the law of gravitation that I was in a condition to credit him with sufficient courage and persistence to attempt to navigate the limbs, in case he should chance to focus the bold and attractive outline of Mr. Coon so temptingly near. But without waiting to give Trim time to further distinguish himself, I commenced to scold and threaten and pelt him with missiles, in my endeavor to make him pilot himself down the way he came, but after making a single trial (evidently in fear) he straightened himself up into his former position and couldn't be made to budge.

"I was now constantly on the ragged edge through fear of losing the farmer's valuable dog, the knowledge of that worthy's frequent refusal of fifty dollars for the brute being fresh in mind; besides, I was aware of his being a general favorite, and that his services were indispensable for churning purposes.

"Realizing the need of affording some means of rescue at once, and being in a desperate mood, I quickly decided to cut down the tree and take the chances of his being whipped to death by the fall. Hastily procuring an axe, I planned the cutting so the tree would land on a low, wet, marshy place, where the earth was soft and mucky to a considerable depth. After exercising a liberal amount of muscle for a time when minutes seemed the prolongation of hours, the usual warning came that the critical moment had arrived, and as soon as the tree had got under lively headway in falling, the dog—fortunately for his future existence—shot out from the tree like the circus man in the cannon act, and landed several feet beyond the tree on all fours and up to his sides in the soft soil, where he was obliged to remain until extricated. He was found to be badly stiffened and stove up generally, thus depriving the owner of his usefulness in butter making for a time, but finally he came out all right. The coon was captured and exhibited as a trophy of one of the most remarkable of hunting incidents."

After a brisk drive of several miles we drew up at an old, deserted cabin, and after finding shelter for our horse and putting our Winchesters in order for doing duty, we went on up the valley for another mile. At this point the Tuna dwindles into a very inconsiderable stream, and changes its course at right angles with its former direction; its headwaters reaching in from the west. Between the source of this branch and that of the other more prominent one, situated some distance to the southward, lies a stretch of territory that has become a favorite camping ground for the hunter and angler, and to this locality we decided to shape our course.

We were now compelled to take leave of the well-beaten track of the bark shipper that had hitherto done us such good service, and make our way through the trackless waste of snow that lay spread out before us in all its spotless purity and dazzling brightness.

We proceeded more slowly and with greater caution, being ever on the alert for signs. After a steady and monotonous tramp for a couple of miles, our vigilance was in a measure rewarded by sighting the fresh tracks of a buck and two does that had crossed our route, traveling leisurely to the northward. We were soon in buoyant spirits, the little telltale throbbings of our hearts had at once caught the inspiration, and were hammering out their beatings with unwonted rapidity and vigor; we were on our mettle and no time was lost in setting out on the trail. As if by a common impulse we struck out at a quick, telling pace, feeling that success was only obtainable by getting within range of the fleet-footed game before the waning shades of the closing day betokened the necessity of sounding a retreat, and setting our faces homeward.

Thus far everything looked favorable to the success of our little expedition. The day and the weather were propitious; the air clear and mild, while the trees had shaken off their light feathery garb of new-fallen snow and were motionless; the high, overhanging clouds of gray, with their lining tinged with a brighter hue, reflected down a steady, even, mellow light, that seemed to penetrate every interstice, and light up every crook and cranny of this vast mountain fastness, permitting the eye of the hunter to detect through the breathless stillness that pervaded, the smallest moving object within range of his vision. Beyond all these favorable conditions of game, wind and weather, we still felt our star of luck in the ascendant; upon contemplating the fact that the ever-treacherous stick at our feet was lying too deeply buried beneath its soft, noiseless bed to give the fatal warning at the crucial moment, when, perhaps, the success of our day's weary, toilsome plodding hinged upon a single incautious step.

We kept pushing onward and upward with increasing swiftness at every turn, at times breasting along through the soft, yielding snow, leaving deeply-furrowed and continuous trails in our wake; then, again, putting greater elasticity into our nether limbs and dotting off the "landscape o'er" at a rate that quickly lifted us out of the broad, silent valley, and brought us to the summit of a high, steep-ascending ridge, a mile and a half distant. Here we came to a halt to take observations. We found the deer had made a sharp detour to the right, keeping along the high point of the ridge for a considerable distance until receding abruptly into the deep ravine below: then facing about, as if dissatisfied with their course, had retraced their steps at their usual slow-moving pace, and again turned their heads to the northward.

After taking a hasty survey of the country in advance, as well as noting down signs, appearances, etc. (intelligent only to the wiseacre of the party), a council of war was held with results highly satisfactory—to Curly.

During our deliberations I was made the recipient of certain information (said to be derived from the science of woodcraft) to the extent that our greatly coveted track-makers had left certain traces and indications behind them in their leavetaking at this point that denoted they would in all probability be found lurking in the near vicinity or thereabouts, and in order to guard against causing any unfortunate surprises in continuing the pursuit, it would be the duty of the writer to fall into line, keeping at the minimum distance of 50yds. to the rear, with special instructions (held to be strictly à la "hunters' code" governing the introduction of all untried members of the craft), to wit: "Whenever entering or passing through any thickly wooded section, extensive windfalls, umbrageous laurel patches, or any other locality furnishing more than an ordinary retreat for the fugitives, to keep a constant lookout (?) to the rear to prevent these wily, agile-footed denizens of the forest from bobbing up serenely and unexpectedly on the warpath behind." As a further mark of favor, I was to be signaled to the front to take part in any chance engagement in that direction, for, *e. g.*, "Whenever the lordly buck or his sleek and graceful consorts came into line of vision" (by some mysterious or unexplained method) "they were to be charmed into a lingering condition until the intervening distance of 50yds. was covered, when time would be called. 'hunters' code' again to govern," etc.

The peculiarities of an early training had taught me not to be too overcredulous in things pertaining to human affairs, but feeling that if success perched upon our obscure and humble banner, greater would be the victory. I accepted the situation with a spirit worthy of a more innocent tyro, and fell back into position; meanwhile mentally resolving to be in at the death if possible.

Our stoppage at this point had been short, and again we were in readiness to move on, while a perceptible glow of satisfaction beamed athwart the countenance of the party in advance as the "intervening distance" was scanned and its advantages mentally considered.

After passing down the northern face of the ridge, the trail led us into a low rolling country, heavily timbered and thickly interspersed with evergreen, then interlacing branches in places, forming a dense canopy that gave an inviting look to the hunter. Such hidden localities when viewed from a distance seemed to possess such unusual attractions to my verdant and imaginative mind that I frequently grew wholly unmindful that a quickening pulse and an increasing pace had set at naught the objectionable distance until a mild remonstrance (in tones that precluded the possibility of game being found extremely abundant in the neighborhood for the time being) again reduced me to the ranks. The game gave no further indication of loitering by the way, but kept giving us a stern chase. On and on over hills, ridges, valleys and streams, ever leading us to the northward, always having a due regard for that particular point of the compass.

The sun had long past the meridian, and the afternoon was far advanced, when we had crossed over a high sloping ridge, and reached the banks of one of those numerous mountain streams, that furnish in season such delightful sport for the angler. The deer had stopped midway the stream to force an opening in the ice, to slake their thirst, then crossed to the opposite side, and taken up the steep acclivity to reach the high bank above. Several hundred feet beyond the stream at this point, we strike the western extremity of another high ridge, whose trend extends in a northerly direction, and parallel with the stream, the land lying between gradually sloping toward the water. The deer upon reaching the high bank had turned to the right, slowly wending their way along between ridge and stream, evidently making for a windfall of two or three acres of heavy timber not far distant. Curly first reached the outskirts of the timber, and the top of a high log extending far out into the windfall, while I a moment later found myself similarly located a few yards to the left. My now equally advanced position gave Curly cause and opportunity to discuss the possible chances of my scoring the winning shot. Although not unsparing of his compliments, they gave a somewhat ludicrous turn to my apparently distracted thoughts that made it to me a very enjoyable episode, if slightly exasperating to my quondom companion. However, nothing daunted I kept up an unflagging spirit of hopefulness as well as a "constant lookout" for our brown-coated friends.

It was now apparent from the numerous tracks observable in the snow between the barriers of logs further on that the game was in search of some desirable resting place. During our consultation Curly's keen eye had discovered that the buck had separated from his companions and had passed along to his right, and at once selecting him as his lawful prey started off in hot pursuit. I had been a silent looker on, but nevertheless had been closely scrutinizing the field and had noticed tracks off some 75yds. to my left that extended past the roots of a large fallen tree, lying upon another of equal size that had fallen in the same direction and that in turn upon another at right angles, forming a line of an impenetrable breastwork in front several feet in height. Proceeding with the utmost caution until a view could be obtained through the labyrinth of roots of the uprooted tree that afforded a series of openings, I caught a glimpse of two white banners waving graceful salutation to the breeze, signaling, as I supposed, the final departure of the does in an opposite direction. Not being able to obtain a shot from where I stood or by a forward movement I retraced my steps with all possible speed to a point where I could command a view of them above the timber as soon as they struck the foot of the ridge, but I could see nothing going out. Raising myself high on tiptoe to peer over this high fortress of logs I soon discovered the wide expanded ears of one of the does, with nose well up sniffing the breeze, all the while keeping up an unceasing watchfulness in the opposite direction. She had evidently caught scent of Curly and was closely watching his movements in his eager pursuit of the retreating buck and had not as yet received the telltale warning of my presence.

Finding it impossible to bring my rifle to bear upon any portion of her body, I decided to direct my shot far enough into the several inches of snow lying upon the log to reach her head. Bringing gun to cheek and resting the muzzle against a convenient sapling, and again elongating my anatomy to its highest sticking point, I suddenly began to experience a certain unsteadiness and giving-out sensation in the lower extremeties, that I was generous enough to attribute to my strained and unsupported position. But a moment's reflection was sufficient to recall Curly's parting compliments, and once more bracing myself into line of action I immediately cut loose upon the imaginary target I had pictured to myself upon the snow. Throwing another cartridge to place without changing position, and waiting until the situation had become tiresome, and seeing no signs of life, I had started off to investigate, when I saw a line of moving hair above the facade of timber, and soon after the doe was seen passing along in a crouching position until reaching the open woods, then turning her well-rounded broadside to view she scampered off up the ridge.

As this is intended for an "o'er true tale," I am compelled to add—for the first time—that not as long as a glimpse of hair or hoof could be obtained through the spreading branches of the forest pine far up the mountain side did it occur to me that I was other than an unarmed spectator. Looking around for the fool killer, and finding myself beaten at all points, it then struck me that the other doe was in hiding, and that the sound of my shot would soon attract Curly to the spot.

Starting off with rapid strides, I soon rounded the upturned roots of the fallen tree, and came upon the doe standing looking in the opposite direction, about 40yds. away. Bringing my rifle well up into position, and while in the act of dropping down to bear upon the game, Curly's diminutive form came into line of vision, some 20yds. beyond the doe. Deciding upon the instant that he was at too high an elevation to be in danger, I continued to lower the bead of my Lyman until covering the neck of the coveted prize, and then touched the fatal trigger. At the report of the gun the doe dropped to her knees, and while in the act of rising another well-directed bullet through the head safely gave us the victory.

Glancing up, I saw an expression of blank amazement pictured upon the countenance of Curly, which would have made it a feast day for our special artist. He had unexpectedly become an eye witness to his own defeat, while success was readily within grasp; hence all consolations offered failed to have the desired soothing effect.

It was found the second shot had been unnecessary as the first had severed the jugular as effectually as if the knife had done the work.

Curly grulloched our deer in a skillful manner, and we swung her up out of reach, as we intended spending a couple of hours of the remaining day in pursuit of the buck and doe.

Following up the trail as it led us along the high divide of the ridge in its gradual ascent for a couple of miles, until reaching the summit, and looking over and downward upon the gradual slope beyond, we saw the deer with their sleek and attractive broadsides, fully exposed to view, about 75yds. distant. Curly being in advance let fly two shots in quick succession, but the deer went away lively enough. Deeply chagrined and crestfallen, he shouldered his rifle, and wheeled into homeward line, solemnly vowing that hereafter no tenderfoot would be privileged with an opportunity to mar the untarnished lustre of his fair fame; from this time henceforth he would enjoy the seclusion of the mountain fastnesses to his own satisfaction, and without let or hindrance.

Returning to our quarry we prepared for a long and tiresome carry, and took up our homeward journey. After following our back track for a couple of miles it was suggested that we take our bearings. Darkness had then blotted out the last ray of light from the valley, and striking a light to consult our compass, we decided upon E.S.E., it proving to be the proper direction, as we reached the ranche without deviation, and greatly to our satisfaction, arriving home at 9 P. M. to receive the congratulations of mine host, and to enjoy a well-relished repast in waiting.

Curly's frequent and solitary trips to the woods brought him no returns until near the closing season. An absence of several days in the deep forest in an adjoining county gave him as reward a fair-sized spikehorn. A. A. A.

Pittsburgh, Pa.

THE SHORE BIRDS.

Salem, Mass., July 31.—Shore birds are again appearing. They have been returning since the beginning of the month, and the opening of the season on July 15 is a time which ought to be changed to July 4. The appearance of such species as *T. flavipes*, or "summers;" *M. griseus*, or robin snipe, and the uplands (*T. bartramius*), besides peeps and ringnecks, announce the fact that the autumnal migration has begun. Such being the case, it clearly proves the need for change as suggested. Abolish spring shooting on these birds and then make this change. Give the birds all possible protection in the spring, but make it equally fair for those who are willing to face "greenheads," mosquitoes and midgets for sake of enjoyment, which many, I know, dearly love. Peep pie is not to be despised. Brother shore-shooters want to agitate this matter, and as a friend recently said, "It would be all right, although I don't care for that kind of shooting. I think, though, you can get the change made."

Five uplands were seen at Ipswich July 8. Some others seen since. I heard one was shot last week. Scattering jack curlew (*N. hudsonicus*) have been seen. No robin snipe flight as yet, and I have heard from various places. Ringnecks and peeps have been round some two or three weeks. I have shot two good messes and some "summers." Winter yellow-legs have also been seen by self and others. Birds are not yet as plenty as I have seen them, say in '85 or '83, or even July last year. This next month of August will see increased numbers. I got a sandbird (*C. arenaria*) some two weeks ago. Never got one so early before. It was in vernal plumage, and the only one I remember getting in this dress. Hundreds of young gull, mostly *L. argentatus*, trade along outside of Ipswich night and morning just now. One flock of eight shags (*G. carbo*) recently noticed. My life partner, with a 16 Parker, is proving quite adept as a follower of Nimrod, but I am under orders to stop here, so must do so.

THE GAME OUTLOOK.

Wellsville, O., July 26.—*Editor Forest and Stream:* The game outlook in the Ohio Valley at present is particularly pleasing. Quail and squirrels can now be found in places where they have not been seen for years, and are gaining rapidly in numbers. Woodcock, which at one time were an unknown quantity, are yet scarce, but increasing. Fishing has never been better, and some excellent sport is anticipated this fall in the Ohio and its tributaries.

This decided change in the game interests here is all due to the untiring energy of our game warden, ex-Sheriff Hostetter, in bringing the offenders to justice. His record against netters and dynamiters is unprecedented, and the game-law breakers greatly fear him. Under his protection we still have some hope for the game.

Our local sporting clubs, the Amateur Sporting Club and Wellsville Recreation Club, will go into camp during October; the former on Tuscarawas River and the latter on Beaver Creek, this State. Jo.

The game indications for this immediate locality are unusually favorable. As more farms have been opened up in the timber, prairie chickens have steadily increased in numbers, and this year are far more numerous than ever before. Ruffed grouse wintered well, and one can scarcely travel for half an hour in any favorable locality without finding a young brood now about half grown. As for rabbits, the woods are literally alive with them, and gray and black squirrels are also plenty. I have not taken my usual number of outings this summer and consequently cannot speak from personal observation as to the outlook for deer, but those who have been in the woods report plenty of "sign." One farmer who spent a day in the vicinity of Bass Lake, looking for some lost cattle, reports having seen fifteen deer during the day. I hope to interview them later on. In one afternoon's fishing last week, I secured forty fish, mostly bass and pike of good size. J. Frank Locke.

Pillsbury, Minn.

I have just returned from a trip to my cattle ranch, about thirty miles up in the mountain near Estes Park, and I find that game is doing very well. Grouse have hatched fine broods; are now about like quail. I saw a band of blacktailed deer a short time ago about half a mile from my cabin. There are several bear on my range, cinnamon and black. My son saw a black one a short time ago, but did not have his gun. In Burch Park, a few miles north of my ranch, there is a large range grizzly that has since last spring killed fifteen head of cattle, none of which was less than three years old. He can break the neck of a four-year-old steer as easily as I could a rabbit's. Cattlemen up there have offered $50 to any one that will kill him. His track is 7in. across the narrowest place. Trout fishing has been very fine in our mountain streams this season. A. A. K.

Berthoud, Colorado, July 27.

Colorado Large Game.—In issue of July 21, you have the "Open Seasons for Game," but there is a little mistake in the law for Colorado. Our last session of Legislature passed an amendment to the game laws which prohibits the killing of bison or buffalo for ten years, mountain sheep for eight years, ibex or Rocky Mountain goat for ten years. For deer or antelope the season is from Sept. 1 to Dec. 1; for elk, from Oct. 1 to Jan. 1. The law prohibits market hunting at all times of the year. This market hunting amendment I have been fighting for a long time, and last fall I urged our representative from Laimer county to try hard and get the bill through, and am happy to say he succeeded in doing it, although he told me he had a hard fight for it.—A. A. K.

RIFLES AND BULLETS.

Editor Forest and Stream:

In the last issues of the Forest and Stream numerous articles concerning long range hunting rifles have been published from which it appears that there is a tendency on the part of sportsmen to discard the repeater and to go back to the single shot rifle.

In former years I was enthusiastic about the magazine gun. I was the first to introduce (through Mr. Weber in Hamburg) the Bullard repeater in Germany, where it has met with universal favor, but the last time I had occasion to go back to the single shooter as the most serviceable gun for rough work.

Some time ago I investigated the motion of projectiles and read the results of my experiments and the development of the mathmetical theory before the Society of Natural Sciences of Hamburg-Altona (*Naturwissenschaftliche Gesellschaft von Hamburg-Altona*) in 1886, and as I have used nearly every description of firearms in the field, I may be supposed to know something about it.

The first rifle I ever tried in the field was a muzzleloader, .43-cal., weighing about 11lbs. I was then a boy of thirteen or fourteen, and became quite an expert with my columbiad. I afterward used the Winchester .44, .45-75 and .50 express, the Bullard .40-90 (one of the best guns I ever handled) .45-70 and .32-40 (this gun I used in my mathematical experiments on account of its accuracy) the Marlin .45-70, .40-63, and .32-40 (also used in my experiments) the Hotchkiss, Kennedy and Remington, of single-loaders the Sharp-Borchard, Mauser, Winchester, Remington, Bullard, Gras, Martini and many others.

Of these I found the Sharp-Borchard and the Ballard Pacific best adapted for rapid and accurate work. The No. 5 Ballard Pacific cal. 45-100 gun I am using now, and it gives the best results.

I would also recommend the use of patched bullets and of either the ordinary buckhorn or the Lyman rear and ivory front sights. The first deer I killed with a Ballard Pacific and the Lyman sights was shot at 183yds. in full jump.

The ammunition used in the Ballard Pacific .45-100 is very expensive, and I would advise the Marlin Co. to manufacture a gun for a cartridge like this: Cal., .44; powder, 85-90 grains; bullet, 360-400 grains, patched. The barrel of the gun should be about 32in. in length, and the twist one in 15in.

This cartridge would give great satisfaction and would also popularize American firearms in Europe, where the .44-cal. cartridge is extensively used both for hunting and target purposes.

THE GHOST OF STANDING STONE.—II.

It was the day before the opening of the season, and everybody seemed to be getting ready. The postmaster had a pail of minnows out under the pump and a lot of crabs stood near in a tin can. The old shoemaker's dog came out of the little shop across the street, and spying the can, gently trotted up and thrust his inquisitive nose down into it. With a howl he jerked up his head and a 5in. crab dropped from his nose. Then the dog, in a spirit of forgetfulness gazed aimlessly up and down the street and very calmly sat down upon the crab. With a howl of anguish he fled and disappeared round the corner while the crab dropped in the dusty road and was soon crushed flat by a wagon wheel.

A couple of fishermen had come in on the down train and were haggling with the village boys about bait for to-morrow's sport. When Marc went to dinner he saw Dick Fagan industriously fishing for minnows with a dip-net down along shore.

That was a long afternoon, but when the sun was nearly down behind the range of mountains which shut off the west, he got his fishing tackle and walked slowly down to the landing place. A reddish-colored toad hopped out across the path. Marc grabbed him at one. "I'll make good use of you to-morrow morning, old fellow."

He took a package from under a stone, where he had concealed it the night before, and put it in the boat, then moving off from shore paddled slowly across, struck the opposite side at the mouth of the little creek again, and paddled up to his landing place. Here he hid the boat and set out, carrying his kit. In addition to the tackle there was the package, and in this were a sheet, some phosphorous and a bit of red fire. This was a combination with which Marc had planned to get up a pyrotechnic display such as had never been seen before on that stream.

The sun was far down now and the darkness was increasing every minute. The crickets were chirping mournfully in every clump of grass and the air was full of lightning bugs that sparkled and glittered with increased brilliancy as the shadows grew deeper. Crossing the little valley Marc started along the mountain path. On account of the wild rapids at that point he seldom went down in his boat. He stumbled over roots and stones in the darkness and once rolled down the bank, but luckily landed against a big pine tree and climbed up again uninjured. When he reached the stone it was entirely dark and the huge mass loomed up faintly before him. It was too early yet, so he sat down on a dead tree and waited. Hour after hour passed on, but no one came. Some animal splashed in the water near him; a snake rustled up among the thickets on the mountain and twice a screech owl startled the night with its echoing shriek. Away off on the lowlands he heard the faint tones of a whippoorwill. Then with a rush and a roar the mail train dashed down the river, leaving a trail of fire behind and arousing the midnight echoes with its shuddering whistle. Marc knew it was 1 o'clock. Could he have been misled! But hark! Away up the river a faint sound breaks the stillness. It comes closer and now the weary watcher can distinguish the steady click of the rowlocks. The metallic sound rings out clear and sharp on the air. Marc hastily drew himself up into the branches of the pine tree. The boat came nearer and seemed to be beating around in the darkness unable to find the shore. Then the oars worked steadily for a moment and the boat came so close to the Stone that Marc could hear every word that was said with startling distinctness.

"Now, Dick," grumbled Mose Peters, "this ere's your fault. I tole you it was too dark to find the place." "Waal," replied Dick savagely, "run right in shore eny place here, an' we'll wait till it gits lighter. It's too dark now to fish eny how, an' it'll be daylight in a couple of hours. We'll land a big lot of fish in here afore sun up." Then the oars began to rattle again and Marc could hear them growling to themselves and moving round in the darkness. Yet they were coming a little closer, so Marc hastily ran the plank across, and daubing a little phosphorus on the top to see where to step, and then holding the sheet ready he stood for a moment peering out on the river from his lofty perch. The rattle of the oars had ceased and not a sound betrayed the whereabouts of the two fishermen. Then with a rattle and a shaking the boat grounded on the shore, and Marc heard them stepping out. Fagan struck a match and proceeded to light his pipe, and the sudden illumination showed the whole situation to Marc. The boat was on shore some distance from the Stone, and both Fagan and Peters were sitting out on the rocks. "Now, ole man," said Dick, "make yerself easy till mornin'."

Marc's time had come, and with a bold step he crossed the plank. With a quick movement he enveloped himself in the sheet, fired the red light and stood on top of Standing Stone, a smoking, flaming pillar of fire, gleaming horribly in the darkness and looking spectre-like and ghostly so far up in the air. One brief second of silence and then a yell that rang over river and mountains, "O, Lawd! Save us! Look thar Dick! Look up thar."

And Dick chimed in with a yell, and together they made a rush for the boat. Mose was first, and shoving it violently as he jumped in, the boat shot out from shore, and Dick leaping frantically at it fell short and plunged into the water.

"O!" he yelled, imploringly, "fur grashus sake come back fur me, Mose. Don't leave me here fur that ghost to get."

"D'ye heer?" he cried, as Mose paid no attention. "If you don't come back, Mose Peter's, I'll break every bone in your cowardly body."

"Swim out! Dick, swim out." I dasent come in thar," cried Mose, in trembling voice.

There was a splashing in the water, a rattle of oars, and Dick seemed to have reached the boat, for the oars suddenly began to move rapidly, and grew fainter and fainter as the boat, driven along by their terror-stricken efforts, receded further and further.

Marc stood erect until the sound had ceased entirely, and then sinking down on the rock, laughed until he was fairly weak. His bass was safe as far as Fagan and Mose Peters were concerned, for they would dread the very sight of Standing Stone hereafter.

But Marc had now the most important part to be done and little time was left, for already the faintest touch of gray appeared dimly in the east. So climbing carefully down from the Stone he took the path and started rapidly up the river, reached the creek and stepping into the boat moved down to the mouth and guided blindly out on the river and down among the foaming rapids. A couple of sharp bumps, a shaking, and quivering, a dash of spray in his face, and he was safely through. The shores were now faintly outlined against the dusky horizon and the day was coming slowly on. Marc paddled quickly and soon the rough outline of Standing Stone stood out from the monotonous slope of the mountain. Without a sound he guided the boat straight on until it grated musically on the pebbly strand, and cut with its sharp keel clear through into the sandy clay beneath. Two yards below was Standing Stone and the stern of the boat extended out several feet beyond. Marc was a little excited now but very calmly he prepared his tackle and arranging all but the bait sat still and waited for another touch of daylight. It came gradually and the sky grew pale red, and bathed the water with a rosy glow, and tinged the puffy clouds with pale orange. Gradually the distance lost its obscurity and through the rolling mist on the water Marc could see the morning train coming round the bend three miles below. He picked out a plump young toad and placing it gently on the hook cast the line cautiously out on the water, and the toad dropped with a little splash on the surface.

Marc was trembling now, but he held a firm grasp on the rod and watched the line intently.

The toad struggled fiercely for a moment and struck out toward the shore. One brief second it rested with outstretched legs and then the water surged up, something black rose for an instant and shot beneath the surface, and nothing was in sight but a circular wave, and this broke in ripples that spread out further and further until they were lost in the deeper, swifter water beyond, and murmured softly against the old gray stone. And a wild joy thrilled Marc's heart as the line ran swiftly out, and a fierce, savage tug nearly dragged the rod from his hands. He stood up and held back firmly, but the fish was started and kept reeling out yard after yard. Marc checked him finally, and after a wearisome struggle dragged him closer, and stepping on shore he drew him cautiously in along the boat and with a quick movement lifted him out on a patch of mountain fern.

Marc had never seen such a large bass, and for a moment he was lost in admiration. Fortunately the hook was only fastened to the tough skin at the side of the mouth, and easily came out, and the big fish was safe in the tank and moored to the gunwale.

Just as he started up the river with the bass floating peacefully by his side, a perfect fleet of boats came down and spread out all around him. "Say, Marc!" called out one fellow as he rowed past, "you'd better keep away from Standing Stone; Dick Fagan's up at the store as white as a sheet, and he says he saw a devil with a fiery sword down on the Stone. Mose Peters says same thing, too. I'll bet they've been drinkin' all night." Marc smiled as he swiftly passed.

He got up through the rapids, and before the sun was clear over the mountains was at his landing place. In

another hour the monster bass was resting calmly in a large tin boiler, while the clear water of a mountain stream poured constantly through it. Marc sent a telegram to New York, and the evening train brought him a tank for the transportation of his fish. Our hero now paddles over the river in every direction to the admiration and envy of the village boys, for he got the ten dollars and made a canoe that he considers unequaled for speed and beauty.

The stratagem that had procured for him his bass was too good to keep, so one dark night he made plain to an eager audience, with the aid of his sheet, the apparition that had proved so effective to the lawless fishermen. As for those worthy individuals, life was made a burden to them, and their friends never allowed them to forget the ghost of Standing Stone.

On crowded Broadway, looking out through a glass tank on the rushing, rumbling teams, and the ever hurrying tide of people that press up and down that busy thoroughfare, is Marc's prize bass. Day after day it idly beats its tail against the crystal sides, and impassively stares at the eager faces that throng around the window. But its thoughts are far, far away, up where the North Branch winds its serpentine course among the towering mountains, and waters the fair historic valleys of Bradford and Wyoming; up where, morning and evening, the sun shines tenderly down and lingers with its soft warm caresses on the rugged, weather-beaten head of Standing Stone. W. Murray Graydon.

MENHADEN FISHING IN NEW JERSEY.

Editor Forest and Stream:

For several years past our fishermen have objected to the manner in which the menhaden pirates of other States steamed into our bays and scooped up everything in the murdering purse net. The question fairly put is: Shall a few men be allowed to destroy our fisheries in order that they may make money out of oil? The Philadelphia *Times*, of Monday last said: "All along the New Jersey coast these steamers are known as piratical craft. From the head of Barnegat Bay to Cape May is a continuous string of islands inclosing bays and inlets. In these bays and inlets swim the food fish which supply the summer resorts and markets to a considerable extent. So bold have these pirates become that they steam right into the mouths of the inlets. They are destroying sheepshead, weakfish, kingfish, bluefish, mackerel and all the fine food fish with alarming rapidity, and they threaten to ruin, not only the livelihood of the market fishermen, but the sport of the many thousands of seaside visitors who are likely to try the hook and line. There is a deep feeling along the coast against the pirates who care nothing for law, and the coming session of Congress will see another attempt made to keep them in bounds.

"They never pause to consider the character of the fish. A sea captain whose word goes as far as John Jacob Astor's bond would go, says he saw three hundred black drum caught in one haul of the purse net last summer. They were taken to Atlantic City and sold for twenty-five cents apiece, all that were not cast out on the beach, near Atlantic and left to rot; and why? Because there is no oil in a drumfish save in its head, and it doesn't pay to make fertilizer or extract oil from this game fish.

"Recently a menhaden vessel from New London, Conn., caught $500 worth of fresh mackerel at one haul, and a captain with a commercial eye in his head undertook to take four tons of these fish to Atlantic City, and to send 10,000 to a Philadelphia market. The firm wrote back, 'Your fish are a total loss.' The weather was hot, and when they reached market they could only be thrown away like the historic 'rotten mackerel.' Here was a wicked waste of food fish, more in number than all the fishermen will catch this summer between Cape May and Barnegat Light.

"I could multiply instances. The menhaden pirates have practically ruined the fishing along shore. Their murderous purse nets have driven the mackerel from the coast. There are three fish factories at Somer's Point or Great Egg Harbor, and three at the Breakwater; and if the menhaden pirates are allowed to come into the inlets and catch the best fish by millions, the business of fishing with a rod and line and reel, or even with a handline, is like Othello's occupation—gone."

Angling Literature of America.—*Editor Forest and Stream:* The list of books on angling and fishes, given by Mr. Hallock, as published in your paper, is, I think, a little misleading. I have just looked over a few of the books mentioned, which I happen to have, which I never suspected were "fishing" books; for instance, Latrobe's "Rambles in North America," 1835; Marvel's "Wet Days at Edgewood," "Arcadia, Northern New York," 1864. I can't find that any one of them contains a word about fish or fishing. "Hudson's Bay; or, Every-Day Life in the Wilds of North America," 1858, is by R. M. Ballantyne, and is a capital book for boys. It does contain about two pages on fishing. Here is how he commences: "Having arrived at the edge of the place where we usually fished, each drew from a cleft in the rock a stout branch of a tree, around the end of which was wound a bit of twine with a large hook attached to it. This we unwound quickly, and, after impaling a live grasshopper upon the barbs of our respective hooks, dropped them into the water and gazed intently at the line," etc. This would hardly commend the book to an "angler." I think there are other errors in the list. The titles are misleading; some, I think, are not books at all, but only articles in sporting papers. I can find no record of them. It would be quite useful if some competent person would make up an exact list of American angling books and print it in the Forest and Stream.—Angler.

Black Bass in West Virginia.—White Sulphur Springs, July 14.—On Monday a friend and I went to Caldwell, on the Greenbriar River, but the stream was high and roily and we had only a pleasant drive for our pains. Yesterday at the unseemly hour of 3:37 A. M., we took a train to Ranceverte, on the C. & O. R. R., where we had telegraphed for boats and bait. Three of us took thirty bass but they were small. Our boatman says he took a small-mouth in the Greenbriar last year that weighed 7½lbs. We will probably try the James River next.—C.

TADOUSAC.

Situated on the St. Lawrence at the junction of that river and the noble Saguenay, about twelve hours' sail by boat from Quebec, Tadousac is yearly becoming better known to both the sporting fraternity and the tourist bent on pleasure, or the relief of both body and mind. Salmon and trout fishing can be indulged in to the fullest extent, the rivers here possessing the "noble king of fish," the goodly salmon, are preserved, being so valuable; but there are still those that afford that pastime to the entire satisfaction of the skilled angler, and passes are not so difficult to obtain if applied for to the proper quarters. As for trout fishing in stream and sea, it is really marvellous; and it is simply necessary to put on a good strong pair of boots and walk down to the sea, only 200ft. in front of you, turn to the left of the beach, and fly-fish till your wants are satisfied, or your arm refuses longer to cast the fly. In proof of this fact it may be well to mention a feat which occurred here at Black Point on the Saguenay, ten minutes' stroll from the hotel.

Mr. S. T. Hatt, who is at present stopping with Mr. Powell, of Philadelphia, in his comfortable cottage at Tadousac, performed the unparalleled feat of attracting to his flies five fish at two casts of the line; it occurred as follows: A good sized trout snapped the tail (or last fly) and came with a rush to the top and flew out of the water; this attracted some of the others below, one of which in his eagerness to get a mouthful took the second fly, and began to pull in the opposite direction to No 1; this had the effect of keeping the bob (or first fly, nearest Mr. Hatt) dipping on the surface, when low and behold, up came another and seized the bob fly. Mr. Hatt's hands were now full with three at once. He managed by his great skill to land all three. His next cast in exactly the same spot secured two more. This occurred on the 27th of June, almost within buckshot range of the hotel. The salmon here have been most plentiful, and a few lines clipped from the Quebec *Chronicle* of the 1st of July will more clearly explain the position than the pen of your humble correspondent:

This manly sport, which has induced the nobles of far distant lands, and the merchant princes of the great neighboring Republic to assemble around the festive bay of Tadousac, has now commenced with promise of great results to the keen sportsmen who yearly indulge in this pastime. The salmon trout take the fly most readily in the bay already, and goodly bags are daily netted with both fly and bait. The salmon of the St. Marguerite River, 14 miles from Tadousac, have begun to try the patience of some Boston fishermen, at the end of 100 to 125yds. of line, requiring skill and rare ability to conquer the noble "king of fish" roused to the pitch of "the death struggle" in his native element, while the Little Bergeron daily sends forth some magnificent specimens, one lot alone, offered for sale in Tadousac, embraced 13 fish in all, the 3 largest weighing 35lbs., and the smallest one, a baby fish, tipped the scales at 10lbs.

As from early dawn till the darkening shadows of evening suggest a return to the comforts of a hotel, the visitors to this enchanted spot, both ladies and gentlemen, know nothing but pleasure. The ladies have a keen relish for the sea bathing, which usually commences about July 10, and as the beach slopes so gradually that a human being would literally require to walk 150ft. from the sand to get out of his depth, if even only 5ft. 6in., the bathing here is absolutely safe, while the shelter for yachts and small boats in the bay is unequalled anywhere. It is time that New Yorkers and others discovered the snug retreat of the lucky Bostonians, who yearly revel in such scenery and sport.

BASS FOR BREAKFAST.

Hot? Yes, it was hot. "Warm" is quite too cool a word to be used while the mercury is worrying the nineties, and it was somewhere in that neighborhood upon that particular Saturday afternoon. I became at length impatient of the heat, and said to myself: "Behold, I will go forth and delude a bass for my Sabbath morning's breakfast."

So with bow-facers shipped, while rod and landing net lay ready to my hand, I pushed the Kelpie from the shores, and with a steady stroke away we went, up river.

Of the five summers past, it is only during the present that I have made any special effort to catch bass in the Intermediate. The fishing has been so indifferent that I felt little encouragement to try it; but of late I have taken some good ones. I had at first some hesitation in starting on a fishing expedition, from the fear, as I said to a friend, that I might catch something—that is, more than I could conveniently make use of, for I remember that when the fishing was good there was often a scandalous waste. The garden at Smith's old hotel is well manured with the finest sorts of fish.

My friend, however, assured me that "it would be all right;" and indeed, there was a greater demand for my fish than I had anticipated, and it came to pass that I fed several grateful families.

I rowed along, watching, meanwhile, the twittering birds, the foliage trembling in the heated air, the sunlight shimmering on the broad green lily pads, among which, ever and anon, there gleamed the white corollas of their flowers, and noting the while a slight haziness in the northwestern sky.

And it grew hotter. The birds seemed almost to gasp as they lazily piped from the dead branches of the cedars along the river's edge; and I remembered a certain misguided girl from Ohio, who hitherward came this summer to see her friends, leaving behind yet others who persuaded her that, going as she was into the far North, among the icebergs, she should take none, save and except the thickest apparel she could muster. This advice she took and sore repenteth.

Landing near the head of the river I diligently sought the elusive frog. Did I say that it was hot? It was so; and that frog knew it and kept close. But at last I got a long shot at him with the paddle and put him into my bucket. Then I secured his brother, after which I approached a little spring, for it was very hot and I fain would drink. Then arose from the border of the spring that which I took to be a woodcock, a bird which as yet I had not seen in these parts.

He alighted within a few feet, and moving cautiously forward, I saw him strutting along the trunk of a fallen cedar, and knew him for a half-grown grouse. One after another six went forth, followed by the mother bird, which flew across the river. I did not seek for more, and think that these birds had not before been disturbed since hatching.

I have scarcely heard a gun this summer and believe that the influence of the Audubon Society and the game warden has been beneficial.

The waters of the spring were good. "Kingfisher," had he been there, would have indorsed this statement; and the thought reminded me that I had promised myself a bass for breakfast.

Entering the boat, I rowed to a spot near the channel, where, at the foot of the lake, the current held an open space among the lilies, and sought to entice into my bucket the lively minnow. But, as I before remarked, it was very hot, and when I caught three I said, "With two frogs and three minnows shall I not catch a bass?" And but for the heat I would have laughed, the while it grew a trifle hazier in the northwest.

And as I fished for minnows came a scow, containing barefoot boys, who, landing not far below, proceeded to disrobe (in their case a very simple process), and entering the river, there screeched and swattered.

Across the field, and upon the side of the stream remotest from the bathers, came while yet they splashed the ominous tramp of a large and heavy female; and she uplifted her voice and cried unto her first born, "M-e-l-v-i-n."

Now she repeated this cry many times, and as I heard it well enough, though some twenty rods further away than Melvin, I admired that he replied not, and was thereby reminded of the days of my childhood. When by dint of much howling, Melvin was at last led to give attention, this female, being by that time both breathless and rubicund (for it was hot), solemnly enunciated these words: "Melvin, you put on your close and git for home."

And Melvin got.

On a warm day bow-facing oars are especially advantageous in giving the rower the benefit of the breeze created by the motion of the boat. This fact I appreciated as the Kelpie glided onward through Cedar Lake into Hanley's, passing the mouths of cool, rippling brooks, where shoals of minnows scurried away before the glancing prow.

Still on, up Sisson's River and into Benway's Lake. And it grew hotter and hazier, while I was not sorry that I had pitched an old Macintosh into the boat before I left my landing.

Now we approach a point of reeds upon the eastern shore, where, through multitudinous cat-tail flags, there softly flows into the lake a cool spring brook. "Kingfisher" knows it well; more by token, one of the family sat upon a cedar tree near by.

My minnows were small and my frogs were large, and as I had taken a perch of about the regulation size for bait, I resolved to experiment with him. This I accordingly did, and straight there was a bite.

It was not a bass, however; and when I raised the bait from the bottom I perceived that it was grasped amidships by the jaws of a small pickerel, perhaps weighing a pound.

Remembering that as yet none of my catches had been wasted, I allowed this fish to "monkey" with my perch; but after a time he gave it up, apparently in despair, and I moved onward. Again I cast the perch; again a bite.

This time it was another pickerel, a little larger than the first, and when I had boated him, I put on a frog and cast again. Before long I had two bites in quick succession, just as I was taking note of the cumulus clouds that now were rolling steadily upward above the western woods. They meant business. So did my two bites. The first of these was from a mosquito, the second a bass.

By thunder, thought I to myself, while the good rod bent and merrily sang the reel, I am of opinion that this time we have upon our line a regular old sockdolager. The bass halted and continued his operations upon the frog. I backed off into the lake.

The jagged and broken edges of the uppermost strata of clouds looked windy, while from beneath rolled steadily upward black and heavy masses of vapor, in the midst of them the thunder growled and streams of lightning played.

And you had better believe that it was hot while I was sitting there in that boat slapping a mosquito from time to time, with never a breath of air stirring, and waiting as patiently as the nature of the circumstances would permit for the blasted bass to masticate my frog.

All things must have an end; and just as I was wondering whether or not I should have time to mop my perspiring features with my pocket handkerchief the bass started, and as he leaped away on his headlong course, the moaning sound in the distant forest deepened into an angry roar.

To this I paid little attention at the moment, for that bass was a tiger, and well he held his own. For the next five minutes I think that I cared little for the weather if it was hot. When I fight a 6lb. bass (estimated, you understand) without an oarsman, I want bow-facing oars to do it with every time. Into the air leaped the frenzied fish, and it was all that I could do to keep him from getting slack line when he darted toward the boat. After two or three leaps he seemed to be inclined to devote his energies toward the reaching of some point to the southward, and, keeping on the line a steady strain, I let him go. By this the sky had grown quite black, which rendered it difficult to see clearly just what was ahead. Alas! that villanous patch of sunken weeds. The bass sounded. I reeled. Yank, whiz. Something had happened. The bass it was, not I, that yanked. Just how he managed it I do not know, but it became painfully evident that there was "summat hup," and when I had reeled in my line I found at least a half bushel of weeds at the end thereof, snake-weeds at that, but nary bass.

The storm came down upon us in its power, and I laid in the rod and headed southward. "But," saith the dude, "why didn't you start befaw?" Because, my son, if there is in nature anything which I dearly love, it is a real, rousing, splendid old storm. Had you been with me I should, of course, have been at home an hour before. But I wouldn't have missed that sight for a dozen dudes, or bass either.

The waters of the little lake were white with angry foam, and the fierce wind vainly strove to wrench the oar-blades from their clasps, while I pulled through the lily-pads into the river's channel and sought the shelter of the bridge until the first burst of the storm should pass.

The waves flashed back the lightning's gleam, the thunder broke a'ong the hills, and on and on through the crashing woods came in its might the stern tramp of the hurricane.

In a quiet pool, well shielded from the blast, the "skaters" were plying their vocation, and I wished that I knew just how it was that they managed so deftly to run upon the surface of the water. I had not supposed that I should be annoyed by mosquitoes after the wind

rose, but I was. They came to me under the bridge, fifteen or twenty of them; being perhaps attracted by an application of "Hind's black fly cream," which in an evil hour I had made to my epidermis. I think that these creatures rather liked that preparation. As a repellent it certainly is the most worthless I ever took into the woods. I sent a while ago for a half dozen boxes, and while they last I will, for a two-cent stamp, send one in the original package to anybody who is willing to try it and report to FOREST AND STREAM.

I think that by age it may have deteriorated in quality; if so, the maker should place upon its labels the date of manufacture, as is done with some sorts of yeast. I addressed a civil note to Mr. Hinds upon this subject, but he has not favored me with a reply. Meanwhile, I am "out" to the extent of a dollar and some odd cents, besides loss of blood and temper from insect bites, yet I charge the aforesaid pharmacist nothing for this notice which, it is hoped, may save my brother sportsmen both anguish and disappointment.

Bridges will leak. While dissecting a flower, I observed that water was streaming through my old straw hat. The truth is that it rained mightily, and even the musk-rats, previously familiar, sought their holes. Ordinarily they seem to care little for dampness.

I pushed off and floated down the stream, while the plash of the rain, the roar of the tempest and the oft-repeated crash of falling trees still sounded through the forest; but when I had reached the mouth of the river, and was swiftly pulling down the lake, the winds had lulled, the air was cool and a streak of brightness lay along the tops of the western hills.

And when my landing hove in sight, I pulled in, made fast the boat, and shortly was at home.

"Are you wet?"

"Not much."

"Where is our bass?"

"Got away."

"What have you caught?"

"One little pickerel."

"Let us return thanks." KELPIE.

JULY 20, 1887.

[Our correspondent's experience with the mosquito lotion may have been exceptional. We have tested the cream in the Adirondacks and found it effective.]

CONVERTS TO ANGLING.

THE desire to go a-fishing is increasing. Boys getting their vacations are asking where they can go to find "good fishing." They want to go where the fare will cost them but little. They expect, in their ignorance of such things, to find such sport as does not exist, by simply going into Maine a few miles and that, too, near some settlement. They are going at the very poorest season—the month of August—and they are doomed to be disappointed. They ask the experienced sportsman where they shall go, and when he is obliged to tell them that such a spot cannot be found, they look disappointed and are very likely to read over the guide book or summer travel advertisement again, which boldly announces, "Plenty of fishing," in the blackest of type. Ten to one they will believe the advertisement rather than the sportsman who has been there, and some fine morning they start for the railroad train. After a few hours' ride they are landed at some cheap little town, but the fishing! Where is it? It is almost painful to note this desire for a sport so wholesome, a recreation so desirable, and yet to be aware that there is no possibility that it can be gratified within the means of the young aspirant with rod and line. In the first place the vacation season is not compatible with the season when trout may be caught, but it is not always boys that are seeking for this August trouting. In fact, several vacationists have started from Boston this week in search of trout in August. In one case they were two gentlemen, evidently of ample means, but without experience in the sport they propose to take up. They interviewed one of the owners of Vive Vale Camp, on Richardson Lake, in regard to the Rangeley waters. They had heard of these lakes and proposed to try them. Mr. Stevens advised them to try some other season; but no, their vacations were set down for Aug. 1, and then they must go. They proposed to buy nice split bamboo rods, and desired advice in regard to the flies that trout would take in August. They did not know an inch of the region they proposed to visit; neither of them had ever handled a fly rod or caught a trout in their lives. They have started off for a vacation of two weeks. How many trout will they catch? Would success follow any other vocation or amusement undertaken under such adverse circumstances?

But not all the August fishermen are as green as the above. There is now and then a tired merchant, obliged to take his vacation in August, who goes into the woods for the love of the outing. He has been there before—has been every year. He goes in August because it is all the time that circumstances will allow him. Such a party of sportsmen started for camp Stewart, Richardson Lake, on Monday, or rather they took the Sunday evening boat from Boston for Portland. It was not a large party, but it was made up of the right material. Mr. Manson, of the iron trade, the firm of Bellows & Manson, and Mr. Binner, also of the iron trade. Now I have not yet named all of the party, for there was Mrs. Binner and Mrs. Charter, her friend. Alas! poor Manson! He is a bachelor! He wanted to take up with that advice published in the FOREST AND STREAM last year, about taking our wives with us on those good times in the wood and on the waters, but how could he do so? Well, he has done the next best thing, he has taken his friend and wife, and in order that that wife should not be alone, he has provided a lady companion. By the way, this same Mrs. Binner went with Manson and his friend, her husband, on their trip to The Diamonds fishing last year. Did she like it? Ask herself; or, better still, watch the enthusiasm with which she starts off on another trip of the same sort this year. It is her husband's vacation and she is going into the woods with him. What could be more to a wife that truly loves her husband. Why, he does her honor when he invites her to share such a vacation with him, and in her very soul she appreciates it. I reminded her that the chances would be poor for trout, by reason of the wrong season. "Well, never mind," she said, "we shall do some tall resting. But then I want my husband to catch just one of those big trout. Do you know that he has never seen one bigger than the brook trout that we got at The Diamond last year. Nor I either, for that matter. But he will get a nice rest, and he needs it." Mr. Manson is an old hand at the business. Will they enjoy the trip? Nothing but some terrible accident can hinder.

The attractions of the Megantic Club are drawing some of the vacationists this year. Mr. E. A. Pardee, of the wool trade, is to start for Megantic waters this week with Mr. Samuel Harrington, Master of the Eliot school, whose guest Mr. Pardee is. This gentleman is a novice at trout fishing, but he says that he is going to buy the tackle, for the reason that he is aware that there must be something to it, since so many genuine, good, sensible fellows follow it. Well, here is another convert, another devotee, and yet the number of trout have not increased an iota. The trouting mania—shall I call it mania? No, a noble, health-giving sport—is increasing rapidly, but the trout to catch are not increasing. Here is a hint for the Commissioners of the trouting States. It is propagation and protection that must never be lost sight of.

SPECIAL.

Fisheulture.

Address all communications to the Forest and Stream Pub. Co.

THE PENNSYLVANIA COMMISSION.

WE have the report of the Fish Commission of Pennsylvania for the past year. It is a very full report and is well illustrated with views of hatcheries, both interior and exterior, and with plates of fishes from "The Fisheries Industries of the United States." There is much in the report that we will quote but lack of space compels us to defer a portion. At present we give the following extracts:

FISHWAYS.

If your Commissioners had to deal merely with the question of fish propagation, their duties would only be light and pleasant. The serious questions confronting the Board have been (1), the adoption of a practical and satisfactory fishway; (2), the protection of fish during or about the spawning season; (3), the prevention of the pollution of waters.

We may be permitted to state that, in previous reports, the Commissioners could only record failures of experiments for the establishment of fishways. We now confidently believe that a perfectly satisfactory fishway has been constructed in this State.

At Columbia, on the Susquehanna, two fishways have been constructed to permit the passage above the dam of shad and other anadromous fishes; one of which ladders has been built as an experiment, at the expense of its inventor, Mr. W. H. Rogers, inspector of fisheries of the province of Nova Scotia. If it proves satisfactory, he is to be reimbursed the sum expended in its construction. The importance of the fishway, or ladder, should not be underestimated. In a state of nature, fish are left to ascend and descend the rivers according to the instincts of their nature, for the reproduction of their kind. Under such circumstance fish prove, in a region such as that comprehended in the original colony of Pennsylvania, one of the chief and cheapest articles of food for the people.

The streams of this State are believed to be still capable of producing fish enough to feed the nearly five millions of our people, if they were not obstructed by dams, polluted by contributions from factories and cities, and ravaged out of season by rapacious and unreasoning fishermen, who take everything, big or little, in their traps and finely meshed nets, wastefully destroying what they cannot sell. It is for these reasons, which are the result of an artificial state of society, where the "poor grow poorer," and the struggle for existence becomes more intense, that fishways are needed to assist the fish that are instinctively anxious to ascend to safe spawning grounds. The primary purpose to be attained by any system, which has for its object the restocking of depopulated streams in a crowded industrial Commonwealth, is to afford the fish artificial helps to overcome artificial obstacles to their natural propagation.

Without practical fishways, money expended for restocking a stream like the Susquehanna, with shad, which river was once their home, as its banks were the homes of the Indian, who subsisted chiefly upon them at the mere cost of throwing a spear, might as well be poured through a chute from the State treasury direct into the active current of the river.

The fact that fishways are needed, and that the shad still seek to ascend our streams, was ably demonstrated in the spring of 1885, when the high water enabled them to go over the Columbia dam, as appeared from catching one hundred and thirty-nine, at one haul of a seine in the Juniata, as reported in the Newport newspapers. No such catch had been known there in years before, nor has any such catch been recorded since.

POLLUTION OF STREAMS.

The preservation of the purity of our streams is a subject that reaches beyond the question of restocking them with fish, important as that will readily be seen to be. Pure water is as important as pure air to the health of the people. It is of vital importance to every farmer whose cattle drink at the streams, as well as to the denizens of every city and borough who draw their drinking water from rivers and creeks. Water in which trout are found to thrive may be safely accepted as pure, and when the streams once become mere sewers for carrying away the poisonous contributions from mines, factories, and cities, they become uninhabitable, not only for trout but for other species of fish.

To place the fry, which have been produced at great expense for years, and after careful attention for weeks and months, into polluted streams is to send them to a premature death, and to defeat the object sought by the State in constructing and maintaining the several hatcheries.

It has been demonstrated, beyond all question, that streams once rich in fish have been totally depopulated of the more desirable varieties by culm from the anthracite mines, by sulphur-impregnated drainage from the bituminous mines, and by acids from various factories on the several rivers of the Commonwealth. The Delaware, the Youghiogheny, the Conemaugh and the Allegheny, were once the homes of some of the most valuable varieties of fish, nearly all of which have been killed or driven away, as a result of the industrial works upon the banks of those streams. The gas works and oil refineries on the Delaware have driven away or killed off the immense schools of fish in that once healthful and noble river.

Oil refineries and acid works have produced similar effects in the Allegheny; the wire works at Johnstown have done as much for the Conemaugh, and two years ago, during an unusually low stage of the Youghiogheny, a number of mines were drained into that river with the result of driving the fish, panic stricken, to the mouths of the small streams in search of wholesome water. Yet more direct and specific proof of the deleterious quantity of tainted river water was afforded at the exhibit of fish at the State agricultural fair in Philadelphia in September, 1884. It was found impossible to keep trout in the Schuylkill water drawn from the hydrant. It was then discovered that by melting ice, by which pure water was obtained, the fish which had escaped the Schuylkill water were readily preserved. Volumes might be cited to prove the deleterious effects of water which has been contaminated by the out-flow from industrial works and from the sewage of large cities. The fact that such foreign matters in the streams from which drinking water is obtained produce zymotic diseases is too well known to be made the subject of debate in this enlightened day.

It is not necessary that the industrial works of factories and mines should be discontinued or forbidden, for the preservation of fish, and what is far more important, the public health; but it is believed the polluting drainage from mines and factories can be rendered innocuous by wise provision, without in any serious degree crippling those important industries by which so large a portion of the community subsists. Wise legislation, to the end of preserving the purity of the streams of Pennsylvania, would, it is believed, prove a blessing that would reach every class of our population, not even excepting those that live by labor in the factory and the mine.

RESULTS OF STOCKING STREAMS.

In the early years of the commission's existence, its attention was mainly directed to the restocking of trout streams, and out of that fact a considerable amount of prejudice was created in the minds of extremely practical persons, who regarded that work as of a sentimental rather than useful character.

The character of the commission's work has been so changed that during the last three years more attention has been paid to the propagation of food fish that have a value quoted in commercial reports, than to game fish. Yet even had the entire labor of the Commission been given to restocking only of trout streams, the State would have been largely the gainer from its appropriations for the fisheries.

The upper waters of the Delaware have been restocked to such good purpose, that the black bass fishing of that region attracts visitors not only from remote parts of Pennsylvania, but from other States; and if it were not for the deadly fish baskets which are constantly in use on the Delaware and the Susquehanna, those two rivers would furnish, probably, the finest black bass fishing in the United States.

The trout fishing in Monroe, Pike and other border counties is sufficient to attract thousands of amateur fishermen and pleasure-seekers from New York State to the manifest advantage of the citizens of the counties to which reference is had. This fact suggests the advantages that may be ultimately derived by this Commonwealth from the cultivation and preservation of good fishing in our mountain streams, which in time should prove as profitable to our citizens as the lakes of Maine, which are resorted to by pleasure seekers so numerously during the summer months, as to add very materially to the prosperity of that State. Such persons carry money to the region visited by them, and leave it there without taking away anything from the value of the country. Pleasure and health is all they seek in return for their liberal expenditures. There is no State in the Union that could be made more attractive to summer pleasure seekers than Pennsylvania, with its picturesque scenery and wholesome air, if it were only once understood abroad that the mountain streams furnished first-class sport for enthusiasts with the hook and line. To make the mountain region of Pennsylvania famous as a summer resort, it is only necessary to continue the work of transplanting trout to streams where such a method of recruiting is still desirable, and to put a stop to illegal fishing. That the stock of fish can be increased, and has been largely increased in such streams, may be shown by the improved catch per day which, within a few years, generally attends hook and line fishing in streams which have been repopulated with the native species from the hatcheries, but indisputable evidence has been afforded in various localities by the catching of rainbow or California mountain trout plentifully, within two years from the time when the fry was turned into the streams. Since no rainbow trout were ever known to be caught in the State previous to their deposition in the streams by the Fishery Commissioners, evidence of the practical character of the work could not be more conclusive.

Considering the depredations which are almost unceasingly practiced by unlawful methods of taking fish in this State, in and out of season, these facts speak well for the work that has been done even with the game species of fish. But additional proof of the results from restocking streams may be obtained by an examination of the records the work of providing food fishes, whitefish, German carp, etc. The last named offer particularly strong proof, for, like the rainbow trout, they were unknown to any considerable extent in this commonwealth before being brought hither by the Commission, and now ponds may be drained where carp will be found in almost incredible numbers, and of sufficient size and weight to appeal strongly to the most practical and prosaic pan fisherman.

Where we find the results so palpable in ponds, wherein the fish may be seen, counted and weighed, it would not, we respectfully submit, be unreasonable to estimate corresponding results from restocking the streams, provided the streams were properly and reasonably protected.

UNLAWFUL FISHING.

In the report of this Board for the years 1883 and 1884, special emphasis was laid upon the incontrovertible fact that if the Commonwealth was to derive adequate benefit for its investments in hatcheries and in other directions, it could do so only by affording to the stocked waters such protection as would effectually abolish the many illegal devises used for the killing of fish, and at the same time devise some method by which the close seasons for the various kind of food fishes, indigenous to the State or propagated in the hatcheries, shall be respected to the latter.

As far as legislation prohibitory of such unlawful practices is concerned, everything has been done that could be expected, but until it is possible to induce all people to respect the laws by refraining from killing fish by any other than lawful means and in lawful seasons, the labors of the Commissioners, although increased tenfold, will prove abortive, and the general public be robbed of their share in the products of the streams.

It having been clearly demonstrated that the laws, stringent though they be, have not answered the purposes for which they were enacted, the question that naturally confronts us is: How can they be rendered effective? We shall be told that several counties of the State are authorized to have "fish wardens" or "bailiff's appointed, and make provisions for payment for such services as may be rendered by such officers from the funds of the county treasury, but, with a solitary exception—Lancaster county—not a single one has manifested sufficient interest in the propagation and increase of food fishes to avail themselves of the license thus given them. Another statute law requires sheriffs to proceed against violators of the State fishery laws, but as far as this Board has knowledge, no sheriff, except one, has ever manifested a disposition to comply with the demands of that law. How then is the difficulty under consideration to be overcome? By placing in the hands of the Commissioners an amount sufficient to enable them to employ wardens along the principal waters of the State.

Every one is aware of the fact that the *role* of informer is not an agreeable one. It is always unpopular, and for that reason violators of the fishery laws have pursued their dishonest vocation without let or hindrance. Fish wardens would not be hampered by any such considerations. Being sworn officers, and having their duties clearly defined, they could proceed to the discharge of them without fear or favor.

But it will be urged, perhaps, that the amount required for the payment of as many wardens as would be needed for the protection of the stocked streams would be a burdensome tax. A proper understanding of the subject will readily correct this error.

In the first place, wardens should not be wanted in all of the counties, and only in a few would their active service be required for more than a few months of each year. They would hold their positions during the entire twelve months, but would be actively engaged only a part of the time, and hence their pay would not be very large. This fact, however, is rarely considered at its real worth by those county officers who are empowered by law to pay for warden services; therefore, if the State is to derive the benefits to which it is fairly entitled from its investment in fish propagation, county officers must either be instructed to make provision for the payment of such wardens as may be employed within the limits of their respective counties, or the Legislature should authorize it to be drawn from the State treasury. New York pays her wardens from the State's funds, and it is appropriate to state just here that her liberality in that respect has been well rewarded.

As an illustration for the necessity of such wardens, attention is asked to the lack of such guardianship in the lower part of the Delaware River. There, there is not only no guardianship, but absolutely no law which gives to the commissioners or any other public officers the right to interfere with illicit shad fishing. There is a law that defines the close seasons in the Susquehanna River, but none for the Delaware, although in the latter river the necessity for warden protection is many times greater. The only check upon illegal shad fishing in the Delaware is the supervision exercised by the State of New Jersey. Pennsylvania has been remiss in duty to herself in failing to provide means for the payment of wardens, and in the absence of such provision the Board has been helpless, as every dollar of the regular appropriation has either been granted for special purposes, such as the erection of fishways and the new hatchery at Erie, or has been applied to the improvements and maintenance of the other hatcheries. It is the hope of the Board that this long neglected matter will secure the attention of the present Legislature, and that a law defining the season when shad fishing may be pursued in the Delaware River be enacted.

THE NEW YORK COMMISSION.

A MEETING of the Commissioners was held on Monday, July 25, at the office of Hon. R. B. Roosevelt, president of the Board, in the Equitable Building, New York city, a full board being present. A resolution was adopted that the new hatchery should be located at Clear Creek, a tributary of Round Lake, in the Adirondacks, in accordance with the law passed by the Legislature last winter, and the sum of $1,000 was set apart for the purpose of locating and preparing plans.

A discussion followed concerning the law passed last winter in regard to the granting of franchises for the cultivation of shell-fish. President Roosevelt thought that the law was inconsistent, as it provided that no person or corporation should hold more than 250 acres of land for the cultivation of shell-fish, but allowed the absolute sale of such land. Mr. Blackford replied that sales must be recorded at the office of the Commissioners, and none would be recorded which gave an undue amount to one person or corporation.

Mr. Blackford said that maps and surveys of the lands would be completed in three months; he did not think the Commissioners would be ready to act on a purchase inside of four months. He thought it was the duty of the Commissioners to formulate rules for the guidance of themselves and of persons making applications for grants, and read a set of rules which he proposed for adoption. Mr. Blackford said that some of the rules needed immediate attention, such as that providing for an office for the Board and that fixing the time of meetings. Mr. Joline and Mr. Blackford were appointed a committee to select an office, and it was voted that the Commissioners meet on the first Monday in September and on the first Monday of each month thereafter for the purpose of hearing and granting applications for franchises. It was voted that franchises be granted to the highest responsible bidder. The proposed rules were ordered to be published.

The meeting then adjourned to meet at Cold Spring Harthe following day; a full Board was present there, also the Secretary, Mr. H. H. Thompson.

An inspection of the grounds and fish was made, and the growth of they earlings was commented upon. Commissioner Sherman thought it one of the best places in the country to grow trout, on account of the cheapness of food, and remarked that the yearling brook trout were as large as most of the two-year-olds found in the Adirondacks. Besides the yearling brook and brown trout there are in the rearing ponds, from this year's hatching, the following fishes: Brook trout, brown trout, Loch Leven trout, rainbow trout, German saibling and golden ide. Supt. Mather stated that the greatest difficulty he had to contend with was the presence of eels, which came from the neighboring mill ponds across the road and up from the salt water, and that he hoped to fence them out. Turtles also came from the same source, and these, with the kingfishers, being the only enemies he had to contend with, with the exception of mink.

The plans for the new hatchery were examined and approved, and it was decided to have it built by contract; to begin as soon as the lease which the law requires is given and approved by the Commissioners and placed on file. The superintendent was directed to make specifications to accompany the plans and to advertise for bids in the Long Island papers. Mr. Townsend Jones, one of the owners of the land, joined the party at lunch, and discussed affairs with the Commissioners.

It was decided to draft some proposed rules governing the granting of oyster franchises, and to have one hundred copies of them printed for the use of the Commissioners.

It was also decided that a tour of inspection of the Adirondack hatcheries should be made about the middle of August.

The Kennel.

FIXTURES.

DOG SHOWS.

Aug. 30 to Sept. 2.—Hornell Kennel Club Show, Hornellsville, N. Y. J. Otis Fellows, Superintendent.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5206.**

THE DOG FOR BIG GAME.

Editor Forest and Stream:

In your issue of July 7 you had an interesting article under the above heading, by "Leatherhead," in *Kennel Gazette*.

In his communication "Leatherhead," while discussing the merits of the various breeds of large dogs, favored the "old-fashioned staghound from the foxhound source." That the staghound does the work well will be seen by the following from a Montana paper:

"The staghounds recently brought in from Colorado by by the Sun River Range Association, of Montana, are doing good work killing wolves. Six hounds recently brought to bay double their number of wolves and engaged them in battle, doing to the death all but two of the sheep and calf destroyers. Not a few single combats have occurred, resulting in uniform victory for the dog, which has the advantage of fleetness, pluck and strength. A pair of hounds can do up a wolf in pretty short order. One will toss the wolf in the air, and before the astonished animal is again on the ground he is caught at the neck and loin and torn asunder. The hounds are fed no meat, their diet being confined to corn bread and buttermilk in most part. The Range Association are satisfied they have made a good investment in these wolf exterminators."

It has not been long since I saw in a Western paper that Dr. Van Hummell sold a lot of dogs for this purpose, so I have no doubt these hounds were from his kennels.

I bring this cutting to your notice hoping it may catch the eyes of some of your correspondents who have had some experience with these hounds. These experiences given to your readers would prove very entertaining. Here is a new field entirely for a series of enjoyable letters.

VICTOR M. HALDEMAN.

[The papers entitled "In the Cherokee Strip," in our gun columns, bear on this subject and may well be referred to.]

BEAGLES FOR BENCH AND FIELD.

Editor Forest and Stream:

Several years since I wrote an article for the FOREST AND STREAM with the above heading. It brought out a lengthy discussion by the leading beagle men at that time, and the matter was thoroughly ventilated. Evidently a new set of fanciers are now exercising themselves over the same topic and I am glad that it is so, as it keeps the beagle before the sportsmen and gives him the prominence he deserves. Years ago the beagle had a hard struggle to maintain his reputation as a gentleman sportsman's dog. "Only a rabbit hunter" was a sort of stigma, and the little hound was selected to be the fitting companion of small boys and negroes. Setters and pointers were the craze and it was considered *infra dig* to be seen hunting rabbits with a pack of beagles. The steadily growing scarcity of feathered game has driven these over-fastidious sportsmen to look for other sources of sport in field, and the beagle is becoming more generally appreciated as he is being better understood.

For nearly forty years the writer has been an owner and breeder of beagles, and in that time has been at particular pains to study the breed both at home and abroad.

With this premise, which is not intended as trumpet blowing, I propose to discuss "H. H.'s" article in some of its points and trust he will accept my strictures in the proper spirit, as they simply are a difference of opinion.

And now to begin, "H. H." says: "My best results have been obtained with four beagles, whose sizes and proportions are very nearly about the same. They stand 17½in. in height, with chests measuring 26¾in., length of bodies and heads 24 and 25in."

Are they beagles? What is the meaning of the term beagle? It is a modification of the Celtic word *Begele*, the definition of which is small, little; and the breed when it was originated received this descriptive title.

Now "H. H.'s" dogs are neither "small nor little;" in fact they are harrier or dwarf foxhound size, consequently his dogs are sailing under false colors; their sizes show them not purely bred beagles. Therefore any comparison as to relative value fails in argument, the fact that they run well proves nothing; harriers or foxhounds trained to the work will run rabbits as truly as beagles, but we believe in the eternal fitness, to use that for which it was specially created, and therefore we use the little beagle to hunt the little hare. The mistake that "H. H." makes is that he hunts a mixed pack 14in. dogs with 17½in., the regular racing gait of the big dog keeps the little one on the keen jump during the entire run, no wonder the latter plays out at the end of the day.

It would be about as reasonable to expect a Sheltie to run a steeple chase across a stiff country, hunters' weights up, matched against a well bred 16½-hand hunter. If big dogs are preferred, leave beagles out of the pack altogether. A lopsided hunt gives poor results and is altogether unsatisfactory.

It has been said somewhere in this correspondence that bench-winning beagles cut a poor figure in the field. This is very possible in many instances, and readily accounted for. There are many beagle fanciers, city men, who lack the taste, time, knowledge or opportunity to work and educate their dogs. These dogs, when bred, have little hunting instinct to transmit, their produce in the next generation have still less, and as they go down the line of descent the grand law of heredity asserts itself, like will beget like, the worthless parents produce still more worthless offspring, intensifying the bad at each downward step. That dogs thus bred are a pest and a nuisance any sportsman may satisfy himself by trying to break one. All hunting sense is so entirely bred out that it is a lost instinct; such dogs are veritable 'mug hunters' and fit for no other kind of hunting. These are the sort that bring the beagle into bad repute, if the unfortunate owner has had no previous experience with those bred in the right way.

I will now give "H. H." my idea of a beagle. In the first place, he must be rightly and truly bred. By rightly bred I mean that his ancestry on both sides must be performers; by truly bred, that they are pure, unalloyed beagles, and nothing else. Now, this is all-important in the outstart If the start is wrong, it takes a long course of careful breeding to remedy it, if it can be done at all, besides the vexation, trouble and loss of time. And just here the breeder's axiom shows its force, "Like will produce like, or the likeness of some ancestor." How imperative, then, that the progenitors should be right in blood and other transmissable qualities.

Next comes height; 13 to 14in. is about the mark. Such a pack will run evenly and smoothly; no appreciable difference in speed will be noticed, and they should run steadily day in and day out, of course soundness and perfection of form being essentials.

Color, as a fancy point, is sometimes carried to an extreme. Some breeders affect to think that if a beagle is white, black and tan, all else is of secondary importance.

All colors that properly belong to the beagle are good enough. Still, there is a choice. I would regard with a shade of suspicion a black and white, a pure white, or a solid black; yet I have seen some likely looking dogs thus colored.

I will not touch on the subject of form, all that is treated in the beagle standard, and nothing need be added.

But be the dog ever so well bred, bear in mind that to have a satisfactory worker, plenty of opportunity is all essential. I have found dogs to steadily improve up to four years old, therefore the more practice the better the dog. Youngsters working in a pack with old experienced dogs will often fall into a follow-my-leader method, and I have found it a good plan to take out such shirkers solus once in a while. Alone he has to depend on his own resources and the improvement is much more rapid. One thing more and I have done, don't whip. There is no breed of dogs more sensitive than the beagle, none so easily cowed by the whip, and none so utterly worthless when squelched by a severe beating, it is almost impossible to reassure them and overcome their timidity. Kind treatment, plenty of work, and well bred and well watched hounds will give all the requisites of a merry pack of beagles. L. H. T.

JOHNNY AND DRAKE.

Editor Forest and Stream:

For upward of two months I have waited for Mr. Mason to reply to my letter on the above subject, but so far I have waited in vain. I am surprised at this as Mr. Mason has not appeared to me to be a man who would shirk a reply. Is he still bound by the promise which he gave to some unknown person, and which, in my opinion, he had no right to give? Or does his book occupy all his time?

As Mr. Mason was engaged by the FOREST AND STREAM to write the report of the Philadelphia show he should criticise all the dogs "without fear, favor or ulterior motives;" and, as I have said before, he promised to in his Hartford report.

I quote the following from a letter published in one of your contemporaries on the subject under discussion, as it treats of the matter in the fullest manner:

"* * * I would like to * * * settle, once and for all, that 'Newark judging business.' That affair may be wholly summed up as follows: Mr. Marmaduke Richardson took the two dogs, Johnny and Drake, in the ring when the judging took place, and Mr. Hemingway awarded the blue ribbon to Johnny, and as he was doing this, Mr. Richardson noticed the 'blunder' in the numbers, *i. e.*, that they had been reversed, Johnny having on Drake's and Drake having on Johnny's number. He at once called Mr. Hemingway's attention to this, when Mr. Hemingway replied: "I am not judging numbers, I am judging dogs, and that dog (pointing to Johnny) is the best.' His subsequent remarks, made after judging the class and while the dogs were still in the ring, and also after awarding the special, were to the same purpose and went to show his preference for Johnny over Drake. After the judging took place, Mr. William Tallman (who was keeper for the dogs during their stay in this country) properly adjusted the numbers so that the award would appear correctly upon the record. I beg also to say that Mr. Tallman, Mr. Wm. G. Martin and Mr. Richardson can all certify to Mr. Hemingway's choice of Johnny over Drake. All these facts go to show that it is a mistake that (according to Mr. Mason) Mr. Hemingway said: 'It was purely owing to a blunder in taking down the numbers that Johnny got the prize in Newark.' Johnny got the prize simply because Mr. Hemingway considered him entitled to it.

Now as to the points and my reasons for believing Johnny to be the better dog:

Head—Johnny beats Drake in size of nostrils and in length and depth of muzzle. He is flat on the top of the head, while Drake is round, and the line running up the center is more clearly defined in Johnny. It is true that the Clumber spaniel should have a marked stop, but Drake's for the length and size of his head is rather too heavy. Johnny, in the opinion of some, may not be heavy enough, but even admitting for the sake of argument that it is not heavy enough, the superiority of the rest of his head should, in my opinion, outweigh this defect and put him well ahead of Drake. Johnny's occiput is also sharper than Drake's.

Eyes—Johnny's are fuller and the droop of the skin below the eye showing the haw is perfect. His expression if also better than Drake's.

Ears—Johnny's are better shaped, the vine being more clearly defined; the hair is shorter and silkier and the color better. They are set on about the same.

Neck—Johnny's neck is much longer and more powerful, but he may be a little more throaty than Drake.

Shoulders—Johnny is much heavier and more powerful in his shoulders, and the muscle is much more developed.

Body—Johnny beats Drake hands down here in length, and every one having a knowledge of a Clumber knows what an important characteristic of the breed that is. From all I can learn Johnny is as long as the best dogs in England. He measures more around the chest than Drake, and also around the loins. His hindquarters are larger and far better muscled. Height at shoulder Johnny is less than Drake.

Legs and Feet—Johnny is much the heaviest in bone of legs. In size of feet they are about the same, but Johnny's feet are more compact than Drake's.

Coat—In denseness and texture Johnny is away ahead; his coat is perfection. In feathering of forelegs and feet Drake beats Johnny, but in the hindlegs they are equal.

Color and Markings—Drake's head is the best marked. Johnny has a spot in the middle, which is a defect. His legs are heavily ticked, while Drake's are not. Drake has a little white on one ear.

General Appearance—I need hardly say anything about; everybody knows how they compare.

One thing more, if you will pardon me. In regard to Mr. Watson's opinion, I consider him (as well as Mr. Mason) a very good judge of spaniels, but when he gave such a hasty glance, as he did at Philadelphia, and decided in favor of Drake by pointing to him and saying: 'That is my dog,' he was no doubt moved more by impulse than by a judgment based on a careful examination of their various points. I regret that he did not give the dogs a closer examination, for I am sure he would then have decided in favor of Johnny."

A MEMBER OF THE AMERICAN SPANIEL CLUB.

CONFLICTING DATES.—St. Paul, Minn., July 29.—*Editor Forest and Stream:* In this week's *Sporting Life*, I notice that the New Jersey Kennel Club claims the dates Sept. 20 to 23 for their fourth bench show, an action which I feel obliged to publicly condemn and braud it as an infringement upon the rights of one of their sister clubs in the A. K. C., the Wisconsin Kennel Club, of Milwaukee, who have claimed and published these dates for the last four or five weeks. Not alone this, but the St. Paul and Minnesota Kennel Club and the Wisconsin Kennel Club have arranged their dates in such a way as to allow Eastern exhibitors to take in two shows in one trip, and they are trying their utmost to make these shows a success. It is the duty of the Executive Committee of the A. K. C. to step in and protect these two clubs against this uncalled for proceeding on the part of another member of the association, and I trust that every honest-minded man interested in dog matters will sustain me in this justified protest against an action which, in my opinion, is an outrage. Yours respectfully, CHAS. WEIL.

[The New Jersey Kennel Club is under contract with the New Jersey State Agricultural Society to give a bench show annually for a term of years in connection with the State Fair of the Society. The time is selected by the Society and the club has no option in the matter. The conflict of dates is unfortunate, but the New Jersey Kennel Club cannot be held responsible for it.]

GOAT'S MILK FOR PUPPIES.

IT has often appeared to me as something strange that goat's milk is not more frequently used for rearing puppies than it is, considering that whenever it has been tried for this purpose it has always given satisfaction, being regarded as far superior to cow's milk. About four years ago under the heading, "Does Cow's Milk Produce Worms?" a letter signed J. Isaacs appeared in the *Journal* from the invitation of Mr. Vero Shaw, who was desirous of obtaining the opinions of dog breeders on this question. The writer stated that after losing 75 per cent. of the puppies he bred from worms, proved by dissection after death, the cause of which he attributed to the use of cow's milk, he was induced to try goat's milk, which proved so successful that the year in which he wrote he bred more than fifty puppies without one showing a sign of worms. This led him to start a small herd of goats, the milk from which he had drawn twice a day and fed to the puppies hot from the animals up to four months old. A few weeks back I mentioned in a report of the Société d'Acclimatation of Paris, that some goats were kept in France for this purpose, showing that the same opinion is held on the continent.

I recollect also being informed by a gentleman I once met, who had lived some time in South America, that goats were there used to rear puppies, suckling them as they would their own kids; but the object in these cases was to create in the dogs a natural affection for their foster-mothers in order that they might be better available as guards for the herds.

What the actual cause is that renders the milk of the goat more snitable as a food for puppies—as, indeed, also for children—than that which comes from the cow is not altogether clear. For the purpose of comparing the constituents of the three milks, I append a table, showing the results obtained by analysis of each, based on the researches of Vernoise and Becquerel.

	Density.	Water.	Solids.	Caseine and Extractive Matters.	Sugar	Fat.	Salts
Cow....	1,033.38	864.06	135.94	55.19	38.03	39.12	6.64
Goat....	1,033.53	844.90	155.10	35.14	36.91	56.87	6.18
Bitch....	1,041.62	722.08	227.92	116.88	15.29	87.95	7.80

By the above figures it appears that although in general solids the goat's milk approaches nearest to that of the bitch, the caseine and extractive matters, which are very considerable in the latter, as in all carnivorous animals, shows less in the goat's milk than the cow's; while the reverse is the case in regard to the fat, though here again the bitch has far the largest quantity. As we know that caseine is less easily assimilated than fat, we might suppose that herein lay the advantage of the goat's milk were it not that the milk supplied by nature to the puppy contains nearly half as much again of this constituent. Then I should observe that the sample of goat's milk here analyzed was evidently rather below the average in caseine, as two specimens of this milk, examined by Dr. Voelcker in the 1880 Dairy Show, produced caseine in the proportion of 3.94 and 4.67 per cent. It is also well known that the constituents of milk vary according to the period of lactation, the caseine being in far larger proportion, and the sugar much less, immediately after parturition than at a latter period, so that unless the analyses have all been made under the same conditions, they are not very trustworthy as a means of comparison. Practical results are, after all, what is wanted; and perhaps these few remarks of mine may lead those who have tried goat's milk for puppies to give their experience of it, so that if really superior to cow's milk, as shown by the cases that have come to my knowledge, the use of goats for this purpose may become more general.—*Mr. Holmes-Pegler, in Fanciers' Gazette.*

B. M. STEPHENSON REINSTATED.—Cincinnati, O. July 30, 1887.—*Editor Forest and Stream:* At a meeting of the Executive Committee of the National Field Trial Club held in this city this date, Mr. B. M. Stephenson was (on application) reinstated as a member of the Club, and the bar against him removed. It was also further provided that circumstances in mitigation, which were not admissible at the trial, under the rules of the association, be made a part of the records of this meeting. In this connection, it is proper to say, in behalf of the Executive Committee, that the consitution of the National Field Trial Club is very defective, in that it does not provide for any different degrees of punishment, and the Executive Committee is therefore left without any discretion whatever. The rule is mandatory, and does not permit matters in mitigation to be considered. In this case it is safe to say that all the members of the Executive Committee would have considered the matters in mitigation entitled to a great deal of weight, had there been any grades of punishment provided for, which would have allowed Mr. Stephenson's statements, which were verified, to be officially considered.—C. W. PARIS, Sec'y; W. B. SHATTUC, President.

[We are pleased to note that the National Field Trial Club has reinstated Mr. B. M. Stephenson. The cause of his expulsion is well known, all the facts having been published in FOREST AND STREAM at the time. As we then stated, "Mr. Stephenson's motives in the case in question appear to have been generous rather than base. He preferred to have his friend's dog win rather than his own. * * * The offense was committed—it makes not a particle of difference by whom—and it should be punished. That Stephenson should bear this punishment no doubt seems hard to himself and his friends, for his position was a difficult one; but however much we may love the sinner, we must hate the sin still more. We have said before that in a matter of this kind we have to deal with results, not motives." The Club could do no less than punish the offence, which it did by debarring Mr. Stephenson. The ends of justice having been served, it was then right for the Club to consider the motives that actuated Mr. Stepenson, and base their recent action on the mitigating circumstaces.]

SPANIEL SPECIAL AT DETROIT.—Toronto, July 22.—*Editor Forest and Stream:* Mr. Chas. M. Nelles having relinquished honors that did not belong to him and having written you to that effect, it is surely now in order for him to return the prize to the rightful owner. I am pleased he deemed it best to place the honors where they belong, but should also like to have the prize he still holds.—H. G. CHARLESWORTH.

HORNELL SHOW.—Hornellsville, N.Y., Aug. 1.—*Editor Forest and Stream:* The Hornell Kennel Club claim the dates from Aug. 30 to Sep.2 for our show. No cash this year, except what is subscribed by the citizens; medals and diplomas. John Davidson will judge all classes. We will make two champion, dog, bitch and two puppy classes, for every known breed.—J. OTIS FELLOWS, Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Royal Arthur and Royal Alice. By Geo. L. V. Tyler, West Newton, Mass., for orange belton English setter dog and bitch, whelped June 9, 1887, by Royal Albert (Sir Alister—Novelty) out of Maida (Tempest—Lilly).

Royal Albert II. By Geo. L. V. Tyler, West Newton, Mass., for blue belton English setter dog, whelped June 9, 1887, by Royal Albert (Sir Alister—Novelty) out of Maida (Tempest—Lilly).

Princess Royal. By Geo. L. V. Tyler and J. Herbert Baird, West Newton and Auburndale, Mass., for blue belton, tan markings, English setter bitch, whelped June 9, 1887, by Royal Albert (Sir Alister—Novelty) out of Maida (Tempest—Lilly).

Easter Bell. By Geo. L. V. Tyler and Fred B. Stafford, West Newton and Faneuil, Mass., for blue belton English setter bitch, whelped April 10, 1887, by J. E. Eveleth's Frank out of Mona Tempest—Lilly).

Prince Leopold. By A. H. Morrison, Auburndale, Mass., for liver and white, tan markings, English setter dog, whelped April 10, 1887, by J. E. Eveleth's Frank out of Mona (Tempest—Lilly).

Gorda, Becky Sharp and Jubilee Vic. By J. L. Campbell, Simcoe, Ont., for black and tan Gordon setters, one dog and two bitches, whelped May 9, 1887, by Royal Duke (A.K.R. 4678) out of Nora (Sport—Clara).

Princess Sheila. By John W. Gale, Providence, R. I., for red Irish setter bitch, whelped April 13, 1887, by Jim (Elcho—Mag) out of Nell II. (A.K.R. 2084).

Lady Bess. By F. W. Fonda, Jr., Albany, N. Y., for golden fawn, dark stripes and markings, Great Dane bitch, whelped May 15, 1885, by Fido (Margaux—Diana) out of Wolga (Margaux—Gretchen).

Mohican Great Dane Kennels. By F. W. Fonda, Jr., Albany, N. Y., for his kennels of Great Danes.

NAMES CHANGED.

Obo III. to Starkey's Obo. Black cocker spaniel dog, whelped Feb. 20, 1887, by Obo II. (Obo—imported Chloe II.) out of Phonsie (A.K.R. 1982), owned by E. F. Starkey, Fitchburg, Mass.

BRED.

DEATHS.

Hector II. St. Bernard dog, whelped Jan. 3, 1884 (A.K.R. 4663), owned by W. R. Watts, New York, July 30, from sunstroke.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

C. E. P., Hartford.—A St. Bernard dog, 1 year old, weight 120lbs., has rheumatism in forward foot; it seems to be below the knee or in the foot. Has had it 3 months. Until then (3 months ago) had always slept in a hen house that was dry, and had a large yard to run in. Ans. Consult a veterinary to decide whether it is a sprain or rheumatism. If the former, a fly blister would be effective. If rheumatism, large doses of Rochelle salts or salycilate of soda.

G. R. P., Smethport.—I have an English setter that is eleven months old and for the last three months his eyes have been very red and discharged a little matter. He has a good appetite and is in a good condition and very lively. Ans. Get the following:

℞. Zinc sulph	grs. iv
Aq.	ʒ ii
M. Sig. Eye wash.	

Sponge the eyes carefully night and morning and drop a few drops of this solution in the outer angle of the eye and let it diffuse itself over the ball.

M. T., Portland.—Will you please let me know through your paper, what to do for my one-year-old King Charles spaniel. He has no appetite, only eats enough to keep him alive, is very thin, and his hair is all broken off, and is very short. I have treated for worms but it does no good, he passes a good deal of matter with his urine; he has been this way for about six months. He seems well, and is as lively as can be. Ans. Give five drops Fowler's solution of arsenic morning and evening in the food. Keep the bowels free with syrup of buckthorn in teaspoonful doses. Do not feed meat.

Rifle and Trap Shooting.

RANGE AND GALLERY.

HAVERHILL, Mass., Rifle Club, July 30, record match, 200yds., off-hand, standard target:

H Tuck	10	10	10	7	8	10	10	9	10	7—91
S Johnson	7	6	8	6	9	5	8	10	10	10—79
J Busfield	9	6	8	6	7	8	8	8	9	8—77
J F Brown	10	7	6	8	4	7	7	8	10	8—75
E Brown	4	9	8	5	9	4	7	10	7	7—70

In the badge match J. Busfield won gold badge, E. Brown won silver badge.

LINDSAY, July 26.—At the annual meeting of the Victoria County Rifle Association, held in the Council Chamber here this evening, the following officers were elected: President, Col. Deacon; 1st Vice-President, Capt. S. Hughes; 2d Vice-President, Capt. Evans; Secretary and Treasurer, Lieut. Bucknell; Council of Management, Messrs. R. Sylvester, Sergt. Williamson, Capt. Hopekins, J. H. Oliver and Sergt. Robinson. It was decided to hold the annual fall match on September 6, and vigorous preparations are now being made to make the coming match, which will be open to the Dominion, a grand success.

CREEDMOOR, Aug. 1.—The sixth marksman's badge match was shot at Creedmoor on Saturday, July 30. The attendance was fair, weather fine but hot, with a fish tail wind from 4 to 7 o'clock, which bothered the shooters somewhat, who, however, made good scores. Following are those who made 42 or over, those marked * being the winners of cash prizes and medals in this match; 200 and 500yds.:

	200yds.	500yds.	Total.

The next matches will be on Aug. 6, 13 and 27.

JACOB MANZ, JR., Ass't. Sec'y, N. R. A.

BOSTON, July 30.—There was a good attendance of shooters at the range to-day, but the finished scores were few on account of a fishtail wind, which was hard to contend with. Quite a number of militiamen were present and shot at 200 and 500yds., but with rather poor results. Appended are the best scores made:

Decimal Off-Hand Match, 200yds.

D L Chase	6	4	10	5	9	7	9	9	7	10—76
J N Frye	7	3	8	6	6	7	6	8	8	10—74

			457				508

MASSACHUSETTS' TEAM.—Competitions for places on the team which is to represent Massachusetts at Creedmoor this fall took place at Springfield on Tuesday, July 26, and at Walnut Hill July 28. The competition at Springfield was arranged to suit the convenience of members of the militia in the western part of the State, and that at Walnut Hill for the members of eastern organizations. The distance shot over in both instances was the same (500yds.), each man being allowed 15 shots. Regimental inspectors of rifle practice had been notified to send their best men to the competition. The weather conditions at Springfield were not of the best, the light being variable and the wind strong. At Walnut Hill the conditions were very poor, a strong fish-tail wind blowing throughout the day. The Springfield riflemen led the list, making scores as follows: Priv. F. R. Ball, Co. G, 70; Priv. James Kimball, Co. G, 67; Priv. L. T. Farnsworth, Co. G, 66; Priv. M. W. Farrow, Co. D, of Holyoke, 65; Priv. A. C. White, Co. C, of Worcester, 64; Priv. L. H. Perkins, Co. G, 60; Sergt. Geo. T. Adams, Co. G, 53; Priv. T. B. Wilson, Co. G, 55; Mus. Bickford, Co. G, 54; Sergt. E. T. Stephens, N. C. staff, 53; Priv. Rae, Co. D, of Holyoke, 53; Lieut. C. N. Edgell, Co. F, of Gardner, 50; Sergt. A. D. Jefferson, Co. A, of Worcester, 50. All the above-named competitors were from the 2d Infantry.

The scores made at Walnut Hill were: Corp. W. H. Merritt, B, 2d corps cadets, 64; Priv. W. C. Johnson, Jr., C, 1st corps cadets, 63; Priv. W. L. Skinner, signal corps, 63; Priv. J. W. Blake, H, 5th reg., 63; W. M. Merrill, 2d brigade, N. C. S., 62; Priv. W. J. Mildrum, H, 9th reg., 62; Priv. L. Grant, D, 1st corps cadets, 62; Lieut. R. B. Edes, I. R. P., 5th reg., 62; Priv. C. A. Lawrence, B, 2d corps cadets, 62; Sergt. E. J. Helliker, D, 8th reg., 62; Capt. W. L. Chase, 1st brigade staff, 56; Sergt. J. E. Darmody, G, 5th reg., 59; Lieut. C. C. Foster, 5th reg. staff, 59; Lieut. W. G. Hussey, I. R. P., 8th reg., 57; Capt. Geo. B. Benyon, C, 5th reg., 55; Sergt. E. C. B. Erickson, L, 8th reg., 53; Sergt. O. A. Kirkpatrick, M, 8th reg., 51; Corp. C. F. Cook, L, 8th reg., 50; Capt. A. A. Hall, 2d brigade staff, 49; Lieut. G. E. Worthen, C, 6th reg., 47; Priv. M. J. Mitchell, H, 9th reg., 46; Sergt. W. E. Smith, D, 8th reg., 46; Corp. G. F. Baker, A, 1st corps cadets, 45; Lieut. J. Hogad, 9th reg. staff, 43; Maj. H. G. Kemp, 1st battalion cavalry, 40; Priv. E. W. Bettison, signal corps, 38; Lieut. John Bellamy, I. R. P., 1st cavalry, 38.

BROOKLYN, N. Y., July 30.—A match shoot at Capt. L. Weber's Myrtle Avenue Park, Brooklyn, N. Y., was a very close contest between Mr. Otto Langsdorf and Adolph Hoffman, both hailing from the "City of Churches." Two hundred yards, off-hand, 25 ring target, 5 rings in black, 21, 22, 23, 24, 25, and 25 shots each:

Otto Langsdorf.

21 20 22 14 16 22 25 24 22 21 20 19 17 21 25 22 19 23 23 10 21 20 21 25 16—518

Adolph Hoffman.

20 25 16 13 20 16 21 22 22 19 23 22 19 19 17 22 23 21 25 21 20 21 21 22—513

The shooting was witnessed by over 100 gentlemen, and a good many "crack shots" were present, Mr. Harney acting as scorer.—R. M. ABESSER.

NATIONAL RIFLE CLUB.—The thirtieth annual meeting of the club will be held at Vernon, Vt., Sept. 6, 7 and 8, 1887. A general invitation is extended to all interested in rifle shooting. Any one can become a member and entitled to all the privileges of the club by paying the $5 entrance fee to the match for prizes and club medal. Standard weight of rifles, 20lbs. as fired; all over must give ¼in. per pound; under 20lbs. will receive ¼in. per pound on each string. Match to be 5 strings of 10 shots each. Any style rest allowed that does not confine rifle or add weight to it. Sights any, time rules, string measure, distance 40 rods. Match will be called first day at 2 P. M., other days at 9 A. M.—N. S. BROCKWAY, Sec'y, Bellows Falls, Vt.

LONDON, July 29.—A match took place to-day at the Springbank Rifle Range between the Westminster and Victoria (Canada) rifle clubs, distance 200, 400 and 500yds. Score: Westminster 415, Victoria 398.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WASHINGTON HEIGHTS GUN CLUB PICNIC.—New York, July 29.—*Editor Forest and Stream:* The Washington Heights Gun Club sent a check to swell the fund of the Manhattan Hospital, the same being proceeds from a benefit given by the club last winter for this worthy charity. The annual excursion will be held this year at Valley Grove, twenty miles from New York, on Aug. 23. Members of sister clubs with their families can join us and be guaranteed a pleasant time in good company. The price of tickets is $1 including gentleman and lady. Boats leave Inwood at 8:30 A. M., 152d street, North River, at 9, Manhattanville at 9:30 and 35th street, North River, at 10:30 A. M., returning 7:30 P. M. We have not decided whether to give an exhibition shoot at the grove or not. Our club has adopted a very neat club pin; it is in sterling silver with a miniature live bird in center, of oxidyzed silver, surrounded by proper inscription. The members of the W. H. G. C. have reason to congratulate themselves on belonging to a "live club."—HAMMERLESS.

THE BANDLE TOURNAMENT.

CINCINNATI, O., July 28.—The Bandle Tournament was undoubtedly the most successful one yet held in Cincinnati. Of the artificial targets the Ligowsky was undoubtedly the favorite; on Wednesday theirs were the only traps which worked, the others broke down. The live-bird shooting awakened the keenest interest. The accompanying scores speak for themselves. The attendance was far larger than anticipated. It is the third annual event of the kind under the same management. Tuesday, July 27, the scores were:

Match 1—Seven single Ligowsky clay birds: Stice 5, Goldrick 5, Mudd 5, Heikes 6, Wilson 5, Parker 7, Gay 5, Boyd 4, Sheldon 6, Budd 6, Crowell 5, Courtney 6, Vergis 4, Ray 7, Teipel 6, Bandle 5, D. F. 6, Cole 5, Early 5, Murphy 6, McMurchy 6, G. W. Henry 3, Hill 6, Otto 2, Brown 4, O'Neil 6, J. Johnson 6, McPhee 5, Watts 6, Whitney 3, J. Gay 2, West 6, Miller 6, Baker 3, Shott 5, Girton 4, Jackson 6, Cotton 5, Ruble 4, Comstock 5. Parker and Ray divided first; Murphy, McMurchy, O'Neil and Watts divided third on 9 straight in shoot off; Gay and Cotton divided third on 9 straight in shoot off.

Match 2—10 single American clay-birds: Bandle 10, Hill 9, Meaders 8, Carter 8, Verges 8, Teipel 9, Gastright 8, Parker 6, Cotton 9, Roy 9, Comstock 9, D. F. 4, Watts 8, S. Gay 9, McMurchey 10, Brown 10, Mudd 8, Adams 6, Nose 8, Heikes 9, E. Taylor 9, Early 10, Sheldon 10, O'Neil 9, Mason 4, West 8, Johnson 8, Stice 10, Jones 2, McPhee 9, Budd 10, Cole 8, Courtney 6, Whitney 7, Miller 10, Baker 7, Williams 1, Murphy 9, Girton 6, Jackson 6, Ruble 3. Bandle, McMurchey, Early, Sheldon, Stice, Budd and Miller divided first, Meaders, Ray, Comstock, Gay, Heikes and McPhee, after a shoot-off, divided second, Carter, Verges, Teipel, Watts, Mudd, West and Cole divided third.

Match 3—7 single live birds: Bandle 6, McMurchey 7, Verges 6, Goldrick 5, Meaders 6, Carter 7, Comstock 5, Roy 4, Stice 6, Ruble 7, West 6, Wilson 7, Armacost 6, Croxy 5, Taylor 6, Early 7, Mason 6, Bing 5, Gregory 6, Crowell 5, Murphy 6, D. F. 5, Sheldon 6, Teipel 6, D. Lefever 5, Boyd 6, Cotton 7, Parker 7, Modoc 7, Hill 5, Erb 7, McPhee 5, Skinner 6, Heikes 6, Brown 4, Budd 7, Shott 6, Daly 7, Nose 6, Miller 6, Whitney 7, O'Neil 6, Gastright 6, Johnson 6. Tie shot off next day. First divided, second won by Stice after killing 22 straight, O'Neil being the last to drop out, missing his 21st.

Match 5—3 pair American clay-birds: Teipel 5, West 4, Verges 4, Bandle 5, Sheldon 5, Stice 6, Early 5, Boyd 2, Nose 4, Wilson 4, Comstock 4, Croxie 5, Hill 5, Jackson 5, Goldrick 4, Crowell 4, Courtney 5, Girton 5, Gay 4, Gregory 5, Budd 6, Heikes 6, Carter 4, Murphy 5, Cole 5, Ruble 5, Parker 5, Gastright 6, Hayes 5. Stice, Budd and Heikes, after scoring 5 pair in shoot-off, divided first money: Teipel and Early, after scoring 5 pair straight in shoot-off, divided second money; Comstock, by breaking 2 pair, stood alone for third money.

Extra Morning Match.—Nine single blue rocks: Taylor 9, Boyd 5, Stice 8, Stevens 6, Sheldon 9, O'Neil 8, P. D. Lefever 6, Heikes 9, Whitney 9, Miller 7, Bandle 8, Goldrick 9, Ruble 7, Otto 6, Wilson 6, Crowell 8, Hill 5, Murphy 7, Roy 7, Baker 9, Meaders 8, Gay 9, D. M. Lefever 7, Budd 8, West 8, D. F. 6, Early 8, Gregory 8, McMurchey 9, Courtney 8, Verges 9, Teipel 9, Mudd 9, Erb 7, Shott 8, Johnson 3, Brown 9, McPhee 8, Bing 6, Nose 8, Cotton 8, Carter 7. Taylor, Gay, Heikes, Mudd and Parker, after breaking 9 each in the shoot-off, divided first money. O'Neil, Geegory, Bandle, Shott, McPhee, Nose, Cotton and Meaders, after scoring 6 each, divided. D. M. Lefever, Miller, Ruble and Murphy, after scoring 3 each, divided third.

Extra Side Match, Morning.—Five single Ligowsky clay birds: Mudd 4, Early 4, Heikes 3, Teipel 2, McMurchey 5 Wilson 2, Gay 3, McPhee 4, West 2, Budd 5, Stevens 4, Murphy 4, Verges 2, Crowell 5, Sheldon 5, Otto 3, Gregory 3, Boyd 3, Bandle 5, Hill 4, Gay 4, Watts 3, Lefever 1, Goldrick 3.

Crowell, Sheldon, McMurchey, Bandle and Budd divided first money; Mudd, Hill and Murphy divided second; Teipel took third money alone.

Second Day.—Match at 10 single Ligowsky clay birds: Stice 10, Bandle 9, Teipel 8, Drake 9, McMurchy 8, Thompson 9, Carter 10, Meaders 10, Brown 10, Gay 8, Parker 8, Early 9, West 7, Hill 8, Verges 8, Heikes 6, Cotton 10, Sheldon 7, Watts 8, Ball 7, Johnson 8, Budd 8, Nose 6, McPhee 8, Shott 10, Whitney 9, Courtney 7, Miller 9, Taylor 9, Roy 8, O'Neil 9, Bing 6. Ties on 10 divided; Bandle, Drake, Early, Taylor and O'Neil divided second after scoring 5 straight in shoot-off. Third, McPhee and Johnson, after scoring 10 each in shoot-off, divided.

Eight singles and two pair American clay birds: Stice 10, Cotton 11, Carter 10, S. Gay 11, Whitney 10, Henry 1, Ball 6, Bandle 12, Teipel 12, Brown 9, Early 12, Sheldon 11, Drake 12, McMurchy 12, Baker 11, Adams 6, Meaders 10, Taylor 10, O'Neil 10, Verges 8, Miller 10, Hill 11, Budd 11, Ray 7, West 10, Modoc 10, Heikes 11, Jackson 11, Johnson 9. Bandle, Teipel, Early, Drake and McMurchy divided first, Cotton, Sheldon, Hill, Budd, Heikes, Jackson and Baker divided second; Gay and Taylor, after scoring six singles and two pair in shoot-off, divided third.

Extra match—Six single Ligowsky clay-birds: Stice 6, Teipel 6, S. Gay 6, West 6, West 6, Skinner 6, Early 6, Sheldon 6, Boyd 4, Comstock 6, J. Gay 6, McMurchey 6, Wilson 4, Gregory 6, Small 4, Goldrick 4, Nose 5, McPhee 6, Baker 6, Hill 6, Whitney 6, Henry 3, Echo 6, Bandle 6, Drake 5, Johnson 5, Shott 5, Watts 5, Jackson 5, Budd 5, Carter 6, Thompson 5, Brown 6, Ball 4, Meaders 5, Bing 5, Cotton 6, Girton 5, Waddell 5, Croxie 5, Taylor 6, Ray 5, Bob White 3, Verges 5, Lefever 5, Heikes 5, Courtney 5. Stice, Teipel, Early, McMurchey, Cotton, McPhee, Baker Hill and E. Taylor, scoring 5 straight in shoot-off, divided first. Scott, Jackson, Meaders, Nose, Waddell, Lefever, Heikes and Courtney, scoring 9 straight each, divided second. Boyd, Wilson, Ball, Small, Goldrick and Ray divided third.

Extra match—Five single American clay-birds. Bang 2, Skinner 3, West 4, Erb 3, Comstock 4, Bandle 5, Wilson 5, Meaders 5, Miller 3, Ball 4, Amacost 4, Roy 5, Girton 5, Thompson 2. Lefever 4, Brown 4, Carter 3, Bing 4, Gregory 4, Boyd 5, Stice 5, Jackson 4, Budd 5, Early 5, Harrison 4, Scott 5, Teipel 3, Croxie 4, Crowell 5, Cotton 4, Courtney 3, Gastright 5, Verges 3, O'Neil 4, Heikes 3, Bob White 5, Goldrick 4, Parker 5, Whitney 5, McMurchey 4, McCartney 4, Nose 4, Hill 5, Sheldon 4. Budd, Early, Erb, Teipel, Bandle, Whitney, Stice, Gastright and Ray, scoring 6 straight in shoot-off, divided first. West, McMurchey, Nose, Sheldon and O'Neil, scoring 6 straight in shoot-off, divided third. Erb, Teipel, Miller and Heikes, scoring 6 each in shoot-off, divided third.

Match 8.—Seven single live birds: Ray 6, McMurchey 7, Teipel 7, Miller 6, Drake 6, Sheldon 7, Modoc 5, Bandle 6, Wilson 6, Budd 5, McCartney 6, Carter 7, Brown 7, O'Neil 6, Doc. Lefever 3, Verges 7, S. QUIRT.

LEAVENWORTH, Kan., July 26.—The Leavenworth Gun Club met on the government reserve this evening for practice. Peoria blackbirds were used. The score shows that very good shooting was done. The following is the score:

McCarten	1101111101111111011—17	Goff	0110101001111110111—14
Humphreys	1110110011101101001—13	Schroed'r	1111010100011010010101—11
Sexton	1111111101111101101—17	Churchill	1111001101111101001—14

CENTRAL ILLINOIS SPORTSMAN'S ASSOCIATION.—The ninth annual convention and tournament will be held Aug. 23-26, at Sportsman's Park, Jersey, Ill.—CAM, B, HUTCHINSON, Sec'y, Jerseyville, Ill.

SAN FRANCISCO, July 24.—A tolerably large and enthusiastic gathering of sportsmen assembled this forenoon at Adams Point to try their hand and skill on clay pigeons. The shooting was above the average record this year at the Point. Schroeder and Schmidt did some excellent shooting. The following is a summary of the contest: The first on the programme was a $2.50 sweepstake at fifteen singles, 18yds. rise, governed by international rules. First prize, $15; second, $5:

Cole	100111010110110— 9	Muller	001011101101001— 8
Harper	111001001011000— 7	Kendal	110001011110110— 9
Browne	011011001111011—10	Schroeder	011111111011011—12
Schmidt	111111010111011—12	Kasten	111101101110110—11

In a shooting off for first prize, at three pairs of doubles, Schmidt was defeated by one point—the score stood 5 to 4. The next sweepstake—$2.50 entrance, ten singles, first prize $10, second prize $5—was won by Schmidt. Score:

Browne	1101101011—7	Schroeder	1011101111—8
Schmidt	1111111011—9	Muller	1111001001—6
Kasten	0101011111—7	Kendal	1001110111—7

This was followed by a five-dollar sweep, six pairs, the winner to take the pot. Score:

Browne	11 11 10 01 11 11—10	Schmidt	11 01 01 11 01 11— 8
Schroeder	01 10 11 00 11 41— 8		

The day's sport terminated with a private shoot, fifteen singles, $20 a side, between Schmidt and Schroeder. The shooting was very good and the contest close. Schmidt bagged the coin; his score stood 13, with Schroeder one point behind.

BOSTON, July 30.—This afternoon the Brighton Gun Club visited the East Boston Gun Club at the latter's grounds and went home defeated handsomely. Nine men shot on each team at 10 clays and 10 blackbirds. Score:

East Boston.

TAUNTON, Mass., July 30.—T. F. & G. P. A., match at 5 clay-pigeons, Ligowsky trap, N. G. A. rules. First match, 8 entries—Smith first, Plummer second, Dr. Post third. Second match, 13 entries—Smith first, J. T. Hall and C. T. Snow second, Homer and J. Davis third. Third match, 14 entries—Haity and Snow first, Homer second, Hall third. Fourth match, 14 entries—Hall, J. Davis and Snow first, Dr. Post and G. Walker second, Smith third. Match at 5 artificial targets, Ligowsky trap, 18 entries—Homer, Bowen and Snow first, W. Barstow second, J. T. Hall third. Sixth match—Walker and Snow first, Homer second, Hooper third. Seventh match—J. Davis Barstow and G. Davis first, R. Snow second, Plummer third. Team shoot, T. F. & G. P. A. against New Bedford Gun Club, 7 men, 20 bluerocks each man, 3 angles, 3 bluerock traps—Taunton team—G. L. Snow 10, J. T. Hall 15, C. T. Snow 15, E. C. Leonard 19, E. Bowen 12, G. H. Davis 12, J. J. Davis 14; total 99. New Bedford Gun Club team—Plummer 14, Bryant 12, Homer 6, R. Snow 9, Dr. Post 10, Hooper 8, Knowles 7; total 66.

CHAMPIONSHIP MATCH.—Marlboro, Mass., July 25.—As there has been considerable rivalry of late between some of our best shots, and especially as to the merits of the Scott and L. C. Smith guns, a match was arranced here on the 23d inst. between Eager, Wheeler and Dickey at 100 clay-targets, half to be double birds. Eager and Wheeler shooting an L. C. Smith hammerless and Dickey shooting a Scott. The match drew a large crowd of spectators and was one of the most interesting events of the year, as it was not only considered a test of the skill of the shooters, but of the shooting qualities of the Scott and Smith guns. The score shows that Mr. Dickey with his Scott gun came out victorious, he breaking 92 birds out of the 100 to Eager's 90 and Wheeler's 82. The following is the score: Dickey, 47 singles, 45 doubles, 92; Eager, 48 singles, 42 doubles, 90; Wheeler, 48 singles, 34 doubles, 82.—R.

NEW DURHAM GUN CLUB was organized at New Durham, N. J., July 16, with the following members: James H. Earle, G. W. Eckerson, Dr. E. J. Dunlap, A. D. Woolmington, John Jones, A. E. Frey, W. H. Danielson, Jr., Abram Greenleaf, Jr., David T. Eckerson, Theo. Buttonbaum, C. Merrill.—GEO. W. ECKERSEN, Sec.

THE BULLARD MATCH NO. 4.

SPRINGFIELD, Mass., July 29.—*Editor Forest and Stream:* Appended are the scores of the competitors in our individual Match No. 4, 50 shots. There were 250 entries, and we have received returns from 113 men. The prize being a valuable gold medal, called the Bullard Champion Off-hand Marksman's Badge, to be won three times by an individual before it becomes his private property. To be competed for in May and October. The highest individual score of 50 shots was made by Priv. A. Johnson, Co. C, 1st Infantry, N. G. C., San Francisco, Cal., who, according to information received, used Sharps military rifle, 6lbs, pull and open sight; and according to our rules this gives him 25 points handicap if the rifle is issued by the State or Government, but in this case we have not as yet been clearly informed as to the rifle used by Mr. Johnson was issued by the State of California Government, and this question remains to be decided as to whether he is allowed the handicap.

On account of the intense heat and different circumstances, a great many of the marksmen were unable to complete the scores. At some place they report 110° in the shade and good shooting impossible. Our next match will take place in October.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3 and recommendation of an active member. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y Northern Div., J. B. Collins, Peterboro. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

TRANSPORTATION A. C. A. CERTIFICATES.—*Editor Forest and Stream:* It will be necessary for canoeists to present their certificates of membership of A. C. A. or a certificate from the purser of their local club that they are members, before they can procure tickets on special transportation rates. Mr. C. E. Lambert, G. P. A. West Shore R. R., writes as follows: If your people will go via our line we can arrange to take care of your canoes in our baggage cars. If there are not too many of them they could be strung up to the roof of the cars in such a way as to be perfectly safe from accident." Should there be a party going notice should be given beforehand, so that proper arrangements for the transportation of the canoes may be made.—TRANSPORTATION COMMITTEE.

W. C. A. MEET, BALLAST ISLAND.

[CONTINUED.]

Thursday, July 21.

THE first race was called at 9:30 A. M. Event 3 on programme. Sailing, Class A, three miles, no limits. Light wind and smooth water:

Name.	Canoe.	Club.	Time.
1. G. J. Bousfield	Peggy	Bay City	53 35
2. G. A. Warder	Nethla	Jabberwock	56 25
3. A. W. Kitchen	53	Tippy	56 35
4. H. A. Theobald	120	Stillwater	
5. F. W. Keith	Psyche	Cleveland	
6. O. A. Woodruff	Janty	Ruckawa	
J. O. Gardner	Cleveland Grays	Cleveland	Did not finish.
C. W. Schaeffer	123	Stillwater	Did not finish.

Event 2—Class B, sailing, three miles, unlimited. Started at 11:20 A. M.:

Name.	Canoe.	Club.	Time.
1. N. B. Cook	138	Kenwood	45 05
C. B. Vaux	Nethla	N. Y. C. C.	46 25
2. B. W. Wood	Vitum	Tippy	49 20
3. W. A. Leys	Dream	Toronto	50 25
4. D. B. Jaques	Dottrell	Toronto	
5. J. O. Shiras	Albatross	Cincinnati	
6. H. D. Crane	Laura	Cincinnati	
7. C. H. Schaeffer		Stillwater	

R. P. McCune, W. W. Blow, W. D. Breed, G. B. Ellard, C. J. Stedman, T. P. Gaddis, C. H. Pennewell, D. W. Ruff, G. W. Clark, C. W. Lee, G. H. Hessert, and B. W. Gardner also started but their times at finish were not taken.

The annual race for the Gardner Cup was the first one called in the afternoon, and was started in a light wind at 2:55. Event 12, no limits to ballast or rig, six miles, four times round the triangular course. Twenty-seven canoes crossed the line at the start, but only eight completed the course. The cup was won last year by C. J. Bousfield:

Name.	Canoe.	Club.	Time.
1. N. B. Cook	138	Kenwood	1 53 55
2. B. W. Wood	Vitum	Tippy	1 59 10
3. W. A. Leys	Dream	Toronto	2 16 06
4. J. O. Shiras	Albatross	Cincinnati	2 16 50
5. D. B. Jaques	Dottrell	Toronto	2 17 15
6. W. W. Blow	'Ello	Oakland	
7. A. W. Kitchen	53	Tippy	
8. C. J. Bousfield	Peggy	Bay City	

Cook, therefore, wins the cup for the year. Just before Bousfield rounded the home flag for the third time Cook caught him (then on his fourth round) and shot across the line a winner, thus beating the former holder of the cup one complete round in four. The very short starting line and large fleet made great trouble and much blanketing till the canoes became separated, some of them by that time wholly out of the race. The unusually large number of canoes that dropped out of the sailing races was due to three causes—the hot sun, the bad start that many made, and the absence of any record or record prizes to work for. The very slim entries in the paddling races can be accounted for also by the absence of a record.

Event 14, hurry-scurry race, was started at 5:25, and won by R. P. McCune, the best swimmer of the three contestants—G. Hessert and F. W. Keith—entered. This race was specially enjoyed by the visitors, who lined the wharf to witness it, and it closed the racing for the day. The very hot weather made it disagreeable to race in the middle of the day, and, therefore, delayed the programme greatly.

During Thursday the camp was caucused to learn how much money could be raised for the purchase of a trophy, and if the members generally were in favor of such a prize and the race it would add to the programme. One hundred dollars was subscribed in very short order, and every one seemed in favor of the scheme. A meeting was called in the evening to discuss the subject formally. A trophy committee was appointed to collect the funds and secure designs, and they were empowered to select from such designs the one in their opinion best suited to the purpose, and have the work executed. Two hundred dollars was decided on as the amount to spend for the trophy. G. M. Clark, 19 East Ninth street, Cincinnati; Geo. B. Ellard, Longworth estate office, 158 East Third street, Cincinnati, and C. B. Vaux, 34 Cortlandt street, New York, were appointed as a committee to take the matter in charge. The conditions governing the cup and the races for it were settled as follows by the committee appointed to draw up the rules, Messrs. Ellard, Gardner (G. H.) and Shiras:

Western Canoe Association Sailing Trophy.

RULES AND CONDITIONS GOVERNING IT.

1. The cup shall be known as the W. C. A. sailing trophy.

2. It shall be sailed for annually at the meet, on the fourth day of regatta week, weather permitting, or on the first fair day thereafter.

3. The race is open to all Class A and B canoes, no limits set for ballast or rig.

4. Only active members of the W. C. A. in good standing can enter.

5. At least ten canoes must start to make a race.

6. The course to be triangular, distance not less than 7½ miles, and the course must be completed in less than three hours or no race.

7. The cup can be held by the winner, who must give bonds for its safe return, for one year, when it is to be returned to the regatta committee, in good order, to be raced for again.

8. The winner of the Gardner cup will not be allowed to enter for the trophy, nor will the winner of the trophy be allowed to sail for the Gardner cup at any one meet. Note—Both conditions are recorded, as it is impossible to state beforehand which race will be called first.

9. These rules can be changed or amended, if it is thought advisable by the regatta committee, at any annual meet by a vote of two-thirds (⅔) of the members present.

GEO. A. WARDER, Sec'y-Treas.

Friday, July 22.

Trophy race, unlimited, 7½-mile course, five times around; good wind, smooth water, start made at 10:30 A. M.:

1. C. J. Bousfield	Peggy	Bay City	1 31	15
2. B. W. Wood	Vitum	Tippy	1 33	30
3. D. B. Jaques	Dottrell	Toronto	1 34	00
4. W. A. Leys	Dream	Toronto	1 43	30
5. O. A. Woodruff	Janty	Ruckawa	1 46	30
6. J. O. Shiras	Albatross	Cincinnati	1 48	00

Messrs. Blow, McCune, Gaddis, Warder, Ellard, Crane, Theobald and Johnson also started, but their times were not taken at the finish.

After dinner Event 15 was called. Sailing, all classes, no ballast, 1½ miles. Light wind, smooth water. The race was started at 2:36 P. M., sixteen canoes crossing the line:

1. B. W. Wood	Vitum	Tippy	34	10
2. W. W. Blow	Corrinne	Oakland	37	20
3. W. A. Leys	Dream	Toronto	40	35
4. D. B. Jaques	Dottrell	Toronto	42	30
5. A. W. Kitchen	53	Tippy	43	30
6. J. O. Shiras	Albatross	Cincinnati	44	40

Cook came in ahead, but was ruled out for fouling a buoy.

Event 17. The tournament was called at 5 o'clock. Three crews entered. G. Messer and C. F. Pennewell, in a Mohican canoe, won. H. Theobald and C. W. Schaeffer, and R. P. McCune and G. Hessert were upset.

One of the crews placed some very highly flavored cheese in the wad on the end of the lance, and the ejaculations of disgust from the opposing lanceman when the wad hit him were most comical. Water-soaked bread and a stream of water from a small squirt gun also helped to complicate affairs and add to the enjoyment of the large crowd of spectators on the wharf.

Event 9, an upset race, wound up the proceedings. There were six starters, but only three succeeded in righting their canoes and crossing the finish line. F. W. Cane won the race, closely pressed by H. Theobald. C. E. Pennewell came in third. Canoe gymnastics then followed, and racing week was over. Events 7 (combined race, 8 (tandem paddling), 10 (novice), 13 (sailing upset) and 16 (hand paddling) were not called on account of lack of time and suitable weather.

The W. C. A. annual ball took place at Wehrle's on Friday night, and was a great success both socially and financially, the W. C. A. clearing $85 in cash from it. The committee having the matter in charge consisted of three members, all of Sandusky: Chas. Mellville, John Mellville and C. B. Wilcox. Wehrle's is a big summer shelter (having an excellent floor), situated on Middle Bass Island, opposite Put-in Bay. All the young ladies at the cottages were present, together with a number of their friends invited up from Cleveland for the occasion. The steamer Louise bringing the band, and a bevy of youth and beauty from Sandusky touched at Ballast Island to get the canoeists and their friends, and then landed at Wehrle's wharf and remained there till the party broke up in the small hours of the morning. Friday was a very warm day in camp; but just as the dancing began in the evening a heavy shower came up, the wind jumped around to the north and blew half a gale, cooling the atmosphere most effectually; so much so, in fact, that many of the revelers wished they had brought extra wraps when the return trip on the boat was in progress.

Saturday afternoon a number of the members left camp to return home, not being able to spare the time for the week's cruising that was to follow the week of racing. The majority remained in camp, however, and looked forward to the excursions and picnics to come with pleasure and expressed to those departing keenly-felt regrets that all could not remain and share the fun. How jolly is the getting to camp and meeting old friends and making new ones, and how sad the leaving is, saying good-bye to splendid fellows and boon companions for a year, anyway, and who knows how much longer. There are few ways of meeting friends in this world more satisfactorily than at a canoe meet, and the boys all know it.

Saturday evening the Commodore announced the names of the gentlemen he had appointed on the 1888 regatta committee as follows: H. D. Crane, Cincinnati, O.; T. P. Gaddis, Springfield, O.; G. H. Gardner, Cleveland, O.; A. W. Kitchen, Chicago, Ill.

There were no record prizes given for the races at the meet and no attempt made to keep such a record as has proved itself popular at the A. C. A. meets. To give a concise and complete view of the results of the races such a record has been made up from the official returns by us. As the programme was arranged but one sailing and one paddling race would appear on the record, if made up according to the plan followed by the A.C.A., as the combined sailing and paddling race was not contested. The following tables have therefore been modified and somewhat added to—thus not following the A. C. A. plan exactly—for two reasons: First, because the A and B canoes are practically equal in speed as now built and rigged, and therefore giving points to canoes competing in a race for all will not be doing an injustice to the A canoes; and secondly, as few, if any of the canoes except in Class II., failed to enter the sailing races, the proportion of three sailing races to one paddling race cannot seriously affect the result, and the average earnings in four races are much more likely to give a fair idea of the good points of each boats than the average of two races could show if the A. C. A. plan were followed.

Event.	Name.	Canoe.	Points.
I.	1. N. B. Cook	138	10.00
	2. W. A. Leys	Dream	9.25
	3. B. W. Wood	Vitum	8.50

QUAKER CITY C. C.—Philadelphia, July 28.—*Editor Forest and Stream:* The semi-annual meeting of the Q. C. C. C. was held on the 22d inst., and the following officers were elected: Com., J. C. München; Vice-Com., A. A. Jackson; Sec.-Treas., J. A. Barten. The annual report of the secretary was read and approved. The secretary reports the club out of debt and in a flourishing condition. Messrs. Letchworth, Fox and McCormick were elected to membership. The latest acquisition to the club is the Lorelei, one of Rushton's Mohican canoes with latest improvements, also a canoe built on the lines of the Notus. The annual club cruise to Trenton took place on July 3-5. Club cruising is becoming a feature of this club, short cruises are being taken every alternate week, starting Saturday afternoon and returning Sunday evening or Monday morning. Cruising has had quite a boom since the Fourth; two members will start for a ten-days' cruise up the river on Aug. 1, another member is doing Barnegat Bay since July 18 and will return about Aug. 6. Still another one will take in the Breakwater in Delaware Bay about Aug. 29 for a week. All expect to be on hand for the sailing and paddling races which will take place on Aug. 13 and 27. The latter will be open to all canoe clubs in the vicinity; prize to be a cup or pennant.—SECRETARY.

CANOES VS. BOATS AT BUFFALO.—*Editor Forest and Stream:* It will be remembered that some correspondence took place last winter (see FOREST AND STREAM, Dec. 16 and 30, Jan. 27 and Feb. 10) between Mr. D. C. Schamp, of Buffalo, N. Y., and "Perch" (Mr. Percy Eaton, Buffalo C. C.), which resulted in Mr. Schamp's challenging any sailing and rowing boat, irrespective of size, to three races, one to be sailed on Lake Erie, one on Niagara River, and the location of the third to be decided later. The challenge was accepted by Mr. Eaton, who entered Mr. T. E. Wood's coasting canoe Wasp, 17ft. × 40in., built by Joyner, Glens Falls. The first race took place July 18, the course being around the Government breakwater, 1 mile, 300yds., making the first half to leeward, the second to windward. Wind northerly and light, increasing to good sailing breeze during windward work. The flying start was very even, the Wasp crossing about 3ft. ahead. In the run to the lee mark the Wasp led her opponent by 4m., to which she added 5½m. on the windward work, winning by 9m. 30s. The date of the second race has not yet been fixed.—F. E. WOOD, Timekeeper.

CANOE RACING AT PLYMOUTH, MASS.—A canoe race, with two silver cups for prizes will be a feature of the regatta of the Plymouth Y. C. on Aug. 6., the race being under A. C. A. rules.

MERRIMAC RIVER.—A correspondent desires information as to the Merrimac River, from Wiers, N. H., to Lowell, Mass.

A CRUISE DOWN RUSSIAN RIVER.

FROM THE LOG OF THE SNOLLIGOSTER.

WHEN three of the most active sailing members of the Oakland C. C. announced their intention of furling their white wings and taking a three days' paddling trip down Russian River, the club was shaken to its foundations. Sailing was and always had been the specialty of the organization, and this was a decided divergence from the usual run. Besides, was not the commodore's unwillingness to paddle except in the most urgent cases such as lunch or petticoats ahead quite proverbial, and although the vice-commodore had been known to paddle upwards of three-quarters of a mile in a broiling sun, it should be remembered that in the execution of that feat he was laboring under the delusion that he was going to secure unto himself the sole companionship of three bottles of pale yellow beer, which, however, had been previously abstracted and accounted for by a more crafty knight of the paddle. The skipper of the Shadow also had never before demonstrated any wish to follow unbeaten paths to glory, but contented himself with exchanging situations with his canoe about once a fortnight and other such amusements.

Notwithstanding these drawbacks the pretty town of Healdsburg, Cal., was invaded one evening by five individuals, three men and two ladies, who speedily commenced laying in a stock of those articles peculiar to campers and at the same time looking intensely happy. Early next morning a procession was formed toward the river, where the canoes had already been sent. First in a wagonette came the above mentioned quintette, fairly covered with impedimenta and recent purchases, followed by a string of vehicles of all descriptions bound to see the start, the rear being brought by a lot of school children who had a holiday for the occasion. Blushing at their own greatness the canoeists arrive at the waterside where the canoes are found all safe from their journey, thanks to the fostering eye of the commodore. The big cruisers had been left at home and the fleet now consisted of Zephyr for the commodore and his little daughter, Columbia for Shadow's skipper and his wife, and the Snolligoster, in Alaskan skin bidarka, for the vice-commodore. Great astonishment was evoked among the natives at the carrying capacity of the canoes, the Snolly excelling in this respect, the method of packing her resembling that of loading a gun, the paddle as a ramrod, leaving the circular hole in the center free for her skipper.

At 10:30 a start was made amid the cheers of the multitude and parting salutes on the brass horns carried in each boat, and soon the party began to realize the pleasures so long anticipated; for what can be more delightful than leaning lazily back watching the clear water rushing along and the wild scenery of the banks changing at each bend of the river.

Russian River is by no means a large one, and in summer is little more than a series of pools connected by riffles, but at this time of year there is plenty of water going down with occasional swift riffles or small rapids, nothing like what Canadian brothers take such delight in running, but quite fast enough to be exciting and necessitate care in navigating. How soon indeed was this to be demonstrated, for presently Snolly, who takes the lead on account of his light draft and handy canoe, yells a warning and is seen to paddle diagonally across a rapid to avoid a big fallen tree and mass of drift at the lower end, under which the water rushes furiously. Columbia, coming next, is not quite in time and in a moment is jammed against the obstruction, the Commodore rushing by in safety a minute later. Hastily landing, Snolly and the Commodore rush back to the scene of suffering and behold Columbia and his crew holding on like grim death and expecting instant annihilation, the water boils against the side and it looks as though the canoe would be drawn under. The rescuers, however, wade in as far as possible, and after several bad shots get a line over them and presently they are hauled bodily out of their embarrassing situation and receive a warm welcome on shore. The excitement subsiding Snolly made the alarming discovery that one of his gum boots was discharging water at the rate of about ten gallons a minute out of a large hole in the toe, and surmised that in his agitation at the Columbia in peril he must have kicked one of the cooking utensils stowed in the bosom of his Goster which resented the familiarity.

Everything being arranged a fresh start is made, and away down the river glides the little procession, drinking in the beauties of the scenery and making the valley ring with their expressions of content through the medium of three brass horns and five good sets of lungs. Presently an Indian encampment appears on the left bank, and about a dozen squaws rush down to see what all this can mean. They are addressed in choice Indian by Columbia, which appears to intimidate them more than the horn prelude; however, Columbia declared they called him a moon-faced angel. He was about to return the compliment when he happened to observe on an island close by the father of the tribe, a very Methusalah, sitting in solitary grandeur, a tacit rebuke to flirtation, and without a word but a lingering glance he passed on. Mrs. Columbia's version of this episode varies slightly from the foregoing, but her evidence cannot be recorded as it was probably warped by jealousy. Lunch was taken about 2 o'clock on a pretty sandy beach. Columbia and Snolly taking a plunge beforehand and eating for four in consequence. Hardly were pipes alight after the meal when it begins to rain, and dire are the forebodings as to the weather; but presently the sun comes out again amid most beautiful cloud effects and a superb rainbow. A fine run was made from here, the rapids being frequent and the pace good, and at 5 P. M. a landing was made for the night.

The Commodore suffers from palpitation of the heart, and enduring a severe one shortly after arrival, it was formally named Camp Palpitation. After the canoes had been got up into a sheltered place the fire was started and dinner served. Bill of fare consisted of giant chicken and tomato stew, scrambled eggs, peaches, preserved ginger, bread and butter, beer and toddy; all good, but oh, that stew! Ever will it linger as one of those sweet memories of the past, not only as a work of art but as one of those kindly friends whom in the hour of need is not found wanting, but nobly exceeds even what is desired, and there are now five individuals to whom it is only necessary to whisper "Stew" to bring grateful tears direct from the heart. Be it recorded, the Commodore was the author of that stew, besides eating about five pounds.

The wind rose considerably later, and it looked so much like rain that it was deemed advisable for the ladies to sleep at an adjoining ranch, Columbia keeping them company. Snolly and the Commodore kept the fire warm till about 9:30, when they also turned in, Snolly privily getting into the Columbia, wherein a comfortable bed had been prepared for Mrs. C. before the change of plans.

Early the next morning arose the Commodore and his trusty aid, and after a hasty and frigid dip in the river, proceeded to get breakfast. Presently the ladies and Columbia appear, and with their assistance the eatables are soon prepared, and, moreover, disposed of.

Breaking camp a start is made about 10 o'clock, the fun beginning in running a rapid within 50yds. of camp. The scenery gets more beautiful every minute, and the canoes are allowed to drift side by side, while the crew idly gaze on the great red woods and mighty canyons as they swiftly glide by and make the hills re-echo to college songs varied by resonant whoops from the Columbia and Snolly. Lunch of hard boiled eggs and hard tack, washed down by beer with preserved ginger as desert, is done good justice to about midday in the shady corner of a pool, after which paddles are dipped to make the ten miles to Guerneville before 4 o'clock, it being found better to camp pretty early so that dinner is over and everything comfortably fixed before dark.

All goes well until about 3 o'clock, when one of the pleasing episodes (to the non-participant), peculiar to canoe cruising, occurs. Snolly, who is about 100yds. ahead, perceives a rapid divided in the middle by an island, and observing that most of the water goes to the left, takes the channel; when about half way down he sees at the lower end a large tree, fallen right across, with limbs sticking up in all direction in the rushing water. Shipwreck is imminent, but behold! a narrow opening through the island to the right, he dashes to it with a yell of warning to those behind and just scrapes through, striking heavily at the stern; but though the Commodore coming next hears the cry it is too late, he is already in the rapid. Inciting his gallant little crew to a desperate effort they climb for the opening and almost make it, the Cook striking the lower island a little forward of midships. "Jump," yells the Commodore, and in a moment his little daughter is safe on the island without wetting so much as a finger, while the canoe and her skipper are sucked under and away down through the tree and rest of the rapid, coming out piecemeal, blankets, tent, cushions, grub, bottles, clothes, dudle and finally the Commodore, gracefully astride of the boat to the expectant and sympathetic Snolly down below. Columbia, coming down the other channel, lends a hand to gather in the derelict, while Commodore gets ashore and wrings himself out. In ten minutes the blankets and clothes are squeezed out and spread in the hot sun to dry. Zephyr's crew is rescued from her island and an examination made to find out what is lost. It is very often only when a thing is wanted that its loss is discovered, but there is no doubt about a large portion of the cooking utensils, box of tools, lamp, hatchet and all the knives and forks. A suggestion to witness Snolly's diving capacities is gracefully negatived, that gentleman finding himself in delicate health at the moment. In

about an hour it is resolved to push on for Guernville at once that the necessities of camp can be replaced and supplies laid in, so paddles are kept moving, and about 4 o'clock the cheers of an expectant crowd announce the arrival.

When the purchase made and the canoes thoroughly examined and commented on, camp is pitched about a mile below the town in a magnificent redwood cañon; the commodore and crew return to sleep at a hotel, all their blankets being wet. After a hearty dinner of scrambled eggs, chops, stew and peaches, Columbia and Snolly proceed to build a campfire worthy of the name, then spreading the cushions and wraps in the warmth, pipes being lighted, they give themselves up to solid enjoyment. Reposing at length they watch the great redwood logs crack and consume in the intense heat, varied by fireworks when a big fellow falls into the red ashes, till finally they get too sleepy to swap yarns and conclude to turn in. Mrs. Columbia is snugly tucked in on a fine bed of redwood shoots in the canoe, and declares the interior of the canoe tent to be the perfection of snugness. Columbia and Snolly make a joint couch between the two boats.

When the Commodore appears the next morning he finds breakfast already disposed of, and it does not take long to get afloat. The river is now getting broader and deeper, with very few rapids, and occasionally in favorable bends the Commodore's little auxiliary sail comes into use, when the other two paddle alongside and hang on. At noon a halt is made at the lovely pool made famous by the annual camp of the Bohemian Club of San Francisco, and a bath is proposed and agreed to. The water is somewhat chilly so early in the year, and Mrs. Columbia, going in with a very scientific header, makes a hasty exit and cannot be persuaded to try it again. From here it is hard paddling, the current being slow and a strong wind blowing up stream. Poor Snolly, who is right on the top of the water and gets the full benefit of it, has to put in big licks to keep up. However, at 5:30 Duncan's Mills bridge heaves in sight, and very soon the canoes are run up for the last time, the crews receiving a hearty welcome from friends on shore. The trip is over, and with heavy hearts the canoes are packed and put in a box car, and then Snolly, that nothing should be wasted, proceeds to manufacture out of the remaining eggs and milk a consolatory milk punch. Having some doubts, however, as to the clean bill of health of the ingredients after their journey, he invites Columbia to first mug, and though that bold mariner declared it to be delicious, a certain stricken look in his face awakens suspicions, and developments are awaited. Sad it is that in the hour of victory so fatal a wreck should have overtaken the Columbia. It suffices to say that Snolly and the Commodore did not drink punch. Returning to the city and to the routine of business we treasure up the remembrance of our short holiday, and refreshed in mind and body pitch in with a will that the days may appear short till we can again float away with the rippling of the water and woodland sounds in our ears in happy contrast to the busy hum of city life.

SNOLLY.

ROYAL C. C. SAILING RACE AND REGATTA.

FOR the sailing race on the 8th inst., held in Teddington Reach, the following canoes started: Charm, W. Stewart; Sabrina, Rede Turner; Pearl, 1885, F. G. Knight; Elna, G. F. Holme; Illawarra, A. B. Ingram, and they had a trying time of it in a strong wind, believed to be blowing from S.W., but as it came down through the trees on the Middlesex shore from several points of the compass, varied by an occasional twist up or down stream, it is somewhat difficult to record its precise direction. With such tempting opportunities before them, it is scarcely necessary to say that Sabrina and her skipper took their customary bath at an early period of the race; in fact the swimming entertainments given by this canoeist are becoming such a regular feature of the R. C. C. sailing races that one is naturally led to wondering whether those of the future may all have such happy endings as those of the past.

Pearl 1885, remarkably well handled, crossed the line at gunfire, followed 15s. later by Charm and Elna. This latter, built in great measure by her owner, who also designed her, may be described as an excellent specimen of a second class cruising canoe and would most probably have taken second prize, but for having fouled buoy at end of first round. Illawarra, also a new second class canoe, showed a rare turn of speed in the first run down, but was apparently over-canvassed for the day and for the inboard position of her skipper. Charm speedily assumed the lead, and despite broken reef-gear, she was pluckily kept going by her skipper, who succeeded in keeping her bottom downward and securing the first prize. With Sabrina capsized, Illawarra retired, and Elna disqualified, second prize fell to Pearl 1885.

	First Round.	Second Round.	Third Round.	Fourth Round.
Charm (1st prize)..	3 39 40	4 15 10	4 32 40	4 48 40
Pearl 1885 (2d prize)...	4 10 30	4 29 00	4 50 15	5 07 20
Sabrina	Capsized.			
Elna	4 06 15	Disqualified.		
Illawarra	Retired.			

The annual regatta of this club took place on Saturday, July 9, and was very well attended. The proceedings were again enlivened by a camp, and a camping competition, which proved successful last year, was repeated on this occasion. In this competition points were awarded: First, for rapidity of making camp; second, the canoe as a single-handed cruiser; third, the tent and its set up; fourth, the cooking gear and mess traps; fifth, the bed and other tent fittings; sixth, the appliances for camp, carriage of food and clothing, and for fresh water and clothing for rain. The competitors were P. Nisbet, A. C. Hamerton, G. F. Holmes, T. H. Holding and S. Futcher. Nisbet and Holmes both showed canoe tents, but the others preferred shore tents. Hamerton's canoe was an open Canadian, while Holmes and Holding had second class sailing canoes, those of Nisbet and Futcher being more of the ordinary paddling type. Holmes was very smart setting up his deck tent, and was ready some minutes before the rest. Holding's outfit was very neat and well arranged, and, after a careful inspection all round, the judges awarded him the prize, Holmes secured second honors. Another tent which attracted much attention was that of W. Baden-Powell; but this was not entered for competition. With regard to the racing, the entries for some of the events were larger than have been known for some years, notably in the paddling and sailing race, when ten starters put in an appearance. The paddling challenge cup again fell to Porter, and the club four beat a crew from the R. N. A. V. over a half-mile course.

Sailing Race, for Open Canadian Canoes.—G. A. Robinson was ordered to sail over for this race, but carried away one of his lee boards, and was unable to get round the course.

Paddling, Canadian Singles, ½ Mile.—E. B. Edwards, 1; J. Day, 2; A. C. Hamerton, 3. E. Edwards, of Toronto, Canada, soon took the lead, and eventually won easily by four lengths.

Paddling, any Canoe, Canoe (and load if necessary) not under 100lbs., 1 Mile.—G. J. B. Porter, 1; P. Nisbet, 2; E. W. Lewis, 3. This was the closest race of the day, Nisbet pressing Porter very hard for the best part of the course. Porter, however, drew ahead slowly, and won by a clear length.

Paddling, Canadian Tandem, Open Canoes, Single Blade Paddles, ½ Mile.—D. H. Marrable and J. S. Ellis, 1; G. F. Yeo and C. Tower, 0; P. Nisbet and J. Day, 0; A. C. Hamerton and C. F. Mendham, 0. Won by a length.

Challenge Cup, Paddling, 1 Mile.—G. J. B. Porter, 1; E.W. Lewis, 2; P. Nisbet, 0. Porter soon went ahead and kept the lead to the finish. Nisbet retired at the half distance.

Sailing and Paddling Race, Paddle First Round and Sail the Second.—There were ten competitors in this race, who all came to the starting line, and at the completion of the paddling round Ingram had a good lead, with Turner, Powell, B. Quincey, Knight, Holding, Stewart, R. Quincey, Edwards and Tredwen following in the order named. The first class canoes, however, soon worked to the front in the sailing round, and a good match concluded as follows: W. Stewart, Charm, 1:56:45, first, E. B. Tredwen, Pearl, 1:57:12, second; W. Baden-Powell, Nautilus, 1:57:35; F. G. Knight, Pearl 85, 1:57:45. Others not timed. Turner capsized.

Sailing Race, Four Rounds.—First Class: W. Baden-Powell, Nautilus; E. B. Tredwen, Pearl; F. G. Knight, Pearl 85; W. Stewart, Charm. Second Class: Sabrina, Rede Turner; Vanessa, B. de Q. Quincey; Illawarra, A. B. Ingram. At the conclusion of the first round the order was: Nautilus, Pearl, Pearl 85, Charm, Vanessa and Illawarra, Turner having seized a favorable opportunity for another capsize. The wind was very puffy and variable, and afforded no true criterion of the merits of the canoes, which changed positions constantly during the race. Pearl held the lead at conclusion of second round, Nautilus regained it in the third, while the conclusion of the race saw Pearl once more to the fore, with Nautilus second and Charm third. In the second class race, Vanessa had first prize and Illawarra second.

Paddling Tandem—G. J. B. Porter and E. W. Lewis, 1; Percy Nisbet and C. O'Malley, 0. Porter and Lewis led from start to finish.

Sailing (Running)—Pearl '85, F. G. Knight, 1; Pearl, E. B. Tredwen, 2.

Chase over Land and Water—W. Brundrett, 1; B. de Q. Quincey, 0; Percy Nisbet, 0. This, as usual, created great amusement among the spectators. Nisbet was first across the river and back, but Brundrett was round the Middlesex shore post first on the next journey, and, taking things very coolly, won the prize.

Four-Paddle Race—R. N. A. V. vs. R. C. C.—R. C. C. crew: G. J. B. Porter, E. W. Lewis, S. Futcher, A. C. Hamerton, 1; R. N. A. V. crew: S. Roberts, H. Macture, Percy Nisbet, J. Day, 0. A good race, won by little over a length.

Scratch Fours—G. Porter, P. Nisbet, J. Day, D. H. Marrable, 1; E. V. Miles, C. O'Malley, E. W. Lewis, J. Paul, 0. Won easily by Porter's crew.

The races were umpired by Mr. G. Herbert, the senior mate of the club, assisted by Messrs. E. A. Leach, H. Church, S. Futcher and the secretary. Mr. Barnes again kindly placed his launch at the disposal of the committee for the day.—*London Field.*

BROOKLYN C. C.—The eighth race for the B. C. C. challenge cup was sailed on July 30, over the club course of 3¼ miles, with a strong southerly breeze and flood tide. At the signal Evangeline, H. C. Ward, was first to cross the line, closely followed by Minx, M. V. Brokaw; Niente, F. L. Dunnell; Kelpie, R. S. Blake; and Queen Bess, R. J. Wilkin, followed in the order named. On the run up to the first buoy, Minx gained a few feet on Evangeline and rounded ahead; here the steering gear of the latter gave way, and the time lost in making repairs ended her chance of winning, though she gained considerable on the beat home from the second buoy. Kelpie got the best of the Niente and secured third place.

A. C. A. MEMBERSHIP.—Trenton, N. J., Aug. 1.—*Editor Forest and Stream:* Applications for membership to date are: Miles G. Nixon, Chicago, Ill.; W. H. Wheeler, Litchfield, Conn.; Geo. H. Sergeant, Northampton, Mass.; C. S. Sergeant, Boston, Mass.; Rufus Stevenson, E. A. Retalack, W. F. Kingau and A. Mercer, Peterboro, Can.; B. St. George Baldwin and H. A. Baldwin, Toronto; D'Arcy Strickland, Lakefield; J. R. Spier, Lindsay; W. J. White, Montreal; Lieut. B. Riley, Winchester, Mass.—W. M. CARTER, Sec'y A. C. A.

CRUISING.—C. J. Peckman and Dr. O. F. Coe, canoe Siren, of the Hudson B. C., at Manhattanville, start on Aug. 6 for a cruise to Albany. The H. B. C. has quite a large canoe annex ...On July 27 the Philadelphia C. C. were at Harrisburg, on a cruise, being entertained by the H. C. C.... The Susquehanna C. C. started yesterday on a cruise of 150 miles on the Conodoquinet.

ANOTHER CAPSIZED CENTERBOARD.

THIS time it is no sandballasted coaster, nor open skimming dish in the hands of a drunken crew, but a large decked yacht with full ballast, fully rigged and equipped, handled by an experienced captain, familiar with the yacht and the waters he was sailing in. The yacht was a "good honest American centerboard sloop," with plenty of beam to make her stand up, and plenty of "bottom for to sail on" and a nice, roomy cockpit, for comfort. A squall, such as we have had dozens of during the late sultry weather, and such as may be expected any day in summer in these latitudes, struck the yacht while she was under way with her captain at the wheel; she capsized, sank, and two of her crew were drowned. Fortunately the mishap occurred in a crowded river where tugs were close at hand and the others of the party were rescued; but had the capsize occurred a little later, when further on the cruise, the loss would have been much greater.

The Minerva has long been known as the crack yacht of the Delaware River, where she was launched from Albertson Bros.'s shop in 1865, being christened Delaware. She has been altered and rebuilt at times and for 7 or 8 years has belonged to the Minerva Y. C., of Philadelphia. On Saturday, at 2 P. M., she left her moorings off Camden, N. J., for a cruise to New York and Newport, with fifteen members of the club besides the captain and a crew of four. The members of the party were: Deputy Coroner Thomas J. Powers, Common Councilman Charles Hammill, Dr. Sidebotham, Thomas Kennedy, Lawrence Coleman, George Alden, Thomas Casey, Jr., James Farley, William Arnold, Frederick Kusch, A. Lincoln English, William Clark, Clayton M. Hunsicker, Nicholas Lockett, James Wetherill, R. P. Thomson, sailing master; Thomas Miller, Francis Richards, Andrew Richards crew, and William White, steward.

Before going far a violent squall of rain and wind struck the yacht and capsized her, the big cockpit filled, then the cabin, and she quickly sank. The river is crowded with tugs, and two of these, the Minnie and Archambault, came to the rescue, passing a line to the yacht and towing her into shoal water after picking up those who clung to the rigging. Mr. Kennedy unfortunately attempted to swim toward the shore and was drowned in spite of the efforts of those on the Archambault, while White, the steward, sank with the yacht, although on deck with the others.

The boat sank with 4ft. of water over her house, and on Sunday a diver descended and secured the watches, money and other valuables of the party, after which the Minnie towed her into shoaler water, and as the tide fell she was bailed out and towed to Market street, Camden. Beyond the damage by water to furniture and cabinet work, and a small hole in the side, she is uninjured, and will soon be refitted and ready for another disaster. The bodies of the two men were not recovered until Monday. Mr. Kennedy leaves a wife and two children and Steward White leaves a wife and one child.

The capsized boat is a very fair example of the type to which she belongs, fully as safe as two-thirds of her kind. She is 52ft. over all, 48ft. l. w. l., 17ft. beam, and 4ft. 6in. draft, with 10 tons of ballast. She has been deepened and hipped of late years, but is still shoal in body. On deck she has the usual large cockpit, wide companion and low sill, with high trunk cabin. Of course she is a centerboard boat, and with the big rig necessary to obtain any speed from such a hulldel.

It would seem that one such instance would be enough to condemn the entire type, but does any one for a moment suppose that it will have the slightest influence on the great majority of those who go afloat in search of pleasure? The capsize of the Mystery was satisfactorily explained by the friends of the type in the usual way, ignorance, drunkenness; not the fault of the boat, etc.; but no such excuse will avail here. A boat with a big local reputation as the best of her class, handled by a skipper who had just been the recipient of a gold medal as a testimonial of the esteem in which he was held by his employers, with a full crew and ballasted as well as the model would admit. No doubt the squall was violent, but the great danger to which vessels are exposed in American waters comes from just such squalls, which are frequent and heavy and may be expected any day in summer. What Minerva has done is nothing unusual, not unexpected by those who are not wilfully blind, nothing that two-thirds of the American pleasure fleet are not just as likely to do to-morrow, for they are like her in principle and detail.

She is of shoal draft, just the boat for "our waters," could run into any harbor, needed no legs to hold her up when aground—yet she capsized in water deep enough to drown her crew.

She had good beam to hold her up, sailed on a even keel, no hanging on by the eyelids or walking on the side of the cabin, as in the despised cutter—yet her beam could not save her from a fatal calamity.

She has a "bottom for to sail on" and a good American bilge, no "plank on edge" or weighted shingle about her model—but neither bilge nor bottom would have saved the dozen helpless men clinging to her rigging.

She had a nice, roomy cockpit, plenty of space for chairs, room to carry ladies, easy entrance to cabin, wide doors and low sill, no crawling down a ladder as in a cutter—but this cockpit and door proved a death-trap as soon as her limit of stability was passed.

A pleasant prospect certainly for all who sail in such boats, and specially for those who take wives and children with them. A puff of wind harder than common, as in the Mystery and Grayling, an incompetent captain, as in the Mohawk; a summer squall, as in the cases of Sarah J. Craig, Sophia and Minerva; a moment's hesitation, a false move of the wheel, or a line jammed, and you are drowned like a rat in a hole.

The risk of drowning is ever present on the water; no vessel floats that may not be "holed" by some means; collisions occur in spite of all laws and regulations, and boats of all kinds are liable to be cast away through stress of weather; but the one great cause of loss of life is the only one of these mishaps which is absolutely preventable. No thickness of skin will prevent a yacht being "holed," and watertight compartments are not always practicable in this class of vessel; there are mishaps and errors of navigation, and chances of weather which may entail unavoidable risks; but the great evil, capsizing and filling, may be easily and certainly guarded against.

Less beam, greater depth, low ballast, reasonable sail area, small cockpit well drained, small companion and high door sill; with these the evil is avoided and yachting and pleasure sailing is made as safe or safer than any method of water transfer in large vessels.

The opposite of these points has always prevailed in American practice and theory, with the result that the drownings here in a single season exceed by far the total of the yacht fleets of the world. Great beam, shoal draft, bad ballast, over-sparring and open deckwork claim their victims by the score every month in summer, and will continue to do so as long as the old principles and theories hold sway.

LAKE Y. R. A.

THIS year the round begins at the head of Lake Ontario, the events being, July 26, R. C. Y. C., Toronto; 28, Toronto Y. C.; Aug. 1, race at Charlotte (Rochester); 4, race at Oswego; 8, Kingston; 11, Belleville. The fleet gathered at Toronto on July 25 and on the following day the race of the R. C. Y. C. was started, but failed to finish within the time limit. On July 27 the race of the T. Y. C. was sailed in order to leave the 28th for a resail of the R. C. Y. C.

The course for Class A and Class 1 yachts was from line between judges' boat (Vivid) and Buoy No. 1, moored off Exhibition wharf, and S.W. by W. ½ W. 5 miles to Buoy No. 2, then S.E. by E. ½ E. to Buoy No. 3, then due north to Buoy No. 1, then a second time around same triangle. For Class 2 yachts, once around triangle and back into bay, finishing in front of club house.

At the time of starting there was little wind, and the larger boats were handicapped. The time for their start was 10:20, with 5m. to cross, while for the small ones the time was 10:40, with same limit. The actual times of start were:

CLASS A.

Atalanta	10 40 16	Ariadne	10 52 40
Aileen	10 45 00	Oriole	10 59 45

CLASS 1.

Cygnet	10 47 45	White Wings	10 53 00
Verve	10 49 45	Ethel	10 58 30

CLASS 2.

Merle	10 51 20	Laura	10 55 43
Cyprus	10 53 00		

The wind was still light and the run slow, the times at Buoy 2 being:

Atalanta	11 21 30	Ariadne	11 45 20
Aileen	11 34 40	Cyprus	11 45 35
Cygnet	11 39 30	Oriole	11 46 30
White Wings	11 40 00	Laura	11 48 00
Merle	11 44 00	Ethel	11 54 00
Verve	11 45 00		

The next leg was to windward, the times at second mark being:

Atalanta	12 20 20	Ariadne	1 03 30
Aileen	12 40 00	Laura	1 08 45
White Wings	12 46 30	Verve	1 10 25
Cygnet	12 59 10	Cyprus	1 12 15
Oriole	12 59 30	Ethel	1 17 10
Merle	1 00 50		

Spinakers were set for the last leg and the small boats were timed as they finished off the club house:

Merle	2 20 40	Cyprus	2 31 36
Laura	2 24 30		

The large boats finished the round thus:

Atalanta	1 04 00	Cygnet	1 36 0
Aileen	1 17 30	Ariadne	Not timed.
White Wings	1 26 25	Verve	Not timed.
Oriole	1 35 30	Ethel	Not timed.

The intermediate marks were not timed in the second round, but the finish was:

Atalanta	3 04 00	Ariadne	4 03 25
Aileen	3 35 35	Cygnet	4 07 20
Oriole	3 41 10	Ethel	4 32 30
White Wings	3 37 00	Verve	4 35 15

The full times were:

CLASS A.

	Elapsed.	Corrected.
Atalanta	4 29 00	4 25 00
Aileen	5 60 25	4 54 52
Oriole	5 06 25	5 03 27
Ariadne	5 28 25	5 18 56

CLASS 1.

White Wings	4 52 00	4 50 07
Cygnet	5 22 20	5 22 20
Ethel	5 47 30	5 39 55
Verve	5 50 15	5 44 13

CLASS 2.

Merle	3 29 10	3 29 10
Laura	3 29 30	3 28 49
Cyprus	3 38 35	3 34 05

The postponed race of Tuesday was sailed on July 28, over a course of 33½. The wind was light at the start but freshened into a good breeze at one time, afterward dropping a little. The start was called for 10:30, and the yachts were timed:

CLASS A.

Oriole	10 33 25	Verve	10 31 00
Aileen	10 35 00	Cygnet	10 33 40
Atalanta	10 35 00	White Wings	10 33 50
		Ethel	10 35 00

CLASS 1.

The second class did not start. The first leg was ended thus:

Atalanta	1 24 00	White Wings	1 33 30
Oriole	1 32 00	Cygnet	3 01 10
Aileen	1 39 00	Verve	2 15 30

Oriole grounded her board and twisted it near the bell buoy. The next five miles were to windward with some sea, and gaff-topsails were set in place of clubs, the sloops going under lower sail or one reef. The times at East Buoy were:

Atalanta	2 13 50	White Wings	2 24 15
Oriole	2 23 30	Cygnet	3 06 45
Aileen	2 41 30	Verve	3 25 30

Over to South Buoy more sail was carried as the wind fell. The times were:

Atalanta	2 51 10	Cygnet	3 55 00
Oriole	2 57 50	Verve	4 11 20
White Wings	3 05 43		

The final times were:

CLASS A.

	Finish.	Elapsed.	Corrected.
Atalanta	3 33 45	4 58 35	4 58 35
Oriole	3 38 15	5 04 50	5 01 49
Aileen	4 12 23	5 37 23	5 31 03

CLASS 1.

White Wings	3 57 00	5 03 10	5 01 09
Cygnet	4 46 45	6 13 05	6 13 05
Verve	5 14 12	6 43 12	6 31 42

MONATIQUOT Y. C., LADIES' DAY.—The Monatiquot Y. C., of Weymouth, celebrated the completion of its new club house by a ladies' day and dedication on July 27. The weather was perfect and the affair a complete success. In the afternoon the club fleet, with ladies on board, sailed in review past the flagship Folly, Com. Sheppard, and then over the club's inside course. In the evening chowder was served, followed by a musical entertainment and dancing and a display of fireworks. The club has issued a very neat programme of its races for the season.

CORINTHIAN Y. C., JULY 30.

THE first open race of the young Corinthian Y. C. of Marblehead, was sailed successfully on July 30, with a good list of entries. In the morning a heavy fog hung over the ocean, but after noon it lifted. At 2:10 the race was started. Shadow was fog bound further east and could not start. Pappoose did some excellent sailing and Williams's new boat, Prince Karl, again led her class. The times were:

	Length.	Actual.	Corrected.
SPECIAL CLASS.			
Pappoose, G. C. & C. F. Adams	37.07	2 53 22	2 19 48

THE NEW YORK Y. C. CRUISE.

TO-DAY the annual cruise of the New York Y. C. begins at New London, where the fleet has gathered. The fleet will probably reach Newport to-night, and the race for the Goelet Cups will be sailed on Saturday. No dates have been set for the Citizens' Cups at Newport, for which a considerable sum has been raised, but the fleet will probably hurry on to Marblehead. With the exception of Galatea and Stranger, detained by fog on the Eastern coast, all the racers will be with the fleet, and a large turnout will be seen on Saturday. Volunteer has been on Lockwood's Railway for a coat of potlead, her figurehead has been set in place, and she is in as good a condition as her newness permits for her first race. Dauntless is expected from England in time to join the cruise, and altogether the fleet will probably be the largest that has ever gone round Cape Cod. The courses for the Goelet Cups will be the usual ones, from Brenton's Reef Light around Block Island Buoy and stakeboat off West Island, or around Sow and Pigs Lightship and Hen and Chickens. The former will be signalled by the letters K. V. and the latter by S. M.

THE CRUISE OF THE BRUNHILDE.

ON July 30 the schooner yacht Brunhilde, with her owner, Mr. J. J. Phelps and two friends on board, anchored off Bay Ridge after a cruise around the world. The following summary of the cruise is from an interview with Mr. Phelps in the *Tribune*:

"We did not stay long at New London. Yale was beaten that year, so we cleared out just as soon as the races were over and set sail for Cowes, England, which we reached in twenty-six days. From there we took a little side trip to London, where I had a little trouble with my mates and part of the crew. I had my papers as captain, but the mates thought they could run the yacht to suit themselves and paid little attention to my orders. That sort of thing had to be stopped. We then returned to Cowes, and early in September started for the Mediterranean Sea, having 'done' Boulogne, Cherbourg and Paris. When we struck the Bay of Biscay, we also struck, or were struck, by a rough sea and a violent storm. It was the worst storm we encountered, for our jibboom was carried away and the whole yacht was swept pretty clean. We tried to make Gibraltar, but were driven to Cadiz, where we secured a new jibboom. But as there was cholera there when we went in, we were quarantined at Tangiers and six hours were given us in which to get out of the harbor. We 'got.' Then we were quarantined for four days at Oran, in Africa. We finally landed and saw the queer old places, Algiers, like a small bit of Paris, and Bougie and Bona. When we set sail for Malta we encountered a frightful sirrocco, which is a hot wind in which it is impossible to breathe. It is like standing on a smoke-stack while the hot cinders are coming up and trying to breathe there.

"When we reached Cairo our party scattered, and I took my gun and dog and took a trip up the Nile on my own account. We spent two days at Alexandria, and went up the Nile together in dahabeahs. After seeing Port Said we went through the Suez Canal in early November, and then saw the gardens of Ismailia. It was then that we met another lively storm which tore away our jibboom, bowsprit and foretopmast. We put in at Jebelzukir for repairs and enjoyed good snipe shooting and gazelle hunting. From there we went to Perim Island, where Governor Turner gave us a reception and dinner. From there we went by Aden and started for Bombay on Dec. 12. At Socotra the chief gave us a grand feast and we had great sport trading with the natives. I remember we traded a red parasol and an old spotted vest for three turtles, and a necktie for a boatload of cocoanuts. Our piano was a source of great terror to the natives, who would run every time we touched a note.

"It was here that we were almost captured by pirates. It was a clear night, but a dark cloud came up for fifteen minutes, and when we first discovered the pirates a great black boat was close to windward of us, with one solitary man in sight. The next minute the black deck was covered with a howling crowd of black devils, and we had to run for it. It was a close chase and a narrow escape.

"Our stay at Bombay was a series of parties, balls, receptions and picnics. We had an immense time for a month. We touched at Ceylon, spent three days at Penang and ten days at Singapore. The French 'Pulo Coudore,' a pretty island, was next visited, and then Hong Kong, where we left the yacht and went to Canton by steamer. Everywhere we went we had dinners and receptions given for our benefit, and we had a good time. I have always wanted to see a typhoon, but I have got all over that now. We caught one in going from Hong Kong to Yokohama.

"From Yokohama we raced a tea clipper to San Francisco for a wager of a dinner, and beat her by ten days. We came over in thirty days. At 'Frisco we took the diploma for 'yacht dress' at the Grand Army reception. From there we sailed down the coast, enjoying dinners and receptions at Monterey, Honolulu, Hilo, Hyta and Juan Fernandez, where, by the way, we were very short of provisions and had to get along on a peck of potatoes and a huge goat. We reached Valparaiso on New Year's Day, and after a month we sailed around the Horn. We then visited Montevideo, Buenos Ayres, Rio, Saint Lucia, Martinique, Guadeloupe, Mont Dominica, St. Kitts, Santa Cruz and St. Thomas, to the Bermudas, which we left on the 24th of July. From there we came straight home."

MINOR CAPSIZES.—On July 31, at Halifax, N. S., a sailboat in which were two men and seven ladies capsized and Miss Bessie Powers, of Boston, and Miss Anna Christian, of Prospect, West Halifax, were drowned... The Gracie, catboat, of Yonkers, capsized on Sunday last, and her two occupants were taken off her side and the boat towed in by a "colored hero."... On Aug. 2 the catboat Fishhawk, with a party of eight on board, capsized off Thirty-sixth street, South Brooklyn, while bound home from a fishing trip to Sandy Hook. Two of the party could not swim, but they were rescued by the others until the tide swept the wreck close to a wharf, where all were helped ashore. The boat was sailed by Captain Elliot, her owner. On the same day the sloop yacht Jennie Lee capsized off Fort Hamilton in New York Bay, throwing four men and a boy into the water. All swam ashore.

In the verdict rendered by the coroner's jury in the case of the twenty-one persons drowned on the centerboard sloop Mystery on July 10, the jury say that the victims "came to their death from asphyxia due to accidental drowning on July 10, 1887, and we, the jury, find that the primary cause of such drowning was the upsetting and sinking of the yacht Mystery opposite Barren Island, while in charge of Capt. David Henrichs, on her way to Canarsie with a pleasure party from Ruffle Bar, and we believe that the accident was caused by Capt. Henrichs carrying too much sail in a squally wind and the fouling of her jibsheets and other portions of her rigging; and from a personal knowledge of the ability of Capt. David Henrichs as a sailor and from his temperate habits we believe that he had not the necessary assistance to extricate his boat from the squall and puffy winds prevailing at the time.

"And we earnestly recommend in the future that sailboats should have a small boat attached, to render any assistance that should be required of them, and that sailboats carrying pleasure parties should always be provided with two men understanding the sailing and handling of such boats.

"And we, the jury, consider it our duty to extend to Arthur Robinson, Henry Rhydes, captain of the tug S. C. Dean; August Lutz, William Fletcher, engineer of the Dean, our sincere thanks and the thanks of the public at large for the bravery and courage shown by them in immediately proceeding to their assistance and rescuing many of them from a watery grave.

"Also, we take great pleasure in recommending August Lutz to the public in general for the bravery shown by him during the disaster in rescuing some of the party in a very small boat at the risk of his life. JOHN H. NOLAN, Foreman."

VOLUNTEER'S PERFORMANCE.—An unusual amount of gush has lately been wasted by the daily papers over the wonderful performance of Volunteer in her first sails; of victories over Priscilla and Bedouin, of running away from fast steam yachts, and of wonderful speed generally. How near the truth these stories are may be judged from the following remarks of Gen. Paine and Mr. Burgess to the representative of the Boston *Globe*: "All that we have found out is that the new boat was remarkably near to her best trim as she sailed her trial trip. I have not discovered a single thing to alter as yet. She displaces some six tons less than her designed displacement, and still she seems stiff enough." "Shall you put in the rest of the ballast?" "I can't tell that yet. I certainly shall not put it in unless I think she needs it. A boat should not be too stiff. The less ballast you can carry and still carry your sails in the average racing weather, the faster your boat will go." "Have you logged the Volunteer in any of her trial trips?" "No, we have not, and I don't think we could learn much if we did. The boats that can reach the fastest are not usually the ones that win the prizes. So many other things come into play that help to win prizes, that mere ability to reach fast is a slight consideration. The public have gotten the impression that the Volunteer is very fast, simply because she was nearly in her right trim at the start. The Mayflower was badly trimmed, her sails set badly, and we could not get the centerboard down for the first few days, so she was generally condemned just as the Volunteer is generally praised. When we get alongside of some fast boat we shall find out how the Volunteer is likely to sail." Mr. Burgess is equally modest in his claims for the new boat, though evidently thinking that she is likely to prove a success. He says: "All boats are fast when sailing alone, but the Volunteer does seem to sail very well off the wind. That was one thing which always hampered us in the Mayflower. She never came up fully to my expectations in sailing off the wind. We could beat the others hardly any on that point, and had to do it all by the wind." "How does the Volunteer point?" "She points very well, even as she is, but of course she isn't doing her best windward work yet."

MONTGOMERY SAILING C., TENTH CRUISE, JULY 31.—Norristown to Indian Creek and return. Distance 5 miles. Weather clear and warm. Wind light S.W. Current ¾ of a mile an hour.

	Length.	Start.	Finish.	Elapsed.	Cor.
Flying Eagle, J. Berndt	15.00	9 00 00	11 22 00	2 22 00	2 22 00
Priscilla, E. Stanley	15.00	9 00 00	11 23 30	2 23 30	2 24 07
Gracie, E. A. Leopold	12.00	9 00 00	11 35 00	2 35 00	2 25 57
E. C. Potts, Parker Bros	15.00	9 00 00	11 29 00	2 29 00	2 27 20
Lulu, James Frith	15.00	9 00 00	11 31 00	2 31 00	
Elsie, E. MacAllister	15.00	9 00 00	Not timed.		
Ino, W. Sullivan	15.00	9.00 00	Not timed.		
Pennsylvania, J. Adams	16.00	9 00 00	Withdrew.		

The two duckers, Elsie and Ino, were about ¾ of a mile behind the little "cockle shell" Gracie when she finished. The Pennsylvania is a hiker and carried 50yds. of sail. She was admitted with the understanding that she would be handicapped 12m. over the 5-mile course. At the end of the first mile of windward work her lead was very slight and she withdrew. With her crew of four men she would probably have capsized if she had continued the race. Judges, Allan W. Corson, L. G. Palmer, A. B. Parker.

ROYAL NOVA SCOTIA Y. C. RACE.—On July 23, a race for the Lieut.-Governor's Cup was sailed at Halifax with the following starters:

	L.w.l.	Sail tons.
Wenonah, schooner	46.00	19.0
Lenore, sloop	27.00	4.7
Halicia, cutter	37.00	9.0
Hebe, cutter	25.00	4.8
Psyche, cutter	24.00	3.7
Daphne, sloop	23.00	2.5
Phantom, sloop	24.00	2.5
Mentor, cutter	21.00	2.5
Hildred, sloop	23.00	2.5

The course was from Lumber yard to Dartmouth Cove buoy, thence round buoy at Point Pleasant, thence to buoy in Dartmouth Cove, back to Point Pleasant, and finish at Lumber yard. The wind was strong southwest. Near the finish as Lenore was leading, one of her crew, Mr. John Lithgow, in hauling the spinaker up from below, fell overboard. The yachts went to his assistance, Lenore picking him up, but the race will have to be resailed. Daphne won in the smaller class.

INTERLAKE Y. R. A., PUT-IN BAY.—The postponed first and third class races of the I. L. Y. R. A. were sailed on July 23, the starters being: First Class—Wasp and Cora. Third Class—Corsair and Jennie J., Michigan Y. C.; Lulu, Toledo Y. C., and Pearl, of the O. Y. C. The result was:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Wasp	9 23 40	12 31 37	3 07 57	3 07 57
Cora	9 21 20	Did not finish.		
THIRD CLASS.				
Corsair	9 26 09	2 05 15	4 37 06	4 33 54
Lulu	9 24 44	2 01 33	4 36 49	4 36 49
Pearl	9 23 13	Capsized.		
Jennie J	9 27 00	Disabled.		

CLARA.—Owing to the absence of her owner in England, Clara has not been seen in the races this season, but Mr. Sweet has lately returned to New York and has at once put her in commission. She will be sailed by a new skipper and crew, as Capt. Barr is now in command of Tristley while Clara's Corinthian crew are now sailing her rival, Cinderella. As the time is too short to procure a new mainsail from England and her old one is worn out, Mr. Sweet will try a laced cotton sail from Wilson & Griffin's loft. Clara hauled out on the screw dock on Tuesday, but will not be ready for the Goelet Cup race, though she will make the cruise with the fleet. The 55ft. class has made a poor showing this year with Cinderella alone at its head, but with Clara and Anaconda added, there will be some hot battles before the season closes.

EXIT IREX.—The large allowance which Class A (racers) is obliged to give to Class B (ex-racers) has at last driven Irex out of the former class, in which she has always raced. She lately came to Fay's yard at Southampton, where her spars and sails were reduced to fit her for Class B. Thus far she has taken 5 firsts and 5 seconds this year.

SIPPICAN YACHT CLUB, MARION, MASS.—A club under the above name has just been organized. A building has been leased for a club house. Officers have been elected, and already one race has been sailed and at least two more are to be expected in the near future. The officers for the ensuing year are: Com., James E. DeKay; Vice-Com., Jasper Whiting; Fleet Captain, Joseph Clark, Jr.; Sec.-Treas., Frank Luce; Meas., Thomas Robins, Jr. The board of directors is composed of the first four of these officers together with Messrs. Eben Holmes, J. E. DeKay, Jr., and Irvin Chapman. The regatta committee is composed of Charles Hammond, Lindsley Loring and Thomas Robins, Jr. The first regatta of the club was held on July 25, and went off in a most satisfactory manner. In the first class Laura, catboat, E. Holmes, won the first prize. She was handled in the race by Com. DeKay. Verona, sloop, J. Delans, won second cup. In the second class Marjory, L. Loring, one of Hiller's new boats, was first, with Trump, J. Whiting, second. In the third and fourth classes Wide Awake, J. Pegram, and Jennie, I. Chapman, had easy victories, with Lynx, W. Austin, and Elf, L. Bacon, second respectively. The next race, to be held on Aug. 6, will be open with no entrance fee. The prizes will be handsome cups. Entries should be addressed to Frank Luce, Marion, Mass., not less than twenty-four hours before the race. All yachts under 23ft. are invited.—T. R.

CHALLENGE RACE ON SHINNECOCK BAY.—A challenge race was sailed on July 27, between the cats Bonito and Marion; Bonito 19ft. 10½in. keel, Mr. Peter Gilsey, and Marion 20ft. 6in. keel, E. A. Jackson. Course, 10 miles to leeward and back. Bonito crossed line at 3:02:30, Marion 3:02:50; Marion allowed Bonito 35s. and finished at 4:47:30, Bonito 4:49:16; thus Marion won the race by 1m. 31s. The stakes were $25 per side. A large fleet of boats sailed over the course. Shinnecock Bay race, open to all boats on the bay, will be sailed on Aug. 6, when Bonito and Marion will probably have another struggle for the championship.

HALIFAX JUBILEE REGATTA.—The secretary of the R. N. S. Y. C. states positively that the races at Halifax will not be sailed until ample time has been given for the American fleet to reach Halifax after the race at Marblehead.

SOUTH BOSTON Y. C.—In the race of the South Boston Y. C. on July 30, the winners were Violet, Raven, Maid, Fearless, Em Ell Eye, Rambler.

LARCHMONT Y. C. CRUISE.—On July 28 the fleet of the Larchmont Y. C. started on a cruise for five or six days along the Sound.

SHEERWATER.—Mr. John M. Forbes's new steam yacht has made a successful trial trip and is now in commission.

PLEON Y. C., THIRD CHAMPIONSHIP, JULY 28.—The winners in this race were Reba, Snail and Monarch.

BEVERLY Y. C., JULY 30.—First class, Surprise wins; second class, Mist; third class, Marjorie.

RAMBLER.—The new owner of this schooner is Mr. Elsworth Ives Chapman.

SAVIN HILL Y. C., SECOND RACE.—Winners: Alice E., Nora and Volante.

STEAM YACHTING.

DESIGN OF STEAM YACHT HULLS.

[From C. P. Kunhardt's "Steam Yachts and Launches."]

LITTLE that is precise can be laid down for governing the design of steam yacht hulls. The first requisite is that the displacement at a given draft of water shall be equal to weight of hull, motive power and equipment combined, with ballast added where such is to be carried. In the majority of cases ballast is not necessary to a steam yacht, for the weight of the machinery, fuel and stores stand in its stead. But there are occasions where ballast in addition is justifiable. Coal cannot be stowed low, the bunkers reaching up to deck to provide the necessary room, and overhead cylinders contribute to a high general center of gravity, especially if the rig and deck weights be large also. The resulting top-heaviness can be met in the design by giving the boat more beam, in which case she would be stiff enough without ballast. But the architect may not wish to resort to such correction, for he may prefer a narrower and deeper model to attain other ends in view. Knowing that weight or displacement in itself is not a true measure of resistance, but that larger displacement and cross-sectional area can be driven upon correspondingly smaller beam with like power, owing to the lesser "wave-making" tendencies of narrower hull, the architect may elect to retain small beam and correct want of stability by adding to the displacement a certain amount for an allowance of ballast. The result will be a model of greater resistance than the wider boat of more beam and less displacement.* At the same time sufficient stability will be insured by a low center of gravity instead of depending upon the high meta-center due to large beam.

The extra depth, weight and easy form are by some designers preferred for good sea-going qualities and easy behavior. The weight of ballast cannot in such cases be put into greater weight of engines and fuel, because such addition would be in the wrong place for stability and might aggravate the evil of top-heaviness. As a rule, however, steam yachts are planned to do without ballast. The great majority can afford to overlook the highest sea-going qualities, particularly along the American coast, where smooth-water navigation and short runs outside from port to port in reasonably fair weather purposes rate greatly.

No directions for proportions of hull can be quoted. In general, five beams to waterline length with such depth as the displacement calls for, will serve the wants of the cruising steamer. For high speed, the ratio between breadth and length is increased. Experience as well as inference teaches that the longest and narrowest hull is the form of least resistance, and the only restriction is the demand for beam enough to bring about the requisite stability. Thus, the racing shell-boat, propelled by oars, is not built wide and shallow with a saucer section, but, on the contrary, the cross section is almost semi-circular and the width of the boat narrowed down to the utmost practicable, the only limit being the width necessary to seat the man pulling the oars. Similar forms would be followed in the hulls of high speed steamers, but for the fact that such forms will capsize, unless sustained by the application of extraneous support, which in the racing shell-boat is derived from the blades of the oars resting on the surface of the water with their handles passing through rowlocks closed across the top, acting as long supporting levers rigged out on each side of the boat. Such assistance being impossible in a steam yacht, more beam is taken in proportion to length, so that the vessel will be able to float on her own bottom.

There is also one other consideration governing the choice of beam in proportion to length. This is a physical rather than a theoretical restriction. As the length is increased, the "lines" of the hull will of course become finer and more favorable to speed. But the increase in length is also accompanied by an increase of weight of hull and we have to draw more and more upon the displacement to float the weight, which is equivalent to robbing the driving power of an equal amount. While, therefore, form is being refined for speed on the one hand, we are on the other hand diminishing the possibilities for driving power.

Now, up to a certain not well defined point, it is found in practice that more is gained by refining the hull than is lost by the restriction to driving power. Up to that point, it is advantageous to high speed to narrow the hull. But after this point is once passed, a further refinement of hull is no longer beneficial to speed, and the loss in driving power would make itself evident by a loss in speed. The explanation of this limit to narrowing beam is simple enough. When the critical point mentioned has been reached, the lines of the hull will already be extremely sharp. A further diminution of the beam will affect the general angle of entrance and run only very slightly, while the extra length will add very perceptibly to the weight of hull, so that we would be losing in the weight of engine faster than the gain due to the small additional refinement of hull.

Just where the limit to fining of hull really lies, cannot be answered except through experiment. The limit will vary more or less with the form of the hull as a whole and the character of its lines, and to that extent must remain a matter of judgment in each case. Stated broadly, the builders of high speed yachts adhere to seven and eight beams to waterline length, and and sometimes even go beyond. These proportions seem fully justified by the well known tendency of boats to throw off waves, representing a loss in power. As speed is increased, the five beams of the seven to ten-knot cruiser must give way to much narrower bodies in order that they may be driven at fifteen to twenty-knot rates.

The depth will be regulated by the beam and contour of midship section, since the required displacement upon fixed length and breadth depends in the main upon the area of the midships.

The high speed torpedo boats of most recent European construction have from eight to nine and a half beams in length, the latter being the extreme beyond which present experience shows no further profit.

*See "Small Yachts," pages 46 and 55.

The character of cross section varies according to the views and purposes of the designer. Some boats are given a great deal of dead rise to the floor, with flare to the topsides above water. Others are distinguished by flat floor and low bilge, particularly where the draft is to be small. The illustrations throughout these pages supply ample information on this head.

Fore and aft waterlines follow no specific rule. Wide boats need some hollow in the ends to produce sharp entrance. Narrow boats are so fine from their dimensions that the entrance is frequently wedge shape or even parabolic in character. Wide boats need greater length of entrance than narrow craft, as the beam has to be "conciliated." In narrow high speeds the length of run is increased to insure complete closing of the wake and avoid unbalanced "head" at the bow.

Towing competitive models through tanks with adequate instruments for correct notation is the only method upon which the designer can depend for positive forecast of speed performance.

How is the rice planted and at what season? Ans. 1. No, the landlocked salmon has not thrived west or south of the State of New York and the pickerel would devour them. 2. Perhaps they will; it depends upon conditions of temperature, food, and enemies of which we know nothing in your unnamed lake. 3. Chas. Gilchrist, Port Hope, Ont., Valentine Bros., Janesville, Wis. 4. In shallow water in early spring or in late fall.

New Publications.

DESCRIPTIVE GUIDE TO THE ADIRONDACKS (Land of the Thousand Lakes); and to Saratoga Springs, Schroon Lake, lakes Luzerne, George and Champlain; the Ausable Chasm; the Thousand Islands; Massena Springs; and Trenton Falls. By E. R. Wallace. Twelfth edition. Revised and corrected by the author. Containing numerous maps and illustrations. Syracuse, N. Y., Bible Publishing House. 1887. Cloth, 420 pp. Price $2.

This admirable guide is a perfect storehouse of information about the North Woods. It gives routes, descriptions of all points of interest and is crammed full of things useful and things entertaining. There are practical directions about everything a tourist needs to know about; and the historical and descriptive pages add not a little to the value of the volume. The correctness of Wallace's Guide is a point on which the author justly claims merit, and we are not at all surprised that each year calls for a new edition. The book is not only accurate, but very comprehensive, and ought to have a place in the duffle of every North Woods visitor, be he hotel tourist or genuine outer.

BRIDGMAN'S NEW INDEXED MAP OF THE ENVIRONS OF NEW YORK CITY.—Compiled from the official data of the New Jersey State Geological Survey, the U. S. Coast and Geodetic Survey, local surveys, and other authentic sources. This map shows, with great particularity, the approaches to and the territory for nearly 4,000 square miles around New York city, the railways, wagon roads, cities, towns, R. R. stations, villages, lakes, ponds, rivers, streams, mountains, valleys, etc., in a style unequaled for distinctness, legibility and correctness. City, township, and other boundaries are delicately but distinctly defined by colors. The index is complete and renders it an easy matter to find any desired locality. Published by E. C. Bridgman, 34 Warren street, New York. Price, $4.

One of the queerest facts in natural history has been discovered by Rev. J. J. Lafferty, of Richmond, who gives it to the world in his religious journal as follows: "When a sparrow hawk pounces on a guinea he lets the guinea fly, but the hawk, sitting on the back of the fowl, uses his own tail to guide the guinea. He always steers his victim to his nest in the forest.—*Atlanta Constitution.*

NEW YORK CITY, May 1887.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.
BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.
PAR M. ANTONIN ROUSSET.
Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

The Forest and Stream Publishing Company takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda: Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

CLOTH, 240 PAGES.

Price, postpaid, $3.00.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.

Go Prepared for Accidents

When starting on a fishing trip. **DODGE'S FERRULE CEMENT** is just the thing to fasten ferrules on a new rod, or repair a broken one. Of dealers, or send 25 cents and get a box by mail.

Champ. LUCIFER (as in præsenti)—Fee $50.

To a few approved bitches.

Sire, champion Splinter; dam, Kohinoor, winner of many cups and prizes in England.

BACCHANAL—Fee $20.

Winner of many prizes in America and England. Sire, ch. The Belgravian; dam, ch. Bedlamite.

REGENT VOX—Fee $10.

Prize winner.

Sire, Tackler; dam, Sandy Vic.

RESOLUTE—Fee $20.

To a few approved bitches.

Sire, champ. Result; dam, champ. Diadem.

Lucifer and Bacchanal will leave for England on the 1st of June for the Jubilee show, returning in the middle of July. Intending breeders please note.

Address GERMAN HOPKINS, tf Hempstead, L. I.

Irish Setter Sarsfield.

(Champion Garryowen ex Currer Bell II.)

In the Stud. Fee $25.00.

Imported to breed to Elcho and Glencho bitches. His breeder, Mr. Giltrap, says: "He will be even handsomer than Garryowen. His performances for a puppy in the Irish setter field trials were very superior." The London *Field* says: "The puppy Sarsfield was the fastest animal on the field, carries himself splendidly, and will make one of the best working Irish setters of the day. Address W. H. PIERCE, Peekskill, N. Y. jy14,3mo

STUD FOX-TERRIER

LITTLE SWELL,

Sire champion Spice, dam Relish; winner of many prizes in England. Fee $15.

BLACK AND TAN TERRIER

CHAMPION VORTIGERN

At stud, Fee $15. Puppies by the above dogs for sale. EDWARD LEVER, 906 Walnut st., Philadelphia, Pa. may19,tf

Nick of Naso

IN THE STUD.

Fee $50. Limited to six approved bitches. Address NASO KENNELS, Ramsey, N. J. JOHN N. LEWIS, Manager. feb17,tf

The Kennel.

FOR SALE.—VERY FINE GREYHOUND pups, 11mos. old, sired by Don II. Address R., Forest and Stream office. 1t

FOR SALE.—THREE CHOICE BLACK cocker pups out of Jet Obo (A.K.R. 4810) by Ranger (A.K.R. 4592). Price $15. W. J. FURNESS, 39 Patterson street, Ogdensburg, N. Y. 1t

RABBIT DOGS.—HALF BEAGLE HALF FOXhound, from extra running stock, $10 couple (dog and bitch). Also beagle bitch pups, $5 each. 1t W. S. CLARK, Linden, Mass.

THE CREAM OF POINTERS.

PUPPIES

by Robert le Diable ex Beau Beaufort. Prices low if taken soon. Elegant quarters for a few canine boarders at a nominal figure. No chains, lots of range, best of care. MYRTLEWOOD KENNEL, aug5,2t Waverly, Pa.

DOGS TRAINED.—WILL TAKE FOUR thoroughbred setters or pointers to break on game, quail, woodcock and partridge. Satisfaction guaranteed; reference if required. FRANK GRANT, West Morris, Conn.

FOR SALE CHEAP.

Puppies by Gladstone's Mark, champion Gladstone ex champion Bessia A. out of Trusty Gladstone, Gun ex Pearl Blue.

OAK POINT KENNELS, 1t 1015 Washington avenue, New York city.

FOR SALE.—BRACE OF POINTER DOGS, 3 mos. old, by Beaufort II. (champion Beaufort—Nellie Bird) ex Hazel Bird (champion Fritz—Bird). Also broken setter and black cocker pups; prices moderate. A. McDONALD, Rockland, Maine. 1t

FROM THE WINNING STRAINS.—A LITTER of Llewellyn setter puppies, whelped July 8, 1887, by Gun (A.K.R. 1538) out of Morning Star (A.K.R. 1541). Both sire and dam are prize winners and very fine field dogs. Address with stamp, CHAS. YORK, 9 & 11 Granite Block, Bangor, Me. 1t

BEAGLES FOR SALE OR EXCHANGE.—Will exchange a grand pair of elegantly bred young English beagles, by champion Bannerman out of a grand bitch, for a 12-gauge breechloader of good make, material and shooting qualities. One beautiful young beagle dog for sale cheap. A. C. KRUEGER, Wrightsville, York county, Pa. aug5,2t

I OFFER RED IRISH SETTER PUPPIES, 9 weeks old, the blood of champions Elcho, Derg, Hutchinson's Bob, Venus; dogs $15, bitches $10, if taken at once. Printed pedigree. Also a bitch, Maud Sarsfield, one year old, by Sarsfield—Maud II., $15. Address, HARRY A. FLETCHER, 241 Commercial street, Portland, Me. aug5,tf

ST. BERNARD FOR SALE.—BITCH PUP, 7 mos. old, by champion First Choice ex Bella (Alp II.—Alma); a magnificent animal; price $60. ORCHARD CITY KENNELS, Burlington, Ia. jy28,2t

FOR SALE.—MY ENTIRE STOCK OF ENGlish pugs and Italian greyhounds; cheap. Address FRED. L. WOODBRIDGE, P. O. Drawer 986, Newark, Ohio. jy14,4t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 11, 1887.

VOL. XXIX.—No. 3. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

NOS. 39 AND 40 PARK ROW. NEW YORK CITY.

ANSWERS TO CORRESPONDENTS.

DOG SHOW PROFITS.

IT was not so very long ago that a howl went up because a Philadelphia gentleman who was getting up a bench show in that city was suspected of a design to make some money out of the enterprise. The ground then taken by this manager's assailants was that the reaping of profits or a willingness to reap profits from a dog show was shocking evidence of moral depravity. Since that time several shows have made a great deal of money for their projectors, and no unfavorable comment has been made. So far as reaping pecuniary reward is concerned the giving of dog shows is a precarious business. Of the shows of the past year Boston and New York come out ahead. Each put away several thousands of dollars profits. On the other hand the New Jersey show was a dismal failure. In a circular issued with their premium list of the September exhibition the managers state that their three shows given within two years have netted them a loss of $2,800; and the end is not yet, for the club is under contract with the New Jersey Agricultural Society to give more shows in the future. The financial failure or success of a show does not depend upon its management in other respects. The Waverly shows have always been well conducted and the exhibits have been good in every instance. The trouble has been perhaps in counter attractions. These shows are given in connection with the State fair; and besides the dogs there are big pumpkins, prize cattle and horse racing to be seen free of charge, and the visitors at a country fair are not the class of men to leave a free exhibiton of horse trotting to pay a quarter to look at dogs, not even though the dogs be the finest in the land. This year, that the prospective loss may be diminished, the members have decided to make it a diploma show, for which they have as a precedent the successful exhibition given by the Boston club in 1882. Next to a brass and pewter metal show, a diploma show entails a less outlay than any other, and a diploma is likely to be held in higher esteem than one of the medals. It is to be hoped that exhibitors will give the Waverly show liberal support by a full entry, making the diploma there won doubly prized because of the close competition.

UTILIZE THE STREAMS.

A NEBRASKA correspondent makes the sensible suggestion that by a little forethought and wisely-directed enterprise, many streams of the Mississippi Valley which under present conditions are for a short period wildly rushing torrents, and dry for the rest of the season, might be converted into regular supplies of useful water through all the year, yielding a supply of valuable fish food, turning mill wheels, and in various other ways adding to the industries and wealth of the community. This is not a novel suggestion, but on the other hand it is one which cannot be too often reiterated and brought to public attention.

The familiar arguments in support of systematic forestry and the conservation of woodlands lack force because they are for the most part based upon general principles, the strength of which is not appreciated by the individual, or because they have to do with results to come in a future, which, however near it may be, is yet so remote that the average man gives little thought to it. But in support of this utilization of streams the immediate results obtained carry their own argument. Shiftlessness gives place to thrift, when thrift sees its reward, and in the improvement of water courses and putting them to some such practical purpose as is here suggested, the rewards are not long deferred. In many perhaps most cases, stream improvement is beyond the control or means of one land owner; but it is something which can be accomplished by co-operation, or by township or county enterprise. What shall we do to add to the value of our streams? is a question that ought to be discussed in town meeting in every village and town where unimproved water resources are awaiting development. State fish commissioners will co-operate to stock streams now barren, provided the community will do its share toward rendering the waters fit habitations for fish, and maintaining them as such.

PRESIDENT, CZAR, ANGLER.

THE list of illustrious anglers is increasing. Dr. George H. Moore, the accomplished librarian of the Lenox Library, and a student of Revolutionary history, has discovered that Washington went fishing in his vacations, just as certain of our modern Presidents have done. Dr. Moore's little pamphlet embodying the fruits of his research is printed in another column, and very good reading it is too. Its author takes a just pride in having enrolled the Father of his Country among the Brothers of the Angle; "I am content," he says, "to have been the first to claim for George Washington his rightful place as an angler." The documentary evidence produced is very gratifying, but then no such elaborate searching among unpublished manuscripts was needed to convince the world that the great Washington was an angler; with all his other virtues, he must have been one; it is one of those things that go without the saying. As to President Cleveland's suggestion that Washington did not record the results of his fishing because he shrank from telling a fish-story, that is an untenable assumption; very slight fishing experience would have sufficed to overcome in the mature angler with rod or pole or handline any foolish scruples entertained by the youth with the hatchet. Moreover, the distinction between the kind of a lie Washington could not tell and a fish-story was recognized even in those days.

President or Czar, it is all one, angling has its charms for those who guide the affairs of State. Alexander III. has taken to pike fishing. It appears that not long ago the pike and carp increased so rapidly in the royal ponds that it became necessary to thin them out, and the Czar addressed himself to the task with such devotion that he has come to be a passionate angler, spending hours upon hours on the ponds of Gatchina. He is said to exhibit all the well-known characteristics of the professional angler. "He is disappointed and moody when the catch is unsatisfactory, and correspondingly elated when he brings home an unusually heavy fish. He enjoys the sport so much that he intends visiting the seashore next autumn."

The Robins Island Club have been very fortunate in securing the services of Mr. H. M. Short to take charge of their preserve. Mr. Short is one of our best field trial handlers, and we have no doubt will fill the position with credit to himself and to the satisfaction of the club.

SNAP SHOTS.

THE shore fishermen of the New Jersey coast are proposing the formation of an organization to combat the menhaden men, whom they charge with ruining their industry. The new society will be known as "The New Jersey Coast Fishermen's Protective Association." The first thing done will be to memorialize Congress to enact a law, for which a bill has been introduced in a previous session, compelling the menhaden steamers to confine their operations to the deep sea three miles from shore. It is alleged by a well-informed correspondent of the Philadelphia *Times* that the menhaden fishermen have a strong lobby at Washington to protect their interests.

One of the stock queries coming into the office about once in a fortnight is usually in this wise: "In a trap match for three prizes, A, B and C tie on 10, E and F on 9, and G and H on 8. How are the prizes divided?" The only answer that can be made to this is that it all depends on whether the match was shot under the rules of class-shooting or not. In class-shooting those who tie on the highest score made either divide or shoot off for first; those who tie on second highest score divide or shoot off for second, and so on to the end. It is one of the simplest things in the world to decide in advance whether these rules shall govern a match; and this once decided everything will go smoothly. But if this condition is not clearly understood beforehand, and a dispute about the division arises after the shooting, it cannot be decided to the full satisfaction of all concerned. Common sense dictates that in such points there should be an express agreement before the match is shot. Class-shooting is the almost universal rule nowadays.

In our gun columns will be found two digests of their State game laws prepared by the Massachusetts Fish and Game Protective Association and the Passaic County (New Jersey) Fish and Game Protective Association. We commend these digests as models to other societies of like character in other States. To make the laws known is one of the first and most important things any game protective organization should give attention to. The law will most certainly not be observed if people do not know its provisions, and the degree of ignorance on this subject of open and close seasons which obtains in most communities is discouraging. Without publication of this information in local journals and posting it in public places there is no effective way of dispelling the ignorance. The two societies named publish their digests in pocket form, and these are supplied gratuitously on application. The Massachusetts Association sent out 4,500 of the circulars and posted in railroad depots, post-offices and other public places 1,100 cloth posters 18x24in. Work of this sort tells. The expense is trifling, the result, gratifying.

Hon. John H. Otis, who died at Poughkeepsie, N. Y., last week, was one of the olden-time sportsmen. He was born in 1810, served in one of the volunteer companies of militia that went from Charleston to Florida to engage in the Seminole War; and in the leisure intervals of a busy and useful career, found time to gratify his sporting tastes in many different sections of the country. Those tastes were not diminished even in his advanced age, nor did Mr. Otis outlive his esteem of the arm of his youth; as for the breechloader, that might do for others, but as for himself he would have none of it; and he clung to the muzzleloader with all the tenacity of its staunchest advocates.

Brussels is to have an international exposition in 1888 and one department will be devoted to the arms and implements of the chase. Guns and ammunition, shooting suits, dog foods and artificial targets are some of the things that American manufacturers might send over in competition for a medal.

Massachusetts school teachers have been on an excursion to the National Park. The result ought to be that Massachusetts will go solid for the Park protection bill when it comes up in the next session of Congress.

The introduction of the German carp into this country has had the direct result of putting to practical use numerous ponds which have been heretofore neglected.

The Sportsman Tourist.

FROM THE FOOT OF MOUNT BROSS.

DOUBTLESS the weather is hot with you, and the denizens amid brick and mortar and brown stone fronts are to be sympathized with. I feel a sympathy and wish that matters could be so adjusted that humanity might follow out the unperverted remnant of nature remaining with it, and take to the woods. We call our ways of living civilized. Ask yourself if it be natural. Men wantonly tangle themselves up and will not cut the tangle, because they think it might be spoiled, and civilization and society go to rack in consequence. This world of ours is more than six thousand years old. We conjecture on the ways of prehistoric people, just, as I presume, people a few million years hence will dream of our barbarism, if there is anything to base a dream upon. Are we advanced? Pray from what? If to be artificial is to be advanced, then we may be. I am not captious—sorry only, but not for myself.

Perched at the foot of Mount Bross it is cool. My chateau is branded "West Point standard 8oz. duck," and faces toward the sunrise, with the flap turned up that I may have an unobstructed view of the snowy range—that is, of a few miles of it. The river sweeps down between the Lava Cliffs, and through the rift, and away beyond, the grand peaks are set in a background of blue—such a delicate blue it cannot be found further this side of heaven than here. Between me and the cliffs is a bit of meadow, and what might be meadow land allowed to run wild with willows; these afford shade for the cows and they are grateful. The green of the bushes and the tints of the meadow grass, slashed here and there with gold color, contrast with the brown of the Lava Cliffs. There is a tender purple haze resting on the lower mountains beyond the gap, deeper at the base, while the lofty peaks of the range stand out through a thinner veil of gray. A few white clouds are drifting about, and this evening, when the valley lies in shadow, these fleecy vagabonds of the air will have gathered together on the summit of the range to be kissed into rainbow hues by the sun, as he says "good night" to the granite lover of his, who reaches her magnificent front fourteen thousand feet to his embrace. If perchance there be a domestic row kicked up of an afternoon by the misty tramps and Terror holds high carnival, it is only for a little while; the sun will caress them into gems to deck the brow of his glorious lady love, and will change her gray veil of the morning into one of gold and rose color. I have watched these lovers a great many summer days and evenings until they have learned to know me and admit me to their innermost sanctuary; they tell me all their beautiful secrets—they have no quarrels.

FOREST AND STREAM is not amiss in such a place; it gathers its inspirations from such an atmosphere, it would be barren else. I may turn to it and without desecration follow the bright paths with others who love out of doors. I strike the "Pioneer" and have a weakness for him. As I follow in his trail he leads me to a familiar place and scenes that will not come back to me except as I reach out for them through a happy memory. The Little Falls hold a tender place in my regard, and I can see them again as I did many years ago; can see them, and feel only as a boy can feel on his first day out and the joy of his first triumph—the white perch. The hills there are still mountains to me; the great rocks with the color of weather-beaten boards are there; the old chain bridge below, which I verily believe was never blessed with a chain, unless to moor it to the bank; it looked like a decayed ark or a wooden tunnel perched upon stilts at each end, and was the only dismal object in sight. Have I coquetted with the Three Sisters in midstream a little way below? Aye, many a day; but I was too young to cause uneasiness, except at home. The middle one, if I remember, was most affected by me, being flat at top and a splendid place whence to dive. And here too, a little later on, I saw for the last time a pale face of one we loved, with a curly black head pillowed in the rocks. I can remember how dark the water looked in contrast to the delicate white skin, and how the tiny waves kissed the black locks as if in sorrow for what they had done.

But let me move on. I stop, of course, on my way to interview the "cheewink," but have no fancy for the prose below. "What a pity" we cannot be contented in finding only beauty in the beautiful! I have heard neither catbird nor whippoorwill for a quarter of a century or more. What use was there in telling me the songster was not "versed in natural history"—the song was sweet. Byron, I think it was, who said that some people pride themselves on being wrong by rules, or words to that effect. Let me say, after the manner of the elder Weller: "I didn't think you'd 'a done it, my dear, I didn't think you'd 'a done it." But perhaps I would better get out of Warsaw, or I may find myself in trouble.

I make my way into Wyoming, back to the Cherokee Strip, over into Germany, on to the Macedony and finally to where I started, to alight upon "Ethics and Experience." Bless his old bones! There he is at this very minute dancing round in the pasture at my feet catching grasshoppers. When he "goes a-fishing, he goes for fish." Seth Green says the same thing—I fear I shall have to 'fess. He threatens that if I do not he will tell you I brought from Denver a fruit can half filled with angleworms. But then he planted them, and I never caught a trout with an angle worm any more than he; and I don't know that our mountain trout will take them. It was only with a view to experiment that I brought them anyway. But he says for that purpose a half dozen would have been as good as a quart. I quite agree with him in the matter of lures, and yet I have very seldom had occasion to use other than the artificial fly. If the trout want grasshoppers or worms and I want the trout, I should not hesitate to cater to their taste; they are interested in the matter and are entitled to have their taste considered. I would do it if I were to be blessed from Dan to Beersheba by all the fly-cranks in Christendom. But I use a fly for convenience, for cleanliness and expedition. I think these considerations must, in a great measure, enter into the whim of the fly-fisher, and I do not wish to set them down as pharasaical as Brother B. intimates. Nor should the skillful sportsman be stigmatized as a pot-hunter. A pot-hunter is only a pot-hunter whether he be skillful or the reverse. The sportsman stops when he has satisfied his needs, the pot-hunter never stops, this is the only difference; if the pot-hunters owned the world, the survivor would angle for the other planets.

When it comes to shooting, I prefer taking the bird on the wing, or not all; it's a matter of taste, or sentiment, if you will. If we have the right to kill God's creatures (and I presume we have, or we would not be endowed with the desire, nor would the creatures have the same propensity among themselves), being above them, as we claim, we should adhere to our loftiness and do it decently and follow the example of the animals below us, by taking what is necessary, no more. It takes but little to satisfy one's stomach; and I cannot understand why a man's sentiment cannot be kept within bounds as well—he is not much of a man if he fails to keep it there. If one kills an unarmed, unresisting brother we call it murder, and cowardly, at that. Birds are not going to bite any one, and if we would keep our self-respect let them have the advantage of their only means of protection—the percentage is in our favor as to who shall win; is it not mean to rob them of their slight advantage? I never yet dropped a bird in its flight that I did not tenderly smooth its feathers with a feeling of regret that I had shut out its life—and still, I would make a double if I could and add to my momentary repentance. But I do not think that anything short of starvation should authorize the shooting of birds except upon the wing. If this be sentiment, say it is one I am proud of—on this subject I'm ready to be set down with the cranks.

But Brother B. is coming up the hill with his grasshoppers, notwithstanding he brought in a fairly full creel from up the river this morning, all of which were caught upon a coachman. On my side of the Grand the governor proved more acceptable. The trout were all of good size, none less than a quarter of a pound, and from that to one of a pound and a quarter.

During my maneuvers on the edge of a boulder bar, sending the flies out into the swift current and allowing them to swing into the eddy, a mad rush in the shallower water at my right commanded my attention. Nothing short of a three-pound trout after a minnow could have made the commotion; I longed for a minnow, but went for him with the governor. The tip of his dorsal twenty feet away was plainly visible. Whether the fly disgusted him or not I am not prepared to say, but between us, it managed to hook into his back just in front of his caudal; he felt like a log as I dragged in my prize to find a sucker—a black one. I was glad I had deprived him of the use of his propellor, as I have no fancy for catching suckers in the back with nothing to guide them except a 7oz. bamboo. In my efforts to get the sucker to land I stirred up a school of them engaged in some business in the shallow water. They seemed to have congregated by the dozen and at times made the water fairly boil. I could not get above them and learn what they were doing; it is too late in the season for spawning, and I concluded they had struck a free lunch counter. To-morrow we go to William's Fork, and with us will be borne the grasshopper with all the reverence due him in his exalted mission.

Perfect days with us are not like angel's visits—they are common. This morning the sky was clear, and on the summit of the Divide below the Springs we were greeted with just breeze enough to insure a ripple on the usually still reaches. Of course we indulged in admiration and comments on the delightful view opened to us; we always do, and seem never to tire of it, because we can always find something new. We found the Fork somewhat full but clear, and unsaddled and tied our horses on the west side about half a mile from the mouth. Brother B. went up stream nearly to the falls, and left me in possession of the ground below. I could find no evidences of recent visitors and congratulated myself. The first likely place, however, proved a failure, as did the second and the third, with the coachman and the governor. Then I tried an unlikely place on the further side, in shallow water under the willows, and was rewarded with a pound trout on the coachman. A little further down, in a similar place, I took another. The coachman was evidently in favor for the day, so I made them swap places, putting the coachman on the end of the leader, and in a little while had my third trout. The fourth one brought to grief made me think I would soon have a dozen and a full creel of beautiful fish, for these would not vary an ounce in weight, and were in splendid condition. I had not missed a rise and felt exalted.

Leaving the stream for a promising pool a few rods below, I came out of the sparse timber to a bank a couple of feet above the water, which was about four feet deep. To my right a willow bush of some size had been crushed down into the stream, and still clinging by the roots, its pliant limbs were playing with the current. If a big trout did not lie somewhere in the shadow, then the pools were empty and I must look to the riffles and shallower water. He was not there. A dozen feet or so below me a young cottonwood sprang out from the bank so close to the edge I could not get between it and the water without holding on and swinging round; below the tree a few feet a broken sod had lodged, and with the line shortened I allowed the flies to drift down by that bit of sod. As I brought them back the chap I was looking for darted out from the shadow. I saw him coming with distended mouth and gill covers, and close his jaws upon the fateful coachman, as he did I raised the tip and he was my trout—two pounds, if he weighed an ounce. The roots of the young cottonwood bothered me, so did the snags about the sod; the willow being up stream, I had no difficulty in keeping him away from that. I must get past the cottonwood, and started to swing round, holding on with my left hand, while I kept the rod well up and out with my right. The water was cold, and it occurred to me that if my hand should slip I'd get wet, so I did the sensible thing and passed the rod round the tree into my left hand. Just below was a break in the bank, and no better place could be desired at which to bring my trophy ashore. As I confidently gripped the rod with my left, his troutship gave a desperate rush toward the shadow of the bank below, I was obliged to give him line; he got an inch too much; the wicked governor on the dropper struck a snag and held fast. With a degree of melancholy not often reached by me I saw my coveted prize slowly break for the current, having barely strength enough to hold his own, but safe from me. When I told Brother B. about it, he said he thought he heard me talking to myself; but he was nearly half a mile away—I think he must have been mistaken.

With this loss my luck with the big trout abandoned me. I had to catch a dozen or more before I made up the weight of the first four. But they were a pretty catch, though my creel was not quite full when I was overtaken by Brother B., who, perhaps, might have carried one more trout with a little squeezing.

It was noon; we had fished an hour and a half, and had 16lbs. between us. It was enough, but I could not put my regrets behind me. I had to tell my misfortune to a stray ranchman whom I encountered at the ford. When I had done measuring the trout to him and looked up, he was smiling. He said it was the same old story; he had heard it lots of times. I never go armed, and the ranchman looked formidable. I appeal, then, for sympathy to the brother who has met with the same misfortune.

BOURGEOISE.

HOT SULPHUR SPRINGS, Col., July, 1887.

IN "PORTE CRAYON'S" FOOTSTEPS.

SOME six weeks ago in writing a personal letter to FOREST AND STREAM I mentioned that I might take a trip to West Virginia, there meet my friend, Mr. Cleveland, of Texas, and together we would fish some Alleghany Mountain streams in a section contiguous to the "Land of Canaan," made memorable by "Porte Crayon;" and I added that ever since reading Mr. Strather's sketches of the "land flowing with fish and game," it had possessed for me a halo more radiant than those painted about the heads of saints by the old masters. The editor was kind enough to hope that upon a nearer approach my halo would not dissolve itself into thin air without the semblance of color or light. "Porte Crayon" in the 50's set out for the mountains of Randolph county by carriage and saddle, while I, more prosaic, early in July, came by steamboat and railroad train to Greenbrier county. "Porte Crayon" plunged into a wilderness and found rugged mountains, bears, panthers, deer and trout. I took a room at White Sulphur Springs and found youth, beauty grace and culture. I found a host of fair dancers and gallant men; I found the warmest hospitality, and incidentally I found some black bass. When I first saw the great hotel and its park with rows of cottages filled with rank and fashion I concluded it was the queerest place I had ever gone to for fish. I had a confidential talk with Major Eakle, the superintendent, and he told me that the fishing about here was excellent, but he was not positive about its yielding returns in fish. Since that time I have been able to impart some information to the Major about the fishing and also the fish, and I will tell you all about it later, but now I can only tell of one day's fishing as a sample bit of that halo of which I wrote you.

Much of the pleasure of our fishing during the past three weeks is due to Senator John E. Kenna, a most thorough and sound sportsman, familiar with the woods and waters of his State, who in any other than this republican land (possibly this particular section, and it may be Democratic) would be a prince royal; and when last Sunday evening he proposed that we start early the next morning and fish Greenbrier River lower down than we had yet been, Mr. Cleveland, Mr. Watson, also of Texas, and myself had but one answer, and that was that we would be ready at the appointed time, 3 A. M. When the train on the C. & O. R. R. came in, for a wonder on time, we boarded it to go to Alderson, 22 miles. At Ronceverte we were joined by Capt. Chas. White who made the trip with us. At Alderson we got breakfast and, later, boats and men to go to Lowell, 12 miles down the river. Senator Kenna took a camera and photographic outfit to take some views of the river scenery which were to include the Texans. (At present I am a cross between New York and Texas including a stream of West Virginia). There was a fog on the river as "Fleet" pushed out from the shore at Alderson to show the way down stream. For ten years Fleet Porterfield has been the Senator's huntsman, kennelman, camp tender and companion in the woods or on the water, and before the day was done I suggested that his name be changed to "Old Faithful." We were told that the stream was well fished for two miles at least and we had better push along to better fishing below, but within one hundred yards of the landing I got the first bass. The stream was extremely low and very clean and it did not look very promising, but at least one man in the party, Mr. Cleveland, followed Mr. Marston's advise, "Always keep your hook in the water," and he was the next to catch a bass as we were running a rapid. The river at this time is a succession of rapids, pools and shallows, and we had gone but a short distance before we were obliged to take to the water and wade while the men hauled the boats through a shallow place. The sun soon dispelled the fog and the day proved perfect except it was slightly warmer than was absolutely necessary for our comfort. We had no live bait of any sort, and depended upon the artificial fly, artificial (phantom) minnow, and the fluted spoon bait. All the gentlemen but myself began fishing with the phantom minnow, and adhered to it until the close of the day. While awaiting breakfast one of our men, Fisher by name, told us of a party that caught quite a large number of bass (seventeen I think) from one pool in the river only a day or two before. "Fisher, that is a large number of bass to take from a small pool, how large were they?" "Oh, they were yearlings!" If Fisher lives to be the oldest man in America he will never forget the laugh his answer provoked, and that day the bass that were caught were characterized as "yearlings," "two-year-olds," "three-year-olds," etc., and an extra large one for this river was said to have a ring in its nose.

I began to fish by casting a fly, but found it was taking too many "yearlings" and no "short horns," so changed to an artificial minnow; and cast I never so lightly it seemed like throwing stones in the river instead of fishing. I therefore again changed, this time to a small fluted spoon, which did good work and was less of a tax on my rod. Our passage down stream was like unrolling a great panorama of the finest mountain scenery, and when we came to a particularly choice bit the Senator would unlimber his camera, the boats would work up into the foreground, and the fishermen would halt waist deep in the water, or, if in the boats, put on their most smiling expression, and thus be transferred by the camera to serve in after years as souvenirs of a most delightful occasion.

The bass appeared to have no particular abiding place, for they were found in deep and in shallow water; in still water and in the rapids. The Greenbrier is a stocked stream, stocked probably not more than four to six years ago—my informants do not agree as to the exact time—and the bass are not large; 2½lbs. proved with us to be the maximum, although on another trip our boatman told us he had caught a small-mouth black bass, as all the bass in

the river are, of 7¼lbs. About noon we selected a place on the shore for lunch, and there Fleet came to the front as cook and fried some of our catch and served them piping hot. Senator Kenna leveled his camera, and later we will be printed as before and after lunch, or "expectancy" and "satisfaction."

My boat carried the photographic outfit, and after lunch I was a little late in starting, Mr. Cleveland and Mr. Watson having gone ahead. I overtook Mr. Watson alone, standing waist deep in the water and casting right and left, and I halted unnoticed to watch how gracefully he cast. I supposed he was practicing a position or pose for the next photograph, but he was simply trying to determine where he had thrown his minnow and a good part of his line. I came to Mr. Cleveland who was also wading, and I got out of the boat and joined him. I had little more than done so when Mr. C. left the perpendicular and assumed the horizontal in the water. The bottom was treacherous and the water swift, and the odds were ten to one that I would be the next man to go in all over, but I was not. I had passed quite a rapid in the boat and looked back to see Senator Kenna come through; he was standing at the stern and Fleet at the bow, each with an oar to use as a setting pole or fender. The Senator turned his head to spear a defunct lager bottle that was floating past with head up and toes in, when the boat hit a rock and he took a header; before his broad hat, with his head in it, had fairly disappeared beneath the water, Fleet had plunged after him. All that I could see of the Senator or his belongings above water was his hip pocket, and I asked him why he made such an effort to save that particular pocket, and he said that was where he carried his matches. If there is anything I do admire in an emergency it is presence of mind; there were plenty of watches in the party and but few matches.

We reached Lowell in time for the 7 o'clock train, having caught 103 black bass. Our boats were brought back to the starting place by train, and we returned to White Sulphur in time for a late supper. Before our supper was finished, we decided to repeat the trip two days later.

White Sulphur Springs, W. Va. A. N. Cheney.

HUNTING IN THE HIMALAYAS.

Lights and Shadows of an Indian Forester's Life.

XII.

THE tiger has his lair, and a man familiar with the jungles has no difficulty in recognizing his signs, which guide him in the selection of it. In the cold weather, too, after the grass has been burnt over, the cover is narrowed down to a few isolated clumps and strips in low ground, the moisture of which kept the grass geeen and rendered it impervious to the general conflagration. The great difficulty in finding the tiger is that he is not always at home—roaming around all night in search of his prey, if he is successful in making a kill he has a good feed off the haunches until daylight, drags the remains into the nearest piece of cover, goes off for a drink and then sleeps out the day in the coolest, wettest, boggiest piece of cover he can find; but excepting after a feed, or at any rate when stirred by hunger, he wanders round all day with the consequence that the sportsman oftener comes across him in unexpected places than in his regular haunts.

My guests of course had come for tiger, and I had sent them the previous day through the most likely piece of tiger country in the neighborhood. They had gone up through a valley about a quarter of a mile wide where its little stream emptied itself into the Ramgunga, and gradually narrowing down to a hundred yards at four miles up, where it branched into two forks, the one of which ran up into the hills, forming an easy pass to another similar valley, drained by a stream which reached the plains some seven or eight miles from the Ramgunga. The nearest valleys had excellent strips of cover, but in some parts the bog was so heavy that the elephants were unable to struggle through it, and these were just the places for a tiger's lair. That tigers frequented the valley was evident enough, for along the sandy bed of the stream and even in the dust of the path, the sportsmen reported that they had seen fresh tracks everywhere. They saw no other sign of tiger until they had crossed the dividing range and were going through a narrow defile passing to the second valley when the leading mahount saw a tiger right in his path looking at them at a distance of 100yds. or nearly. There was a general fusilade, and then it was seen that there were three tigers, two of which dashed up the hill on their left, crossing right above them, and getting volley after volley as long as they were in sight, while the third was seen to dash back to what appeared to be a cleft in the hill on the right. Advancing on this they found a little cleft about 6ft. wide with the remains of a gerao stag, and the hills being inaccessible to the elephants on that side they rounded the spur on their left, and getting into the valley on the other side of the hill, behind which the two tigers had disappeared, they kept beating up the cover until it was time to return.

I had a supply of rockets in camp which would be useful in the boggy ground above referred to; but I thought it better to take another course the next morning, and as the matter was left entirely to me, I chose the valley of the Ramgunga, in which there were always tigers, although there was so much cover sprinkled over so large an area that coming on them was very uncertain.

So the next morning we went straight away up the road to the sawyers' camp, where I had bagged my tiger the previous day, and dropping Charley there, we went down to the lower valley, and after coming to an understanding that there was to be no shooting at anything but tiger, on our way up stream we commenced beating, with the result that we saw no tiger, but put up dozens of hog deer, which did their very wickedest to tempt us to shoot them.

We had got four miles up stream above the camp by 11 o'clock without firing a shot, and had got into some low grass about 4ft. high, when I saw a ripple ahead of me, and halting my elephant I signaled the others to close in, the beast, whatever it was, was going quietly away from me, and with rifle ready, I moved on again after him until the others had drawn up close. I signaled a halt again and was pointing out the spot, when a bear stood up to reconnoitre. The Colonel and S. both fired, and as the beast struggled away kept up a sharp fusilade, but although several balls struck him he struggled on for about 100yds., when he dropped and kept tumbling about, taking another half dozen shots at close quarters before he gave up the ghost. Preparations were being made for hoisting him in position, when my chuprassee touched me on the shoulder, and pointed to an object in some low grass about 30yds. off, which I immediately set about investigating. It was a dead cheetul stag, and so little eaten, and the blood spots so fresh that there was no doubt we had disturbed the beast at his breakfast.

Reconnoitering the country, I saw there were two strips of good cover, about a quarter of a mile long each, and forking away right and left from us; in one of these there was little doubt our game had sought shelter. The intelligence was promptly communicated, the bear was allowed to lie where he fell, and after a short consultation it was decided that as the strips of cover were neither of them very wide and one quite narrow, we would divide forces. The Colonel took the narrower strip on the right, and posting S. on my right, he and I beat up the broader strip. We had not gone far before I saw that the Colonel was on the track, and signaled to S. to push ahead to be prepared for a chance, if the beast broke across to us. The Colonel's attitude evidenced that he saw the grass waving before him and was prepared to shoot, but it was not until he reached the extremity of his patch that the beast broke cover on our side about two hundred yards off. The Colonel fired both barrels, and the next moment I saw a fine panther coming straight at us, and had but just time to wheel round into line with S. before he was within twenty yards. At that instant he sighted us. There was a moment's pause, and crash went our barrels. He was down on his haunches now, swearing furiously, and the elephants were too much excited to give us a chance for a second shot. I fired and guess I came somewhere within six feet of him, and picking up my smoothbore, fired another couple of shots with similar results. S. was firing away too as if cartridges cost nothing, and the Colonel was pushing on toward us at top speed, when I called to him to stop, and inviting S. to join me, we retreated some seventy yards, pacified the elephants, and poured in another broadside, which tumbled him over. "Spare the skin," I said, in time to stop any more shooting. The first shot had broken his backbone, and rendered him powerless, and now that he had got his quietus we could let him die quietly, or some one might dismount and give him a settler in the ear. "I'll settle him," said the Colonel, and making his elephant kneel he jumped off, and after some dodging round the panther, which appeared to resent the well-meant intention to put him out of his pain, the Colonel got in a shot, which crashed through, stilling him effectually, but making a mess of the head. Lashing him behind the howdah, we went on and picked up the bear, and then started for camp, well supplied with venison for the present.

It was near 3 o'clock again when we reached camp, and this brought luncheon and dinner so close together that we determined to go without luncheon and to hurry on the dinner for to-day, and to take something for a midday meal along with us in future. There is but one bath-room in the little bungalow, and by the time we had all taken a refresher, dinner was ready.

There was still an hour of daylight when we rose, and the Colonel and S. took their rods and went down stream, returning at dusk with a 10-pounder which S. had taken—the Colonel had not succeeded in getting a rise to his fly—fish are so fickle. Shikaree.

A NEW JERSEY SURFMAN.

[A forthcoming book from Mr. Charles Lanman will be entitled "Letters from a Motley Company." It will describe a great variety of phases of American life, and the following chapter, "A Letter from a New Jersey Surfman," may interest those of our readers who are now summering on the shores of New Jersey.]

I CANNOT, in this brief letter, record the particulars of my life, but will try and comply with your request, and give you a few incidents and facts connected with my experiences as a surfman on the coast of New Jersey. I was born on Long Island, had a limited education, went to sea as a sailor while yet a mere boy, had command of a brig for several years, running between New York and New Orleans, and after many troubles found a home on the flat lands near the ocean in New Jersey. As I was fond of hunting I hugged the shores of Barnegat, and for a while did very well by keeping a tavern where the sportsmen of New York and Philadelphia might be cared for when they wanted to shoot geese, ducks and other game peculiar to the country. I made some money, with the help of my good wife, and became the owner of a nice little house and a patch of land. When I was off gunning with my visitors my wife carried on our affairs, devoting much of her time to keeping poultry, and to show you that she was smart in that business, I may tell you that she raised chickens, turkeys and ducks, and sometimes had a brood of 300 of the latter fowls. She had nobody to help her, but was generally attended by some half dozen nice dogs for which she had a special fondness. They served as protectors and companions in her hours of loneliness, and kept off the weasels and other vermin.

As time progressed I had a longing for a particular spot directly on the sea shore; and while ready to pull up stakes at any time, I was induced to change my business and location by this particular incident. A lot of three wild fellows, but greenhorn sportsmen, had come down from York to hunt for ducks, and one morning, as luck would have it, they killed about twenty wild geese. This success greatly excited them, and they spent the next entire night drinking, playing cards and dancing, and as I was disgusted, I resolved to quit tavern keeping, and so went over to the east shore and divided my time between some shooting and fishing and looking after shipwrecks, which were often happening on the New Jersey shore. The methods employed for saving vessels and men in the old times, were very different from what they are now. Formerly the surfmen banded together as friends, oftentimes acted independently, and for everything like compensation we depended upon the liberality of the men or companies whom it was our good luck to serve.

Generally speaking, we surfmen were liberally treated, but perhaps the meanest man who ever sailed upon the sea was the captain of a schooner which once came ashore, when we not only saved the entire crew but also a large part of the property on board the vessel. Not only that, but we lodged and fed those men at our houses for about ten days, and after the captain had secured his property and arranged for carting it off, he presented two straw beds to the party who had saved his life and property but not one dollar in money. At that time the laws of salvage were of no account on the Jersey shores and we had no redress. But the majority of men with whom we came in contact had souls, and one of them I recall with real pleasure. He was the captain and owner of a brigantine that came ashore in a snow storm, and after we had saved the crew and a rich cargo of cotton, the owner presented to each one of the men who had helped him the sum of $500. The mean man just alluded to was a sanctimonious creature of the whining type, while the latter was a jolly old chap whose laugh could be heard half a mile away. As to the salvage question, I may say that according to the American system it is only given to men who have voluntarily saved property from ships in disaster, and not to men under legal obligations to save property, as is the case with the surfmen.

From the foreign sailors driven on this shore I have heard some very queer things about the laws of England on the subject of shipwrecks. For example, I have been told that formerly everything that was washed ashore on the British coasts, including vessels and cargo, was claimed by the Government as its own property and was often granted as a gift to the owner of the adjacent property. When a man escaped with his life, the disaster of coming ashore was not called a wreck, and the same was said to be true even when a cat or dog got ashore alive; all of which, to my mind, looks like heathenism. But these strange laws have been somewhat modified in recent times, the coast officials keeping the property for a certain time, and then, when not claimed by the owners, it is turned over to the crown. In this country when wrecked goods come ashore, if not called for, they are, after a certain time sold for the benefit of charitable institutions.

But we also have some outrageous customs on this side of the Atlantic, and some of the worst of them grow out of the incompetency of the superintendents at our life-saving stations. These officials are generally active politicians, and receive their places as a reward for political services. In nine cases out of ten they are entirely unfit for the important business intrusted to them. They receive good salaries, and while they who now work under their directions are poorly paid and do not obtain as good a living as we did under the old order of things. I know one of these superintendents whose home is not within sight of the ocean, but whose business it is to instruct his men, or see to it that all goes on correctly, and yet who only visits the various stations once in three months. And when he does come down to the shore to manage what we call a drill—with boats in the surf—he knows no more about the necessary operations than a man in the moon, and would no more risk his own life in rough water than he would treat a political opponent with decency. And some of these fellows come to us with arms full of books, out of which they teach us how to act in certain emergencies and how to bring drowned men to life, all of which, where common sense is important, is the merest foolishness.

After all the Life Saving Service as at present organized, with its 201 stations in all the Union has been a blessing to the country. The system was commenced in 1871, and down to the year 1885 the disasters numbered 2,547; value of vessels wrecked $31,665,600; value of cargoes $15,463,714; property saved $40,000,000; property lost $14,230,968; persons saved 28,000; and persons lost 446. The stations along the coast of New Jersey number not less than forty-one, while the whole Atlantic coast counts up one hundred and fifty-six, with thirty-seven on the Great Lakes, and seven on the coast of the Pacific. The time for hardest labor on the New Jersey shore ranges from September to May; the stations are generally managed by one keeper and six surfmen, and supplied with houses of refuge and all the implements that can be used in saving life and property, such as surf boats, wreck guns, beach apparatus, life lines, rockets and restoratives for all emergencies. After every storm the keeper and his men are obliged to go upon inspecting tramps along the coast to discover any evidences of disaster; and the crews patrol the beach about four miles on each side of the station, between every sunset and sunrise and also on foggy days.

Returning now to my own personal experiences, I may tell you that I have now been leading the life of a surfman for about thirty years, and have participated with others in saving the lives of not less than twenty-seven hundred shipwrecked men. I have performed about as much hard work as any other man on this New Jersey coast, and my adventures would make a good-sized book. For one of my bits of service I received a gold medal from the Government, and the leading particulars were as follows: It was after a terrible gale at midwinter, and in the midst of a snow storm, that a big brig came ashore—outside of a tremendous surf. Our crew, in a body, made an effort to reach the vessel but failed, and would not make a second trial. With this conduct I was disgusted and I resolved to make a trial on my own hook. I launched our smallest lifeboat, got it over the foaming ridge of surf and made for the vessel. She lay with only her forward deck out of water, with all her sails torn away, and when I reached her side I saw no signs of life; I shouted to the top of my voice, but no answer came. After a terrible struggle I reached the deck, found five men alive, shut up in the forward cabin, one man dead in the gangway and another frozen to death and hanging by his legs from the rigging, to which he had climbed to avoid being washed overboard. The five men were rescued and it was for this service that I received the medal.

Of course the memories of this catastrophe and of many others of like character are very mournful, but they are in perfect keeping with the every-day life of the surfmen who have the common susceptibilities of humanity. The sunshine is indeed a great blessing, but as we watch the great luminary continually rising out of the sea and setting on the waters of Barnegat Bay, we realize more fully than any other people how rapidly our years are passing away. And then come forth from their hidden chambers the perpetual storms of wind and rain, of snow and hail, oftimes bringing in their wake death and destruction to those who have trusted themselves to the remorseless sea. To perform the part of guardsman over the elements, in the midst of which we live, is a difficult duty, and yet I may mention with pride that for a period of twenty-four months, in making my midnight patrol of four miles, to exchange checks with watchmen from another station, I never once failed to start upon my tramp at the appointed hour. At certain times when I was not well I had the companionship of one of my dogs, and I often fancied that he enjoyed the midnight calms, the brilliant moonlight and the starry heavens, and was as greatly depressed as myself, by the singing sands, the screaming of the winds and the moaning of the sea.

CAMPING ON THE EASTERN COAST.—I.

FOR more than six weeks straight on end the Scribe had camped in a little 8x4 stateroom, where, although not a large man, he could seldom manage to turn around without bumping the crazy bone of his elbows. And all the time he had been waiting and watching for a chance to get out and away to the woods for a little genuine camp life. It had been on the programme that when the yacht reached a point in southern Florida where she could be safely left in charge of her crew, the Skipper and the Scribe should go to the woods, make camp in the pleasantest spot to be found and proceed to possess their souls in peace and comfort. And now that the time had come the Scribe promptly suggested that the Skipper in the dinghy and himself in the canoe should wind themselves through the puzzling and interminable channels, marshes, bayous and lagoons that lay between the ocean and the pine woods for one week at least of dry, wholesome, open air outing. Rather to his surprise the Skipper failed to see it. He was quite comfortable where he was. He had his choice of two fine boats, with a stout sailorman to pull him wherever he chose to go, let alone that the dinghy had a leg o' mutton sail and was fast under canvas. With a good breeze she could beat the canoe under paddle about one mileinthree, by which it happened that the Scribe, attempting to keep company, was constantly getting left and was only too glad to accept a tow, which, to say the least, was humiliating to an enthusiastic canoeist. It was one thing to sit in the stern sheets of the "captain's gig" and handle the tasseled tiller ropes while Pilot Joe pulled a vigorous oar against wind and tide, and another thing quite to bring up the rear in an 18lb. canoe with the double blade. On more than one occasion the Scribe, after following the gig all day, reached the yacht after dark nearly exhausted; and the Skipper was apt to improve the occasion something after the following manner: "Well, old boy, we're home again. Tired, eh? Well, you've nothing to do but turn in and sleep till morning. Joe will take care of your canoe and duffle; and you haven't got to break your back toting nightwood and getting browse for your bed. Al will attend to that." (Al is the steward, and a better one would be hard to find. It is true that he keeps my little room in apple-pie order. And he also brings me a small cup of hot coffee every morning before I turn out. It is very æsthetic, very high-toned, and after the manner of yachting everywhere, I suppose.)

In response to the Skipper's suggestive remarks the Scribe lets himself out to the following effect: "It is as you say, Captain, I may camp in my little stateroom and be waited on to any reasonable extent, without the trouble of making camp and getting night wood. But my soul wearies of damp sea air and dead sea-levels, let alone that an endless landscape of saw-grass, dead brush and muddy water channels is not inspiriting to one who loves the living forest. A wax candle in a small stateroom is a weak substitute for the bright camp-fire that warms your feet and lights the camp through the dark watches of the night. As to chopping and toting night wood, why that is only one of the pleasures of camping out, which, with hunting, fishing and cooking, just rounds out the time. Let us by all means have one week of it."

But the Skipper would not be entreated, and perhaps he was right. He was both owner and captain, and much experience had taught him that any vessel in commission needed the constant presence of a commander. Also, he was under the impression that a roomy stateroom with all the modern conveniences and good attendance was quite as comfortable as an open camp with its inevitable concomitants of sand flies, mosquitoes and red bugs, not to mention the probable contingencies of contrary winds, smoke and violent thunder storms. He volunteered, however, to lead the way up Spruce Creek with Joe for pilot, and as Spruce Creek was the most promising stream for a camping ground in all that region, the Scribe closed with the offer at once.

Spruce Creek is a tributary of Halifax River, which it enters just opposite the neat little hamlet called Ponce Park. Standing on the little wharf at the park and looking to the northwest you have a broad stretch of dead mangrove keys under your eyes, with a distant line of living forest in the background. Through a labyrinth of keys and muddy channels you work your way to the green woods, after a weary paddle of three miles, and you need a pilot to get there.

And so it happened that on the 10th of the last February as ever was, the Nessmuk, Jr., was following the captain's gig up the intricate channels of Spruce Creek to the bay, three miles above. The bay is an expansion of the creek (it would be a river anywhere in Europe), and is about a mile wide in any direction. There is a little settlement on the west side, and on the north, just where the stream enters the bay, the ruins of the "old bridge." The new bridge is a half mile higher up, and above this the creek is a respectable stream with well defined banks, which rise in some places to a height of 50ft. Near the east end of the ruined bridge is a clean, dry shell hammock, and near at hand, under a large live oak, is a spring of very good water—for Florida. On the bank of the creek in the edge of the hammock is a capital camping ground, and here, after a few minutes spent in prospecting, the Scribe commenced putting up a camp, while Pilot Joe started a fire on a pile of shell oysters (about three pecks of them), for roasted oysters are the Skipper's weakness; and when he goes for a day's outing, Al has standing orders to fill a bag with the bivalves and stow it away in the forward locker, with a well filled lunch basket and a bottle of wine.

Roasted oysters are good, but they should be washed clean, spread evenly instead of being piled pyramid fashion, and the fire should be made of dry, hard wood instead of flashy palmetto stems. As it was, the oysters on top were dried up, those on the bottom did not open their shells, and only a portion in the center were well roasted. There were enough, however. And after the empty wine bottle had been turned over to the Scribe for a water bottle and the party had done justice to the Skipper's Lone Jack, the gig went off up stream to try for channel bass, sea trout and big-mouth bass. For just here, where the tide meets and pushes back the stream, there is a long stretch of water where you may catch fresh and salt-water fish in the same reaches. It was nearly sundown when the gig came back, and the Scribe, who had worked like a beaver, had as cosy a camp as one need wish to see; but the Skipper declined to stay the night in camp and let Joe come for him in the morning, incidentally bringing a few supplies for the camp. But they had made a very fair day of it, too. The Skipper had taken half a dozen fine fish, weighing from 1½ to 5lbs., and they had "saved" a bushel of oranges from some man's grove. Joe is an excellent forager.

> "I am heinously unprovided. Oh for a smart young thief of two or three and twenty! Where shall I find me one that can steal well?" —*Fallstaff.*

I think Joe would have filled the bill.

The sun was shining through the pine tops in the west as the party in the gig pulled out for the yacht, leaving a camp supply of fish and oranges, with a promise to come back on the third day with a supply of bread and bacon, of which the camp was short. The Scribe watched the boat until the flash of her oars was lost in rounding the point where the stream leaves the bay, and then turned to the camp with a feeling of relief and freedom easily understood by any old woodsman who has bunked for six weeks at a stretch in the little stateroom of a small yacht.

The night was fine, there was a glorious moon, and no lack of animal life about the bay or in the hammocks on either side of it. Marsh hens, herons, owls and chattering coons, with an occasional guttural bellow from a 'gator kept the camp from seeming lonely, and the fire of seasoned oak was on its good behavior. "It is good to be here," murmured the Scribe, as he stretched himself on the blankets and pulled drowsily at the pipe. "To-morrow I'll see—what's in these—'er—hammocks—if I aint—too tired." And the Scribe was asleep.

It was like coming home after a weary cruise to waken at early dawn, rouse up the fire and brew a cup of clear strong coffee, and then lazily listen to a mockingbird singing insanely but sweetly from the oak by the spring, and a cardinal in his best coat warbling from a hickory right by the corner of the tent, while a pair of chewinks foraged for crumbs within a yard of the back log.

And the old, old story was taken up once more: the story that is acted over and over again but never tires. Loafing silently through the woods, sitting on a log, getting an occasional shot at a squirrel or rabbit, lounging about camp, cutting night-wood and "fixing up." A real woodsman is always "fixing up" the camp when there is nothing else to do, and the camp is always growing more easy and comfortable the longer it is occupied. There was no lack of interest or incident to fill out the time. It was only a mile to the nearest orange grove, and there was good fishing in the stream, the best and gamiest fish being the sea trout or weakfish. There were ducks on the bay and squirrels in the hammock near camp, while on the other side of the stream there was a large hammock with better hunting.

Two miles up stream there is a high ridge known as "Mount Altitude," and following up the ridge for a half mile you strike the "Big Hammock," concerning which you will be told some big stories (mostly lies) of bear, deer, turkeys and panthers. The natives will tell you of a panther that was shot in this hammack, so large that it required four stout men to hang him up, and even then the head did not clear the ground. "I think," said a tall cracker who assisted at the skinning, "he must 'ave weighed more 'n 300lbs." He evidently believed what he said, and another man who helped hang the beast up corroborated his story. Mr. N. Hasty, the founder of Ponce Park, who saw and measured the panther, says, "Yes; I think it was the biggest panther that has been killed in this part of Florida in the thirteen years I have lived here. It measured about 9ft. from tip of nose to end of tail, and weighed, I should say, about 150lbs. I have known much larger ones to be killed in the Adirondacks."

The Scribe made a point of prospecting the Big Hammock from end to end and from side to side. He found two trails crossing it, one from north to south, the other from east to west, and it was not more than a mile and a half in extent the longest way. A fair day's walk was sufficient to do the famous hammock pretty thoroughly. There is a fine brook running through it from northwest to southeast, and in the soft soil along the margin were a few old tracks of deer, with one small bear track. A solitary gobbler opened his call within 50yds. of the trail, whereupon the Scribe got out his call and gently played two or three of his most seductive squawks. There was a faint, rapid patter of receding footsteps in the hammock, and that gobbler was heard no more. The peculiar "yelping" of the Scribe usually has that effect on the turkey tribe; and why and wherefore no one understands except the turkeys. The yelping is admitted by the best judges to be a good imitation, and it deceives the home turkey every time. Perhaps the wild one has a nicer ear.

The Scribe seated himself on a log, filled his pipe, and proceeded to muse and moralize after the following manner: "Well, here I am, in a hammock in southern Florida, trying to call the turkeys, which, like spirits from the vasty deep, the more they are called the more they don't come. On the contrary, quite the reverse, dash 'em. It's just as well. In the last fifty years I have learned a good many shiftless, thriftless accomplishments connected with woods life; but my worst enemy can't accuse me of being a turkey hunter, and I'm glad of it. Who ever knew a successful turkey hunter to own a decent coat, and a whole pair of boots? What can you expect of a crank who will leave the fresh track of a buck to follow a turkey track, knowing that the bird can run like the wind, and when he is tired of running can end the race by flying clear away? Long ago—in the 40's—I hunted in Eaton county, Michigan, with a partner hight Ez Putnam, and Ez was a most inveterate turkey crank. Time and again he came into camp after an all day hunt, covered with ignominy and turkeys that we had no use for; and this when the tracking was just perfect, and deer so plenty that you could seldom follow a single track without getting mixed. For more than two weeks he kept this up, during which time he only killed two deer, though there were still-hunters in the same range who averaged more than a deer per day. Of course we were hunting for sport—but with an eye to market—and turkeys were of little value in Marshall, which was our shipping point.

I remonstrated, mildly at first; then firmly, and finally with sarcasm and even abuse. He took it patiently, even penitently, as though he had been a confirmed inebriate with a strong desire to reform. His excuse was that he couldn't help it. He had been "drawed into it" by old Ned Cooper, the best (or worst) turkey hunter in the State, and somehow he found it a hard thing to break off. "You see," he explained, "I go out at daylight and find a big deer's track; I just swear myself to follow it till I get the deer, and in an hour or two I run afoul of a flock of turkeys and get a fair standin' shot. Of course I cut loose, and then the rest of the flock tree up, some of 'em in plain sight. Would you, would any man, go off and leave 'em without shootin'? I reckon not. And when a man has got two or three turkeys to tote along, it stands to reason he aint goin' to run after deer very fur that day. That's how it is."

Such woodland depravity might be pitied or condoned even; but it would hardly wash in camp, when turkeys were about worthless, while venison saddles were quick sale at ten cents per pound. So Ez and I made an equitable divvy of the plunder and dissolved. And that was more than forty years ago. I wonder on which side of the Dark Divide is he working his turkey call now? For no land devoid of turkeys could be a heaven to him.

This much by way of digression.

As the Scribe finished smoking and stowed away the pipe, his ear caught the soft crash and rustle of a squirrel traveling along the treetops, a sound that every woodsman knows so well. It was a beautiful gray or hammock squirrel, and he was making straight for the trail which he was destined never to cross; for just as he let himself out for an extra hazardous leap, half a dozen chilled shot crashed through his sleek gray pelt, and he fell dead at the edge of the trail. It seemed a brutal thing to do. But when the average sportsman gets loose in the woods, with an empty stomach under his shooting jacket and a scatter gun in his hands, beautiful plumage and sleek fur are poor protection against his savagery.

The Scribe sauntered up the trail to the northward, crossed the creek with its miry bottom, climbed the steep bank where the hammock ends and the scrub begins, and followed out to where the scrub peters out to thin wire grass, dwarf palmetto and flat pine lands. Nothing can be more dreary and monotonous than these "flat lands" as they are called. They have a scattering growth of southern pine, too small for lumber, usually. The soil is absolutely worthless, there is no shade (the pine tops are too thin), and no life save an occasional woodpecker. Even the half wild cattle and wilder hogs avoid the flat lands. Only one thing can be said in their favor. They afford excellent roads—when not under water.

A mile of such traveling was enough, and the Scribe turned back. Just as he was entering the scrub a small bevy of quail darted across the trail, scurrying for shelter, and quick work with the first barrel saved a brace of them. A slow, cautious walk down the trail to the bank where the canoe had been left, gave another squirrel, which was plenty for camp use, and the Scribe descended the high, steep bank, found the canoe safe and paddled leisurely down stream, stopping a while at Mt. Altitude to see an old darkey catch sheepshead, which were of the largest size, and again at the bridge to see a white lad throw a light Spanish cast-net for mullet in deep water, at which he was very successful, and then to camp.

A few minutes suffices to start a lively fire, put on the camp kettle and dress a gray squirrel for supper. Unlike his big brother, the fox squirrel, he lives almost entirely on hickory nuts, by which it happens he is of superior quality as regards flavor, fat and tenderness; and, in fact, there is no better game brought to the camp-fire than the gray or hammock squirrel of Florida. The fox squirrel is twice as large, often weighing 2½lbs.; but he lives mainly on acorns and the seeds of pine cones, and, though very good in a stew, is inferior to his smaller brother, either broiled, stewed or fried. And here, dropping the impersonal, let me say that, dur ng more than fifteen months spent in the woods and wilds of Florida, I never saw a fox squirrel at work on a hickory nut. I doubt if he can get at the inside of one. As to the gray squirrel of the South, he only differs from his congener of the North in having a lighter brush and weighing an ounce or two less.

The Florida quail also weighs less by an ounce than his Northern cousin, and he is a handsomer bird withal. I shot a good many during the two winters I camped on the Gulf coast, and to say the truth I always felt a little ashamed of murdering such cute, beautiful things for a few ounces of meat, knowing in my conscience that hog and hominy was quite as good fare as I deserved.

To conclude with a few lines on camp cookery. Don't go back on the frying-pan; it is the main, and the best cooking utensil in camp. But, to fry well is something of a knack, and requires care. Small game and fish are apt to curl up and warp away from hot iron, which renders it difficult to get the right brown on either. To obviate this fit your fish or game so it will lie flat in the pan, have the fat hot, but not hot enough to scorch, have a tin plate that will just fit easily into the frying-pan, and press it on to the contents of the pan firmly, with a stone on the plate heavy enough to keep it in position. When nicely browned on one side, turn, and brown the other. It is rather an old dodge; but I constantly run across outers who complain that they cannot make trout, squirrels, etc., lie flat enough in the pan to brown properly. Only the hind quarters of squirrels, rabbits and opossums should be fried; and these, as well as birds, should be first parboiled until tender. NESSMUK.

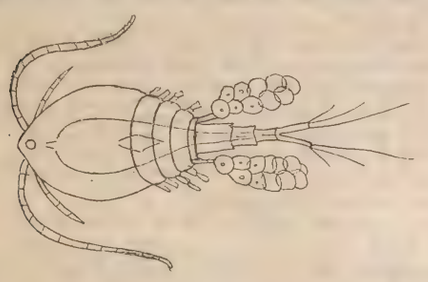
FRAGMENTS FROM A LETTER FILE.

Am glad to know that "Uncle Lisha's Shop" is to appear in book form. I'm good for one. I've been out West and up to the Sault since I wrote you, but did not have any fishing. The warriors who sling the dip-net at the Sault for whitefish demanded $4 per half day to paddle his white brother where perhaps he might catch a fingerling, and my exchequer didn't warrant any such disbursal. I have been out on Lake Erie once or twice after pike and bass, with fair success.

There are two gentlemen here in my room and three more on the verandah just outside the door. All are smoking and talking, and have been for two hours. I have been trying to write, how much of a success you will see if you, by any possibility, can read the inclosed. I cannot write, smoke, laugh at the proper point in a story, and do it all properly at the same time.

The one question with me is, will it pay me to go so far? *i. e.*, shall I find the fishing sufficiently good? I must have fishing from a boat, because I am not able to walk. This has led me to think much of Lake St. Joseph. As to roughing it—in the sense of plain food, sparsely furnished rooms, etc.—I am quite prepared for all that. My physical condition forbids exposure. If the fishing is good, that is the thing for which I chiefly care.

Outing depends upon several things for success. The very first, think, is good fellowship and a desire to enjoy everything conducive to health. And it is all conducive to health if not spoiled by a capricious man.



Natural History.

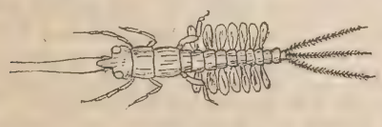
POND LIFE.

FEW people suspect how rich in life our fresh-water ponds are at mid-summer. Any one who will collect a few quarts of water from a weedy pond and place it in a glass jar in a good light will be surprised at the number of living things that may be seen swimming, leaping and creeping about in it. Small and shallow ponds in which many water plants are growing are best for making collections. By taking the trouble to make a net of some fine woven material—mosquito netting will do for the larger forms—a much larger number and variety may be obtained. They may be kept alive in the jar for a long time if a water plant or two be put in with them and water is added daily to make up for evaporation. In this way an interesting aquarium is made.

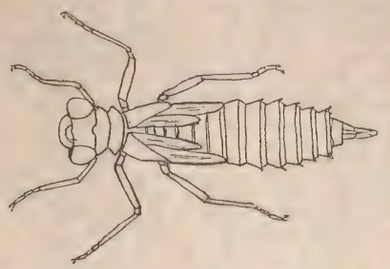


Let us examine some of these lively little creatures and find out where they belong in the great world of living things and, as far as we can, how they live and move and have their being. Suppose we begin with this little fellow, just large enough to be readily seen, which swims along with a jerky motion and which is easily distinguished from all others of its kind by possessing a single eye directly in the middle of the head. Its name is *Cyclops* and it belongs to a group of small crustaceans called *Entomostraca*, or, in common language, waterfleas. One

CYCLOPS.

notices its long antennæ which seem to serve as swimming organs as well as feelers, its short kicking legs, its ringed abdomen or tail which terminates in two long whips which seem to serve as rudders. If it is a female cyclops we are examining our interest will at once be centered in the two large sacks attached at the sides of the abdomen and filled with what one would at once guess to be eggs. Eggs they are, and being carried about by the parent in this way their chances of development are, no doubt, very much better than they would be if they were set free in the water and exposed to the danger of being devoured by some hungry creature. When they have reached a due state of maturity they escape the sack, and it has been found that their subsequent development is through a series of remarkable changes, though not uncommon in the group of animals to which they belong. They pass into what is called the nauplius form, an organism very different in appearance to an adult cyclops. The nauplius goes on developing, passing through a series of moults, and finally the perfect animal is reached. Thus the little cyclops has a truly wonderful life history.

Even more remarkable is that of this other creature, very much larger than the cyclops and belonging, as we see at once, to the order of insects. We observe the wing-like parts, though we know, of course, they are not true wings. What they are, in fact, is gills, and we can see the branching tubes which penetrate them and which



EPHEMERA.

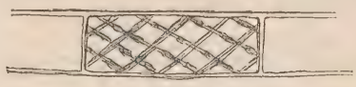
really have just the same use as the tubes (called veins) in the wings of insects. The only difference is that in insects these tubes are filled with air derived from the atmosphere, and in our animal with air derived from the water. But I have already said that our animal is an insect and I must hasten to explain that it is now in its larval state, and that in its perfect condition it possesses true wings and flies in the air. But it enjoys this liberty only for a single day; the insect we are studying is one of the *Ephemera*, the class receiving its name, of course, from the fact just stated. When their one-day existence in the air is terminated they return to the water, where the female deposits her eggs. These hatch into the larval form we have seen swimming about, and in this state persist until the time of flight, when a metamorphosis into the winged form occurs.

It need hardly be said that the larvæ of many other insects will be found in our aquarium. The mosquito spends a part of his career in water, and judging from his restless, jerky movements he may make himself as disagreeable in that medium as he does in the rarer one which he inhabits later. The larva may be recognized by this movement or by the bristled process, an organ of breathing, which terminates its abdomen. The larval stage is succeeded by the pupa stage, also spent in water. In this stage the mosquito has a large head with prominent eyes and a ringed abdomen terminated by two swimming paddles. The body is bent a good deal and the creature swims by a kind of rolling movement.

If in making our collection we dipped pretty closely to the bottom of the pond it is very likely a larva of the dragon fly or devil's darning needle was caught. This is quite a large creature, fully an inch long, of a black color, and rather savage in its disposition, as we should judge from the insect's name. By seizing it just behind the head it cannot bite us, though it is not likely the wound would be a severe one if it did. We notice the wide head and prominent eyes, likewise the wide abdomen with its pair of short rudimentary wings and respiratory process at its end. The body is covered with a hard skin like that of beetles; one may often find these skins, dry and empty, along the shore. They are what is left of the larva after its transformation into the adult dragon fly. Before the transformation the larvæ crawl up out of the water, their skins split along the back, and the perfect insect escapes, leaving the skin behind. The cycle is

DRAGON FLY LARVA.

begun again by the dragon fly depositing its eggs in the water, this it does by flying to the surface and dipping its abdomen a little beneath.

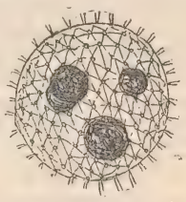


Other insect larvæ likely to be met with are those of water beetles. Some of them are quite large and possess powerful biting jaws.

Crawling along the sides of the jar may be seen many small worm-like animals. Some of them would doubtless prove upon examination to be insect larvæ, but others are true worms. Among the latter, perhaps, is the nais, one of the most interesting objects for examination our collection affords. To the naked eye nais is only a short white hair, but when magnified a creature truly beautifully and wonderfully made comes to our view. The skin is transparent, so that all the internal parts can clearly be seen. The body is made up of a series of segments, like an angle-worm. Indeed, the nais has a very similar structure to the angle-worm, and if the skin of the latter were transparent so that we could see the parts within, it would look much the same as nais does under the microscope. We should see the long intestine running through the segments like a string on which beads are strung, the delicate blood vessels constantly pulsating and so driving along the white blood contained in them, the rows of bristles which form the legs and which fit into pouches in the skin, and finally, if we looked sharply, the very curious breathing organs which are like funnels—a pair in each segment—the large inner end being surrounded by a row of vibrating cilia which keep up a circulation between the fluids in the body and the water without. The way Nais multiplies itself is very curious; it simply divides into two parts by a break in the middle of the body, each part soon becoming a new and perfect animal. As this is the natural way for nais to reproduce, we are the less surprised that its near relative, the angle-worm, is able to undergo cutting in two without loss of life.

Among other worms that may be present, these small dark flat ones attached to a stick or dead leaf, perhaps may deserve a moment's notice. They belong to the interesting group the *Planaria*. One notices the two black eye spots and the dark area in the middle of the body which represents the stomach and which has very many small gastric canals running out from it. These little creatures seem lowly enough, but one finds here as everywhere a perfect adaptation to that place in nature which they occupy. Witness the organs of defense with which they are provided, short, stiff rods concealed in the skin and shot out in great numbers when they are irritated.

Speaking of stinging organs we are reminded of the little green (or brown, it may be) hydras attached to our jar. This is a classic animal. In 1744 Trembley, a Swiss naturalist, did those experiments with it which have secured its fame for all time. He showed that the hydra can be cut into small pieces, either lengthwise or crosswise, and each piece will grow into a new animal. Furthermore he showed that the creature can actually be turned inside out, so that its stomach-lining becomes its skin and *vice versa*, and no apparent inconvenience is suffered by the change; it goes on catching and devouring prey as if quite unaffected by its evagination. Any one who does not know the hydra may easily recognize it by its long slender body, one end of which is attached to some object and the other provided with six or eight long swaying arms or tentacles. It catches its prey—minute plants and animals—either by grasping with the tentacles or by stinging them with thread cells, precisely like those of jelly-fishes. It is very interesting to watch the movements of a hydra. It slowly sways its body to and fro and thrusts its arm about in its search for food. Under a slight irritation it quickly contracts its body into a small rounded mass. Commonly one can see young hydra growing out from the parent-like branches of a tree. The hydra can readily be seen with the naked eye, being a quarter to half an inch long when expanded.



All the forms of life thus thus far described are large enough to be easily seen without the help of a glass. There are many others which can be discerned by the naked eye, appearing as minute floating specks, but which require a microscope for their examination. Then there are very many others which are far too small to be seen at all without artificial help. Provided with a microscope one could spend a very long time in studying the wonderful forms of life contained in our aquarium. It would be too great a task to attempt to give an idea of the number, variety and beauty of the living objects that would be found. A sketch of the life found in fresh-water ponds would be quite incomplete without some reference to the plants that are always found in them. Here again we must limit ourselves to a few of the most common. Let us begin with one that is almost invariably present, and that will be recognized under the name of pond scum. Every one has noticed the green or brown patches that float on the surface or are attached at the bottom and sides of the pond. They are not very attractive forms of plant life to the ordinary observer, but when one has once learned about their life history, they will always afterward be of a good deal of interest. There are many kinds of these plants; let us take one of the most common, the *Spirogyra*. It looks somewhat like a green jelly when viewed in masses under the water. But if a little be taken into the hand it will be seen to consist of many very fine green threads closely interwoven so as to form a kind of felt-work. These threads have a surprisingly beautiful appearance when examined under a magnifying glass. They are seen to consist of rows of oblong cells placed end to end, each consisting of a delicate transparent case wound about on the inside by green bands, like the threads of a screw. For some unexplained reason that portion of the matter contained inside the cell which has been stained green by chlorophyll takes on this spiral form. On a sunshiny day the cells are constantly growing in length and after a time cross-partitions are formed in each cell, each one thus giving rise to new ones. When the strings have reached a certain length they break into pieces and each piece going on growing as before, it is understood how rapidly pond scums extend themselves. In the fall of the year they die away, but in the spring they appear again in full vigor. The manner in which they are preserved during the winter is worth studying as illustrating a process common to many waterplants. Early in the summer the plants form what are called zygospores which fall to the bottom of the water and remain there in an inactive

POND SCUM.

condition until the next spring. Then, under the influence of warmth and light they grow into new plants. In the *Spirogyra* a zygospore is formed by the union of two cells of contiguous filaments, this union being considered a sexual process.

Quite common in midsummer is the very curious little plant called the volvox. To the naked eye they appear like little green balls slowly rolling through the water. They really consist of a mass or colony of cells in the

VOLVOX.

form of a hollow sphere. Each cell is provided with a pair of vibrating cilia which project into the water, giving the ball a hairy appearance, and by their movements propelling it through the water. In the hollow of the sphere other smaller balls may be seen, and examination shows that they are precisely the same as the larger one, forming an instance of life within life. After a time these smaller ones escape and begin a career of their own. A friend of the writer says that he saw many of these plants in one of the Adirondack lakes a few years ago at about midsummer. They were so thick that water could not be dipped up without catching many of them.

Another curious plant common in ponds is *Hydrodictyon*, or the water net. It consists of a tubular net composed of very many elongated cells attached at their ends. Sometimes the net is 10 or 12in. long, and the cells one-third of an inch long. In this plant, too, a miniature plant (in this case a net) is formed inside the parent and finally escapes as a new plant.

Of the larger plants growing in ponds *Chara*, which has a very interesting history, is quite common. It may be recognized by its slender tubular stems to which whorls of needle-like leaves are attached at regular intervals. The portion of stem between two whorls consists of a single large cell surrounded by many small ones arranged spirally about it. Sometimes one can see in the large cell the movement of its thick fluid contents. It streams up on one side and down on the other with a slow, steady progress—a form of motion in plants which has been studied a good deal by botanists. Where the leaves unite with the stem may be seen the reproductive organs. They are of two kinds, one produces free-swimming male cells and the other female cells. The former swimming about in the water meet with and fertilize the latter, which then become surrounded by a hard case and finally fall to the bottom of the water. There they remain until the coming of conditions favorable to their germination, when they give rise to a new plant. This plant, however, is not like the original *Chara*, it is a simple growth consisting of a single row of cells, one of which, after a time, becomes the starting point for the growth of the more complex sexual plant.

Many other plants, not less interesting than these named, are common in our ponds. Here again the microscope would reveal to us an unexpected abundance. The green slime that coats the surfaces of stones at the bottom and the film that gathers around the stems of the large plants are very rich in microscopic plants.

To the plants in ponds is due the preservation of the purity of these waters. The noxious products of the decomposition of dead animal tissues (for where is so much life there must be a corresponding amount of death) are in large part absorbed by the growing plants. Furthermore, the plants give off gases to the water which keep it sweet and capable of sustaining animal life. Thus there is a mutual dependence between the two great families of animate nature. S.

A SPARROW TERRIER.—Washington, D. C.—There is a black and tan terrier of peculiar ability in this city that is distinguishing himself by extinguishing sparrows. He belongs to a street car driver and accompanies an open car to and from the Navy Yard to Georgetown. Sighting a bunch of sparrows the dog goes for them like a flash, seizing one, which he quickly kills and carries a short distance, then he drops it and goes for another bunch. He has been known to kill six on one trip, and at this rate could round up with a record of twenty-five or thirty a day. In spite of the fact that sparrows are so numerous and that there is much prejudice against them the dog is unpopular. Threats of killing him are frequently made, while passengers express their dislike of the dog and sympathy for the birds.—J. C. B.

RANGE OF SCORPION AND TARANTULA.

THE scorpion and tarantula are inhabitants of hot climates, and the average temperature of a locality may be supposed to limit their northern range. Both of these animals are found in some numbers in southern Kansas, but I have supposed that their occurrence much to the north of this was extremely rare. Recently, however, one or two facts have come to my knowledge which lead me to think that both scorpions and tarantulas may occur in the northern country more frequently than I had supposed. In the summer of 1885, while in Billings, Montana, I saw a live scorpion, which had been captured within two or three miles of that city. It was a young one, only about an inch and a half long, but was very vigorous and lively, using its tail viciously when touched with a stick. It was of a pale horn color. I heard on good authority of the capture of another near Miles City, Montana. This would seem to give the scorpion a range on the plains as far north as the Yellowstone River, which is much further to the northward than I supposed it reached. The capture of a supposed tarantula in Shirley Basin, in Carbon county, Wyoming, is reported to me by Mr. A. J. Matthews, a very intelligent gentleman, for some time Principal of the Academy at Adams, Jefferson county, New York. Mr. Matthews is not a naturalist, but has frequently seen tarantulas preserved in collections. He reports this huge hairy spider, which ran out from under a log which he turned over, had a spread of legs of about six inches, and to have corresponded in all respects with the preserved tarantulas which he has seen. Unfortunately the specimen, which he killed, was not preserved. An intelligent and observant ranchman, Mr. W. H. Reed, reports having seen a very few tarantulas in the mountains during a residence among them of ten or twelve years. The Shirley Basin, on whose western border Mr. Matthews killed this spider, is situated in the bend of the North Platte River, and is about twenty miles south and fifteen miles east of that stream. In the Montana and Wyoming localities mentioned the temperature falls very low in winter. In the Shirley Basin the mercury often freezes.

I should be very glad to hear from any of your readers anything that may throw light on the question how far north these two creatures are found in the Western United States. Perhaps Dr. Shufeldt can help us on this point, and there must be many of your Western readers who have observed facts which bear upon it. G. B. G.

SHIRLEY BASIN, Wyo., July 30, 1887.

ARTEMIS.

WHAT happy inspiration prompted the follower of entomological lore to think of the goddess of the woods, the chaste Artemis of the Greeks, in dedicating one of the most beautiful of butterflies, the insect queen of mountainous Pennsylvania, to the memory of Diana? Was it the conformity with the chaste hues of this handsome winged denizen of mountain forests, or was it its ever-restless attitude which distinguishes it from the various members of its tribe, which numbers among them such old-time renowned personages as the Polyphemus, Danais, Atalanta, etc.? As a matter of fact we find Artemis spread over a vast extent of our northeastern continent, from the southwestern highland of the Virginia Alleghanies to the northern shores of the St. Lawrence River and Gulf beyond, where I never saw the sight of this beautiful butterfly in my wanderings for trout. He becomes replaced toward the South gradually by the handsome, but funereally-robed congener which is called *Limenitis* by the entomologists, and forms one of the most common and conspicuous sights along the course of the rhododendron-fringed rivers and brooks of western North Carolina. But the northern butterfly surpasses her southern sister vastly on account of her beautiful colors. The general ground tint of the wings is of the deepest and almost b ack violet, but the upper ones are conspicuously ornamented by two broad curved bands of the purest white, which quickly attracts the eye by the happy combination of coloring, and mark the insect as the winged forest queen of our cold temperate zone. They are by no means over-abundant in Pennsylvania, and a week's collecting, if attended with satisfactory success, will hardly yield more than fifty, while here over two hundred rewarded the expense of only two hours' labor.

I did not intend, however, on this memorable occasion to make any collection of insects nor to devote my time to their study, but a far different purpose had hastened my steps for over 1,200 miles from far off home over sea and land to my first resting place, the gravelly shores of Mann River, a tributary of the famous Nouvelle, in the eastern part of the Province of Quebec, and running into the waters of the Baie des Chaleurs. What else could it possibly be but the magnetism of its finny population, which attains here to enormous sizes, averaging from a minimum of three to seven pounds in weight? They are all of the variety known everywhere as sea trout, which are anadromous by habit and therefore migratory, and thus at times very numerous, while it often happens that again they are entirely absent, as in the Nouvelle, where one on the first view of its magnificent large and deep pools would surmise an immense concourse of trout at any time.

Yet such is frequently the case, as I know best by my own experience of last summer on the Nouvelle, when the results consisted all told in four large four-pound trout, and all this at a distance of thirty miles from the mouth of the river. Probably thirty miles higher up it was black with them, as they appeared to have ascended as far as possible to the ideal terminal big pool for spawning purposes. But it is not in these brief notes my intention to describe what I saw this year in the way of sea trout, but rather to relate my experience with the Artemis, which I noticed along the Mann River in the most wonderful abundance.

Since entomological investigation had formed no part of my present mapped-out programme in ascending the river, the insect net had been left behind, never thinking for a moment that the po derous landing net would have to be called upon to hold within its stout meshes such strange game as gauze-winged Artemis instead of ponderous 5-pounders of sea trout. But such turned out to be the case on the second day of my stay, when I noticed the occurrence of these insects in such wonderful swarms that I set about to secure a big lot, as I never could hope again to obtain elsewhere so satisfactory returns for time and labor invested. It had been the odor of the blood of some of the large trout we had taken, and which freely bled on the gravelly beach, to which I have to ascribe their large congregation in such small limits. Never, even in equatorial America, where months were devoted to collecting of butterflies, did I ever see such an enormous assembly of beautiful insects, all massed in a space of only about 50yds. wide and long. What a desecration to the legitimate mission of the trout net to see now within its meshes in more than one cast no less than twenty-four of the Artemis wildly fluttering about and powerless to break the firm and complex barriers of its web. There were now, outside of those imprisoned within the net, immense numbers flying around still, which could safely be estimated by hundreds and fairly crowding into the spot which had been painted by the blood of our finny victims. I shall never forget the sight which met the delighted eye on this exquisite typical bit of Northern scenery while rocking as in the cradle in the birch canoe, with a river at my feet whose dark emerald hues and waters are, even in the middle of July, as cold as ice, while great mountain walls rise almost vertically and abruptly from the foot of the foaming, roaring stream until their summits, towering up to a height of 1,800ft., are kissed by the fleecy, billowy, cumulus clouds floating high over the landscape, which they embellish by their continuous alternations of bright sunlight into passing shadows. If we add to these atmospheric displays the ornamentation by the vividly green spring foliage of the deciduous trees and shrubs comingled with the oceans of evergreen which cover every foot of the mountain slopes and river shores, and the leaves of their overhanging branches dotted, to crown the effect, with hundreds of the brilliant gems of Artemis pictures, quietly poised on their velvety surface and increasing the happy contrast of color by their black and white wings, we have a picture still engraved on my mind which will never fade from memory. CHAS. LINDEN.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One short-tailed wallaby (*Halmaturus brachyurus*), one Derby's opossum (*Didelphys derbianus*), one yellow-billed strathbill (*Chionis alba*), two white-fronted parrots (*Chrysotis leucocephalus*), one augolan vulture (*Gypohierax angolensis*) and five scarlet ibis (*Ibis rubra*). Presented—One German linnet (*Linaria cannabina*), four box tortoises (*Cistudo clausa*), five land tortoises (*Testudo tabulata*), two water snakes (*Tropidonotus sipedon*), one banded rattlesnake (*Crotalus horridus*) and one green snake (*Cyclophis vernalis*). Born—Two American elk (*Cervus canadensis*) and five musk rats (*Fiber zibethicus*).

Game Bag and Gun.

IN THE CHEROKEE STRIP.—VIII.

TIME passed only too quickly for our short respite. The great American arch-demon, Business, sent down a warning note to the Cimarron that he was about to claim his own. Mr. Streeter declared that he must go; Mr. Kirkpatrick also was wanted at Kiowa. One more day with the hounds, said we, and we will all go north together. It was agreed.

We took every available greyhound on the ranch, and also the two foxhounds, and bright and early trotted off toward the flats for a regular field day with the deer. We had a string of dogs, about two miles long, more or less, and there were good ones in the procession. The puppies frolicked all over the country, while the veterans kept close to the horses. The blue dog trotted for miles with his nose between the hind legs of Mr. Streeter's horse, and Prince kept close alongside. Jim and Terry staid by old John, the former dog limping painfully, and the latter looking as if he had stuck his nose in a hornet's nest. Close-leashed together, Buck and Drum, the two foxhounds, ambled along behind, their long faces filled with a magnificent gravity, as if the safety of the country depended on them. We had an idea that we had found a sort of runway of the deer, and intended to put in the foxhounds and see if they would not bring the deer around to us again. Old Mike was so lame that we had to leave him at camp. All the dogs showed hard usage; the frozen ground had made havoc with their feet.

We rode out on the flats, about five miles beyond the timbered sandhills, and about eight miles from home, before we saw any deer, though the foxhounds would have run on several trails if we had permitted it. All at once Red, who had been a little in advance, bent down in his saddle, wheeled his horse under cover of the hill, and came back to us with a happy sort of smile on his face which unmistakably meant deer. There were, he said, four deer standing not 200yds. from us, just beyond the hill.

We could have easily killed a couple of the deer, at least, with the rifles—Mr. Streeter, Ricker, Red and I all having guns—but the opportunity for a chase seemed too good. The foxhounds were, therefore, hurriedly secured, the greyhounds bunched as well as possible, and we all stooped in the saddle and rode with short breath up to the crown of the hill. Four white fans were going, drifting along, hip-hopping, hitting the ground once in a while, about 250yds. ahead of us. And not a dog saw them!

They say a greyhound has very quick sight. It may be so. But I don't believe it. Of course, a dog has not so extended a range of vision as a man on horseback; but these deer were in full view on a hillside, and the grass was short. I think a greyhound is not quick to change the line of his vision. He is a line-runner. If he happens to have anything in his line of sight, very good; but much depends on the send off. There is but a moment for the send off, and deer always start just the way you don't expect.

There was, perhaps, a little conceded rivalry among our dog owners that morning, and each man tried to get his dogs in closer than the others. I have been told that Mr. Allison has been known to have such pride in the success of his dogs that he has turned them off a course where they didn't have a dead sure thing for the best send off. As that would savor too much of the turf ever to please a lover of the field, and as it is, moreover, unnecessary with such good dogs as Mr. Allison unquestionably has, I surely prefer to think it a mistaken assertion. It would be a justly exposable crime against sportsmanship, as well as against sport, to pull a good hound in a good course, even if he were a mile behind. Let him run. He likes it. It does him good. Mr. Allison's dogs are not going to catch all the deer, any way he can fix it; nor Mr. Streeter's, nor any other man's. There's too much chance in it. Good rivalry is good; but reputation in the field is got by being careless of reputation. I, for one, would not follow a hound a foot in a deer course if I thought there was any of the smell of the turf about him.

Well now! Where was I? And where were the dogs? They were mostly nowhere, apparently. Not one sighted! And the very heart-strings in our bosoms stretched longer and longer as those four white-tailed acrobats went away further and further, in spite of our desperate wishes that they would hold on, just a minute!

Thinking the deer would soon turn into the wind, I pulled off to the right, and was soon quite alone. Slipping the rifle out of the holster as I ran, I determined to cut in behind the point of a big sandhill, and try for a flying shot as they came by, trusting to Providence to be able to get my horse again, which I knew would run off as soon as I dismounted.

The deer did begin to turn. And almost at the same moment I saw something long, and lithe, and yellow—a very tawny thunderbolt of a dog—whizzing by me straight for the deer. Sandy Jim, and sighted, by the Lord Harry! Lame? That's all right. He might have been lame in all four of his legs. He didn't need his legs, very often. He only came down once in a while!

Viva! Jim. Hoo-oy! Jim. And Bugler, thou slab-sided livery-horse, and son of a livery-horse, run now, or I'll get off and run myself! And Bugler could run. And he rose to the occasion. My lariat came down, I lost my saddle blankets, my rifle was out of the holster; but all the same Bugler and I maintained our former social relations, and we saw as pretty a little run as most fellows ever get to.

I didn't mind losing the saddle blankets so much, and I didn't care about the saddle's getting under the horse; but when Bugler got his hind legs through the front cinch, I dismounted. I grabbed the end of the lariat, and ran as far as I could toward the point of the sandhill, near which I now was; still having a good chance for a shot, as the deer were turning fast to the right. Just then Mr. Allison came thundering up behind me, and passed on over the hill. This turned the deer, and I lost my shot. The first thing I knew, Jim was off the course, and the deer all disappearing in the distance. But if I can have that much fun, all by myself, I don't care whether I catch a deer or not. Same with Bugler.

I gathered up my goods and chattels, and was resuming navigation just as Mr. Allison called out and pointed to the left. There, streaming up a little slough, went a second chase, well bunched together, with all the other men and dogs in it. A rush, and the quick closing in of all the dogs, horses and men, told the story. Waving hats and the faint hollo repeated it. Away we both went to our successful brethren.

It seems that this deer—which was a young buck—had jumped up out of the grass about 100yds. ahead of the main body of the dogs, just as they finally had got sighted and were running the first bunch of deer. The clean-built young buck had run nearly a mile and a half at a terrific pace, well in sight and followed hard. The blue dog was first to seize, and Terry was next, and half a second later a whole wagon load of dogs. The blue dog threw the deer, and it never got up at all. It was scared nearly to death, and its despairing bleat, just as the hounds closed in, was its signal of surrender to a foe which gave no quarter.

I say "the blue dog" caught the deer. Ricker said he could see a blue dog close in and throw the deer. Mr. Streeter thought it was his big blue Eagle Chief dog, and Red thought it was the blue puppy of the 21. *Quien sabe?* But we all agreed that we got the deer.

There was a little tree near where we now stood, and in this we hung up the deer, though Ricker afterward came back and slung it behind his saddle when we started for home. This tree, which was the only landmark near, was agreed upon as a sort of rendezvous.

The foxhounds were now loosed upon the trail of the deer Jim had been chasing, and they promptly ran clear out of the country, and were last heard by Red and Mr. Allison away to the south in the timber on the T5 range. Red did not believe—and perhaps some sportsmen would not believe—that these two foxhounds would run away from any horse on a trail, in less than three miles. But that is just what they did and will always do.

Mr. Streeter took his dogs and cast out for part of the scattered bunch. Ricker and I started north for a bed of willows where the deer nearly always ran through when hard crowded by the dogs, and where they often shook off the pursuit in the dense cover.

I did not see much more of my companions till I got into camp. I had no comfort of my day's hunt after I left Ricker, for my idiotic fool of a horse kept neighing for his mate in such a way that still-hunting was impossible; and in spite of all I could do I could not stop him. Once I sighted three deer about a mile distant, in good position for stalking, and having the wind, I made a long detour and came up within four hundred yards of where they were; but just as I had dismounted and was crawling up, with the end of the lariat in my hand, what must that brazen-lunged, asinine imitation of a horse do but let go a yell which would make a steam calliope blush for shame. Away went my deer. They thought Satan was on the range; and this lineal descendant of his never undeceived them, for he kept up his demoniac chorus till I knocked him over the head with the rifle barrel. Usually I am of sweet and angelic disposition, but this was one of the times I wasn't. Seriously, I would have shot that horse then and there if he had been mine; but I knew the liveryman, instead of being content with four dollars and a half, the real value of the horse, would want at least fifty or sixty, and find points of excellence I never would have dreamed of. Talk about still-hunting, though! Why, I'd rather go still-hunting with a brass band than with that creature. A fellow could watch the drum major and tell about when it was going off; but with Bugler you couldn't.

Ricker reported a trouble with his horse similar to mine, and we were two disgusted hunters when we met near camp early in the afternoon.

Shortly after we got into camp, Mr. Allison and Red came in with a few of the greyhounds. They reported the foxhounds lost. No word from Mr. Streeter at all. They also told us that they had hung up two more deer in the little tree, their horses being so done up they could not bring the deer in. They had had hard riding and plenty of it, and had seen a number of deer. The blue

pup and Terry had a yearling buck squarely to their credit. While gralloching this deer, they had heard the bleat of a doe, probably its mother, and presently she came running by, pursued by the blue pup and some of the other dogs. Red fired two or three shots from Ricker's .45-90, and just singed the foreleg behind the knee. Terry ran in from near where they were standing and turned the doe, at which the blue puppy bolted in, and he and Terry killed, close together in the seizing. These two dogs had done grand work all day long.

After a lunch, Mr. Allison and I took the buckboard, with Bugler and his mate, and started out to bring in the deer, half fearing we should not find them, it being late and the distance over ten miles. We drove hard and finally did find the game a little before sundown. The country was beginning to look very dangerously alike all over, when we fell in with Mr. Streeter, and shortly after happily hit the gate in the pasture fence of the 21, whence we easily got into camp.

Mr. Streeter reported plenty of deer, but all very wild. He had one or two good runs, but caught none, unless the blue dog, now absent, had caught one. He complained that Prince had stuffed himself up so on corn bread in the morning that he could not run "a little bit."

Our game rack was now a goodly sight. It was covered with deer, and showed besides abundance of cat and coon skins, to say nothing of the otter, the solitary turkey and the festoons of wild ducks we had hung upon it. It bespoke a successful hunt. We all agreed that the last day was a fitting close.

By dark most of the hounds were in; and to our surprise, Jack reported that the two foxhounds were swimming the river from the south. The dripping coats of these two vagabonds disclosed no signs of conflict, and their faces were solemn and imperturbable as ever; but, as they had started so early in the day, and as they must, from the direction they had when they came in, have gone thirty miles at least, it is altogether probable that they killed their deer. They are fast enough and fierce enough to kill almost any deer within twenty-four hours, even with an indifferent start. These two dogs were inseparable. If you saw one, you saw the other. They hunted excellently together. E. Hough.

GERMAN HARE SHOOTING.

Editor Forest and Stream:

The season for partridge shooting opens in Prussia on the 20th day of August, in some parts of Germany on the 1st day of September. Hares can be hunted everywhere after September 15, and one month later all game, deer calves and young roe excepted, follow.

The prospects for partridge and hare hunting are good. The weather has been favorable for both during the hatching and breeding time this year. The Prussian province Silesia is the best field for partridge hunting in Germany. Silesia also contains excellent hare hunting grounds, is in short the Eldorado for a gunner. A good gunner can kill as many as one hundred partridges on one day, and can reach the same number when hares are hunted.

Hares are generally hunted by means of a so-called "Kesseltreiben." From thirty to fifty gunners and double that number of so-called drivers surround a given space of an open field. After the selected space is thus surrounded, drivers and gunners move toward each other in a circle, when the aroused hares as a rule try to find a safe opening to escape on the opposite side. Upon reaching the other side they find the same body of men in motion, and now break to the right or left. Meanwhile the circuit has assumed a smaller size. The gunners are only 150yds. apart and no hare can possibly break through the line without passing a gunner at shooting distance. It affords great pleasure to see from twenty to fifty hares run in every direction within the circle. Frequently after one has broken through the line half a dozen will follow in the same direction, and thus the gunner nearest the point will not have time to reload his gun quick enough. Where hares are in great abundance, as in Silesia, each gunner is equipped with two guns, one being carried and loaded by a servant marching in the rear of the gunner.

Hares generally weigh from 8lbs. to 12lbs.; the market price averages 75 cents. The hares killed are gathered up after each circle and placed on a wagon, the same wagon which, as a rule, carries the lunch, beer and wine for the hunting party. A small fine is collected for every miss. There are, however, gunners who seldom miss a hare in the open field.

For hares No. 3 chilled shot is used in the winter, No. 4 and 5 before the animals have their heavy winter coat. On rainy days a good charge of powder is required to give the pellets sufficient penetrating power, and even then old hares will often get away in spite of all good shooting. Armin Tenner.

Berlin, July 13.

Rochester Woodcock Shooters.—*Editor Forest and Stream:* Rochester sportsmen had fair sport on the opening of woodcock shooting, Aug. 1. The best bag reported was seventeen birds, by a party who shot in Irondequoit. Abram Geis and two friends shot ten in the same town. Two men got twelve east of the city. John Nouch, Geo. Zimmer and John Hafner brought in ten and F. H. Krug got twenty-four in two days. One man who shot nine, and whose word is good, states that he saw a woodcock perched in a tree 6ft. from the ground. He flushed the bird and shot it. On the morning of the opening day one favorite piece of cover near the city was beaten by seventeen men with guns. About twenty-five birds were taken out.—E. R.

Shore Birds.—New Castle, N. H., Aug. 6.—Shore birds have not made their appearance here in numbers as yet. I have seen several flocks of ringnecks and peeps, but no large birds. I heard of two curlew being observed off Appledore Island, Isles of Shoals, a week ago. I have no doubt that the next two weeks will bring in some summers and a few yelpers.—J. Wendell, Jr.

Hunting Rifle Alteration.—In your paper of the 21st ult. "Flint Lock" asks me to name the gunsmith that altered my .38-45 over into a .40-60, "and whether the improvement is a success in every particular." Mr. H. V. Perry, of Jamestown, N. Y., did the job to my entire satisfaction.—Cap Lock.

A Recollection of Long Pond.—I was very much interested in the Adirondack story by Ralph K. Wing in the last Forest and Stream, more than usually so because two friends and I met them at Mother Johnson's carry and went with them on the Saranac River to where we turned off to go via Spectacle Ponds to the Hiawatha House, and "that reminds me." We three fellows, Walt, Al and the waiter, when we came back on our route stopped in camp at Long Pond, just opposite Duryea Camp. We had an open camp and slept on the browse in front of an all-night fire. One night about 12 I was waked by Al, who whispered "There's somebody round the camp." Visions of rapine and murder rushed through my head, and calling Walt, I hurriedly told him. We hastily armed ourselves, Walt taking the revolver, Al the little .22-cal. rifle and I the axe and an old birch bark lantern with a candle in it, which I lit. All this time, while we were preparing, the thump, thump of footsteps, now heavy, now light, could be heard at the back of the camp. With blanched faces and overstrung nerves, grasping our weapons fiercely in our hands, we three brave spirits started on our perilous trip of investigation. I know I shook like a leaf. Cautiously peering around the back of the camp we saw nothing, but the scary thump, thump, still came at regular intervals. Soon Al discovered our nocturnal intruder. It was the largest and ugliest "toad" it has ever been my misfortune to see, and his jumping on the sticks and dead leaves at the back of the camp had produced the fearful sounds, magnified by our fears. That was the only trouble we had in all our two weeks outing, but I guess we were all as much scared as we could have been had it been a wildcat. By the by, won't Mr. Wing tell us of the wildcat they saw on the Marion River?—Elk.

A Heterodox Opinion on Chokes.—New York, Aug. 1.—*Editor Forest and Stream:* Did it ever occur to any of your readers that more chickens fired at with a chokebore fly away filled with shot than are brought down with a cylinder barrel with half the shot in them; that the choke so hinders penetration as to make it necessary that a greater number of shot hit the bird than when the shot are not retarded by the choke of the barrel? I have a chokebore 32in. long and am considering having the choke taken out. A cylinder that long ought to get the shot so well started in a line, it seems to me, as to render the choke unnecessary, particularly for wing-shooting.—J. H. B.

Kansas City, Mo., Aug. 3.—Our prospects of good shooting this fall are very good, it having been very favorable during the breeding season of both birds and beast.—E. A. W.

THE GAME LAWS.

Arizona.

It shall not be lawful for any person to take, kill or destroy any elk, deer, antelope, mountain sheep, mountain goat or ibex, or to buy, sell or have in their possession any of such animals between the first day of February and the first day of October of each year, except such as are tamed or kept for show or curiosity.

It is unlawful for any person to shoot or kill any partridge, wild turkey, goose, brant, swan, curlew, plover, snipe, quail or ducks of any kind between the first day of March and September of each year, except on his own premises.

It is unlawful for any person at any time within five years after the passage of this act to shoot or kill any grouse or prairie chickens.

It shall be unlawful for any person to take or catch any fish with any seine or net.

It is unlawful for any person at any time to kill or destroy any fish with giant powder or any other explosive substance.

Any one violating the provisions of this title, is guilty of a misdemeanor, and shall be fined in a sum not exceeding one hundred dollars or less than fifteen dollars and the cost of prosecution, and in case such fine is not paid, the person so convicted shall be imprisoned in the county jail until such fine is paid, provided such imprisonment shall not exceed one day for each dollar of such fine. See page 752 Revised Statutes.

Massachusetts.

(As compiled by the Massachusetts Fish and Game Protective Association. Copies in pocket form may be obtained free of cost by addressing the secretary, Mr. Henry J. Thayer, 246 Washington street, Boston.)

TROUT, LANDLOCKED SALMON AND LAKE TROUT.

"Whoever takes a trout, landlocked salmon or lake trout between the first day of September and the first day of April, or buys such fish taken in this Commonwealth between said dates, or takes a trout, landlocked salmon or lake trout with a net or salmon-pot at any season of the year, shall forfeit not less than five nor more than twenty dollars for each fish so taken." Public Statutes, Chap. 91, Sec. 51. Acts of 1884, Chap. 171.

"Whoever sells, or offers or exposes for sale, or has in his possession, a trout, landlocked salmon or lake trout, except alive, between the first day of September and the first day of April, shall forfeit for every such fish taken in this Commonwealth between said dates, ten dollars; and the possession of any such fish between said dates shall be *prima facie* evidence to convict." Chap. 91, Sec. 53. Acts of 1884, Chap. 171.

SALMON.

"Whoever takes a salmon at any time otherwise than with naturally or artificially baited hook and hand line shall be punished by a fine of not less than fifty nor more than two hundred dollars for each fish so taken; but a person catching a salmon when lawfully fishing, and immediately returning it alive to the waters from which it was taken, shall not be subject to such penalty." Chap. 91, Secs 45 and 46.

"Whoever takes a salmon between the first day of August and the first day of May, and whoever at any time buys, sells, or has in his possession a salmon taken in this Commonwealth between the first day of August and the first day of May, shall forfeit for each offense not less than ten nor more than fifty dollars; and whoever at any time buys, sells, or has in his possession a young salmon less than one foot in length, shall forfeit five dollars for every such salmon." Chap. 91, Sec. 47.

BLACK BASS.

"Whoever takes a black bass between the first day of December and the first day of July, or at any time, except with naturally or artificially baited hook and hand-line, or buys, sells, or has in possession any such fish taken in this commonwealth between said dates, or otherwise than as allowed in this chapter, shall forfeit for each offense not less than two nor more than twenty dollars; *provided, however*, that this limitation of time shall not be applicable to the Connecticut River, or its tributaries." Chap. 91, Sec. 56.

SMELT.

"Whoever sells, or offers or exposes for sale, or has in his possession a smelt between the fifteenth day of March and the first day of June, shall forfeit one dollar for every such smelt taken in this commonwealth between said dates; and the possession of any smelt between said dates shall be *prima facie* evidence to convict." Chap. 91, Sec. 57.

"Whoever takes a smelt in any other manner than by artificially or naturally baited hook and hand-line, shall forfeit one dollar for every such smelt so taken; and in all prosecutions under this section the burden of proof shall be upon the defendant to show that smelt or smelts taken by him, the catching of which is complained of, were legally caught." Chap. 91, Sec. 58.

"The two preceding sections shall not apply to smelts taken in a seine or net, in the counties of Bristol, Barnstable, or Duke's county, during the time, and in the manner, in which fishing is allowed for perch, herring, or alewives." Chap. 91, Sec. 59.

LOBSTERS.

"Whoever, during the month of July in any year, catches or takes from any of the waters of this Commonwealth any female lobster bearing eggs, shall be punished for each offense by a fine of not less than ten nor more than one hundred dollars or by imprisonment in the house of correction for not less than one nor more than three months; but a person catching or taking any such lobster during said month of July and immediately returning it alive to the waters from which it was taken shall not be subject to such penalty." Acts of 1882, Chap. 98, Sec. 1.

"Whoever, during the month of July in any year, sells or has in his possession with intent to sell any female lobster bearing eggs, taken in this Commonwealth, shall forfeit for each offense a sum not less than ten nor more than fifty dollars. Acts of 1882, Chap. 98, Sec. 2.

"Whosoever sells or offers for sale or has in his possession a lobster less than ten and one-half inches in length, measuring from the extremity of the bone projecting from the head to the end of the bone of the middle flipper of the tail of the lobster, extended on its back its natural length, shall forfeit five dollars for every such lobster; and in all prosecutions under this section the possession of any lobster not of the required length shall be *prima facie* evidence to convict." Acts of 1887, Chap. 314, Sec. 1, amending Public Statutes, Chap. 91, Sec. 84.

SCALLOPS.

"Whoever at any time between the first day of April and the first day of October shall take scallops from any of the waters of the State by dredging or by nets of any kind, or shall expose any scallops for sale within the State or shall export the same, shall be punished by a fine not exceeding twenty dollars for each offense." Acts of 1887, Chap. 96, Sec. 1.

"Whoever takes in any one day, between sunrise and sunset, more than twenty-five bushels of scallops, including the shells, for each boat actually employed by him in taking the same, shall be punished by a fine not exceeding twenty dollars for each offense. Acts of 1885, Chap. 220, Sec. 3.

GENERAL PROVISIONS.

"Whoever puts or throws into any waters for the purpose of taking or destroying fish therein any Indian berry or Indian cockle, or other poisonous substance, whether the same is mixed with any other substance or not, shall forfeit ten dollars for every such offense." Public Statutes, Chap. 91, Sec. 44.

"Whoever, without the permission of the proprietors, fishes in that portion of a pond, stream, or other water in which fishes are lawfully cultivated or maintained, shall forfeit not less than one dollar nor more than twenty dollars for the first offense, and not less than five nor more than fifty dollars for any subsequent offense." Chap. 91, Sec. 27.

"Whoever draws, sets, stretches, or uses a drag-net, set-net purse-net, or seine in any pond in the Commonwealth, or aids in so doing, shall be punished by a fine of not less than twenty nor more than fifty dollars, one-half of which shall be paid to the person making the complaint, and the other half to the county within which the offense is committed, and in addition shall forfeit to the Commonwealth all fish taken by the above means, and the seines, boat, and other apparatus used." Acts of 1884, Chap. 318, Sec. 1.

"Fishes artificially propagated or maintained shall be the property of the person propagating or maintaining them; and a person legally engaged in their culture and maintenance may take them in his own waters at pleasure, and may have them in his possession for purposes properly connected with said culture and maintenance, and may at all times sell them for these purposes, but shall not sell them for food at seasons when their capture is prohibited by law." Public Statutes, Chap. 91, Sec. 26.

"Whoever takes any fish which at any season frequent fresh water, except eels and pickerel, and except as otherwise allowed in this chapter, in any other manner than by artificially or naturally baited hook and hand-line, hand or dip net, sweep-seine or salmon-pot, shall forfeit not less than five nor more than fifty dollars; *provided, however*, that towns may permit the use of set nets for taking herring and alewives." Public Statutes, Chap. 91, Sec. 43.

"Every superintendent, clerk, or other person having charge of a market, provision store, or other place where fish are sold, and have reasonable cause to believe that any fish taken in violation of the law has been offered for sale on such premises, shall immediately give information thereto to a constable or trial justice in the city or town where said premises are situated; and for each neglect so to do shall be punished by fine of not less than five nor more than fifty dollars." Public Statutes, Chap. 91, Sec. 62.

GAME BIRDS AND ANIMALS.

"Whoever takes or kills a pinnated grouse at any time, or a woodcock between the first day of January and the first day of August, or a ruffed grouse, commonly called partridge, between the first day of January and the first day of October, or a quail between the first day of January and the fifteenth day of October, or a wood or summer duck, black duck or teal, or any of the so-called duck species, between the fifteenth day of April and the first day of September, shall be punished by a fine of twenty dollars for every bird so taken or killed." Acts of 1886, Chap. 276, Sec. 1.

"Whoever takes or kills a plover, snipe, sandpiper, rail, or any of the so-called shore, marsh or beach birds, between the first day of May and the fifteenth day of July, or a wild or passenger pigeon, or a gull, or a tern, between the first day of May and the first day of October, shall be punished by a fine of ten dollars for every bird so taken or killed." Chap. 276, Sec. 2.

"Whoever buys, sells or has in possession any of the birds or animals named in this act and protected thereby, during the time within which the taking or killing thereof is prohibited, whenever or wherever the aforesaid birds may have been taken or killed, shall be punished by a fine of twenty dollars for the birds protected by section one, and ten dollars for the birds protected by sections two and four; provided, however, that any person, firm or corporation dealing in game may buy, sell or have in possession quail from the fifteenth day of October to the first day of May, and pinnated grouse, wild pigeons and any of the so-called shore, marsh or beach birds, or of the so-called duck species, at any season, if not taken or killed in this Commonwealth contrary to the provisions of this act." Chap. 276, Sec. 3.

"Whoever takes or kills any wild or undomesticated bird not named in sections one and two, except English sparrows, crow blackbirds, crows, jays, birds of prey, wild geese and such fresh-water and sea fowl as are not named in sections one and two, or wilfully destroys, disturbs or takes a nest or eggs of any wild or undomesticated birds, except of the birds herein exempt from protection, shall be punished by a fine of ten dollars; provided, that any person above the age of twenty one years, having a certificate from the game commissioners, or from the president of the Boston Society of Natural History, to the effect that such person is engaged in the scientific study of ornithology or collecting in the interest of a scientific institution, may take the nest and eggs of, or at any season take or kill, any undomesticated bird, except woodcock, ruffed grouse and quail; but nothing herein contained shall be construed to authorize any person to enter upon private grounds without the consent of the owner thereof for the purpose of taking nests or eggs or killing birds; and provided, further, that the game commissioners and the president of the Boston Society of Natural History may at any time revoke any certificate they have, respectively, issued." Chap. 276, Sec. 4.

"Whoever takes or kills a gray squirrel, hare or rabbit, between the first day of March and the first day of September, or within said time buys, sells, or offers for sale any of said animals, shall be punished by a fine of ten dollars." Chap. 276, Sec. 5.

"Whoever takes or kills a game bird or water fowl, hare or rabbit, by means of a trap, net or snare, or by the use of a ferret; and whoever, for the purpose of taking or killing a game bird, water fowl, hare or rabbit, constructs or sets any trap, snare or net, or uses a ferret; and whoever shoots at or kills any wildfowl or any of the so-called shore, marsh or beach birds with or by the use of a swivel, or pivot gun, or by the use of a torch, jack or artificial light, or pursues any wildfowl with or by aid of a sailboat or steam launch, shall be punished by a fine of twenty dollars." Chap. 276, Sec. 6.

"The commissioners of inland fisheries shall be game commissioners also; and their authority, personally and by deputy, shall extend to the protection and preservation of birds and animals in like manner as to fish." Chap. 276, Sec. 7.

"It shall be the duty of every officer qualified to serve criminal processes, to arrest without warrant any person whom they shall find taking or killing, or who has in his possession birds or animals contrary to the provisions of this act; *provided, however*, that persons engaged in the business of regularly dealing in the buying and selling of game as an article of commerce, shall not be arrested without warrant for having in possession or selling game at their usual places of business. Any officer who neglects or refuses to enforce the provisions herein contained shall be punished by a fine not exceeding twenty dollars." Chap. 276, Sec. 8.

"All fines accruing under this act shall be paid one-half to the complainant and one-half to the city or town in which the offense is committed." Chap. 276, Sec. 9.

"Whoever takes, carries, sends or transports any of the birds or animals protected herein, out of this Commonwealth, the said

birds or animals having been illegally taken or killed within this State, shall be punished by fine of twenty dollars. "Chap. 276, Sec. 10.

"Chapter ninety-two of the Public Statutes, chapter thirty-six of the acts of the year eighteen hundred and eighty-three, and all acts and parts of acts inconsistent herewith are hereby repealed." Chap. 276, Sec. 11.

"Whoever hunts, chases, or kills a deer within the counties of Plymouth or Barnstable, except his own tame deer kept on his own grounds, shall forfeit for every such offense one hundred dollars." Acts of 1883, Chap. 169.

"The provisions of section 6 of chapter 276 of the Acts of the year 1886, shall not apply to the trapping or snaring of ruffed grouse, commonly called partridge, hares or rabbits by an owner of land upon his land, or by a member of the family of such owner if authorized by such owner, between the first day of October and the first day of January." Acts of 1887, Chap. 600.

GENERAL PROVISIONS.

"Whenever the owner of any land shall conspicuously post on the same, notices that shooting or trapping is prohibited thereon, it shall be unlawful for any person to enter upon such land for the purpose of shooting or trapping without permission of the owner thereof." Acts of 1884, Chap. 308, Sec. 1.

"Game artificially propagated and maintained upon lands, posted as above, shall be the exclusive property of the person propagating and maintaining the same, but such person shall not sell such game for food at seasons when its capture is prohibited by law." Acts of 1884, Chap. 308, Sec. 2.

"Whoever offends against any of the provisions of this act shall be punished by fine not exceeding twenty dollars." Acts of 1884, Chap. 308, Sec. 3.

SPECIAL LEGISLATION.

Buzzard's Bay.—Drag, set, or gill-nets, purse or sweep-seines, not to be used in waters of Buzzard's Bay, except in certain waters of the towns of Mattapoisett and Fairhaven. This does not interfere with rights under Sec. 70, Chap. 91, of Public Statutes, nor shad or alewife fishery in influent streams. Acts of 1886, Chap. 192; and Acts of 1887, Chap. 197.

Barnstable and Marshpee.—No seine or drag-net to be used in Barnstable Harbor, Osterville Harbor, Popponessett Bay, or any waters of the towns of Barnstable or Marshpee. No person, not an inhabitant of the town of Marshpee, is allowed to fish in any of the waters of the town except in Hamblin's Pond, and the trout fishery in Popponessett Bay, without written permit from the Selectmen of the town. Acts of 1885, Chap. 264.

Edgartown and Cottage City.—Seines, mesh or gill-nets (except for mackerel), not to be used within three miles from the shore. Acts of 1886, Chap. 234.

Nantucket, Tuckernuck, and the Gravelly Islands.—Wildfowl, shore, marsh and beach birds, not to be shot from boats. Acts of 1886, Chap. 246.

Plum Island Bay.—No seine or net to be used having a mesh of less than two and one-half inches. Smelts not to be taken, sold, or exposed for sale, (taken in Plum Island Bay), between February 14 and June 1. Acts of 1887, Chap. 105.

Westport.—Purse-nets and seines not to be used, except for the taking of mackerel, in certain waters of the town of Westport. Acts of 1887, Chap. 193.

North River, in the County of Plymouth.—Seines or mesh-nets are not to be used except as provided under Chap. 44, Acts of 1881. Acts of 1883, Chap. 76.

No seine or seines over three hundred and eighty-five feet in length, and no mesh-net over three hundred and fifty feet in length, to be used in North River. Acts of 1884, Chap. 199.

Connecticut River.—No fish to be taken within two hundred yards of any fishway on the Connecticut River or its tributaries. Public Statutes, Chap. 91, Sec. 34.

Gill-nets not to be used. Public Statutes, Chap. 91, Sec. 35.

Merrimac River.—No fish to be taken within four hundred yards of any fishway. Public Statutes, Chap. 91, Sec. 34.

Gill-nets not to be used. Public Statutes, Chap. 91, Sec. 35.

New York.

AN ACT FOR THE PRESERVATION OF GAME IN THE COUNTY OF WESTCHESTER.

The people of the county of Westchester, represented in the Board of Supervisors, do enact as follows:

SECTION 1. It shall not be lawful to kill any partridge or grouse, quail, robin, snipe, woodcock, lark, rabbit, or gray squirrel in the county except during the month of November in each year.

SEC. 2. It shall not be lawful to sell or offer for sale any partridge or grouse, quail, robin, snipe, woodcock, lark, rabbit or gray squirrel killed in the county of Westchester.

SEC. 3. Any person violating any of the provisions in the two foregoing sections shall be liable to a fine of ten dollars for each and every partridge or grouse, quail, robin, snipe, woodcock, lark, rabbit or gray squirrel killed or offered for sale in violation of the foregoing sections of this act.

SEC. 4. It shall be lawful for any citizen of the county to arrest any individual violating Sections 1 and 2 of this act and take him before the nearest justice of the peace of the county, who, upon complaint being made of such violation of either of Section 1 and 2 of this act, and trial had according to the practice in the courts of justices of the peace, and conviction of such person so found violating the provisions of either of Sections 1 and 2, the justice shall impose the fine mentioned in Section 3, together with the cost of prosecution, upon such person so found guilty, and in default of the payment of such fine and costs the justice shall commit the offender to the county jail for a period of ten days, or until such fine and costs are paid.

New Jersey.

(As compiled by the Passaic County Fish and Game Protective Association.)

Be it enacted by the Senate and General Assembly of the State of New Jersey, that any member of any society for the protection of game and fish, organized under the laws of this State, shall be empowered to make arrests of any person or persons who may be found violating any of the provisions of this act, or infringing any of the laws of this State made for the protection of game and fish, and bring them before a magistrate for examination.—*Pamphlet Laws of New Jersey, Session of 1878, page 293.*

SYNOPSIS OF LAWS.

The following is a synopsis of the laws in relation to fish and game in this State:

Game.	Open Season.	Penalty.	Law.
Quail	Nov. 1—Jan. 1	$15.00	1883, p. 24.
Partridge	Nov. 1—Jan. 1	15.00	1883, p. 24.
Rabbit	Nov. 1—Jan. 1	15.00	1883, p. 24.
Woodcock	July 1—Aug. 1 / Oct. 31—Dec. 16	15.00	1881, p. 216.
Rail	Sept. 1—Dec. 1	5.00	1881, p. 126.
Reed Bird	Aug. 25—Dec. 1	5.00	1881, p. 126.
Squirrel	Oct. 1—Jan. 1	15.00	1886, p. 312.
Fish.			
Black Bass	May 30—Nov. 1	25.00	1886, p. 26-311.
Trout	March 1—Sept. 1	$20, 10 days, or both.	Rev'n 1,330.
Pike	May 1—March 1	"	Rev'n 1,330.
Pickerel	May 1—March 1	"	Rev'n 1,330.

All insectivorous birds (except the English sparrow) are protected, together with their eggs and nests; penalty, $5. For ornament or apparel, $50. Laws of 1885, p. 271.

Fish wardens, constables and police officers may serve warrants in proceedings to enforce game or fish laws. 1885, p. 98.

Fish Wardens and members of societies are authorized to arrest persons found violating any of said laws, and bring such persons before a magistrate for examination. 1878, p. 203.

Penalties may be enforced before justices of the peace, or before police magistrates or district courts. 1885, p. 98.

Fish Wardens are appointed by the fish commissioners, one in each county, to enforce the fish and game laws. Rev'n, p. 457: 65, and 1885, p. 131.

Associations may be formed by ten or more citizens over the age of 21 years. 1879, p. 169.

Taking game with trap or other device prohibited. Penalty, $15. Except taking alive for scientific purposes or by members of societies to keep over winter. Rev'n, p. 455: 52. Having trapped game in possession, $15. 1886, p. 53.

Fishing with nets above tide water prohibited. Penalty, 10 days imprisonment or $20 fine, or both. Black bass can never be taken with nets. 1881, p. 234.

Set lines prohibited in waters inhabited by bass, pickerel, pike, trout or perch. Rev'n, p. 1,339, and 1881, p. 234.

Sunday shooting prohibited. Rev'n, p. 450: 14.

Sunday fishing prohibited. Rev'n, p. 450: 15.

Trespassing on private grounds to fish, after public notice posted adjacent to pond, stream or spring, $100 and damages to owner, lessee or occupant. Rev'n, p. 452: 36.

Fishing in private pond within three years after the same has been stocked. Damages to owners, three months imprisonment or fine not less than $25 nor more than $100, or both. Rev'n, p. 456: 57.

Person trespassing with gun. Penalty, $5 to owner, on conviction before a justice, action in trespass. Rev'n, p. 448: 1.

Non-residents shall not hunt or fish without complying with the by-laws of game protective societies organized under laws of New Jersey. Penalty, $50. Imprisonment if not paid.

Lists of members of societies to be filed with county clerks and certificates given. 1878, p. 293.

Non-residents trespassing with gun may be apprehended by owner (who has same power as constable for that purpose), and shall forfeit $15 and gun. Rev'n, p. 448: 3 and 9.

No person shall infringe game laws on his own land. Rev'n, p. 455: 53. (See exception above as to fishing.)

Having black bass in possession out of season, ten days imprisonment or $20 fine, or both. Rev'n, p. 1,339.

Having ruffed grouse in possession from Jan. 1 to Nov. 1, $15 fine. Rev'n, p. 455: 51.

Five days after close of season allowed for disposing of quail in possession. Rev'n. p. 453: 22.

Hunting rabbits with ferrets prohibited. Penalty, $15; imprisonment if not paid. Rev'n, p. 450: 19.

European pheasants, partridges and grouse, protected for three years from March 22, 1886. $25.

Allowing any substance that will kill fish to be discharged into water inhabited by fish. Misdemeanor. Two years or $2,000, or both. 1886, 118.

Bass not to be taken under two inches; trout, six inches. Penalty, $25. Second offense, in any case where penalty is $25, penalty, $100. 1886, 252.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

SALMON OF THE DUNGARVON.

DURING the present season a stimulus has been given to fishermen to seek out new fields of sport, owing to the completion of a railway from Fredericton, N. B., to Chatham, which for a great part of the distance follows the valley of the Southwest Miramichi, into which the Renous River empties at a distance of about eighty-five miles from Fredericton. The latter river has three large tributaries, the Dungarvon and the North and South Branches. There are probably more than thirty lakes on these streams which head high up among wild and romantic forests, where the settler's axe has never sounded and where from the base and sides of many a hill the water, springing pure and cold, creates such streams and pools as trout and salmon love to revel in.

All of these streams having been leased for ten years to the Renous and Dungarvon Fishing Club, a Fredericton organization, Messrs. Loggie and Tennant, two of the members, were deputed to examine and report upon them. They have just returned to Fredericton from this mission after having spent about a fortnight upon the waters. The chief part of their time was occupied in the investigation of the Dungarvon, which is reached at a distance of fourteen miles from the railway, leaving it near Doaktown. The Dungarvon was explored by them to a distance of forty-seven miles from its mouth. For this purpose they made use of two canoes, each poled by two men. They found it necessary to make but one portage in the whole of this distance, and that but a trifling one. The stream they found well stocked with salmon, grilse and trout. They succeeded in taking twenty-five grilse, two salmon and more trout than they could take care of. Besides this they hooked and lost five salmon and fifteen grilse. They found the dusty-miller and the yellow-bodied flies with mallard wing the best.

The salmon of Dungarvon are very lively, they will run from 10 to 15lbs., although one of the wardens caught one which weighed 20lbs.

During their excursion Messrs. Loggie and Tennant saw very many first-class pools, in one of which they counted ten salmon at a time. EDWARD JACK.

FREDERICTON, New Brunswick.

WASHINGTON AN ANGLER.

DR. GEORGE H. MOORE, of the Lenox Library—or as he prefers to be known in the present circumstances, plain "George H. Moore, member of the Ammauskeag Fishing Club"—has just written and privately printed an interesting monograph entitled "Washington as an Angler, with Extracts from his Diaries, 1787-89." Heretofore, says the New York *Times*, Dr. Moore has been chiefly known to the public as a scholarly librarian, deeply informed respecting scarce Americana, first editions of famous authors, and curious and rare copies of the Bible, "Paradise Lost," "The Pilgrim's Progress," etc.; but it appears now that his name belongs also on the list of eminent fishermen. In writing this pamphlet he has conferred an honor on his fellow anglers which must have been wholly unexpected by them, for to the list of Presidents who were fishermen he has added the name of Washington. The selections from the first President's diary by which he does this have not heretofore been published. They certainly offer interesting reading. Dr. Moore dedicates the little pamphlet to Washington's latest successor in the following pleasing way:

To Grover Cleveland, President of the United States:

It is known to me that there have been skillful fishermen, more than one, among the Chief Magistrates of the nation. Your immediate predecessor has left an unsurpassed record among them, and it is with no ordinary pleasure that those of us who profess the faith and follow the precepts of "The Complete Angler" have been assured that you are inclined to indulge in similar recreation betimes. No good fisherman was ever a bad man, and history will bear out the assertion that the best Presidents have been the best fishermen. No one of the many biographers of the first President of the United States has done justice to the character of Washington in this important feature, and the present publication of extracts from his diaries is intended to be a timely tribute to his fame as a man among men, a fisherman among fishermen, in which it will be no disparagement to you to share. In the first century of this nation's life he was the first and you have been called the last President. I trust that the beginning of the new era will find as good a fisherman as you are in office, and that the line may continue to stretch out, like that of the blood-boltered Banquo, till the crack of doom. GEORGE H. MOORE.

LENOX LIBRARY, July, 1887.

The article itself is of sufficient public interest to be given here in full. It is as follows:

Mr. Sparks, in his life of Washington, has mentioned the report of tradition that he displayed in his boyhood a passion for active sports and a fondness for athletic amusements which he did not relinquish in mature life. Other writers have repeated this general statement, but no one has pointed out his claim to be recognized as "a Brother of the Angle." Among his manuscripts hitherto unpublished he has left a very interesting record of his recreations at a period of his life when he was engaged in a service hardly less important to his country than that of his military career. Without him there would have been no United States to need a Constitution, and without him no Constitution would have been formed or established. He was the savior of his country in peace as well as in war. As President of the Federal Convention at Philadelphia, in the summer of 1787, he was punctually in his place during the arduous deliberations of that renowned assembly. After a very close application to business for more than two months the convention appointed a committee of detail to whom they referred the results of their previous action, with orders to prepare and report them in the form of a constitution. The convention then adjourned on Thursday, the 26th day of July, until Monday, the 6th day of August, 1787.

It was duly reported in the newspapers of the day that on "Monday last [July 30, 1787] his Excellency General Washington set out for Moore Hall, in order to visit his old quarters at the Valley Forge."

Moore Hall was the ancient stone mansion of William Moore, who has been characterized as "the most conspicuous and heroic figure in the county of Chester" in his day and generation. The building is still standing, overlooking the Schuylkill and, three miles distant, the Valley Forge. Judge Moore, who was born in 1699, died in 1783, leaving a widow who survived him several years. An advertisement, in the *Pennsylvania Gazette* of Feb. 2, 1791, offered—

"Moore Hall. To be rented. Mansion house, farm and mill, in the township of Charlestown, in the county of Chester, situated on the River Schuylkill, distant twenty-three miles from Philadelphia. Two hundred acres. Mill on a never-failing stream called Pickering. Feb. 1, 1791."

This ancient homestead, known in 1787 as "the Widow Moore's," was the objective point of Gen. Washington's outing when he set out to visit his old quarters at the Valley Forge. What a flood of recollections must have overwhelmed him as he fullfilled this purpose and reviewed those scenes of past trials, sorrow and distress, in the great light of patriotic hope after the hours of triumph! The contrast must have been more impressive even than that presented in the suggestions of his visit to Lexington—neglected by historians—when, in his first vacation as President of the United States, he "viewed the spot on which the first blood was drawn in the late glorious war" where

"Once the embattled farmers stood
And fired the shot heard round the world."

But historic places and reminiscences were by no means the only thing in view upon this excursion—perhaps not the main thing. What it all was cannot be better told than in Gen. Washington's own brief sententious records of each day:

"*Monday*, 30th July.

"In company with Mr. Governr Morris went into the neighborhood of the Valley Forge to a Widow Moore's a-fishing, at whose house we lodged.

"*Tuesday* 31st [July.]

"Before breakfast I rode to the Valley Forge and over the whole Cantonment & Works of the American Army in the Winter of 1777-8, and on my return to the Widow Moore's found Mr. & Mrs. Rob. Morris. Spent the day there fishing, &c., & lodged at same place.

"*Wednesday*, August 1.

"Returned abt 11 o'clock with the above company to Philadelphia.

"*Friday*, 3d Aug., 1787.

"Went up to Trenton on a Fishing Party with Mr. & Mrs. Robt Morris & Mr. Govr. Morris. Dined and lodged at Colo Sam Ogden's. In the evening fished.

"*Saturday*, 4th [Aug., 1787.]

"In the morning and between breakfast and dinner fished. Dined at Gen. Dickinson's and returned in the evening to Colo Ogden's.

"*Sunday* 5th [Aug., 1787.]

"Dined at Colo Ogden's and about 4 o'clock set out for Philadelphia—halted an hour at Bristol, and reached the city before 9 o'clock."

These were very notable fishing parties. The companions of Washington were old, tried and constant friends, always true and never found wanting.

Gouverneur Morris, of New York, one of the noblest of her sons, a great man and a good citizen, who could truly say that the welfare of his country was his single object during a conspicuous public career. He never sought, refused nor resigned an office, although there was no department of Goverment in which he was not called to act; and it was the unvarying principle of his life that the interests of his country must be preferred to every other interest. Such a man was Gouverneur Morris, the inspired penman of the Federal Constitution.

Robert Morris, of Pennsylvania, the great financier of the Revolution, whose services to his country have never been justly appreciated, for his biography has never been justly written.

Mrs. Robert Morris, whose charming face, in the most beautiful and well-preserved portrait of a woman ever painted by Gilbert Stuart, smiles on the vain effort of the writer to tell what is the real secret of its winning grace and lasting impression on every visitor to the gallery of the Lenox Library, which is now its permanent home, and of which it is one of the principal ornaments.

The Widow Moore, the loyalty and devotion of whose husband is the best testimony to her merits. He has left the record in his will—"happy woman, a pattern of her sex, and worthy the relationship she bears to the Right Honorable and noble family from whence she sprang."

Gen. Philemon Dickinson, a distinguished officer of the New Jersey line, a brother of that famous writer and patriot who was the author of the "Farmer's Letters," both "Petitions to the King," and the "Declaration of the Continental Congress on taking up Arms in 1775."

Col. Samuel Ogden, the brother-in-law of Gouverneur Morris, and, like Dickinson, a worthy representative of that grand army of the Revolution, whose practical lessons of disinterested patriotism are so full of wisdom and rich in instruction to every true-hearted American.

Truly this was a goodly company for any place or pursuit, with much of profitable entertainment therein for

all concerned. Indeed, it may well be doubted whether anything recorded in the annals of angling anywhere can challenge it for distinction, all things considered. Certainly no American fishing party hitherto described can vie with it, for a moment, in historical interest and importance.

Another fishing excursion is mentioned in a later diary of Washington. When he made his great northern and western tour, already alluded to, in 1789, Portsmouth, in New Hampshire, was the extreme point of his journey. While he was there he was taken out to view the harbor, and to try his skill and luck in salt water. On Monday, Nov. 2, they went down to the outer harbor beyond the fort and the lighthouse, where, as he says himself:

"Having lines, we proceeded to the Fishing Banks a little without the Harbor, and fished for Cod; but it not being a proper time of tide, we only caught two, with w'ch, about 1 o'clock, we returned to town."

His visit to Lexington, to which I have alluded, took place on his return toward New York. He had intended to go to that historic locality while he was yet in Boston, but on the day appointed, Monday, Oct. 26, his record is:

"The day being Rainy and Stormy, myself much disordered by a cold and inflamation in the left eye, I was prevented from visiting Lexington, where the first blood in the dispute with G. Brit'n was drawn."

Returning from Portsmouth, he left that place on Wednesday, the 4th of November, passing through Exeter, Haverhill, and Andover, where on the 5th he was received and escorted by the Hon. Samuel Phillips, Jr., President of the Senate of the town. He made a short visit to Mr. Phillips, who attended him as far as Lexington, where they "dined and viewed the spot on which the first blood was spilt in the dispute with G. B. on the 19th of April, 1775." His further route was continued through Watertown, and by what was known as "the middle road" to Hartford, Conn. He arrived in New York on Friday the 13th November.

Future research may or may not reveal particulars of these fishings in the Schuylkill and the Delaware or their tributary streams, the character and weight of the catch, the methods of the sport in those days, and all the incidents which crowd such fleeting hours of charming recreation. I am content to have been the first to claim for George Washington his rightful place as an angler—a genuine disciple of Izaak Walton.

Dr. Moore has received from President Cleveland the following sportsmanlike letter in acknowledgment of the receipt of a copy of the publication:

EXECUTIVE MANSION,
WASHINGTON, July 31, 1887.

Dr. George H. Moore:

MY DEAR SIR—Please accept my thanks for the little book you sent me entitled "Washington as an Angler."

I am much pleased to learn that the only element of greatness heretofore unnoticed in the life of Washington is thus supplied.

I am a little curious to know whether the absence of details as to the result of his fishing is owing to bad luck, a lack of toleration of fish stories at that time among anglers, or to the fact that, even as to the number of fish he caught, the Father of his Country could not tell a lie.

Yours very truly,
GROVER CLEVELAND.

THE OXBOW.

SKOWHEGAN, Me., July 30.—Two friends and I last week went to Jackmantown, Somerset county, Me., where the Canada road crosses the Moose River and the Canadian Pacific Railroad now being built. From there in two canoes we went up Moose River, across Wood Pond, into Attean Pond with its sixty-three islands, over a carry of a mile and a quarter into Holeb Pond, into Holeb Stream which flows into Moose River, then down Moose River through Attean and Wood ponds again, to Jackmantown. The whole distance is fifty-three miles; the distance around the Bow alone is twenty-seven miles. One need not walk more than two miles on the whole trip. We were four days on the trip, but would have taken a week could we have done so. Our total catch, with three of us fishing, was between 285 and 300, and we might have caught three times that number could we have used them. They ran all the way from small brook trout up to 2lb. specimens. They were very gamy, lively trout, too. Our guide said it was quite common to take them weighing 3lbs. and 3½lbs., and sometimes 4lbs. We ate the small ones (it is surprising how many small trout a man will eat when he is in the open air all the time) and carried most of the big ones out with us. We had to put salt on them, as we could get no ice nearer than Jackmantown.

Although it rained every day we enjoyed our trip immensely. We got dry at night only to get wet again in the morning. The scenery is fine. For forty-seven miles you do not see a house. Large game is abundant. We came upon abundant sign of moose, deer, caribou and bears. A white-faced bear was seen on Holeb Stream in June. If any one go to Jackmantown or Moose River and get Ed Graft to go as guide, I can assure them plenty of fish and game and a good time at a very moderate cost.

LANCE WOOD.

POORMAN'S SPRING FISHING CLUB.—We have received two views of the Poorman's Spring Fishing Club house, which is on Juniata River, twenty-two miles west of Harrisburg, on the Pennsylvania Railroad. The first story is 22×30, built of logs with the bark on. The club was organized June 30, 1887, and has 65 acres of ground—the railroad running through it. The location is most beautiful and access and convenience are not surpassed. The fish are bass and wall-eyed pike (Susquehanna salmon). The club has had 483 visitors this season and the members are always pleased when they entertain their friends. The FOREST AND STREAM acknowledges an invitation to test the club's hospitality.

LAKE CHAMPLAIN BASS AND PICKEREL.—A letter from the veteran Lake Champlain sportsman, Mr. Phelps Smith, states that pickerel are unusually plenty this season. Recently one was caught near Chimney Point weighing over 14lbs. Many bass have also been taken, some of 4lbs. weight. This is good showing in favor of game laws, as in former years no bass were seen in Upper Lake Champlain.—W. H. R.

SAVE THE STREAMS.

CENTRAL CITY, Neb., July 27.—*Editor Forest and Stream:* Your interest in the streams is mainly that of sporting fishermen. Though mine is different, yet thus far we hunt together; we love the streams. In their behalf as things of use and beauty and in yours as nurseries of fish, I wish that more attention were paid to the smaller streams and brooks.

In that part of the Mississippi valley where the annual rainfall is 40in. to the surface foot, the stream that drains 10,000 or 15,000 acres should have a sufficient water supply for between 8 and 12 miles of stream with constant water. If a few substantial catch-ponds were made, and the higher land put under main drains, so that the break in the land did not trace back to the top of the watershed, such would be the case. At present land washes, silt, drift and other abominations fill up the pools and channels of these water courses, and a too great haste upon the part of the water leaves them dry the greater part of the year, or so nearly dry that they are unfit harbors for fish of any size.

If in some way the right to put the entire water shed and water courses under careful supervision, with a view to the fisherman's delight, were enforced, a good many other interests would be advanced—a clean and constant water course, the turning of a water wheel for some useful industry, and fish good for food (for the delight of catching is quite different from that of eating). This supervision might be obtained by lease for water power and for fishing, or by the county authorities for purposes of drainage and water supply for cities and towns. These suggestions are put forth in hope that attention may be called to a subject of great importance. X. Y.

A HINT FOR BOYS OLD AND YOUNG.

ROCKLAND, Me., Aug. 8.—*Editor Forest and Stream:* In reading my last number of FOREST AND STREAM I saw, under the heading "Converts to Angling," that the boys are asking where they shall go fishing. As a boy, though a pretty old one, I can tell them, if they are not particular what kind of fish they catch. Trout are played out about here, but you can catch plenty of cunners in the salt water, more than you will want to eat. There are plenty of nice clams to be had for the digging. Miles of coast on which to camp with never a hot night. Plenty of farmers and fishermen to sell, at a fair price, bread, milk, butter, eggs and vegetables. All kinds of canned provisions can be bought at the stores. Pure air, pure water, some mosquitoes, with possibly a chance to go for cod and haddock with the fishermen. Or, go back in the country a few miles and catch white perch and pickerel, all you want to eat. No expensive outfit is necessary. Perch can be caught with a rod and fly, or equally well with a pole and worm. There is lots of fun in it, and cheap, too. Leave Boston at night on the boat; have the porter call you at three o'clock and see how cool the air is. If it is not foggy (it may be in the morning, but likely to burn off) see how pretty the islands and the shore look. Bring plenty of thick clothing and bedding. No matter if the clothing is old. No food, tents if you have, or can get them, or can probably hire some here. If the father and mother and sisters wish to come, all the better. Don't be foolish and shoot each other. Better leave the guns at home. Don't be careless and get drowned. If you do you will wish you had stayed at home and I shall be sorry that I wrote this. I am prompted to write this because I love the boys and want them to have a good time. If any one coming will call on me I will cheerfully give them any information in my power, but have nothing to sell or let. With love to the boys,

JAMES WIGHT.

P. S.—It would be well to bring a few dishes, kettles, etc., for camp.—W.

NOTES ON TROUT.*

BY J. W. WILLIS BUND.

[From the Journal of the English Fishculture Association.]

FOR some time past I have been very anxious to find, if possible, some external difference that could be easily pointed out to water-bailiffs and magistrates, and would at once enable them to say that a particular fish was a trout and another a young salmon. Of course, it can be determined with accuracy if the bones of the two fish are examined; but, perhaps fortunately, anatomy is not a branch of study familiar to justices or water-bailiffs, and the infallible "outward and visible sign" is one of the conservator's great desiderata. Various tests have been given from time to time, but they all have proved unreliable. The celebrated case in the "Eighth Report of the Inspectors of Fisheries," p. 55, should act as a warning to the most careful. It is there stated: "By the fifteenth section of the Act of 1861, there are penalties fixed on the taking the young of salmon. Salmon and young of salmon are defined in the sixth section of the Act of 1861, nevertheless it is often difficult for conservators and water-bailiffs to get convictions, inasmuch as the natural history evidence brought into court is not always such as to be satisfactory to the magistrates. It is difficult by words only to describe the young of migratory salmonidæ, nevertheless I have made bold to give one broad rule. It is: *That any young fish that is found and presents red markings at the end of the 'fatty,' 'dead' or 'adipose' fin is certainly not one of the migratory Salmonidæ, but is the common trout.*" The italics are in the original article as the official rule. An unfortunate man caught and kept a fish with some red on its dead fin. He alleged it was a trout; the water-bailiff denied it. He was summoned for killing the young of salmon. He cited the official Government Blue Book, but the justices decided that they were not bound to follow Government Blue Books when they knew them to be wrong, and convicted the man. The doubtful cases are rare; in ninety-nine out of a hundred there is no doubt, and a water-bailiff or magistrate who knew anything about fish could distinguish between the two at a glance; but occasionally a fish occurs that externally is a puzzle. Last year a case occurred of a miller who had caught a lot of fish in his trap. The water-bailiff, although there was no doubt about it, had not seen either the trap at work or the fish taken out of it, but he found the miller's servant cleaning a number of fish. On looking them over, he found that a number of them were trout, but two, he said, were young salmon, and these he seized and summoned the miller for illegally being in possession of the young of salmon. I had the fish sent me to look at, and I was quite prepared to swear that the fish sent me were young salmon. On the case coming on, the fish were produced, and the bailiff swore that they were young salmon. The defense was two-fold (1), that the fish produced were not the fish seized; (2) that the fish produced were not young salmon. The water-bailiff swore strongly on both points, and did what was more important—stuck to it, and no cross-examination shook him. He was also a wiser man than many water-bailiffs, and to the question "How do you know it was a samlet?" replied, "Because it is;" and declined to be led into definitions. Leaving the solicitor on the other side to ask him: "Has not a samlet such a mark? are those marks on the fish?" The bailiff replied: "They may be; sometimes they are and sometimes they are not." The result was a conviction. But all water-bailiffs do not make such good witnesses as this one, and I was therefore very desirous of trying if an examination of a number of fish might not lead me to discover some external marks that it would be safe to say were present in the trout and absent in the salmon, or *vice versa*. Hitherto I have failed; but the examination of a number of fish has shown me certain things.

At first I thought I had found a mark that distinguished the two. On the first stream I fished, A, I caught a number of small trout and of young salmon. I selected a dozen of each and carefully examined them. In length they were nearly identical; the trout were a little the smallest, the average size of the trout being 5¼in., of the samlet 6¼in. All the trout from this stream had several black spots on the gill cover, the number varying almost indefinitely, while the samlets had usually only one, but never more than three, of such spots. This held good with the first lot of fish I caught, and also with a second lot from the same stream, and I was beginning to think that I had really hit upon something. I then tried another stream, which had no samlets, only trout, in it. It rose in the same bog as stream A, but while stream A flowed to the left, stream B flowed to the right. Stream A passes through a different country to B. There was a very rapid fall at first, and then hardly any as it went through a peaty valley to the main river. Stream B had a gradual fall over slaty rocks; a high cascade at its mouth, where it joined the main river, excluded salmon from it. I selected a dozen trout of those I caught in stream B at random. The only thing that guided me was size; they were a little larger than those from A, averaging 6¼in. Of course the first thing I did was to test my imagined discovery. My disgust was great when I found, out of the dozen, five had less than three black spots on the gill cover, and some had actually none! So ended that distinction.

The next test that I tried was the presence or absence of carmine spots below the lateral line; and here, again, I at first thought I had found "the outward visible sign." The samlets from stream A had no carmine spots below the lateral line. It is also true that the presence of carmine spots below the lateral line is by no means universal in trout; but it was, in the trout from this stream, of frequent occurrence. The lesson that the spots on the gill cover had given me led me to push my experiments further. I tried some samlets from the main river, into which stream A fell. Here, again, there was a universal absence of spots below the line, but the number of trout that had them was very variable, especially if all the trout taken into account were of the same size. If size was not taken into account, then the proportion of the whole number that had these spots was large; but if the size was limited to 5½ to 6¼in. the proportion was much less. I tried another tributary of the river with the same result. No samlet had the carmine spots below the lateral line; trout had them, the percentage of small trout having them being about 68 to 70 per cent. of the whole number, but the fact of any trout being without them was fatal to this as a test.

The next distinguishing feature was the color of the dead fin. The usual rule is the one previously stated, that the trout have red marks and the salmon have none on this fin. At first I thought that this was, after all, going to give a satisfactory result, but in each stream I fished I occasionally got a samlet that had a distinct red mark—I use the term advisedly—on the fin. It was not a deep spot or spots, like that met with in trout; it was not even a red border, but at the edge of the fin red could in places be distinctly seen. There was quite enough red to prevent your being able to answer truthfully the question. Will you swear that salmon have never any red marks on the adipose fin?

With these three failures I was obliged to abandon my task for the time. I had not the opportunity to follow out the matter further, as to the outward distinctions between the two fish. This I, however, hope to do on another occasion, but I greatly fear that a reliable outward mark is not to be found.

But, although I failed to find this mark, yet, as I measured a large number of fish, some of the results may be worth recording. So far as I have gone—and this holds true in every case I measured—if a samlet and a trout of the same size are placed side by side, the head of the samlet is slightly larger than the head of the trout. It is difficult, if not impossible, to say how much larger the head is, or to give any fixed proportion between the total length of the fish and the length of head, either in the trout or the samlet; it varies in different streams, which is only another way of saying it varies with the food. From one stream come lanky, ill-fed fish, with large heads; from another, fish in good condition, with small heads, or heads that do not strike one as disproportionate to their size. But from all the streams from which I got both samlets and trout, if the fish were nearly the same size (that is, within an inch of each other) and of the same sex, the samlet's head is larger than the trout's. There is another result. In the different sexes of trout of this size, there seems (so far as I could find out) to be no perceptible difference in the size of the head; but in the samlet I have found that the heads of the females are slightly larger than those of the males; and therefore the distinction between the length of the head in the young trout and the samlet is much more marked when the samlet is a female. Unfortunately, of the samlets caught by rod and line, the majority are males; so that the number of specimens that are obtained for measurement include a larger proportion of males than females. I am told by Dr. Day that great difference exists in different specimens as to the length of the head,

*The American reader will understand that whenever Mr. Bund mentions trout he means the brown trout (*Salmo fario*).

Trout from burns above Howietown are comparatively much longer in the head than those raised in the fishery where they have been fed from birth. This may serve to show that the size of the head depended on the food, and was not a real difference between the two fish.

Another distinction I found in the measurement of the different fish was, that the pectoral fin of the trout is shorter than that of the samlet; this I also found to be true in all the cases I measured. I could not trace any fixed proportion between the length of the fish in either trout or salmon; but, out of a given number of samlets and a given number of trout, the length of the pectoral fin of the samlet is always larger than that of the trout. I could not detect any perceptible difference between the length of the pectoral fins in the different sexes of trout, but in the samlet there is a difference between the length of the pectoral fin in the different sexes, the female having a longer fin than the male. This held good in all the fish I measured and from whatever stream they came. Fish differing in length, marking, condition, and in some cases, when the fish were the same or almost the same size, the length of the fins varied; but, with all other differences, this rule held true throughout, that the pectoral fin of the female was longest. Here, again, the remark as to the size of the head applies, that far fewer females were measured than males. These two are the only approaches to direct results I was able to arrive at; and it is very likely that when I test them more largely another year I may find them all wrong. But, so far, my measurements show that, out of an equal number of trout and samlets taken at random from different streams, the length of the head and pectoral fin in the samlet is greater than the length of the head and pectoral fin of the trout; that no reliable variation can be noticed between the measurements of head and pectoral fin in the sexes of trout, but in samlets the head and pectoral fin of the female are larger than those of the male.

I should say that all the fish measured were caught in August and September. I have not been able to try any spring measurements, and I am not sure I should get the same results, as both trout and salmon are in different condition in the spring and in the autumn.

Examining these fish for their measurement led me to one or two very interesting questions: (1) At what stage do female trout begin to breed in their natural state? I purposely use the term "natural state," for a careful perusal of Sir James Maitland's book shows clearly that the Howietown fish are not in the same condition as the fish in a mountain stream. Fish that are regularly fed, that have nothing to do but to get fat and grow, are in a very different position from fish who have to get their own living as well as do their duty in their state of life; plenty of food stimulates the reproductive organs of fish, and scarcity of food causes temporary sterility or at least delays the development of the reproductive organs, and this seems to be the case both if the fish are fed artificially or if there is abundance of natural food. Trout from eggs sent from Howietown to Gloucestershire, at a place where the fish are not fed, but where natural food is abundant, breed in the second year. It therefore seems that the answer to the question would depend on the quantity of food in the stream; and if this is so, then overstocking may check breeding or at least put off the period at which the fish begin to breed. It does not, therefore, of necessity follow that a well-stocked stream is in the best condition for keeping up a good head of fish. I am rather inclined to think that the small female trout in the mountain streams do not begin to breed until their third year. It is very difficult to come to any conclusion, for all one has to go by is size, and size depends on food, or perhaps to one fish being stronger than another or on a number of other details; but I am inclined to think that in a stream in which a trout has to get its own living and in which there is a large number of small trout a six-inch trout is a three-year old trout. I do not mean to say that a trout grows two inches a year. The year's growth depends on a host of things, and very often the fish may grow more rapidly in its first year than afterward. What I say is that the majority of trout of six inches are three years old. If this is right, then of the trout under six inches that I caught and examined, what I usually found was this, that in the females the ova were not so far developed as to be ready for spawning that season. A four-inch female trout caught in September, 1886, would not spawn till the autumn of 1887; at least that is so far the result of my observations. I examined from different streams about 100 trout last autumn, and of the females I only found one doubtful case of a fish under six inches that would have spawned last year. The fish were caught from different streams in the watersheds of different rivers; and although it is dangerous to generalize from so few cases, yet this is the result; I found of the fish that would spawn the ova was differently developed, as the fish came from one stream or the other, some would spawn earlier that the others, yet with those over six inches, with but two exceptions, all would have spawned in 1886. To arrive at any satisfactory conclusion, what requires to be done is to artificially breed a number of trout and mark them and then note their growth and development. In most mountain streams there are great difficulties as to this.

The next question is, When do the male trout begin to breed? and I think it is clear they begin at least a year earlier than the female, at least in some streams. It would not do to state this as an invariable rule, for if it were so, and females as have been proved at Howietown breed at two years, the males would breed at one year, which is certainly not correct. For some cause that has to be explained, both in the trout and in the salmon the milt develops earlier than the ova. If a 4in. trout is a two-year old fish (and I believe this to be so), there can be no doubt that male trout begin to breed at two years old. Out of 100 4in. trout taken in September, at least 90 per cent. of the males have the milt so developed that they will spawn the same season; and unless it be that the female trout grow much faster than the male, a point on which I have no evidence, one is led almost irresistibly to the conclusion that in the mountain streams the male breeds a season before the female. It is not the males taken from a particular stream that have the milt thus developed. In September the males of nearly all the small brook trout have the milt so developed that they will spawn in that season. If you get a male fish with the milt developed, it is almost certain to be a large fish, about a pound or so. One sees but few of these fish, but in the few one does see, it is by no means infrequent to find the milt in a rudimentary state. Most of these large trout I have seen are males. This gives rise to a very interesting question, Does the early development of the males exhaust them so, that after a short time they become either wholly or seasonally sterile? On this point, except so far as we have evidence from Howietown, I know none; and, as already stated, the results from the fish in an artificial state by no means of necessity govern the fish in a natural state. The Howietown experiments would seem to point to this, that after a certain age the reproductive powers of fish become exhausted; in other words, the fish become useless for breeding purposes, and it has been found at Howietown, that the males, as a rule, die several seasons before the female. There is one point to be considered that may upset the whole of my observations.

The fish I have dealt with are the fish that are found in the brooks in August and September; these may be either the fish that permanently dwell there or the young of larger fish that remain in the brooks for the first year or so of their lives before they drop back into the main river. That trout ascend the brooks from the main river and spawn, and, having spawned, drop back to the river, is, I think, clear. The point I have no evidence on is this: What are the trout that so ascend? Are they only large fish, or are they small fish as well? If so, the better food that the fish get in the main river may wholly reverse the state of things found in the brooks. A female trout in the river may begin to breed (and the reasoning is all in favor that she should) far earlier in the river than in the brooks. A second-season trout in the river may be over 6in., while it takes three seasons to produce such a fish in a brook. I have been trying, and hitherto without success, to collect some reliable evidence as to this. I have only got as far as what is almost every one's experience: (1) That the river trout are larger than the brook trout; (2) that the river trout ascend the brooks in the autumn to spawn; (3) that a large proportion of these ascending fish, having spawned, descend. The points on which information is wanted are: What is the age of the fish that ascend? Are they over two years old? Of the fish that descend, do the young fish come down to the main river or do they remain for a time in the place where they are bred? I incline to think—but I say this with great reservation, as the evidence is almost *nil*—that the fish that are spawned in the brook remain there till they reach a certain size. What that size is I cannot yet say definitely, but I am led to think that it is until they are about 6 or 8in. in length, and that then they descend to the main river.

If I am right in this, it would be an explanation—there are also others—of how it is brook trout are as a rule so small; but here one is met by this difficulty: There are numerous small streams in which trout breed, but the streams are so small that there is not sufficient food to enable the trout even to reach a size of 6in. What becomes of these trout?

I think the trout only stay in the brooks during the first year or two of their lives; and then, in the winter and spring floods, having spawned, go back to the main river. Some of the fish that have spawned remain; these are the large fish one finds here and there in deep pools. They have found comfortable quarters and they stay, eating all they can and doing no end of mischief in devouring the food that should go to the support of small trout. These fish should be caught and killed. It is easy to say but difficult to do, for they become as crafty as the professional poacher, and know the exact limits in which to trust themselves. I am far from sure if the night line, which modern legislation has excluded from our streams, was altogether hurtful. It captured the old cannibals: now they remain "monarchs of all they survey." It is by no means certain—I say it with fear and trembling—that our modern precautions really do so much good. They probably produce, by preserving the spawning fish, a larger number of small trout. But, and it is a large but, does this multiplication of small fish really beneficially affect our streams? The stock of food is limited, the small mouths must be fed and they require a good deal; is not the result to retard development by short commons, and hence to delay the fish, who used to grow larger a year earlier, another year in the river, making so many more mouths to feed and thus injuring the rest? It seems to me that, in our great desire to develop our trout fisheries, we have lost sight of one most important point—that, so far as we know, the food supply is a constant quantity, or at least it is not a quantity that varies within the stock of fish; and that when we hear of Mr. A and Mr. B having turned such a number of fry into the river it does not follow that they have done good, but, with the best intentions, harm in giving so many more mouths to consume the food of the river. I do not desire for a moment to discourage fishculture, but I am by no means sure that there is not a zeal which is not of knowledge, and that the best thing for a trout stream is not necessarily to fill it with artificially-bred fry. I am by no means clear that food or want of it is not one of the reasons why mountain trout are always small. There are, however, a number of matters to be taken into account before even a guess at this can be hazarded. Of these I propose to treat in a future paper. All that I can now say is that I have found to my cost that excessive preservation of a trout stream, although it may—I do not even say it does—increase the number, does not as a consequence increase the size of the fish.

St. Louis River Fish Pirates.—Much complaint is being made of violations of the game law in the vicinity of Duluth. Last spring the *Sun* published a synopsis of the new game and fish law for the purpose of bringing the matter to the special attention of those who are in the habit of violating it. We are reliably informed that the law for the protection of fish is being daily violated in a most outrageous manner. On the St. Louis River, not far from this city, thousands of fish are being destroyed by nets, fish traps and other unlawful devices for taking them. Men make a business of taking them by any method most convenient and successful, whether the means employed be lawful or not. The St. Paul & Duluth short line, which is being built from Grassy Point to the junction, gives employment to a large number of men. These predatory fishermen take all the chances of punishment in order to furnish these railroad employes with fish. The camps buy them, of course, without knowing that they are unlawfully taken. We are informed that when first captured the fish are put into boxes sunk in the water, and there kept from day to day without food until a sufficient number are collected to justify a trip to the railroad camps or to Duluth, when they are put up for sale. Fish have been kept alive in this way so long that they have been known to bite and snap at poles or sticks or any object placed near them, so crazy are they for food. The fish that are thus wantonly and criminally destroyed in the St. Louis River and other streams and lakes are among the best game and food fish of the Northwest, comprising black bass, pickerel, pike, perch and trout. The game and fish law is a very stringent one, and in addition to the severe penalties it imposes upon the offender, it provides for the severe punishment of certain officers who refuse or neglect to prosecute those who violate it. We would recommend to officers within whose jurisdiction these outrages are said to be of daily occurrence to look sharp to their duties lest they be themselves indicted when the time comes for them to render an account of their stewardship.—*Duluth (Minn.) Sun.*

Princess Bay, lower end of Staten Island, resorted to by New York salt-water fishermen, has afforded good sport this year. Among the captures have been a 20lb. sheepshead, taken with rod and reel after a fifty-minute struggle by J. W. Campbell, Jr.; a drum 13¾lbs., by M. Conners; a 20lb. drum, by A. Lorey, and a 14½lb. drum by J. Feuerbach.

Fishculture.

NORTH CAROLINA ENCOURAGEMENT TO SHELLFISH CULTURE.

BY S. G. WORTH (RECENT STATE COMMISSIONER).

[Read before the American Fisheries Society.]

Mr. President—The subject to which I desire to direct the attention of the Association is the new oyster law of my native State, North Carolina. When, four years ago, I met Lieut. Francis Winslow urging before this body the adoption of a resolution declaring in favor of private ownership of oyster bottom, I became impressed with his views, and brought about, after months of ceaseless work, the passage of a resolution in the North Carolina Legislature of 1885, instructing the State Board of Agriculture to expend $2,000 on a survey of the oyster area, looking to the adoption of the principle of ownership in fee simple. Accordingly the work was done, and two years later, in the session of January-February, 1887, in consequence of the able report of Lieut. Winslow, an act was passed which puts on sale, at twenty-five cents an acre, nearly a million acres.

Owing to apprehensions of assemblymen, lest too big a step should be taken at once, the bottom within two miles of the shore was exempted from the general provisions of the act and left under jurisdiction of the several counties, but the main body of Pamlico Sound and much additional area was put on sale, except the well established natural beds. These, as public beds, were exempted and still remain the common property of the people. Under laws operative prior to the new act, no person could own more than ten acres in a county, and as a consequence the limited areas precluded the use of dredges and restrained healthy growth. Under the new act a person can own any amount up to a square mile. The new law is regarded by the press of North Carolina as an advanced movement, and as the law found its origin in a meeting of this body, I now gladly lay it before you entire, with all that may be good or bad in it, and invite friendly criticism from members practically experienced in such legislation, looking to modifications which may be suggested to the next General Assembly in the interest of the people at large.

The Board of Shellfish Commissioners is elected outside the membership of the State Board of Agriculture and consists of three—W. J. Griffin, Elizabeth City, Pasquotank county; I. B. Watson, Hyde county, and W. T. Cabo, Bayboro, Pamlico county. Lieut. Francis Winslow, schooner Scoresby, of the U. S. Navy, is conducting all details of a complete survey.

THE ACT.

An act to promote the cultivation of shellfish in the State [of North Carolina].

The General Assembly of North Carolina do enact:

Section 1. That the State shall exercise exclusive jurisdiction and control over all shellfisheries which are or may be located in the boundaries of the State, south of Roanoke and Croatan sounds and north of Core Sound.

Sec. 2. In order to carry out the purposes of this act the southern boundary line of Hyde county shall extend from the middle of Ocracoke Inlet to the Royal Shoal Lighthouse, thence across Pamlico Sound and with the middle line of the Pamlico and Pungo rivers to the dividing line between the counties of Hyde and Beaufort, and the northern boundary line of Carteret county shall extend from the middle of Ocracoke Inlet to the Royal Shoal Lighthouse, thence to the Brant Island Shoal Lighthouse, thence across Pamlico Sound to a point midway between Maw Point and Point of Marsh, and thence with the middle line of the Neuse River to the dividing line between the counties of Carteret, Craven or Pamlico, and that portion of Pamlico Sound and the Neuse and Pamlico rivers not within the boundaries of Dare, Hyde or Carteret counties, and not a part of any other county, shall be in the county of Pamlico, and for the purposes of this act and in the execution of the requirements thereof the shore line as now defined by the U. S. Coast and Geodetic Survey shall be accepted as correct.

Sec. 2. The State Board of Agriculture shall, at the next regular meeting following the passage of this act, elect three commissioners of shellfisheries, whose term of office shall be one year, and the said board of commissioners of shellfisheries shall be maintained so long as may be necessary to carry out the special duties confided to them by the provisions of this act and no longer, and they shall employ such engineers and clerks as may be necessary for the execution of the said duties, and fix their compensation.

Sec. 4. The Board of Shellfish Commissioners shall make or cause to be made a survey and map of the area hereinbefore described, whereon shall be shown the location and area of all the natural beds, and of all the grounds which may have been occupied under authority of previous acts for the growing, planting or cultivation of shellfish, and upon the completion of the said survey in and maps of each or any county the Board of Commissioners of Shellfisheries shall determine the location, area, limits and designation of each and every public ground in the county, and such public grounds are to include the natural beds, together with such additional areas adjacent thereto as may be deemed by the Board of Commissioners as necessary to provide for the natural expansion of the said natural beds; and having decided upon the location, area, limits and designation of the said public grounds, the Board of Commissioners of Shellfisheries shall publish the same for the period of thirty days at the court house door and in four other public places in the county wherein the said public grounds are located, and any person or persons objecting to the decision of the Board of Commissioners of Shellfisheries, as published, may file a written protest, stating the ground for his or their objections, within the said thirty days, with the clerk of the Superior Court of the county wherein the said publication is made, upon payment to the said clerk of the sum of twenty-five cents, and at the expiration of the said thirty days the said clerk of the Superior Court shall forward all such written protests to the Board of Shellfish Commissioners, and in case such protests are so filed and forwarded, the said Commissioners, or a majority of them, shall upon fifteen days' notice, in writing, mailed or personally delivered to all parties in interest, hear and pass upon such protests or objections in the county in which the said public grounds are located; and the said Board of Commissioners of Shellfisheries, having fully informed themselves of the facts in the case, shall make within twenty days from the conclusion of the hearing a decision which shall be final, and shall be so considered until reversed on appeal to the Superior Court. And at all hearings authorized by this act the said Commissioners may, by them-

selves or their clerk, subpœna witnesses and administer oaths, as in courts of law.

SEC. 5. The board of commissioners of shellfisheries shall, upon making the said final decisions as to the location, limits area and designation of the several public grounds in the country, publish the same in the county in which the said public grounds are located, and in two newspapers having a general circulation in the State, and shall announce in the said publication that at the expiration of twenty days from the first day of publication the territory within said county and embraced within the provisions of this act will be open for entry in manner and form as hereinafter provided, and any person or persons desiring to raise, plant or cultivate shellfish upon any ground in the county which has not been designated as public ground by the board of shellfish commissioners, may, at the expiration of the said period of twenty days, make an application in writing, in which shall be stated, as nearly as may be, the area, limits and location of the ground desired, to the entry-taker of the county in which the said area for which application is made is situated, for a franchise for the purpose of raising or cultivating shellfish in said grounds, and the said entry-taker, having received said application, shall proceed as with all other entries, as provided in Section 2765 of the Code, as amended, except that the warrant to survey and locate the ground or grounds shall be delivered to the engineer appointed by the board of commissioners of shellfisheries and not to the county surveyor, and the said engineer shall make such surveys in accordance with the provisions of Section 2,769 of the Code, except that it shall not be necessary to employ chain-bearers, nor to administer oaths to assistants, nor to make surveys according to the priority of the application or warrant.

SEC. 6. The Secretary of State, on receipt of the Auditor's certificate as provided in Section 2,778 of the Code, shall grant to the applicant a written instrument conveying a perpetual franchise for the purpose of raising and cultivating shellfish in and to the grounds for which application is made, and the said written instrument of conveyance shall be authenticated by the Governor, countersigned by the Secretary and recorded in his office. The date of the application for the franchise and a description of the ground for which such franchise was granted shall be inserted in each instrument, and no grant shall issue except in accordance with a certificate from the engineer of the commissioners of shellfisheries, as to the area, limits and location of the grounds in which the said franchise is to be granted, and every person obtaining such grant or franchise shall within three months from the receipt of the same, record the said written instrument in the office of the register of deeds for the county wherein the said grounds may lie, and shall define the boundaries of the said grounds by suitable stakes, buoys, ranges or monuments; but no franchise shall be given in or to any of the public grounds as determined by the commissioners of shellfisheries, and all franchises granted under this or previous acts shall be and remain in the grantee, his heirs and legal representatives, provided that the holder or holders shall make in good faith, within five years from the day of obtaining said franchise, an actual effort to raise and cultivate shellfish on said grounds. And provided further that the area hereinbefore described, lying within two statute miles of the main land or any island, shall be entered or held only by residents of the State of North Carolina, and no grant shall be made to any one person of more than ten acres of said territory, and no person shall hold more than ten acres in any creek unless the same shall be acquired through devise, inheritance or marriage. And all that territory within the provisions of this act and lying more than two miles from the mainland or any island, shall be subject to entry by any person, but no person shall be permitted to enter in any one period of five years, more than six hundred and forty acres.

SEC. 7. Twenty-five cents per acre shall be paid to the State Treasurer for all franchises granted, and all moneys received for the granting of franchises or for taxes laid on the said grounds or on property thereon, shall be set apart and kept separate for the purpose of defraying the expenses entailed by the provisions of this Act, and any moneys remaining after the payment of said expenses shall be paid into and credited to the school fund.

SEC. 8. The Secretary of State is hereby authorized and empowered to hire and take upon leases, not exceeding a term of ten years, in the name and behalf of the State, any such plot or plots of ground within the State as may be deemed necessary for the constructing, erecting, setting, maintaining and protecting of signals, beacons, bound-stones, posts or buoys to be used in designating, locating, surveying or mapping any shellfish grounds, and any person who shall wilfully injure or remove any such beacon, bound-stone, post or buoy, or any part, appurtenance or enclosure thereof, or any buoy, stake, mark or range of any private or public shellfish ground, shall be guilty of a misdemeanor.

SEC. 9. All grounds taken up or held under this or previous Acts shall be subject to taxation as real estate and shall be so considered in the settlement of the estates of deceased or insolvent persons.

SEC. 10. The board of County Commissioners shall have entire control and jurisdiction over all public grounds lying within the boundaries of the counties, shall place and maintain such marks, and shall prescribe and publish at the court house door and at four other public places in the country such rules and regulations as may be necessary for the governance and control of the fisheries on such public grounds.

SEC. 11. Any person who shall willfully commit any trespass or injury with any instrument or implement upon any ground designated under this act, upon which shellfish are being raised or cultivated or shall remove, destroy or deface any mark or monument set up by the Board of County Commissioners, by virtue of Section 10 of this act, or who shall violate the rules and regulations prescribed by the said board for the governance and control of the fishery on the public grounds, or who shall work on any oyster ground at night shall be guilty of a misdemeanor. But nothing in the provision of this or any act shall be construed as authorizing interference with the capture of migratory fishes or free navigation or the right to use on any private ground any method or implement for the taking, growing or cultivation of shellfish.

SEC. 12. Entry takers shall make return to the Secretary of State of all franchises granted under this act in the same manner as provided in Section 2,776 of the Code, and the provisions of Sections 2,777 and 2,778 of the Code are hereby extended so as to cover the grants or franchises in grounds for raising or cultivating shellfish as authorized by this act, and all applications, grants, warrants and assignments of franchises in or to oyster grounds, shall be in manner and form as approved by the Attorney General of the State.

SEC. 13. All grants of grounds under previous acts for the purpose of cultivating shellfish in the territory within the provisions of this act are hereby confirmed and made good in the grantees, their heirs and assigns, provided the holders of said grounds shall, within one year, file with the Secretary of State certified copies of their licenses and surveys, and that the said surveys be found correct by the engineer of the commissioners of shellfisheries, and in case such surveys are found to be incorrect, the grounds shall be resurveyed by said engineer as soon as practicable, and in designating lots any person who has made in good faith an actual effort to raise or cultivate shellfish on the area for which application is made, shall have the prior right to a grant or franchise in said grounds; but nothing contained in the act shall be construed to validate any entry heretofore made of a natural bed.

SEC. 14. The commissioners of shellfisheries shall keep books of record, in which shall be recorded a full description of all grounds granted under the provisions of this act, and shall keep a map or maps upon which shall be shown the position and limits of all public and private grounds.

SEC. 15. Any person who shall steal or feloniously take, catch or capture, or carry away any shellfish from the bed or ground of another, shall be guilty of larceny and punished accordingly.

SEC. 16. All acts or parts of acts in conflict with the preceding sections are hereby repealed.

SEC. 17. This act shall take effect on and after the day of its ratification.

Ratified this, the 28th day of February, A. D., 1887.

THE JAPANESE COMMISSIONER.—Our readers will remember our announcement of the arrival of Mr. K. Ito, the Commissioner of Fisheries for northern Japan, on his mission to learn American methods of catching, curing, transporting and breeding fish. Mr. Ito received a good English education in his own country and was familiar with all that has been published on the subject of the fisheries and fish-culture, but wished to see the practical work. To this end he has spent several months in this country examining the models in the National Museum, the fish hatcheries at Cold Spring Harbor, N.Y.; Northville, Mich.; Wood's Holl, Mass., and Buckport, Me.; the methods of catching and curing cod at Gloucester, Mass.; the sardine "factories" in Maine and the menhaden oil and guano works on Long Island, Rhode Island and elsewhere. On Monday last he called at our office and ordered the paper sent to his address in Japan for three years and then left for the Pacific coast to inspect the salmon fisheries and canneries, and will then sail for home with more knowledge of the fishing industries of America, in all branches, than is possessed by any American outside of a few who are connected with the U. S. Fish Commission and who can be numbered on the fingers of one hand. We have been surprised at the amount of varied and accurate information gathered by Mr. Ito, from the rig of a Gloucester schooner to the making of fine fishing tackle or the sousing of mackerel. We are promised some notes on the method of angling in Japan which will be of interest. The Japanese have fly-fishers among them and we have seen some artistic flies tied by them.

BLACK BASS IN GERMANY.—In a private letter Herr Max von dem Borne writes that the breeding of black bass in German waters has been very successful, and that the crop of fry this year will be very large. In 1884 he had 1,517 fry; in 1885, 20,400 fry; and last year 31,700. At least 60,000 are expected this summer.

"FOREST RUNES."

From the Nation, Aug. 4.

AMONG the books of the months there are two volumes, both American, which are rich in out-of-door flavor. Readers of the earlier volumes of the *Atlantic Monthly* may recall a poem by a correspondent at the time unknown, the verses being entitled "John o' the Smithy." It was a contribution that thoroughly delighted the editor, Mr. James T. Fields, who was never weary of reciting its vigorous refrain:

"Down in the vale where the mavis sings;
And the brook is turning an old-time wheel,
From morning till night the anvil rings
Where John o' the Smithy is forging steel.
My lord rides out at the castle gate,
My lady is grand in bower and hall,
With men and maidens to cringe and wait,
But John o' the Smithy must pay for all." (P. 61.)

This hearty ring, and the rather foreign *dramatis personæ*, led readers to suppose that this poem was by some transplanted Yorkshireman; but he turned out, on the contrary, to be an American of the Americans and a woodsman among woodsmen. The title of his volume is "Forest Runes," by George W. Sears ("Nessmuk") (Forest and Stream Publishing Co.). He was born, he tells us, in a cabin on the borders of Douglas Woods, in Massachusetts, near Nepmug Pond and Junkamaug Lake, and has "spent a large share of the summer months in the deep forests, and mostly alone, for fifty years." His face—that of a shrewd and weather-beaten man of sixty-four—looks out of the frontispiece; and his poetry is that of a simpler and more genuine Walt Whitman, that of a man who lives in the open air and speaks his mind. He is incomparably more modest withal, and says, in the prelude to one poem, "Inscribed to the memory of Uncle John Mavo, a Puritan freethinker. * * * If my lines were as good as the man I could discount Milton." Never actually accomplishing that audacious feat, the author gives us fresh, strong, wayward pictures of man and nature, including some striking delineations of Brazilian life, such as show him to have penetrated remoter forests than those of North America."

The Kennel.

FIXTURES.

DOG SHOWS.

Aug. 30 to Sept. 2.—Hornell Kennel Club Show, Hornellsville, N. Y. J. Otis Fellows, Superintendent.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. R. D. Whitehead, Manager.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 21.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

WAVERLY DOG SHOW.

Editor Forest and Stream:

The following judges have been selected for the N. J. K. C. show at Waverly, N. J., Sept. 20 to 23 next: Mastiffs, Mr. Chas. C. Marshall. St. Bernards, Mr. K. E. Hopf. Newfoundlands, Great Danes, English setters, black and tan setters, foxhounds, Basset hounds, dachshunde, miscellaneous and selling classes, Mr. Percy C. Ohl. Fox-terriers, Mr. Fred Hoey. Pointers, Mr. Geo. L. Wilms. Irish setters, Mr. Max Wenzel. All sporting spaniel classes, Mr. A. C. Wilmerding. Judges for the remaining classes have not yet been selected.

Several special prizes have been offered since the premium list went to press.

The Adams, U. S. and American Express Co.'s will return all dogs free which have not changed ownership. The D., L. & W. R. R. Co. of N. J. will carry all dogs free if accompanied by owner; the latter road as far as Elizabeth. The Pennsylvania R. R. have not yet been heard from.

Drs. Glover and Arrowsmith will act as veterinarians.

Entries close Sept. 5. GEO. L. WILMS, Sec.

The premium list is ready for inspection. The following card in the premium list explains itself:

"TO OUR FRIENDS, THE EXHIBITORS.

"The New Jersey Kennel Club has given three bench shows within two years and sustained a net loss of $2,800. The club would have gladly rested from its labors, but being under contract with the New Jersey Agricultural Society to give a show this fall, will carry out its agreement; but feels compelled to pursue a very conservative course. There will not be any money prizes offered, but each winner will receive a handsome diploma. We trust exhibitors will not be governed by the desire for the money consideration, but bear in mind that wins scored will count the same with the A. K. C. Honors being equal, we hope for a liberal support from our friends."

ROBINS ISLAND CLUB.

Editor Forest and Stream:

I take pleasure in informing you that we have secured Mr. H. M. Short to take the general management and care of the Robins Island Club and their dogs. Mr. Short is now on the island. Our club is in a most prosperous condition. We have made several additions to the kennel in the way of blue bloods. Our sixth annual field trials will take place in November, open to members only, Mr. E. W. McClare is the secretary. We expect a much larger supply of birds than usual, on account of having discovered a lot of mink on the island near the pond on the west side, which we have caught and destroyed. This will rid us of one of the quail enemies, and we shall put out more birds than we have formerly. Our members are enjoying the island greatly during the summer and are anticipating the fall opening with much pleasure.

S. FLEET SPEIR.

BROOKLYN, Aug. 8.

THE SENSE OF SMELL IN DOGS.

OF all the phenomena presented by the higher evolution of sense-organs in the animal kingdom, to my mind the most remarkable is the acuteness of olfactory perception which is exhibited by certain orders of mammalia. All the other faculties of special sense are, so to speak, more evenly distributed throughout the vertebrated series; so that when we compare our own sense of sight, of hearing or of taste, with those of vertebrated animals in general, we at once recognize that they are comparable. But such is not the case with the sense of smell, for in many of the carnivora, ruminants, etc., this sense has undergone so enormous a development as to be suggestive of differing from our own, not merely in degree, but in kind. Any one, for example, who is accustomed to deer stalking must often have been freshly astonished at the precautions which it is needful to take in order to prevent the game from getting wind of the sportsman. Indeed to a novice such precautions are apt to be regarded as implying a superstitious exaggeration of the possibilities of olfactory perception; and it is not until he has himself seen the deer scent him at some incredible distance that he lends himself without disguised contempt to the direction of the keeper. Yet among the carnivora the sense of smell is even more extraordinary. Here, for instance, is an observation upon the subject which I published several years ago and which I now quote because it led to the experiments which it is the object of this paper to detail:

"I once tried an experiment with a terrier of my own which shows, better than anything I have ever read, the almost supernatural capabilities of smell in dogs. On a bank holiday, when the broad walk in Regent's Park was swarming with people of all kinds, walking in all directions, I took my terrier (which I knew had a splendid nose, and could track me for miles) along the walk, and, when his attention was diverted by a strange dog, I suddenly made a number of zigzags across the broad walk, then stood on a seat and watched the terrier. Finding I had not continued in the direction I was going when he left me, he went to the place where he had last seen me, and there, picking up my scent, tracked my footsteps over all the zigzags I had made until he found me. Now, in order to do this he had to distinguish my trail from at least a hundred others quite as fresh, and many thousands of others not so fresh, crossing it at all angles."

The object of the experiments about to be described was that of ascertaining whether a dog, when thus distinguishing his master's trail, is guided by some distinctive smell attaching to his master's shoes, to any distinctive smell of his master's feet, or both of these differences combined.

I have a setter bitch over which I have shot for eight years. Having a very good nose, she can track me over immense distances, and her devotion to me being very exclusive, she constituted an admirable subject for my experiments.

These consisted in allowing the bitch to be taken out of the kennel by some one to whom she was indifferent, who then led her to a prearranged spot from which the tracking was to begin. Of course this spot was always to leeward of the kennel, and the person who was to be tracked always walked so as to keep more or less to leeward of the starting point. The district—park lands surrounding a house—was an open one, presenting, however, numerous trees, shrubberies, walls, etc., behind which I could hide at a distance from the starting point, and so observe the animal during the whole course of each experiment. Sundry other precautions, which I need not wait to mention, were taken in order to insure that the bitch should have to depend on her sense of smell alone, and the following are the experiments which were tried:

1. I walked the grass lands for about a mile in my ordinary shooting boots. The instant she came to the starting point the bitch broke away at her full speed, and, faithfully following my track, overtook me in a few minutes.

2. I set a man who was a stranger about the place to walk the park. Although repeatedly put upon his trail by my servant, the bitch showed no disposition to follow it.

3. I had the bitch taken into the gun room, where she saw me ready to start for shooting. I then left the gun room and went to another part of the house, while my gamekeeper left the house by the back door, walked a certain distance to leeward in the direction of some partridge ground, and then concealed himself. The bitch, who was now howling to follow me, was led to the back door by another servant. Quickly finding the trail of the game-keeper, she tracked it for a few yards, but, finding that I had not been with him, she left his trail and hunted about in all directions for mine, which, of course, was nowhere to be found.

4. I collected all the men about the place, and directed them to walk close behind one another in Indian file, each man taking care to place his feet in the footprints of his predecessor. In this procession, numbering twelve in all, I took the lead, while the gamekeeper brought up the rear. When we had walked two hundred yards, I turned to the right, followed by five of the men; and at the point where I had turned to the right, the seventh man turned to the left, followed by all the remainder. The two parties thus formed, after having walked in opposite directions for a considerable distance, concealed themselves, and the bitch was put upon the common track of the whole party before the point of divergence. Following this common track with rapidity, she at first overshot the point of divergence, but, quickly recovering it, without any hesitation chose the track which turned to the right. Yet in this case my footprints in the common track were overlaid by eleven others, and in the track to the right by five others. Moreover, as it was the gamekeeper who brought up the rear, and as in the absence of my trail she would always follow his, the fact of his scent being, so to speak, uppermost in the series, was shown in no way to disconcert the animal when following another familiar scent lowermost in the series.

5. I requested the stranger before-mentioned to wear my shooting-boots, and in them to walk the park to leeward of the kennel. When the bitch was led to this trail she followed it with the eagerness wherewith she always followed mine.

6. I wore this stranger's boots, and walked the park as he had done. On being taken to this trail, the bitch could not be induced to follow it.

7. The stranger walked the park in bare feet; the bitch would not follow the trail.

8. I walked the park in bare feet; the bitch followed my trail, but in quite a different manner from that which she displayed when following the trail of my shooting-boots. She was so much less eager, and therefore so much less rapid, that her manner was suggestive of great uncertainty whether or not she was on my track.

9. I walked the park in new shooting-boots which had never been worn by any one. The bitch wholly refused to take to this trail.

10. I walked the park in my old shooting-boots, but having one layer of brown paper glued to their soles and sides. The bitch was led along my track, but paid no attention to it till she came to a place where, as I had previously observed, a small portion of the brown paper first became worn away at one of my heels. Here she immediately recognized my trail, and speedily followed it up, although the surface of shoe leather which touched the ground was not more than a few square millimeters.

11. I walked in my stocking soles, trying first with new cotton socks. The bitch lazily followed the trail a short distance and then gave it up. I next tried woolen socks which I had worn all day, but the result was the same, and therefore quite different from that yielded by my shooting-

boots, while more resembling that which was yielded by my bare feet.

12. I began to walk in my ordinary shooting boots, and when I had gone about fifty yards I kicked them off and carried them with me, while I continued to walk another three hundred yards in my stocking-soles; then I took off my stockings and walked another three hundred yards on my bare feet. On being taken to the beginning of this trail, or where I had started in my shooting boots, the bitch, as usual, set off upon it at full speed, nor did she abate this speed throughout the whole distance. In other words, having been once started upon the familiar scent of my shooting boots, she seemed to entertain no doubt that the scent of the stocking soles and of the bare feet belonged to me; although she did not clearly recognize them as belonging to me when they were not continuations of a track made by my shooting boots (10 and 11).

13. I requested a gentleman who was calling at the house and whom the bitch had never before seen, to accompany me in a conveyance along one of the carriage drives. At a distance of several hundred yards from the house I alighted in my shooting boots, walked fifty yards beside the carriage, again entered it while my friend alighted and walked two hundred yards still further along the drive. The bitch ran the whole 250 yards at full speed, without making any pause at the place where the scent changed. This experiment was subsequently repeated with other strangers, and with the same result.

14. I walked in my ordinary shooting boots, having previously soaked them in oil of aniseed. Although the odor of the aniseed was so strong that an hour afterward the path which I had followed was correctly traced by a friend, this odor did not appear to disconcert the bitch in following my trail, for she ran me down as quickly as usual. It was noticed, however, by the friend who took her to the trail that she did not set off upon it as instantaneously as usual. She began by examining the first three or four steps with care, and only then started off at full speed.

15. Lastly, I tried some experiments on the power which this bitch might display of recognizing my individual odor as emanating from my whole person. In a large potato field behind the house, a number of laborers had been engaged for eight or ten hours in digging up and carrying away potatoes all the way along half a dozen adjacent "drills." Consequently, there was here a strip of bared land in the field about twenty yards wide and a quarter of a mile long, which had been thoroughly tramped over by many strange feet. Down this strip of land I walked in a zigzag course from end to end. On reaching the bottom I turned out of the field and again walked up a part of the way toward the house, but on the other side of a stone wall which bounded the field. This stone wall was breast high and was situated nearly a hundred yards to windward of my previous course through the potatoes. The bitch, on being led out of the house, was put upon my trail at the top of the field, and at high speed picked out my trail among all the others, following roughly the various zigzags which I had taken. But the moment she gained the "wind's-eye" of the place where I was standing behind the wall, she turned abruptly at a right angle, threw up her head and came as straight as an arrow to the spot where I was watching her. Yet while watching her I had allowed only my eyes to come above the wall, so that she proved herself able to distinguish instantly the odor of the top of my head (without hat) at a distance of two hundred yards, although at the time she was surrounded by a number of over-heated laborers.

16. On another day, when it was perfectly calm, I tried the experiment of standing in a deep, dry ditch, with only the top of my uncovered head above the level of the surrounding fields. When she was led within 200yds. of the place, she instantly perceived my odor, and ran in a straight line to where I had then ducked my head, so that she should receive no assistance from her sense of sight. This experiment shows that, in the absence of wind, the odor of my head (and no doubt, in a lesser degree, that of my body) had diffused itself through the air in all directions, and in an amount sufficient to enable the setter to recognize it as my odor at a distance of 200yds.

From the above experiments I conclude that this bitch distinguishes my trail from that of all others by the peculiar smell of my boots (1 to 6) and not by the peculiar smell of my feet (8 to 11). No doubt the smell which she recognizes as belonging distinctly to my trail is communicated to the boots by these exudations from my feet; but these exudations require to be combined with shoe-leather before they are recognized by her. Probably, however, if I had always been accustomed to shoot without boots or stockings, she would have learnt to associate with me a trail made by my bare feet. The experiments further show that although a few square millimetres of the surface of one boot is amply sufficient to make a trail which the animal can recognize as mine, the scent is not able to penetrate a single layer of brown paper (10). Furthermore, it would appear that in following a trail this bitch is ready at any moment to be guided by inference as well as perception, and that the act of inference is instantaneous (12 and 13 as compared with 2, 8 and 11). Lastly, the experiments show that not only the feet (as these affect the boots), but likewise the whole body of a man exhales a peculiar or individual odor, which a dog can recognize as that of his master amid a crowd of persons (15); that the individual quality of this odor can be recognized at great distances to windward (15), or in calm weather at great distances in any direction (16); and that it does not admit of being overcome by the strong smell of aniseed (14), or by that of many other footprints (4).—*Read by Dr. G. J. Romanes before the Linnean Society in London.*

AN AFTERNOON WITH THE RABBITS.

CLAY CENTER, Kansas.—The day succeeding our last snow I took down my Parker and started for a dry creek or branch about a mile from town, heavily fringed with thickets, underbrush and tall grass, which is a great resort for rabbits. Upon my arrival I found a party of three persons, B., L. and J., already on the ground. Joining the party we were soon industriously scouring the brush. For "rabbit dogs" we had an old pointer and a setter pup, but were soon joined by a little black fice, evidently out for a hunt on his own hook, which as a regular rabbit dog, shut the balance entirely out. The first thicket yielding no game, B. and I crossed the creek and took up a trail leading across the prairie to a snow bank. A close examination revealed the mouth of a snow tunnel with a "breathing hole" on top and an exit on the other side of the bank.

B. went around to the other end of the tunnel, while I proceeded to root along the passage with my feet. Out bounced bunny from between my legs, and was off like a flash to the rear. Wheeling quickly, I gave him my right barrel. He nearly turned a somersault, but recovered, continued his flight and disappeared over the bank of the creek. It ran by our party, one of whom fired with no visible effect. The dogs followed in pursuit to the bank of the creek and then returned. "Never touched him," shouted B., which, considering that I fired through the thickly-standing sunflowers, could not be considered remarkable. B., who was an old rabbit hunter, declared that they sometimes performed the acrobatic feat described when badly frightened. After reloading we followed the trail to the edge of the bank where he had disappeared. The old dog followed the trail across the creek and found the rabbit lying on the other bank dead. It must have run three hundred yards from the point where it was shot. This shows that, contrary to the general belief, some rabbits have considerable vitality.

The party now proceeded up the creek. When we came to a thicket L. would take his dogs and beat up the bushes. The remainder of the party took positions on the banks and watched for the appearance of the little quadrupeds. I have often heard that it was very tame sport shooting rabbits, but we found it quite lively. It is not the easiest matter in the world to tumble over a rabbit at full speed, especially when moving through a thicket of tall grass. You see the bushes move slightly, a flash of something that looks to you exceedingly small, a white tail just disappearing in the bush beyond, and bunny is gone unless you shoot quick and true. At the next thicket, J. and I each scored a clean double miss as one came down a little path directly toward us. At the report of our guns he dodged into the tall grass and the next we saw of him was going into a cornfield with long, exultant leaps.

As we advanced up the creek the brush became thicker and the tracks more numerous. In fact well-beaten paths through the snow crossed and recrossed the thickets. B. made a fine double at two of the little animals as they passed his stand, getting both. A few minutes after the old dog came hurrying down the creek with two cottontails a few yards ahead of him. I bowled over the first as it passed a little open space and the other as it passed abreast through the brush, just as B. had his finger on the trigger.

The head of the creek was reached and we were all tired. J. had gone home, his rheumatism beginning to be troublesome. Our bag aggregated a dozen rabbits, and we started for home well satisfied. Crossing a cornfield we came upon the track of a large "jackass" rabbit, which a dweller near by informed us had lived around there all winter and which he had shot at that morning. Our weariness was forgotten, for jack rabbits are not so plentiful as they were years ago, and we started on the trail with renewed strength.

We started the old fellow out of a corn shock about half a mile from the starting point. He was some distance away and looked as large as a small antelope. We all fired at him, but our No. 10 shot only served to hasten his footsteps. The old dog started in frantic pursuit, but he soon came back looking very much ashamed of himself. I have heard of dogs catching jack rabbits, but I have never seen one catch a full grown one when he was feeling well, and I have seen many very good dogs try the experiment. Another tramp of half a mile brought us to a road. The jack had leaped the hedge fence and had followed the beaten track. Proceeding up the road, keeping a sharp lookout on both sides for tracks, B.'s keen eye espied him in the hedge. "He's dying," said B. Advancing a little distance the jack bounded up, leaped the hedge and was off like the wind. I was close to the hedge and gave him both barrels without any perceptible effect.

Another tramp through the snow and he was again started, this time alongside of a fence, and at close range I bowled him over with a double shot. Even then he was not dead, and his neck was broken before he gave up the ghost. He was an immense fellow and must have weighed fifteen or twenty pounds. He seemed to weigh forty before I got home.

Our tramp ended, the game dressed, gun cleaned and put away, supper over, and sitting by the side of a good fire with feet at angle of forty-five degrees enjoying a good smoke, one can realize just how tired he is, and appreciate his home and fireside after his afternoon's tramp through the snow.

I send you the ears of the jackass, just 12½in. from tip to tip when killed. Ears, black-tipped; upper side of tail black.

TENDERFOOT.

[The specimen is the true southern jack rabbit (*Lepus callotis*).—ED.]

FOX-TERRIER SHOW.—The second annual bench show of the American Fox-Terrier Club will be held at Newport, R. I., Sept. 7 and 8. The premium lists are ready for distribution. The classes are the same as last year. The prizes are also the same with the exception that a second prize of $15 is offered in the champion classes. Several valuable silver cups are offered as special prizes, and other specials are promised. Entries close Aug. 27. The secretary's address is Fred Hoey, Long Branch, N. J.

DAYTON DOG SHOW.—The annual dog show of the Southern Ohio Fair Association will be held at Dayton, Ohio, Sept. 27 to 30.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rightaway. By G. C. Sterling, New York, for black, white and tan English setter dog, age not given, by Sportsman (Gladstane—Sue) out of Rosa (Dashing Monarch—Lelia).

King Naso, Lord Naso, Viscount Naso, Marquis Naso, Premier Naso, Naso of Columbia, Princess Naso, Countess Naso, Lass of Naso, Duchess Naso and Fairy Naso. By Floyd Vail, Jersey City, N. J., for six liver and white pointer dogs and one liver and white and four lemon and white bitches, whelped Aug. 4, 1887, by Mort of Naso (Nick of Naso, A.K.R. 4391—Temptation, A.K.R. 1590) out of Devonshire Queen (A.K.R. 2731).

Gordo. By J. L. Campell, Simcoe, Ont., for Gordon setter dog, whelped May 9, 1887, by Royal Duke (A.K.R. 4678) out of Nora.

Becky Sharp and Jubilee Vic. By J. L. Campbell, Simcoe, Ont., for Gordon setter bitches, whelped May 9, 1887, by Royal Duke (A.K.R. 4678) out of Nora.

Sandy. By L. K. Mason, for sedge Chesapeake Bay dog, whelped April 29, 1887, by Poyneer's Gowrie (Sunday—Nellie) out of Ruby III. (Foam—Ruby II., A.K.R. 143).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Beauty—Royal Diamond. A. A. McRae's (Attleboro, Mass.) bull-terrier bitch Beauty to J. W. Newman's Royal Diamond (Hornet II.—Lulu), July 14.

Young Baroness—Young Royal Prince. J. W. Newman's (Boston, Mass.) bull-terrier bitch Young Baroness (Baron—Lurline) to his Young Royal Prince (Young Royal—Scarlet II.), June 19.

Yoube—Tim. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Yoube (Elcho—Rose) to his Tim (Biz—Hazel), June 29.

Katie B. Liver and white pointer bitch, whelped December, 1886, by Dick B. out of Nellie, by F. S. Stewart, Hoosick Fall, N.Y., to W. G. Whitehead, St. Paul, Minn.

Ione. Fawn mastiff bitch, whelped Jan. 4, 1885 (A.K.R. 3122), by F. G. Stewart, Hoosick Falls, N. Y., to W. G. Whitehead, St. Paul, Minn.

Duke de Richelieu (A.K.R. 4366)—Ione (A.K.R. 3122) whelps. Fawn mastiffs, whelped May 4, 1887, by F. G. Stewart, Hoosick Falls, N. Y., a dog each to H. Parsons and J. L. Grosbeck, same place, and S. W. Skinner, Auburndale, O., and two bitches to W. G. Whitehead, St. Paul, Minn.

PRESENTATIONS.

Duke de Richelieu (A.K.R. 4366)—Ione (A.K.R. 3122) whelps. Fawn mastiff bitches, whelped May 4, 1887, by F. G. Stewart, Hoosick Falls, N. Y., one to C. W. Crandall, Springville, N. Y., and one to Elbridge Gerry, Stoneham, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. L. C., Sincoe, Ont.—My bitch's udder is pendulous and flabby although there is no milk left in it. Her puppies are three months old. Is this an unusually long time for her to be in that condition and what would you advise? Ans. Get the following:

℞. Ung. belladonnæ.
Ung. iodi.....āā ʒi.
Mix. Sig. To be rubbed or kneaded into the udders night and morning.

H. E. M., Melbourne.—I have a spaniel about 11 months old. For about two weeks his ears have been very sensitive to the touch and for 3 or 4 days thick matter has been running from them. Ans. Your dog has canker of the ear. Get the following:

℞. Bromo chloral.....ʒii.
Tr. opii.....ʒii.
Aq. q. s. ad.....ʒii.
Mix. Cleanse the ears carefully once daily and let a few drops fall into the ears.
Consult a veterinary about the other trouble.

D. S. W., Portland, Ind.—My Irish setter eight months old disgorges his food; at times has ravenous appetite, at other times is languid. The conjunctiva more marked at inner canthus of both eyes is inflamed and hyperæmic coat in good condition. What ails him, what shall I do for him? Ans. Symptoms of worms. Examine vomited matters and stools to be sure. If you find worms give areca nut, a half teaspoonful powdered and made into large pill with lard. Purge with castor oil, dessertspoonful before and after giving the vermifuge. The dog may have gastric catarrh from some indigestible food taken, but on account of age and so on, we suspect worms. Feed only milk for a day before and two days after treating.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5206.**

NEW YORK CITY, May 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it,* not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. CUSHIER.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR, New York, Aug. 8.—The seventh of the series of marksman's badge matches of the N. R. A., was shot at Creedmoor on Saturday, Aug. 6. The weather was very hot and sultry during the day with rain, and a mild 3 o'clock wind made it very favorable to the competitors, the scores made were very good. The gold marksman's badge, which becomes the property of the competitor who wins it the greatest number of times during the season, has been won by a different man in each match so far. Major H. C. Brown acted as executive officer. Following are scores of 42 and over, the winners of the match being marked.*

J. MANZ, Jr., Ass't Sec'y, N. R. A.

HAVERHILL, Mass., Rifle Club, Aug. 6, record match, 200yds., off hand, standard target. Weather condition cloudy with showers:

J Busfield	7	8	8	10	8	8	8	10	7	9—83
A Edgerly	9	7	6	8	9	8	9	8	9	9—79
S Johnson	8	7	8	10	5	9	7	7	7	7—75
H Tuck	9	8	6	7	6	9	8	9	5	7—74

NEW JERSEY MILITIA.—The present month is a busy one at Sea Girt camp, and the crack of the rifle is constant. The rifle range practice began on Aug. 1, Colonels Vanvalen, Howard, Overa and Capt. Walker, officers in charge of arrangements. The first thirteen days of August will be occupied by troops of the Second Brigade (Gen. Sewell's) in practice, and the rest of the month by the First Brigade (Gen. Steele's). The State promotes this practice in the most generous way, being anxious to afford every facility to the National Guard to perfect itself in the use of the rifle. There are five grades of marksmen. The third class comprises all who have never shot on the range, and all who have shot and failed to reach the required standard. The second class comprises those who in practice at 100 and 300yds have failed to score 25 out of a possible 50. The first class is made up of those who have scored 25 or over in 100 and 300yds. The marksmen coming next are those who have scored 25 or over in 200 and 500yds. The sharpshooters are those who score 42 or over in a possible 50. These latter are given a silver badge by the State. There are only two at present, no others last year reaching the standard. They are Capt. Haddenhorst, of the Second Regiment, of Hoboken, and Col. Howard, of the Division Staff, both crack shots.

BOSTON, Aug. 6.—There were several riflemen present at the range at Walnut Hill to-day. A high wind and frequent showers interfered with the scores. Following are the scores: Rest match —S. Wilder 112, John Gunn 103, W. H. Oler 105, R. S. Simonds 88, J. P. Cutts 83. Revolver match—F. Bennett 81, C. E. Berry 79, B. Crawcow 79, J. B. Fellows 78, W. Bennett 76, W. H. Oler 76. State militia match—F. A. Shaw, 18, 18, 20, 19. Won the bronze medal.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

AUBURN VS. GENEVA.—Auburn, N. Y., Aug. 4.—In the return match between the Auburn Gun Club and the Lake Shore Club, of Geneva, the Auburn Club again won. Ten bats or kingbirds at 18yds., ten at 21yds.:

LEONIA, N. J., Aug. 4.—Match between George W. Gladwin, of Leonia, and Dr. John A. Wells, of Englewood, 50 American clay birds, 3 traps, N. G. A. rules:

Gladwin	0110111001111001100110101111111111011011011010100—31
Wells	0111011111000111111111111111111011111110111111111101—42

THE MARKSMEN.—Capt. Bogardus and the young Bogarduses are giving exhibitions with Forepaugh's show at Staten Island, N. Y. Dr. Carver is traveling on his own hook, beating the world's record. He killed 50 pigeons straight, English rules, at Lynchburg, Va., last week. Chevalier Ira Paine and wife are with Robbin's circus, last heard from at Montreal, Can., where the *Post* of that city reports some of the local shots tried their hand with Paine. At 50yds., Smith & Wesson army revolver, Paine scored 45444—21. Mr. N. P. Leach, with the same arm, 45554—23. Mr. McCane, secretary of the Montreal Gun Club, and Sergt. Marks also did their part to uphold the credit of the town.

ONE-HANDED SHOOTING.—A remarkable score was made by L. Davenport, of the Fountain Gun Club, last week, at Woodlawn, Long Island. He shot at 37 birds, killing 12 out of 13 from the 28yds. mark, 10 straight from the 25yds. mark, and 11 straight from 27yds., using only one hand. He won the club's championship badge and was second in a sweepstakes.

THE YONKERS (N. Y.) GUN CLUB hold a tournament to-day at the Yonkers Driving Park.

SAN FRANCISCO, July 31.—The largest gathering of sportsmen that has assembled before the traps at San Bruno was present to-day to witness the great team match captained by ex-Judge Hale Rix and M. Ault. Although the toss for first choice was won by Captain Ault, he experienced rather hard luck in many of his selections. The hopes and fears of the rival teams were on the ebb and flow for the first three or four rounds, but Captain Rix finally led his men on with renewed vigor, winning the match by a total of 194 birds to 187. The two captains had selected the best pigeon-shooters in this city and Oakland, teams which represented twenty-three men a side. A few of the best men chosen on either side failed to put in an appearance, but their places were satisfactorily filled by good shooters who were present in masses to witness and enjoy the sport. The shooting commenced promptly at 10 o'clock and the popping was kept up without intermission until the gong sounded as a signal to "let up" on the slaughter of the innocents and repair to the lunch compartments.

The spectators and competitors returned to the city on the 5 o'clock train highly satisfied with their day's sport and the general management of the team shoot. The shooting was governed by Hurlingham rules, 5 ground traps, 30yds. rise, 100yds. boundary. The competitors faced the traps five at a time, and according as their names were announced by the referee W. L. Eyre, whose judgment gave entire satisfaction, they blazed away. The birds provided by Murphy were an excellent lot and in the early part of the shooting, when the blue-rocks were very abundant, the contestants were on their mettle to stop them within the boundary. The average shooting was first-class, considering that many of the contestants had not shot in a pigeon match for several months before. The day was all that could be desired for trap shooting. The following is a summary of the team-match shoot, the figure 2 representing when the second barrel was used:

WELLINGTON, Aug. 6.—The range was well attended to-day, and some fine scores were made. The winners: Six bluerocks, Nichols; six pigeons, Schaefer; six bluerocks, Gerry; six pigeons, Nichols; six pigeons, Schaefer and Nichols; six blackbirds, Schaefer; six pigeons, Gerry; six bluerocks, Warren and Nichols; six pigeons, Schaefer; six bluerocks, Gerry; six pigeons, straightaway, Perry; six bluerocks, Schaefer; six pigeons, Gerry and Perry; six pigeons, Gerry; six bluerocks, Nichols.

HOUR OF SHOOTING.—It would be a great convenience to the readers of your paper if you would publish the hour at which the shooting matches published in your paper are held. Some are held in the morning, others in the afternoon. Probably your correspondents omit the hour. If so, a request in your paper for your correspondents to write the hour at which the matches begin would supply the omission hereafter.—R. E. C.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AUGUST.

1-12. Northern Division, Stony Lake.
7. Oakland, Edwards Cup.
12-26. A. C. A. Meet, Lake Champlain.
13. Lake St. Louis Chal. Cups, Lachine.

SEPTEMBER.

4. Oakland, Edwards Cup.
24. New York, Sailing and Paddling.

OCTOBER.

9. Oakland, Edwards Cup, Mayrisch Badge.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3 and recommendation of an active member. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y Northern Div., J. B. Collins, Peterboro. Sec'y W. C. A., Geo. A. Warder, Springfield, O.

NOTES ON THE WESTERN MEET.

RACES 7, 8, 10, 13 and 16 on the programme could not be started the first or race week of the meet for lack of time. They were worked in the early part of cruising week, except Event 13, with the following results:

Race No. 7.—All classes, 3 miles, sail first half mile, paddle second, sail third, paddle fourth, sail fifth and paddle sixth to finish:

Name.	Canoe.	Club.	Time.
Miles Johnson	Sireu	Sandusky	30 44
R. B. McCune	Kabeyun	Tippy	30 32
W. A. Leys		Toronto	27 52

First stake was passed as follows: Johnson, Leys and McCune. In second half mile Leys and McCune both passed Johnson by superior paddling, and on homestretch Leys left both the other canoes badly. Wind blowing half a gale and big sea running.

Race No. 8.—Double paddling (two men in each canoe), Class IV., half mile:

Name.	Canoe.	Club.	Time.
C. F. Pennewell, F. W. Keith	Algonquin	Cleveland	5 10
C. L. Rist, C. W. Schaeffer	Grayling	Stillwater	5 05
R. P. McCune, G. Hessert	Kabeyun	Tippy	Did not finish
F. M. Keith	Psyche	Cleveland	Did not finish

Race No. 10.—Sailing, all classes, mile and a half course, open to novices only:

Name.	Canoe.	Club.	Time.
C. W. Lee		Tippy	21 40
H. Theobald	120.	Stillwater	20 40
G. M. Clark		Miami	Did not finish
F. M. Keith	Psyche	Cleveland	Did not finish

Race No. 16.—Hand paddling, 100ft.:

Name.	Club.	
G. S. Schaeffer	Stillwater	Fifth.
H. G. Hodge	Stillwater	Fourth.
John Daven	Stillwater	First.
R. Dewese	Stillwater	Second.
F. W. Keith	Cleveland	Third.

The A. C. A. rules recognize two classes of sailing canoes—B, the larger class, being over 28in. in beam, and A, 28in. and under in width. The class B canoes have been built usually 30in. and over to a length of 15ft., and are always most numerous at a meet. Until the meet of 1885 it was thought that the class B canoes could always sail faster than class A canoes, as they could stand more sail. Little Nirvana, sailed by Nimick, of Pittsburgh, upset this idea by making the course in less time than the majority of the class B canoes. Since then several A canoes, built with a view to speed, have held their own with the B boats on even terms, and why? Speed depends principally on length. The A and B canoes are about the same length. If two canoes are the same in length, and of as good lines, but differ in beam, the smaller one will sail as fast as the larger with less sail, as there is less resistance offered to it. When all sailing was done with skipper in the cockpit, stability could only be got by giving the canoe considerable beam. Now, that all race sailing is done with the skipper on deck, stability is, of course, increased the greater the beam, but partially at the expense of speed. The weight of the skipper is the main factor to be considered. A man of 135lbs. and under can get greater speed out of a good A canoe than he can in a B. If over that weight a B canoe he must have to attain the maximum speed. This is generally stated and there may arise rare exceptions to it. An A canoe is too tender for a heavy man no matter how ballasted, and a light man cannot sail a B canoe on an even keel or anywhere near it, as his weight is out of proportion (too little) to the necessary sail spread. Then why have two classes? The races at Ballast Island plainly illustrated that A and B canoes were about equal. To be sure a class B won the free for all and the Gardner cup, and a man under 135lbs. sailed her. But Cook's canoe and rig, and his sailing abilities were superior to those of any one else—and the winds were light. An A canoe came in second in both B races (sailing in the B class), beating the fleet of B boats. Cook barred, an A canoe won the W. C. A. trophy, beating all the B canoes at the meet except one. Down the wind the A canoes were faster than even Cook's canoe, and on the wind but little slower, and that owing largely to imperfect rig—the A canoes, of course, carried 20 to 30ft. less sail than Cook's boat. The point was raised, "Should A canoes be allowed in the B races?" and several gentlemen argued that they should not, giving as one of the reasons that the A canoes in light winds had an advantage over the B boats. This puts the boot on the other leg and credits an inferior class boat with better sailing qualities than the superior. In yachting the length of a boat classes it. Sailing canoes of same length should be put in the same class. This has been done by the 1887 Regatta Committee of the A. C. A. All the canoes are to sail in every class at Bow-Arrow Point, and the prizes go to the winners irrespective of class.

At Ballast Island there was quite a fleet of very excellent canoes, any one of which practically as fair and good as the winners. The Douglas boats particularly came out strong—well built, good lines, common sense centerboards and every device perfect to make them fast. Two modified Peterwsics were also in the races, and a beautiful specimen of a boat from Ruggles. Why did they not do better in comparison with Cook? They were not sailed as well for one reason. Handling has very much to do with the racing results. The correct trim of sails, when to come about to make a buoy—not fall short of it, nor lose by going too far—correct ballasting, sailing a true course—a straight line is the shortest distance between two points—taking advantage of puffs, never getting under the lee of the shore or another canoe—all these points and many more come into play, and the proper solving of each problem gives its inch of help toward the general result. A crack racing sailor is perhaps born, not made, but the majority of those who sailed at Ballast can very much improve their sailing by practice, and the same thing can be said about those who sail at the A. C. A. meets.

Baden-Powell showed the A. C. A. men last year a well rigged canoe. Taking his for a model there was not even a fairly well rigged canoe at Ballast, except Cook's—and he could not reef his sails. The builder is responsible for the canoe and the owner for the rig. A sail cannot be got to sit perfectly in a day. The yacht sails take weeks of tinkering and adjusting to get them to sit flat and perfectly. Canoeists as a rule don't seem to understand this. The spars are too heavy, too light, heavy in the wrong place; masts are too high; the sails are too baggy, or pulled out at the corners into nigger heels. Halliard blocks are not strongly fastened and reef blocks clumsy. The cordage is poor, and knotted instead of spliced, wound or whipped. And thus it is through the list. Cook could have won every race that he did win in any one of fifteen canoes there on Ballast Island, if he could have rigged the canoe himself, and got a few spins in her for practice on the water. Too much attention has not been paid to good lines, a fair, strong and well built canoe; but too little thought and work have been given to sails, rig, and the proper handling of both. This applies to canoeists generally and not particularly to the Western men, for the same faults are illustrated every year at the A. C. A. meets. It is a question which is most important in a race, boat, rig or man. If the man is—and there can hardly be a question about it—then boat and rig are about equally important, for a good rig can work wonders even on a poor boat, but a poor rig will relegate a good boat into the tail end of the procession.

Cook designed and built his own canoe, and, therefore, does not care to make public her lines for others to copy exactly. No. 138 is a full-limit A Class B canoe, lapstreak, with the outside plank edges fined down very thin, good sheer, slight dead rise, fine entrance carried well back, and with slightly hollow lines. A heavy steel dagger board, dropping exactly 18in. below keel, is used in a low open-top trunk, the board lifting clear out of the trunk when the canoe is running. Sixty pounds of shot ballast is carried in bags on the floor of the canoe, placed in a sort of trough to prevent its shifting when the boat heels. The rudder is a very large wooden one, thin, and perfectly smooth, dropping a little below the keel. The keel is slightly rockered, stem and stern nearly plumb to waterline. The stem rounds quickly into the line of keel just below the l.w.l. For the no-ballast race (an event that should be banished from all regatta programmes) Cook used a wooden dagger centerboard, as his steel one was over the 15-pound limit. The canoe was painted inside, but varnished outside on planking and deck. The surface below the waterline was beautifully smooth, the nail heads and screws being sandpapered and filed down perfectly even with the wood, which was polished to the very top notch. It is safe to say that a smoother canoe never entered a sailing race in this country. The deck was not marred with cleats. Two tiller lines and two sheets were the only ropes used. The sails were fore and aft spreet sails, laced to the masts, having booms to which the sheets were attached in several places by means of blocks, thus making an even strain from end to end and requiring but very light lines to hold the sail. Tiny thimbles were used instead of blocks in places. Long, thin spars were used as spreets, keeping the peaks of the sails in place. Usually the spreet is toggled to the mast; not so in Cook's rig—the lower end of the spreet fits into a socket in the boom about 3in. aft of the mast, and by this arrangement the sail is spread out very flat and the boom kept from jumping up, especially when the canoe is before the wind. The greatest fault the ordinary spreet sail has is thus cleverly overcome. The sail is furled by rolling it up around the mast. The only way of shortening sail when under way is to take out the spreet, drop peak and let it fly, thus making a mutton sail with a flapping leach—a very unshipshape method. Cook has a number of suits of sails, differing in sizes and suitable for every kind of weather; but once started in a race he cannot make any changes, and if the force of the wind changes considerably he must be hopelessly left. The wind held very steady during the narrow cockpits seem to have been a necessary, and as it usually does, this kind of rig will often win. Should a smart thunder squall come upon the fleet during a race, how many canoes would live through it, think you? Not many, and surely not one in which reefing a sail is out of the question. Such a canoe would have to down all sail and anchor or lay to till the squall was over, while the canoes with well-working reef lines would be making headway.

Dream, the Record winner at the meet, handled by Leys, the Canadian, is deserving of a word. The canoe was built by Ruggles in his peculiar method, smooth skin, narrow planks, caulked. The canoe is very light, has no bulkheads and very few fittings to add to her weight. Leys put steadies in canoe and thus got a good racing surface. Narrow cockpits seem to have become a fashion now, leaving as they do a good bit of deck on each side of the well, and thus enabling the canoe to go over till the sail touches the water without shipping any of it. Leys's rig was a combination of the Toronto fan sail and Stoddard's latest rig. The radiating battens and heavy brass work high up on the mast certainly do no good. The good paddling points of the canoe helped greatly to push the Record points up into the big figures. Cook, of course, entered no paddling races. With a light, well-fitted rig, there is no reason why Dream cannot hold her own with the best of them.

Bousfield's canoe Peggy, built by McWhirter and Grant Edgar, from Stephens's lines, has figured on the A. C. A. Record and is generally known. The 35lb. board forward, with the necessary ballast aft to trim the canoe, and the new experimental Pound Boat rig used at the meet, are responsible for the only fairly good record attained. With a light board and clean rig, handled as well as Bousfield always sails a canoe, her record should be very near the top notch, if not the top one. Jaques's canoe Dottrell also houses a heavy board, and it is certainly a very good point in this case, as everything is arranged for taking it into the calculations. B. W. Wood's Douglas canoe Vitum carried the next best rig to Cook's at the meet, a pair of well fitting and fairly well rigged balance lugs, and his good record is largely due to this fact. As a rule, the canoes at Ballast Island spread more sail than is now the custom at the A. C. A. meet. Cook and Wood carried considerably over 100ft. in the two sails, and several other

canoes nearly approached these figures. The very poor rigs on the Pecowsic canoes are alone responsible for the low records made in them.

The W. C. A. will certainly find it a benefit to their regattas to establish the Record now in vogue at A. C. A. meets, for it induces more men to enter the rather unpopular paddling races, prevents canoes dropping out of sailing races before the course is half completed because all hope of winning has gone, and shows in bold figures—which cannot lie—which are the best all around and average canoes. The Record in one year worked wonders for the A. C. A., and it cannot fail to do as much for the W. C. A. Perhaps it can be improved upon. Let it be tried.

In all but one sailing race Cook brought his canoe to the line some time before the start, took up his position at the windward end, and held his canoe in position, not two feet back of the line, by putting his arm on a sailboat moored to the wharf, on which the regatta committee stood. A few seconds before the starting signal was given he trimmed in his sheets, and at horn blow shot across the line on the second, to windward of the fleet and in a position to make the first buoy in one leg. The others had to get a flying start all bunched together in a very narrow space and hopelessly blanketing one another. It is probably impossible to start more than ten canoes fairly in such a race, and the A. C. A. regatta committee have recognized this and propose to start the races in heats at Bow-Arrow Point. Better results than heretofore can therefore be looked for. Too much care cannot be given in racing to getting a good start. Atlantic's four wins in one week in June were largely due to clever work of skipper and crew in getting over the line early. A stern chase is a long race, therefore don't start out, if it can possibly be helped, astern of the fleet. While two canoes are having a luffing match with each other the leaders are leaving them further behind every minute.

The third meet of the W. C. A. brought together a larger fleet than assembled at either of the previous camps, and the canoes were very much superior to those seen there in former years. Better sailing was done, and more business-like methods of management. Gentlemen, look to your rigs and the handling of your canoes—which are as good as the best—and next year show each other that you learned something at the '87 meet; then come East and pocket the A. C. A. Trophy, which is even now within your reach, or that of your crack sailor, probably the cleverest canoeist in the country, Cook.

SAGAMORE C. C.—Lynn, Aug. 2.—The second race of the club series was held on July 30 over the regular club course of three miles. A fine breeze was blowing from the south. Curfew was the last to cross the starting line but gained the lead before turning the first buoy, which position she held during the remainder of the race, though closely pressed by Wenuchus. At the finish Loyola attempted to run down a large catboat, but as usual in such cases, failed. The finish was made in the following order: Curfew first, Wenuchus second, Raven third, Ibis fourth. During the progress of the race two canoes were sighted in the distance which, on near approach, proved to be occupied by Mr. Geo. Riley and W. H. Holt, of the Mystic C. C., of Winchester, Mass., on their way to Marblehead. They had intended to be on hand to start in the race, but owing to light winds did not arrive in season. Starting from Winchester at 9 A. M., they had cruised down the Mystic River through Boston Harbor, Shirley Gut into Lynn Harbor, a distance of nearly twenty-five miles, most of the distance being made under paddle. On Sunday morning the two visitors resumed their cruise, accompanied by four of the Sagamores. The wind was light and slow progress was made, but with the famous shores of Nahant on our port hand, there was plenty to interest one who takes delight in viewing nature in her sea-washed beauty. For a canoe cruise on salt water no finer scenery can be found than that stretching from Nahant to Cape Ann, with bold water close to the shores and plenty of shelter in case of storms. It is a veritable canoeist's paradise. Arriving at Marblehead, a short time was spent in partaking of the hospitalities of our friends and sailing about the harbor. Here the Sagamores left their Winchester friends, and continued their cruise through Salem and Beverly harbors to the home of one of their non-resident members, Mr. Clarence Murphy, known to the members of the A. C. A. camp of '86 as the one who tried to cover Eel Bay with his sails. Not finding him at home we took possession of his club house, and after stowing our canoes took the 9:13 P. M. train for home, thus ending a day of the finest cruising to be had on the coast. A regular meeting of the club was held Monday evening, Aug. 1. Two new members were elected, Chas. F. Pollard and W. H. Palmer. The latter is a new arrival from Terre Haute, Ind., and is enthusiastic enough to send to the Far West for his canoe. Mr. Pollard has bought the Ibis from F. E. Passmore, who intends to build a new one during the coming winter. Frank I. Pettingell, the ex-purser of the club, and Edward Wyman, have withdrawn their names as members. *Lusus naturæ.*—White Wings.

TRANSPORTATION TO THE MEET.—Boston, Aug. 8.—The Boston & Lowell Railroad will give the members of the A. C. A. the free and exclusive use of a baggage car from Boston to Burlington, Vt., provided they will state when they will occupy it. They also have reduced passenger rates.—J. L. Powers.

A. C. A. MEMBERS.—Trenton, N. J., Aug. 7.—*Editor Forest and Stream:* A. C. A. applications to date are: Irving A. Quimby, Springfield, Mass.; Hermon Griffin, New York; H. R. Averill, Brooklyn, N. Y.; C. S. Averill, Brooklyn, N. Y.; John Walsh, Lowell, Mass.; E. L. Stoddard, Buenos Ayres, South America.—Wm. M. Carter, Sec'y.

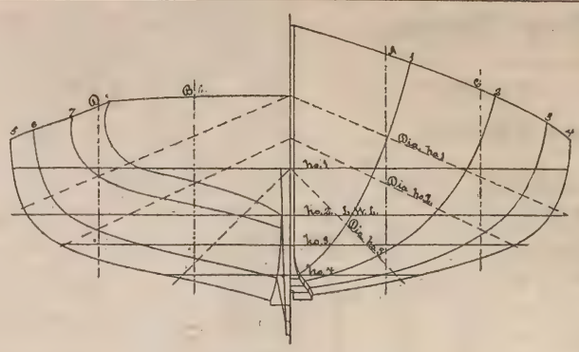
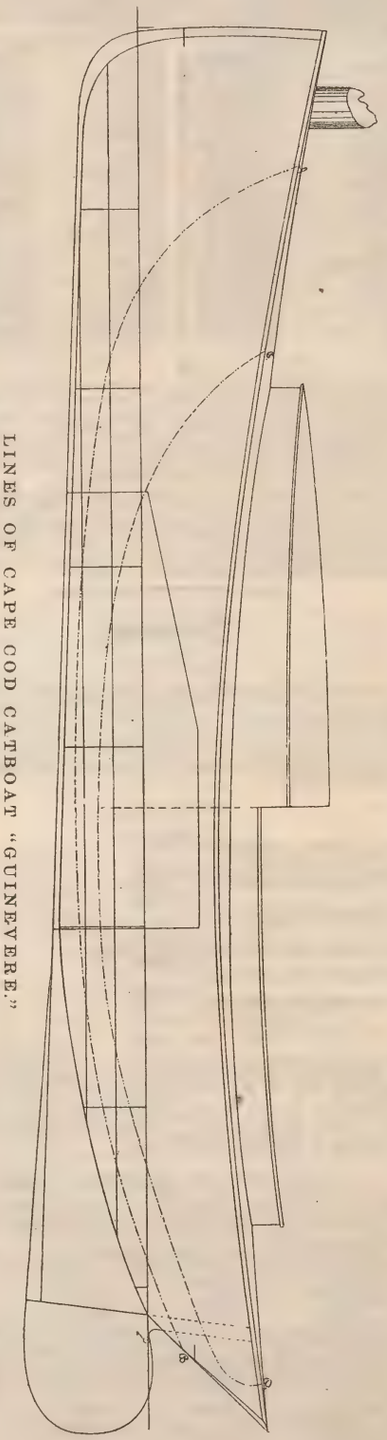
October.

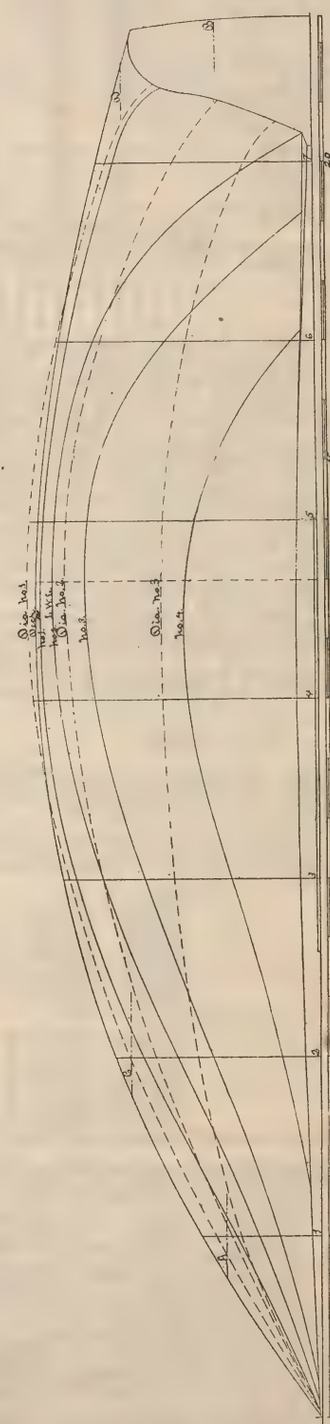


1. America's Cup Match, N. Y.



MONTGOMERY SAILING C., ELEVENTH CRUISE, AUG. 7.—Course, Morristown to Indian Creek and return, distance 5 miles, weather clear and cool, wind fresh northerly, current half mile per hour.

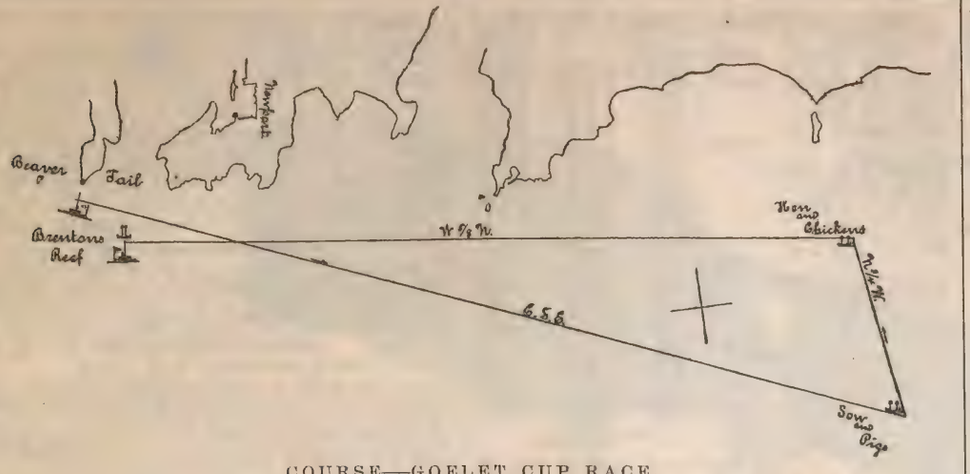
	Length.	Start.	Finish.	Corrected
Gracie, skiff, E. A. Leopold	12.00	9 00 00	10 33 56	1 24 53
E. C. Potts, tuckup, Parker Bros	15.00	9 00 00	10 30 00	1 26 20
Flying Eagle, tuckup, J. Berndt	15.00	9 00 00	10 28 47	1 28 47
Priscilla, tuckup, E. Stanley	15.00	9 00 00	10 27 27	1 29 17
Lulu, tuckup, James Frith	15.00	9 00 00	10 28 16	. . . .
Elsie, ducker, E. MacAllister	15.00	9 00 00	10 33 46	1 30 54
H. S. Scott, tuckup, Carnathan	15.00	9 00 00	10 38 06	. . . .
Pennsylvania, hiker, J. Adams	16.00	9 08 00	Capsized.	



The Lulu has not yet had her sail measured, and it is supposed to be over the limit of 180 sq. ft. The Scott is a new boat from Kensington, not yet measured. The Pennsylvania has a 50yd. sail and carried a crew of five men. Gracie wins championship pennant. It was a reach both ways, with an occasional short tack off shore. The Pennsylvania had a lead of 300yds. at the end of 3½ miles, when she capsized. Judge: Joseph Boucot.

THISTLE'S RIG.—The Anchor steamship Circassia, which arrived Monday from Glasgow, brought the racing spars of the Scotch cutter Thistle. The spars, which are covered with canvas, consist of a mainboom about 86ft. long, a spinnaker of 85ft., a topmast of 60ft., a jibboom of 48ft., a gaff of 48ft. and two yards of 60 and 45ft. The boat is of clear pine, 27ft. long, with five seats.

LINES OF CAPE COD CATBOAT "GUINEVERE."



A CAPE COD CATBOAT.

THE American catboat in general has come in for a good deal of severe condemnation at the hands of the Forest and Stream; but as long as there are shoal waters to navigate the type must exist, and, like a motion to adjourn, the lines of a good one are always in order and will commend themselves to many of our readers. The class of boat found about Cape Cod—in fact, from Newport to far up the eastern coast—is far safer and abler than that about New York, where the old Hudson River and Penny Bridge models still prevail, and is much to be preferred for a pleasure boat where large parties are to be carried or for cruising. With a good bottom, heavy fixed ballast and a snug cabin, they have little resemblance to the familiar "skimming dish," and are largely free from the objections that are made to that class. The boat here illustrated was built at Barnstable, Mass., for Mr. V. D. Bacon, Cape Cod Y. C., by Truman D. Eldridge, of that place, last year. She took part in a series of six championship races and won the prize, a spirit compass and binnacle. Her best performance is in breeze and choppy sea, when she can go to windward of the wider boats, especially if reefed.

DIMENSIONS OF CATBOAT GUINEVERE.

Length over all	23ft.	5in.
l.w.l.	21ft.	5in.
Beam, extreme	9ft.	6in.
l.w.l.	9ft.	4in.
Draft	2ft.	
Freeboard, bow	3ft.	2in.
Least	1ft.	3in.
Stern	1ft.	11in.
Midship section from stem	14ft.	
Mast from stem	1ft.	4in.
Step to truck	32ft.	6in.
Diameter at deck		8in.
Sail, hoist	19ft.	6in.
Foot	28ft.	
Leech	36ft.	6in.
Head	17ft.	

The cabin or cuddy has a height of 3ft. 8in. at center, and allows a 7ft. berth on each side, with lockers at after ends, while forward there is a large space for an oil stove and also for the stowage of lines, oilers, spare Chester anchor and other gear, so that the boat is excellently adapted for cruising. She is ballasted with 2,400lbs. of iron dross under the floor. The Haggerty sail hoist is used and gives entire satisfaction. The stations in the plans are placed 3ft. apart. The skag shown was added after the boat was first tried, and has improved her steering.

COURSE—GOELET CUP RACE.

NEW YORK Y. C. CRUISE.

THE presence of half a dozen racers of the first class, with Volunteer at their head, is of itself a feature that must place the united New York and Eastern fleet of this year ahead of its predecessors, but besides the large racing class there are other indications of the strength and growth of yachting, both from a racing and cruising standpoint. Not only is the fleet very large in point of numbers but it includes some new yachts whose reputation is already worldwide; the older yachts have to a very great extent been modernized and improved in appearance decidedly, and in many cases in performance as well, while this season many that have not been seen for years are again in the racing. The fleet as it left New London included Puritan, Volunteer, Bedouin, Wave Crest, Bertie. Thistle, Dare, Cinderella, Pocanontas, Eclipse, Vision, Magic, Sachem, Regina, Atlantic, Grayling, Gracie, Medusa, Titania, Gitana, Republic, Mayflower, Mystery, Harbinger, Crusader, Iroquois, Troubadour, Phantom, Halcyon, Wanderer, Huron, Athlon, Esperito, Palmer, Maggie, Speranza, Lydia, Nonpareil, Mischief, Princess, Agnes, Norseman, Viking, Resolute, Fleetwing, Whileaway, Madeline, Mohegan, and Æolus. At Newport Priscilla, Stranger, Clara, and Cythera, with some others, joined, making a fleet of 60, besides a large number of steam yachts, from Atalanta down to the odd little Now Then. Pursuant to orders the yachts gathered at New London on Wednesday, and in the evening a meeting was held on board the flagship, at which it was decided to sail to Newport on Thursday, the race for the Goelet Cup to take place on Friday, leaving Newport for Vineyard Haven on Saturday and sailing on Monday for Marblehead, where the race of the E. Y. C. would be sailed as soon as possible. It was also decided to decline the offer of cups from the citizens of Vineyard Haven, and the Newport citizens' cups were postponed until the return from the East. Mr. J. Pierpont Morgan offered the club a $1,000 cup for schooners and two $500 cups for sloops, to be sailed for between Vineyard Haven and Marblehead, which offer was accepted.

New London to Newport, Aug. 4.

The glowing reports of Volunteer's trials had served to direct general attention to the new boat that was expected to beat Mayflower as the latter last year beat Puritan. Seen at a little distance under way she is a handsome craft and worthy of a place beside her sisters. The clipper stem looks well, while the sheer and overhang are much the same in a general way as in the others. Near by, however, a great difference is noticeable in the latter particular, due, as Mr. Burgess claims, entirely to the fault of the builders. The stern is drawn in almost to a point, in a very ugly fashion, and in consequence the sheer is quickened aft, and is not as fair as Puritan. The whole form and workmanship of the counter is bad, and the boat suffers much in appearance when seen near at hand from astern or off the quarter. The workmanship generally is rough, the plating not of the best, while the rail and deck work is very rough. The bowsprit runs in through a pair of heavy locust bitts, with an iron fid, being fitted with long shackles in bobstay and bowsprit shrouds which can be taken out when it is desired to house the spar. Of course this can only be done when at anchor in quiet water, but it will probably prove all that is necessary, while bobstay fall and shroud tackles are unnecessary and the spar is more rigidly held. Unlike Mayflower, the jib sets flying, the luffrope being of steel wire. The usual outhaul with a sheave hole in bowsprit end is also dispensed with, the spar being whole. The iron traveler ring is hauled out by a small tackle, two double blocks with 4in. sheaves, on top of the bowsprit. On the lower side of the spar is an iron hook or spur which engages the traveler ring and holds it, reinforcing the tackle. The peak halliard blocks are pear-shaped and of light construction, and the slings on the gaff are so long that the blocks are nearly home when the peak is up. The sails thus far are setting well and doing very good work, though of course not in their best shape. The boom, 82ft. 6in., is too short now, an extra cloth having been put on the leech after the mainsail was finished, but the sail will be kept at its full size and a longer boom shipped. Like the others, Volunteer is painted white, and with good reason, to judge from Mayflower, now potleaded to the rail. To one who has seen her white it is hard to believe that she could be made so ugly, the dull blue-black of the potlead changing her whole appearance for the worse. It is a question whether it pays, and whether the loss in looks is made up by a gain in speed. The white side is always hard and smooth, and probably nearly equal to the potlead, while at low speeds little of it is immersed, and in strong winds the difference would not be appreciable.

The early morning at New London was threatening and unpleasant with a light N.E. wind, but sails were set early, and at 9 A.M. the signal to get under way was given from the Electra. This year no tugboat accompanied the fleet, but the regatta committee, Fleet Captain Gouverneur Kortright and Mr. Stephen Peabody, was on the Electra, with the latter's two Herreshoff launches at their service, and in their hands all the arrangements for timing the runs as well as the races were very well crrried out. The Electra anchored outside the harbor and at 9:30 fired a gun for the start. The little Esperito was first away, followed by Puritan, then Volunteer. The fleet straggeled along, the last boats being two hours astern of Esperito at the line.

The difference at the start between Puritan and Volunteer was but 9s., the latter to windward, but she fell off and took a place to leeward of Puritan, taking the lead as the other luffed for a moment; Puritan set her small jibtopsail and went in chase, both on the wind. The steel boat held her, though the wind grew lighter until there was almost a calm, only the ebb tide helping the yachts. Just before noon a breeze came in from S.E., light at first, but freshening, and as it was now ahead the fleet was soon crosstacking. Volunteer continued to increase her lead until she was able to set her spinaker and run into the finish off the Dumplings. The only times taken were:

	Start.	Finish.	Elapsed.
Volunteer	9 47 08	6 05 48	8 18 40
Puritan	9 46 59	6 13 00	8 26 01
Atlantic	9 56 09	6 24 25	8 28 25
Gracie	9 56 51	6 43 05	8 46 14
Titania	9 59 18	6 49 25	8 50 07
Bedouin	9 48 40	6 42 17	9 03 37
Huron	10 19 21	7 32 45	9 13 24
Mayflower	10 02 56	7 18 19	9 15 23
Sachem	9 53 52	7 14 50	9 20 57
Cinderella	9 52 11	7 29 40	9 27 29
Grayling	9 56 41	7 38 00	9 41 19
Thistle	9 51 24	7 34 00	9 42 36

The fleet anchored in Newport Harbor and all turned in early to be ready for a hard day's work on the morrow. As the times show the day's sail was by no means a fair test of the fleet, as the conditions varied at times and the yachts were miles apart, but Volunteer's performance, the first of the fleet, is another of the many indications that for a new boat she is a very fast one.

Goelet Cups, Newport, Aug. 5.

The cups offered by Mr. Ogden Goelet, of the schooner Norseman, were as usual, one of $1,000 value for schooners and one of $500 for singlestickers, with time allowance; and the two courses were the same as in previous years, that around Sow and Pigs and Hen and Chickens lightships being chosen this year.

There have been some hard races sailed over this course, but this year there was a regular regatta day, smooth water, light breeze, clear, warm weather, but no sharp and exciting work, and the entire race, though important in its way, was devoid of striking incidents. The yachts simply sailed over the course as fast as the wind allowed, but the first long leg, 18 miles, represented all the windward work, and some of the yachts made it on one tack, as last year. The wind was S.E. all day, blowing light but steadily, with no change of force or direction. Signals were shown from the flagship for a start at 10 A. M., and before that time she was in position off Brenton's Reef Lightship, and the first gun was fired on time, the start being given at 10:15. The starters were: Schooners—Sachem, Mr. Metcalf; Iroquois, T. J. Coolidge; Palmer, R. Stuyvesant; Troubadour, Lucien H. Smith; Resolute, C. A. Postley; Magic, T. N. Motley; Phantom, G. G. Hazen; Æolus, S. A. Wood. Sloops—Volunteer, C. J. Paine; Puritan, J. M. Forbes; Atlantic, D. Chauncey; Priscilla, A. C. Canfield; Mayflower, E. D. Morgan; Huron, H. K. Bloodgood; Titania, C. O. Iselin; Mischief, H. and E. S. Auchincloss; Fanny, F. B. Fisk; Pocahontas, J. D. Smith; Concord, H. C. Roome; Bedouin, A. Rogers; Gracie, J. P. Earle, Stranger, G. H. Warren.

Puritan was first over, rounding close under Electra's bow, but Huron cleverly cut in between her and the steamer, crossing only 5s. later and to windward. Mischief came next, then Priscilla and Bedouin, then a group of four schooners, Iroquois, Palmer, Magic and Sachem, the latter crossing abreast of Volunteer. Next came Phantom, and after her Mayflower and Atlantic, the latter to windward. Titania followed, then came Pocahontas and Troubadour, the latter in a new coat of white. Fanny was not in time to save a handicap. Beside here the laggards were Resolute, Concord, Gracie and Stranger. Stranger had just arrived from the East to join the fleet at 8:30 A. M., and the preparations for racing delayed her so that she was handicapped 7m. at the start. She sailed wonderfully fast all day and really was second boat over the course. The times were:

Puritan	10 16 25	Mayflower	10 21 56
Huron	10 16 30	Atlantic	10 21 57
Mischief	10 17 20	Titania	10 22 30
Priscilla	10 18 00	Pocahontas	10 23 07
Bedouin	10 19 01	Troubadour	10 23 27
Iroquois	10 19 11	Fanny	10 24 54
Palmer	10 19 30	Resolute	10 25 30
Magic	10 19 30	Concord	10 26 25
Sachem	10 20 07	Gracie	10 31 13
Volunteer	10 20 07	Stranger	10 31 15
Phantom	10 21 17		

The handicap time was 10h. 24m. 40s.

Nearly all carried clubtopsails at the start and jibtopsails of various sizes, those who had none wishing heartily for that useful piece of handkerchief, a baby jibtopsail.

The flagship waited to time the last and then ran through the fleet to the head. Nearly all the yachts were on port tack for Sow and Pigs; only a few trying a short hitch to windward at the start. Puritan was ahead, with Bedouin, Huron and Priscilla together astern of her. Volunteer was now far astern, and at 11:15 she came on Priscilla's weather and passed her and Bedouin, though the pair hung to her for some time, Priscilla setting a balloon foresail. Mayflower was coming up astern, and at 11:45 she went through Bedouin's weather. The order now was, Puritan, with large balloon jibtopsail, Volunteer, still carrying her "baby," Mayflower third, Bedouin and Priscilla nearly even, the cutter to windward, and Atlantic in sight far astern.

Just before noon a light fog covered the fleet and all were lost for a time, but it lifted before the first mark—Sow and Pigs—was reached. Volunteer was the first to come up, with spinaker boom ready to starboard, on the original tack on which she crossed the starting line. She rounded at 12:57:56, and at once set spinaker. Just as she turned Puritan went on port tack, holding it until 12:02, when she too stood for the lightship. Volunteer also broke out an immense balloon jibtopsail of light linen, the foot hanging in the water, and with headsails down she ran for Hen and Chickens. The others came up, Palmer now leading the schooners, nearly all making several tacks to weather the ship. The times were:

Volunteer	12 57 56	Huron	1 23 45
Puritan	1 03 25	Palmer	1 29 35
Mayflower	1 04 01	Titania	1 30 01
Atlantic	1 10 55	Sachem	1 32 15
Bedouin	1 12 45	Fanny	1 34 10
Priscilla	1 12 45	Pocahontas	1 35 30
Mischief	1 22 00	Iroquois	1 36 01
Gracie	1 22 45		

The 5 miles to Hen and Chickens was run easily in the same order, the times, as far us taken, being:

Volunteer	1 45 50	Atlantic	1 56 05
Puritan	1 53 57	Priscilla	1 58 02
Mayflower	1 54 10	Bedouin	1 58 40

The comparative work done to the first mark is shown as follows:

	Start to Sow and Pigs.	Hen and Chickens to finish.
Volunteer beats		
Mayflower	4 16	2 58
Puritan	9 11	1 19
Atlantic	11 09	3 22
Priscilla	16 56	5 53

Most of the fleet set jibtopsails, but Mayflower tried a balloon sail with poor results. The long leg was covered at good speed considering the wind, and the flagship was compelled to speed up in order to be in at the finish. The steel yacht came in with a long lead and an easy victory in her first race. The times were:

SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Volunteer	10 20 07	3 14 09	4 54 02	4 54 02
Mayflower	10 21 56	3 25 27	5 03 31	5 02 44
Atlantic	10 21 57	3 27 46	5 05 49	5 04 35
Puritan	10 16 25	3 23 35	5 07 10	5 04 55
Bedouin	10 19 01	3 37 37	5 18 56	5 05 50
Stranger	10 24 40	3 48 41	5 24 01	5 06 41
Titania	10 22 30	3 41 25	5 18 55	5 07 22
Priscilla	10 18 00	3 32 14	5 14 14	5 12 46
Huron	10 16 30	3 48 06	5 31 36	5 13 20
Gracie	10 24 40	3 52 52	5 28 12	5 14 57
Mischief	10 17 20	3 59 40	5 42 20	5 22 32
Pocahontas	10 23 07	4 01 11	5 38 04	
Fanny	10 24 40	4 12 53	5 48 13	
Concord	10 24 40	Did not finish.		

SCHOONERS.

Sachem	10 20 07	3 45 24	5 25 17	5 25 17
Iroquois	10 19 11	3 55 13	5 36 02	
Palmer	10 19 30	3 43 08	5 23 38	
Magic	10 19 30	4 13 39	5 54 09	5 48 24
Troubadour	10 23 27	4 16 07	5 52 40	5 52 01
Resolute	10 24 40	4 11 33	5 46 53	
Phantom	10 21 17	4 22 18	6 01 01	5 59 21

It will be seen that Bedouin comes in very well with the big boats, having done wonderful work all day, but Stranger's sailing is really still better, as her corrected time, less the 7m. lost at start, would be a few seconds under 5h. or second to Volunteer. Of course this does not go on the record, but it serves to show the speed of the boat under certain conditions and that she is a light and not a heavy weather craft. Sachem won in her class, with Iroquois second and Palmer third. The big schooner, looking handsome in her new rig and long stern, sailed very well, but had not wind enough through the day.

In the evening a reception was given by Mr. Goelet on board the Norseman, at which the schooner cup was presented to Mr. Metcalf, owner of Sachem, and the sloop cup to Gen. Paine, owner of Volunteer. It was decided to start early on Saturday morning for Vineyard Haven, the run being timed, but no prizes given. The following letter was received by Com. Gerry during the evening:

NEWPORT, R. I., Aug. 5, 1887.

Com. E. T. Gerry, Flagship Electra:

SIR—I have the honor to refer you to the conversation had between yourself and Secretary Bird and Gov. Wetmore and myself Thursday evening in reference to the race for the cups offered by the citizens of Newport and to inform you that the citizens' committee has concluded that inasmuch as you expressed yourself as well satisfied with the conditions of last year it is desired that they be repeated in the present case. That is to say, the committee offer four prizes as follows: One for schooners 71ft. and over, one for sloops 71ft. and over, one for sloops 55ft. and under 71ft., and one for cutters and sloops under 55ft. The value of the prizes is apportioned as follows: Schooners $650, first, second and third class sloops $650, $350 and $250 respectively; the race to be forty miles or more over the Newport course. The committee desires me to say that the race be sailed on or after Sept. 10, and further that the arrangement of the race be left in the hands of such a regatta committee as the New York Y. C. may appoint.

The committee also desire me to say that it would be very agreeable to them for the owner of the winning yacht to select their own prizes if they desire.

Hoping to receive an early reply and with great respect believe me, sir, your obedient servant, FRANK G. HARRIS, Sec'y.

Newport to Vineyard Haven, Aug. 6.

The signal for a start at 10 A. M. for Vineyard Haven was shown from the flagship in the morning and by 9 o'clock the yachts began to work out to Brenton's Reef Lightship. The schooner Avalon and Clara had come in during the night, but the cutter did not start with the fleet as her new sails were in poor shape. Atlantic had strained the luffrope of her mainsail and so did not start. The flagship was early in position and at 10:34:30 fired the starting gun.

The big Norseman was first away on starboard tack, with a moderate wind from the south. Bedouin and Gitana crossed together, then came America, Athlon, Cinderella and so on until over 50 sailing yachts had passed. Steamers too were about in plenty. Electra, Viking, Susquehanna, Shearwater, Ormmoore, Meteor, Fedalma, Corsair and Reva. All the racers carried club and jibtopsails, Priscilla only of the big ones carrying a thimbleheader. The day was clear, the water smooth, and the weather all that one could wish. As the fleet strung out the leaders in each class soon showed their speed and worked to the front, leaving a scattered and straggling pack astern. Mayflower held her place all day, Volunteer overhauling her for a time but unable to hold her. She really sailed her race alone all day, while Puritan and Volunteer fought it out alone. Puritan kept well to windward in the latter part of the race, while Volunteer, leaving her, struck more tide further off the Martha's Vineyard shore, losing thereby.

Norseman came first for the finish, with Mayflower carrying clubtopsail and jibtopsail, then came Sachem, with working topsails, and a balldoner over her headsails. Puritan and Volunteer followed, then Gitana, with spinaker to starboard, America, with maintopmaststaysail set, Resolute and Grayling and Bedouin under spinaker and sprittopsail. The others were a long time in finishing and it was after 4 P. M. before the last time was taken, with a number still out. The official times are:

SCHOONERS.

	Start.	Finish.	Elapsed.
Norseman	10 34 36	2 19 36	3 45 00
Sachem	10 43 53	2 34 17	3 50 24
Gitana	10 38 20	2 39 32	4 01 12
America	10 39 20	2 42 35	4 03 15
Resolute	10 44 59	2 50 55	4 05 56
Grayling	11 07 50	3 15 46	4 05 56
Troubadour	11 04 57	3 26 46	4 21 49
Magic	10 51 31	3 13 39	4 22 08
Iroquois	11 56 56	2 36 37	4 29 41
Palmer	10 56 08	3 27 37	4 31 29
Phantom	11 04 32	3 36 56	4 32 24
Halcyon	10 57 57	3 30 38	4 32 41
Madeline	11 20 24	3 54 09	4 33 48
Mohican	11 04 27	3 39 05	4 34 38
Republic	11 24 21	4 01 20	4 36 59
Crusader	11 08 21	3 52 50	4 44 09
Wanderer	11 13 43	3 53 28	4 49 45
Wave Crest	11 03 49	3 54 29	4 50 40
Speranza	10 57 14	4 00 23	5 03 11

YAWLS.

Nonpareil	10 55 22	4 33 53	5 38 31

Sachem easily saved her allowance and is the leader of the schooners. The sailing of Volunteer, Puritan and Mayflower was very even, all things considered, Mayflower doing much better than on the previous day, while the run gives further proof that the new boat is fully as good as the other two in moderate weather, and with further sailing will probably be better. Bedouin heads her class by a very large margin, beating Titania by 16m., and Fanny did well, coming in a good second to the famous cutter. Unfortunately Shamrock is not with the fleet, as she would have had a fine chance in the weather that has thus far prevailed.

In the evening the Commodore entertained the fleet on board the flagship, Sunday being spent quietly in harbor.

Vineyard Haven to Marblehead, Aug. 8-9.

Monday morning, with a fresh breeze, the start was made as follows:

Puritan	7 00 34	Priscilla	7 04 32
Volunteer	7 01 10	Titania	7 05 00
Stranger	7 01 34	Iroquois	7 05 21
Gracie	7 01 44	Sachem	7 05 29
Cinderella	7 02 15	Vision	7 06 03
Bedouin	7 02 30	Magic	7 06 20
Wanderer	7 02 31	Pocahontas	7 06 57
Atlantic	7 02 31	No. 35	7 07 16
Huron	7 03 29	Norseman	7 07 16
Mayflower	7 03 32	Mohican	7 07 40
Resolute	7 03 58	Gitana	7 08 42
Troubadour	7 04 06	Fanny	7 10 44

The times taken at the Pollock Rip Lightship were:

Volunteer	10 41 45	Bedouin	11 10 33
Puritan	10 51 22	Gracie	11 11 02
Mayflower	10 57 30	Sachem	11 23 55
Priscilla	10 59 50	Palmer	11 28 23
Atlantic	11 01 32		

After long waiting by the committee at Marblehead the yachts

came in in the following order, Volunteer having held the lead throughout:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Sachem	7 00	10 40 54	27 40 54	27 08 18
Iroquois	7 00	11 34 40	28 54 40	27 49 22
Magic	7 00	12 33 22	29 33 22	28 45 45
Troubadour	7 00	2 26 02	31 26 02	30 51 38
Palmer	7 00	2 19 19	31 19 19	31 11 22
Republic	7 00	2 56 53	31 56 53	31 39 02
Norseman	7 00	3 29 10	32 33 10	32 23 10
Mohican	7 00	4 12 20	33 12 20	33 04 17

FIRST CLASS SLOOPS AND CUTTERS.

Volunteer	7 00	7 42 13	24 42 13	24 42 13
Mayflower	7 00	10 07 28	27 07 28	27 05 22

Atlantic	7 00	10 40 45	27 40 45	27 35 35
Puritan	7 00	Not timed.		

SECOND CLASS SLOOPS AND CUTTERS.

Bedouin	7 00	10 20 26	27 20 26	27 17 04
Gracie	7 00	10 28 10	27 28 10	27 26 29
Clara	7 00	12 15 45	29 15 45	28 19 07
Huron	7 00	11 41 28	28 41 21	28 23 03
Stranger	7 00	11 41 17	28 41 17	28 25 24
Cinderella	7 00	12 33 38	29 33 38	28 41 22
Fanny	7 00	3 41 09	32 41 09	32 31 41
Ulidia	7 00	4 28 03	33 28 03	32 36 38
Pocahontas	7 00	4 08 10	33 08 10	33 01 50

Thus the schooner Sachem beats the Iroquois 41m. 4s. The Volunteer beats the Mayflower 2h. 23m. 9s. The cutter Bedouin beats the Gracie 6m. 25s.

THE GALATEA IN AMERICA.

I SUPPOSE you have seen the accounts of our last race with Mayflower. I am now quite satisfied that Mayflower can beat us in any weather, from a light air to a whole sail breeze. After making all allowance for Galatea not being wound up quite as well as she was last year, owing to having a numerically weaker crew, and her bottom being in a somewhat rough condition, the ice last winter having cut away a good deal of the cement with which it is coated, and also for the time which we lost through striking a calm spot while Mayflower had a strong breeze, I am of opinion that Mayflower is ten minutes faster than Galatea over a forty-mile course in such weather as the last race was sailed in; in light weather, if Galatea was canvassed to the extent she can carry since the lead keel was put right, the difference might not be so much. The ballast being wrong the first year undoubtedly misled us as to her sail-carrying capacities; then she could not carry the original sail plan, and we reduced her all round. The second season the original sail plan was restored, and it might have been augmented considerably, at all events for sailing in these waters. I have been sailing her this year with two tons of ballast less, and she is still as stiff as a church. The New York races were all more or less fluky, and flukes did not come our way. When the breeze was true and had weight she did well enough with Atlantic and Priscilla, both of which are supposed to be improved since last year. During the New York Yacht Club race the fleet encountered a smart squall. Priscilla and Atlantic had to douse topsails and lower foresails to it, and then were rail under. We hung on to our jack-yarder, and were just down to the covering board, no more. The squall only lasted half an hour, but in that time we improved our position from No. 19 to No. 4 in the race, and the sloop advocates had to allow that the narrow cutter stood up better than Atlantic or Priscilla. Both of these vessels are, I think, faster than Mayflower off the wind, but cannot look at her to windward. On a broad reach they can pass us as if we were anchored; on a close reach we are slightly better than they are, and we can stick pretty close to them on a dead run, and to windward, if there is any sea, we can beat them.

I think the Americans are still ahead of us in the matter of sails, and I am not sure if the material they use has not something to do with it. I have had a look at the Volunteer, and as far as I can judge (for she is not yet down to her load line) she ought to be a very powerful and fast vessel. She is narrower on deck than Mayflower, but of the same beam on waterline; her sides tumble home a trifle more, her sternpost rakes more, her keel is cambered and she has about 70 tons of lead run in and loose; spars are much about the same as Mayflower's, boom 2ft. longer (82ft.). She appears to be very lightly built, and the plating is very smooth and fair. She is also deeper than Mayflower and I think will be faster and therefore give the Thistle a good race.

I don't think I shall race Galatea any more. I only wanted to have a good square race with Mayflower for my own satisfaction and I have had it and am satisfied. We will wait out and see Thistle through and then up stick and home again some time in October.

The modern Yankee sloop (?) is to all intents and purposes a beamy cutter with a board; the rig, even to the smallest details, is cutter. Housing bowsprits and longer topmasts are coming into fashion, and heavy lead keels are all the rage. There is a little keel sloop (?) lying close to us called Pappoose, Burgess's latest—38 w.l.×12; 8ft. draft, with 12 tons on the keel. She has only sailed one race as yet. On that occasion she beat the hitherto invincible centerboard sloop Shadow ten minutes. Pappoose is a beamy cutter pure and simple, and a pretty boat too. The days of the old death trap skimming-dish are over in America, and moderate beam and depth have won the day. I hope Thistle will do the trick; she appears to be a marvel in light weather, but do you think she will be as good a sea boat as Trex and Co., carrying such canvas, and the freight of a timber ship aloft?

We are now with the Eastern Y. C. Squadron on its annual cruise up the coast of Maine, and we shall probably look into Halifax (Nova Scotia) before we return to New York to see the trial races. These should prove interesting. Mayflower has been sold. I hope her new owner will do her justice, for she is a grand vessel of her type, and Volunteer will be a good one if she can beat her much.—*William Henn in London Field.*

SINGLEHAND CUTTERS.—*Editor Forest and Stream:* Though opposed to the extreme cutter, I cannot refrain from expressing my admiration of the sailor-like manner Mr. Will Howell handles his thoroughbred alone and in the tricky weather recently experienced on the Delaware. He has never had occasion to reef his little ship, no matter how severe the blow. When the Minerva capsized the little cutter was close aboard on the big one's weather, and went about her business as if nothing unusual was the matter. When it becomes necessary to reef our first-class sloops, then it is the "wee un" puts her big sister to shame. An ex-commodore of the Q. C. Y. C.—cutter all over—with a queer smile puckering the port side of his mouth, said, "All right, Cap, you are the strongest cutter advocate I ever met, but you don't want to believe." Has any one noticed that peculiar left-handed smile of Com. B. when on the cutter rampage? Mr. Howell's cutter is 26ft. over all, 5ft. beam, 4ft. 4in. draft, with two tons of lead on keel. She was built by James Collins from the owner's design.—R. G. WILKINS (Cooper's Point, Camden).

SIPPICAN Y. C.—The first open regatta of the Sippican Y. C. was sailed in a good southwest wind off Marion, Mass., on Aug. 6. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Symigl, C. C. Hanley	25.01	2 36 07	2 28 25
Climax, E. Stetson	26.01	2 35 55	2 19 47
Mabel, S. H. Perry	24.00	2 43 25	2 23 52
Tramp, T. A. Akin	26.06	2 44 06	2 28 36
Mattie, Howard	25.04	2 49 36	2 32 18

SECOND CLASS.

Skip Jack, V. Knudson		Time not given.	
June Bug, Dr. Foster	11.11	Withdrawn.	

WEST LYNN Y. C.—The second race of the special series was sailed off the club house on Aug. 6. The prize in each class is a silver cup to be won twice. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Lark, Sproule and Olin	22.04	2 17 08	2 13 36
Blanche, Martin Nies	23.05	2 22 53	2 13 21

SECOND CLASS.

Flying Yankee, Sawyer and Rich	18.06	1 14 31	1 10 26
Hornet, F. Stoddard	19.02	1 19 32	1 15 34
Alice L., P. Lynch	17.02	1 36 59	1 32 40

THIRD CLASS.

Wildcat, Charles Alley	16.06	0 48 57	0 44 31
Florence, John White	16.10	0 54 10	0 49 47

Lark and Wildcat each had won a leg, so they retain the cup. Hornet and Flying Yankee have each won a leg in second class. A race for keel boats will be sailed on Aug. 13.

MINERVA.—*Editor Forest and Stream:* The Minerva Y. C. have owned the fastest and most reliable yachts in "these waters," from the Slaven (changed to the Minerva) up to the grand 36ft. cabin yacht of the same name. The present Minerva is not of that family and should not be quoted as such. Capt. Thomson is an amateur sailor of the finest type, and has handled the "big" Minerva successfully through many tight nips, and was not unmindful of her bad behavior. While it is patent that the old beamy centerboard boat—death-traps so-called—are no longer safe, useful or ornamental, a modern compromise centerboard is. Please send one along.—R. G. WILKINS (Cooper's Point).

CORINTHIAN Y. C.—In the open regatta of the Corinthian Y. C. the allowance on the yacht White Wings was figured on a basis of 23ft. 3in., instead of 20ft. 3in., her true sailing length. The revised calculation makes her corrected time 50m. 18s., instead of 52m. 41s., and gives her second prize instead of the Zoe, whose corrected time was 51m. 21s. The Zae is thus entitled to third prize.

HULL Y. C. CHAMPIONSHIP.—The second championship race of the Hull Y. C. on Aug. 6 was a drift throughout. Posy won in second class centerboards, Banneret in second class keels, and Eni Eli Eye sailed over in third class, fourth class not making a race.

MONATIQUOT Y. C.—The 2d championship regatta of the Monatiquot Y. C., of Weymouth, Mass. (postponed from Aug. 6), will be sailed over the Fort Point course Saturday, Aug. 10, at 1 P. M.

ATLANTICVILLE, L. I., Aug. 8.—The Shinnecock Bay race was postponed on account of the wind and rain until Aug. 20.

STEAM YACHTING.

AN AMERICAN STEAM LAUNCH FOR INDIA.—Among the several steam launches Bowdish & Co. of Skaneateles, N. Y., are building, is one for an officer of the British Army in India. This boat will be built in the best manner, of selected white cedar, oak and butternut, copper fastened throughout, and all metal parts of the hull of bronze. She will be 22ft. over all, 19ft. on l.w.l., 4ft. 6in. beam, and will draw 24in. aft. She will be propelled by a 1½ horse power, oil-burning engine. The boat is to have air tanks of sufficient capacity to float her machinery, etc. She will be shipped via Liverpool, Eng., to Calcutta.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

B., Richmond, Va.—It is impossible to foretell what the litter will be. Write us the result.

F. C., Omaha.—There is no regular standard. We always give the particulars when they are furnished to us.

HERTFORD.—The description of a greyhound, "A grehounde shold be heeded lyke a snake," etc., was originally printed in Dame Juliana Berner's Book of Saint Albans, in 1486.

F. M. L., Lima, O.—Write to Mark Norris, Esq., secretary Michigan Sportsmen's Association, Lansing, Mich.

BREECHLOADER, New York.—Your puppy will probably come out all right with plenty of exercise and nourishing food.

A. J. T., Avon, N. Y.—In your answer to W. Y. P., of Tuscarora, N. Y., in your issue of July 28, you say it is not forbidden to use nets unless the lake is inhabited by brook trout. Now if I understand Section 23, Chapter 543, of the laws of 1879, it is illegal to fish in Silver Lake in any other way than that of angling with hook and line, that lake not being excepted in that act. Ans. The prohibition of nets reads as follows in the section alluded to: "No person shall kill or catch, or attempt to kill or catch any fish, except minnows, bullheads, eels, suckers and catfish, in any of the fresh waters, or in any of the canals of this State or in the American waters of the St. Lawrence River, in any way or manner, or by any device whatever, except that of angling, save only in the following waters, etc."

A SOFT, VELVET TEXTURE is imparted to the skin by the use of Glenn's Sulphur Soap. For skin diseases it should be used freely. Never take a bath without it. It is also especially useful as a means of bleaching and purifying woolens, cotton, etc. HILL'S HAIR AND WHISKER DYE—Black and Brown, 50 cents.—*Adv.*

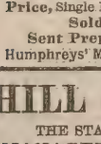
HOT WEATHER POT LUCK.

I have always been extremely susceptible to the poison of poison ivy and oak so as to give me great annoyance, unless it is immediately checked on its first appearance. This common washing soda accomplishes for me, if properly applied. I make the application by saturating a slice of loaf bread with water, then cover one surface with soda, and apply to the eruption, the soda next the flesh. When the bread is dried by the animal heat, I drop water on the outer side so as to keep it thoroughly moistened, and dissolve the soda crystals in contact with the skin. This, you will perceive, is merely a bread poultice; the bread being a vehicle through whose moisture the soda reaches the humor. I find that the washing or bathing with soda water, even continuously, will not suffice with me. My skin requires the heat and moisture of the bread in order for the soda to act on and neutralize the poison. I rarely have need to retain this soda poultice for more than 30 minutes on any affected part. No pain ensues. Formerly I suffered often for weeks, as the poison would spread all over my body. Now 30 minutes measure the duration of its exhibition.—*Popular Science News.*

A young man at Fort Popham the other day caught a cod which weighed probably 30 pounds, and which he placed in a large hogshead and so kept alive. When the party went into the water the young man harnessed up the cod with stout twine and placed him in the water. He had a great deal of sport, and finally, after considerable persuasion, allowed a young lady to try his sea horse. A life preserver was procured and fastened on her, and she grasped the reins holding the large cod. The fish struck out for deep water at a rapid pace. The young lady, becoming uneasy, dropped the reins, but they caught in her feet, and if a party had not gone to her rescue in a sailboat the result would have been disastrous.—*Portland Argus.*

The other day, from a top-story back window in the Lewis Block, a gentleman was observed on a neighboring roof diligently casting a trout fly into the waterless waste around him. "What on earth ails the man?" said one: "he can't imagine he's down the river." "Maybe he's gone fish crazy," suggested another. "Or asleep," ventured a third. Then the office boy came to have a look. "Huh, that's it, isn't it?" said he; "why, he's only practicing. He's going up in the Canadian woods in a week or two, and he's getting into shape." The gentleman continued to cast and recover until his shadow stretched eastward over the housetops 50 feet, when he disappeared down the scuttle.—*Buffalo Courier.*

On Saturday evening at seven o'clock Messrs. Scott, Bond Talmadge and Beal left town for the Lake Basin for a duck hunt. They returned yesterday afternoon, and report lots of game and a glorious time. They brought back seventeen large ducks and nine or ten snipe as evidence of their marksmanship, which were duly appreciated by those fortunate enough to partake of them. On their return they presented Dr. Hersey with a large, fine duck (?) which was on exhibition at the drug store last evening, to a host of inquiring friends, as it was a great curiosity, having four legs instead of the usual two, another proof of the unusual fertility of Montana's soil.—*Billings (Mont.) Gazette.*



If it is worth the *World's* while to pay cable tolls on this dog story, it is worth the FOREST AND STREAM's while to copy it and commend the *World's* enterprise: "London, Aug. 2.—Mr. McDonald, the Secretary of the King's Cross Hospital, in a letter to the *Times* to-day, relates a remarkable case of a wounded collie being recently brought to the hospital by two white-and-black terriers. The latter barked until the doors were opened, and then went off, leaving the wounded dog in the hands of the surgeon, who dressed its injuries."

A gentleman on Cotton avenue says that Flint River is so low the catfish have left the water and invaded the woods and fields. They have nearly devastated a field of corn for Lucius Hudson, living several miles from the river. It is said that the noise they make in pulling the corn would be equal to a hundred head of hungry cattle. The gentleman is a very reliable grocer, and no doubt he is correct, as he and Hudson had a talk over it.—*Sumter (Ga.) Republican.*

A young gentleman and lady from the Sixth Ward were rowing on the river on Saturday evening, when a black bass weighing about a pound leaped from the water, striking the young lady's wrist and greatly frightening her, and alighted in the bottom of the boat, where it was made a prisoner. Sunday morning it was served as the young lady's breakfast.—*Elmira Advertiser.*

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

CHAMBERLIN CARTRIDGES!

The Only Genuine Machine-Loaded Cartridge in the Market.

UNEQUALLED IN QUALITY AND CONVENIENCE.

The superior quality of these cartridges is not the result of chance, but arises from the fact that the Chamberlin Cartridge Machine is so constructed that every charge of powder and shot is measured with mechanical accuracy, and the wads, which are made especially for use in these machines, are of uniform thickness, and placed upon the powder and shot with a suitable and unvarying pressure, an advantage which cannot be secured by any other method of loading cartridges. Every trap shooter understands the advantages of uniform velocity of shot in wing shooting; this cannot be obtained except the charges of powder and shot are alike in each cartridge, and the wadding placed upon each with the same pressure. This is accomplished in the Chamberlin Machine by means of graduated rammers, which are adjustable to any desired pressure, from five pounds to one hundred pounds. Thorough experiments have been made by which it is found that thirty-five pounds' pressure upon the powder wads gives the best results in Black Powder cartridges, and seventy-five pounds the best results in Wood Powder cartridges. Previous to the invention of the Chamberlin Cartridge Machine, experiments in this direction could not be made, for the reason that no means for ascertaining the pressure that was applied to the wads had been devised. A blow of the mallet was an unknown quantity, and no two blows were alike, and the same can be said of hand pressure upon the rammer.

The following *REMARKABLE SCORES* were made with Chamberlin Cartridges: Match at Cincinnati, Ohio, June 20. Conditions, 50 singles and 25 doubles:

J. R. Stice	94	out of possible	100
B. Teiple	90	"	"	100
McDuff	88	"	"	100
A. Meaders	86	"	"	100

On July 11, same place and conditions:

J. R. Stice	broke 90	out of possible	100
McDuff	" 90	"	"	100
A. Meaders	" 87	"	"	100

This, we believe, is the highest average ever made at 700 clay-pigeons, one-half being doubles, and shows the superiority and uniformity of the Chamberlin Machine-Loaded Cartridges.

PRICES OF CHAMBERLIN CARTRIDGES.

Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda: Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

CLOTH, 240 PAGES.

Price, postpaid, $3.00.

FOREST AND STREAM PUB. CO.

WOODCRAFT.
By "NESSMUK."
A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.
FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.

One beautiful young beagle dog for sale cheap. A. C. KRUEGER, Wrightsville, York county, Pa. aug5,2t

I OFFER RED IRISH SETTER PUPPIES, 9 weeks old, the blood of champions Elcho, Derg, Hutchinson's Bob, Venus; dogs $15, bitches $10, if taken at once. Printed pedigree. Also a bitch, Maud Sarsfield, one year old, by Sarsfield—Maud II., $15. Address, HARRY A. FLETCHER, 241 Commercial street, Portland, Me. aug5,tf

ST. BERNARD FOR SALE.—BITCH PUP, 7 mos. old, by champion First Choice ex Bella (Alp II.—Alma); a magnificent animal; price $60. ORCHARD CITY KENNELS, Burlington, Ia. jy28,2t

FOR SALE.—A VERY HIGH-BRED LAVERack dog, about 6 mos. old. For pedigree and price address DR. JOHN J. MILLS, 348 Main street, Poughkeepsie, N. Y. aug11,2t

FOR SALE BEAGLE HOUND LITTLE NICK (Racer—Spangle), field broken; half brother to champion Little Duke. FRANK QUINBY White Plains, N. Y. 1t

FOR SALE CHEAP.—MASTIFF BROOD bitch Nell, winner 2d, Boston, and 1st, Hicksville, 1886; a sure breeder and will be shortly in season. Color, fawn, black points, muzzle quite short. Four-month old mastiff pups also for sale. SANDYCROFT KENNELS, Milford, Del. aug11,2t

FOR SALE.—DACHSHUND PUPPIES, strain of H. H. Prince Albert Solms, Braunfels, Germany. None better in the world. Price $15. Satisfaction guaranteed. Dogs of my breeding were awarded nearly fifty first premiums in six years. WM. LOEFFLER, Preston, Minn. tf

VERY CHOICE POINTER PUPPIES.
By Nick of Naso (A.K.R. 4391) out of Nan (A.K.R. 355), whelped June 15, 1887. By Mainspring out of Fly (A.K.R. 4745), whelped July 21, 1887.
1t ALONZO KOLB, Yonkers, N. Y.

SETTER DOG WANTED.—MUST BE THOROUGHLY broken and a trial allowed. Address stating age, color, price, and if will retrieve, etc. CASH, this office. 1t

BEAGLE PUPPIES FROM CHAMPION Little Duke stock, handsomely marked, black, white and tan. Also some fine pug puppies. Box 46, Linden, Mass. 1t

WANTED.—A SOLID BLACK COCKER spaniel dog of standard form. Address giving lowest price and description to J. W. PISTOR, Binghamton, N. Y. 1t

GORDON SETTER DOG OR PUP WANTED must be all black and tan and very handsome. Reasonable price or red setter given in exchange. J., 338 Prospect ave., near East 165th st., New York. aug11,1t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 18, 1887.

VOL. XXIX.—No. 4. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

CALIFORNIA DEER.

IF the half told of it be true, California is a paradise; but it is a paradise cursed with two wretched specimens of human kind—the skin-hunter and the conventional "sport." It is an undecided question which of the two is the worst half of the curse—the out and out butcher who kills for profit and makes no bones about the business, or the would-be sportsman who kills for brag. One takes the hide and leaves the venison to waste; the other takes only the antlers or the legs and likewise abandons the carcass to the buzzards. Honors are even between them; if either one be ahead it is the skinner.

The deer supply has bravely withstood the enormous drains made upon it by both these classes, but the game has disappeared at a tremendous rate. Multitudes of deer have been killed by the skin-hunters. The industry has been carried on from year to year, with a zeal only now diminished because the pursuit no longer yields the same large returns as formerly.

Could the killing for the sake of the hides be wholly suppressed even now, there might be maintained a supply sufficient for all the demands of the sportsman, though those demands are annually increasing as the numbers of sportsmen visiting the State multiply. New regions are coming within reach of the tenderfoot and cockney who follow the railroad builders. The California and Oregon Railroad, which traverses a region of rare attractiveness between Redding and the Klamath River, has opened a new field for the sportsman, and unfortunately, too, for the game slaughtering tourist who kills because he conceives it to be quite the proper thing to have a deer to brag about.

The old residents of that region of northern California estimate that there must be in that part of the State more fishermen than there are trout in the streams, and more hunters, by forty to one, than deer. Such estimates may not amount to much for accuracy, for no one knows anything about the actual number of deer, but they are significant as showing the magnitude of sporting travel there; and what this means for the game supply of Northern California it is not difficult to comprehend.

A MEMORIAL OF THE GREAT PLAINS.

THE game is going, and one after another different species of wild creatures are disappearing from the face of the American continent. On the extermination of each one there is manifested a desire to perpetuate the memory of its existence, and we see individuals, corporations and Government bureaus uniting to provide memorials of these vanished races and to write of them, "Gone but not forgotten." In our Natural History columns is given an illustration of the pied duck, one of the wild-fowl thought now to be extinct. The National Museum has been advised of the success of an expedition sent out to dig up skeletons of the great auk, another extinct species. Agents of the same institution were not long ago dispatched on a cruise to the Pacific breeding grounds of the sea elephant, bent on the same mission of securing specimens to be preserved after the elephants had been exterminated from the coast by the hunters. Later another party of National Museum agents went out to secure buffalo bulls to be set up in that institution as effigies of another extinct race.

The largest bronze casting ever made in one piece in this country was cast at a foundry in this city last week. It is a huge buffalo head, modeled by Edward Kemeys, Jr., which is to be placed over the east portal of the Union Pacific Railroad bridge over the Missouri River, between Council Bluffs and Omaha. There will be more poetry clinging to this memorial of Great Plains life than attaches to the average railroad bridge decoration. To old-timers it will recall the days in the early history of the road when the trains thundered past far-stretching herds of bison, and cockney sportsmen fired from car window and platform into the great stupid beasts. The plains are there, and the trains and the passengers, who lack only opportunity to exhibit the same old style of abominable cruelty; but one may pass and repass from East to West and see no sign of bison save the mounted heads which ornament some of the stations, and this bronze cast over the Missouri bridge.

THE PORTUGUESE OF BOSTON HARBOR.

THE Boston papers are full of sentimental gush in regard to that city's removal of the Portuguese fisherman from Long Island in Boston harbor. It was long ago decided that the island was needed for the public good—the erection of public works, for the good of the poor. The property was taken for all it was worth some two years ago by right of eminent domain, and the Portuguese were given notice to quit. But they refused to quit, and the other day they were moved by the strong arm of the law and their houses torn down. It is a fact that they have herded together there ever since they came to America, but they never desired to become American citizens. Their only wish has been to control the lobster fishing of the harbor and vicinity. Their right to this industry they have hung to and fought for with a zeal worthy of a better cause. In fact, to them more than to any other fishermen or class of fishermen is due the almost complete destruction of the lobster in the immediate vicinity of Boston Harbor; and since the Massachusetts Fish and Game Association has attempted to rigidly enforce the law for the protection of the lobster, these foreigners—this clan of lobster fishermen living in a little village of their own on Long Island, have given Deputy Commissioner Shattuck and Capt. Gould more trouble than all the rest of the fishermen put together. In fact the majority of the celebrated short lobster cases brought to trial last winter were against these Portuguese. What have they done since? They have become the most bitter enemies of the lobsters too small for sale. The Beach hotels have been furnished with short lobsters by them; and they have made a practice of crushing those too small for sale with this feeling, "if we can't have them, no Yankee shall." They have lived together, worked together, and violated the laws together, and it has been very hard to obtain evidence against them to convict them of poaching. One of them expressed the truth the other day to a newspaper writer when he said there was no other place in the harbor where they could go, "it would not do to be too far from the lobster fishing grounds." It might be added that nowhere else could they be so successfully banded together for the evasion of the short lobster law. In their eviction by the city, the Massachusetts Fish and Game Protective Association may congratulate itself on the breaking up of a clan of lobster fishermen that were in love with the laws no further than they interfered with the Yankee fishermen, but which laws they were bound to respect themselves no further than they could help.

SNAP SHOTS.

ONE reason why summer woodcock shooting should be forbidden is that the pursuit of these birds in July and August affords an excuse and pretext for gunners who pot whatever comes to their gun; and among the game killed are immature ruffed grouse, or "chicken partridges." July woodcock shooters do not confine their operations to proper woodcock cover; they range the sidehills and ridges where the longbills are never seen, but where the average man with a gun manages to get in a good many shots, and birds of some sort go to fill up his bag. This explains how it is that young grouse may be noted in abundance in a given locality, but mature birds are not to be found by the most diligent search when the open season comes around.

Public interest in yachting is perhaps greater this year than last, and it hinges mainly on the coming international races. The newspapers are "giving space" to the topic and lavishing column after column upon the cruises and races. The Thistle's arrival in this port last Tuesday gave a new stimulus to the yachting talk one hears on the street, in the cars and everywhere; if one may believe his ears there must be a vast amount of sailing lore among the people he meets. There is no telling the result of the trial races for selection of an American champion, but everything points to the success of Volunteer. Gen. Paine's new boat has had it all her own way so far; and it may be accepted as a sure thing that she will be selected to compete with Thistle.

The condition of drought prevailing over the West demands the exercise of great caution on the part of gunners and campers with respect to fire. A careless shot or a burning wad may ignite inflammable material which is awaiting only a spark to burst into flames; or the neglected embers of a camp-fire may start a forest or prairie conflagration. In the East where the rainfall has been abundant there is less apprehension of destruction from this cause, yet none the less should care be exercised to provide against the spread of a camp-fire and to thoroughly extinguish it before leaving the spot. There is happily an increased sense of responsibility in this matter among campers, but the gross carelessness and indifference to consequences often displayed are nothing short of criminal.

Will some one versed in kennel affairs kindly explain the intent of the American Kennel Club's rule that unless a dog show club medal be of gold or silver "no description shall be given of its material." There presumably must be some weighty reason for this, but common minds cannot comprehend it. Or is it another piece of American Kennel Club stupidity? A curious complication has already come up in the case of the Hornell Kennel Club, which giving bronze medals cannot come out and say that they are bronze; but according to the course pursued by the American Kennel Club, with reference to such matters in the past, were the Hornell medals pewter it would be quite the correct thing to proclaim them silver.

The AUDUBON SOCIETY membership numbers 38,400, and shows a steady increase month by month. It cannot be said of the movement that it was not called for nor, in face of such figures, unappreciated. The influence exerted by the SOCIETY, the rapidity of its growth and its present strength afford a capital example of what may be done in the way of reform when once it is set about in earnest.

In the summer resort letters to the metropolitan journals the Adirondack "camp" figures as a "model of rustic elegance and taste." It is the sort of "camp" to harmonize with the Adirondack hotels, which boast elevators, electric lights and colored servants in uniform; but one wonders what he of "Woodcraft" fame would have to say to it all.

The index of contents of Volume XXVIII. is published with this issue.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co

MOUNT YO.

MOUNT YO, a bare rugged peak of some five thousand feet in height, is situated on the right shore of the North Arm of Burrard Inlet, ten miles from the mouth and fifteen miles from the village of Hastings, the nearest hotel, from which point the trip to the foot of the mountain is made by water. The broken nature of its summit offers ample cover for the different kinds of game found there; and although at first glance the extent of country to be hunted may appear very limited, still one will require at least three or four days to thoroughly explore the many nooks and corners of this snow-covered peak. There is no trail leading to the summit, and one must pick his way through the tangle of undergrowth and broken rocks. Still there is nothing difficult or dangerous in the ascent, which can generally be made in from seven to ten hours. Mountain goats, black-tailed deer and black bear are among the game found here, and of the smaller mammals, a few wolverines, the Douglas marmot and little chief hare are sometimes met. Mount Yo was the scene of that photograph "One Day's Hunt in British Columbia," which has been so unceremoniously appropriated by some half dozen authors, and which, after going the rounds of the civilized world, has at last found its way into the school books of the Dominion; it was on the occasion of that hunt the mountain was named Yo, after the correspondent of FOREST AND STREAM, whose talented pen has so often delighted its readers with sketches of camp life in the mountains. With this bit of introduction, I will relate my last trip to Yo.

Three hundred feet below us the creek seethed and foamed over its rocky bed, and as its sound reached us, or some turn in our course brought us nearer the almost vertical sides of the cañon, my companion would look down with greedy eyes at the cool gurgling waters, a mouthful of which would have been so much to his parched lips, and ask, "Is there no way of getting down to that stream?" At last the summit is reached; and after quenching our thirst at one of the many springs found in the locality, the spirits of my companion began to revive, and in a moment all the troubles experienced during his ten-hour tramp were forgotten. He took off his hat and strutting around over the heather-covered sward delivered himself after the following fashion: "Here we are at last. Behold, oh rugged peak, a new form of life has appeared before you. For the first time these gloomy cañons are echoing back the voice of civilized man, for the first time this sod is pressed by——"

He stopped short as if struck by the fangs of a rattler. His foot had come in contact with something which, as it rolled on in front of him, gave out a hollow clinking sound. Both eyes starting from their sockets he watched it till it came to rest against a clump of juniper, and then, as if drawn by some irresistible force, he moved slowly toward it and picked it up, and from the partially faded label on its side read out the following:

Pure Ground Coffee, Fell & Co., Victoria, B. C.

There was a moment of silence, the thing dropped from his hand, then he straightened himself up and fairly bursting with indignation turned and faced me.

Now, after complying with my companion's request to accompany him to the summit of some one of the mountains of the Inlet, it never occurred to me that he was ignorant of the fact that Mount Yo was an old camp ground of mine, nor that I was deceiving him in leading him up here. But the true meaning of his remarks repeated to me a half dozen times on the way up, that "the pleasure of exploring some unknown land, to pitch his tent where no white man had ever hunted, had always been the height of his ambition," just began to dawn on me, and I felt guilty. But what he intended to say then will probably never be known, for just at that particular moment something occurred which not only absorbed his attention for the rest of the evening, but completely drove the relic of the old camp ground out of his head. This is what happened. About 500yds. from where we were standing the summit proper of Mount Yo shoots into the clouds three or four hundred feet above the surrounding ridges. The side of this peak facing us is steep and rugged, broken up with great blocks of granite, with here and there a clump of stunted pines and juniper bushes. I have never attempted the ascent from this side, though my Indian on one occasion followed an old goat and its kid to the top. On the opposite side the ascent is quite easy. As my companion turned to face me, his eye caught sight of something on the side of this peak, and, uttering an exclamation, he picked up his rifle and started in that direction, followed by the Indian. A hasty glance revealed the cause of his excitement; a white goat was running down the side of the mountain, closely followed by a black bear. Neither appeared to be going very fast; indeed, the nature of the ground was not at all favorable for a test of speed, and this was more a game of hide and seek, and the goat had the best of it. Doubling round among the granite blocks, he kept the distance between him and his black pursuer about the same; and once when on the top of a huge rock he stopped and looked back at the bear. From my position I had a good view of the race, and with my glass watched it eagerly. I believe that the noble red man of the forest is accredited with holding in his composition a more than average share of stoicism, but in this respect, and under all circumstances, a mountain goat can discount him. Whether scrambling away from danger or chewing his cud on the sunny side of a rock, the same mopish indifference to passing events is stamped on every feature of his long and shapeless face. I do not wish it to be understood that I entertain any feeling of contempt for the mountain goat, for, on the contrary, I consider it one of the most interesting animals in the mountains; and the sportsman who has a desire to know something of the life history of our mammals, and who has never encountered a white goat in its habitat, has missed a very important chapter in natural history.

A puff of white smoke and the report of my companion's rifle recalls me to the chase. The goat moves off to the left and disappears among the bushes in that direction, while the bear, followed by my companion and the Indian, who fire two more shots apparently without effect, rushes off to the right, and is soon lost to view beyond the angle of the mountain.

I have not fully made up my mind as to what would have been the result of that race had it not been interfered with by my companion. There is nothing in my experience with the white goat to stamp it as an animal of more than average speed. I have also had, on more than one occasion, ample proof that a black bear will get through the woods about as fast as any animal I know of. But as before stated, the present case was not one where speed could have been made the winning card; and in the matter of staying powers, patience and cunning, the goat was probably the superior animal. The Indians have more than once told me that the goat sometimes becomes the prey of the black bear, the latter lying in wait and springing upon his victim from an ambush.

It was dark when my companion returned. He had the usual story: "The bear was literally shot to pieces, but it was too dark to follow the trail; they would find him easy enough in the morning" (a prediction not verified by facts). The evening wore on and I fell asleep, to be wakened some time in the night by a punch from my companion, and "How in thunder did that old can get here?" But I feigned sleep, and so the thing was forgotten.

The next day resulted in the killing of three goats, which, however, I had no hand in, as I occupied my time in endeavoring to secure some specimens of the little chief hare (*Lagomys princeps*).

When the chase is over, on the approach of night, in the rugged surroundings and deathlike stillness always pervading the summit of these mountains, there is something conducive to gloomy reflections; and with the presentment forcing itself upon me, that probably this would be my last trip to Yo, I must admit that my spirits were not of a very buoyant nature, nor did the cheerful blaze of the camp-fire impress me with any desire to listen to "Indian lore" or "camp-fire flickerings." My companion appeared to be fully engaged in looking after his goat skins; and strolling along down the ridge to a point overlooking the waters of the inlet and commanding a view far to south and west, I sat down for a quiet smoke. The sun had already dipped behind the long wooded ridge which marked the boundary between Burrard Inlet and Howe Sound, but his light still rested on the tops of the tall firs which skirted the southern shore of the South Arm. Port Moody, fifteen miles away, buried in the shadows of its forest surroundings, looks sullen and gloomy, while its successful rival, Vancouver, twelve miles to the west, looms up in all the gaudiness of freshly painted walls and glittering roofs, reflecting back the rays of the fading day. In the matter of these two cities it is shadow and sunshine in very truth.

A long line of black smoke is twisting its way like a huge serpent down the shore of the South Arm. It is the express train of the Canadian Pacific Railway from the far away East. What a chain of thought that line of smoke calls up. Twenty-five years ago, when after footing it across the Great Plains of the Northwest, I stood upon the summit of the Rockies and looked down over this sea of mountains stretching away to the Pacific, I imagined I had found a land into which civilization would be slow to follow, and my wildest dreams then could never picture these two iron bands stretching from the east to the west. But the granite breastworks of nature, which stud the country from the western border of the plains to the Pacific, have proved but puny barriers to the march of progress and conquest toward the setting sun; and the journey which then took the writer five months to accomplish can now be made in about as many days.

A mountain goat which has been slowly working its way up the side of the cañon opposite me, has reached the top and now stands, his white shaggy form sharply outlined against the darkening sky beyond. This solitary old chap is also taking a survey of his surroundings, and if possessed with the power of reasoning may, in contemplating these two iron bands, be computing the time when the report of the hunter's rifle will be more frequent here than it is now; when an army of exterminators shall encompass the land, compelling him to give up his lease of life or move on toward the frozen north.

This picture probably may be a fancy one. It may also be within the range of possibility. Well, so far as I am concerned, I have had my day, and under existing circumstances, the unexpected turn in the wheel of fortune which necessitates my changing my forest home for one in a noisy bustling city, has not come too soon. Many of the ties which bound me to these rugged haunts have been severed. Companions who have shared with me a hunter's couch and fare have laid away their rifles and crossed the unknown river. Even Seammux, the faithful old Indian who first guided my footsteps to this spot, has folded his *kliss-kliss** for the last time and departed for the happy hunting grounds, where probably he will find a realization in the hope often repeated to me, that mountain goats and hoary marmots are there in abundance, and the Douglass Indian will not be allowed to encroach on the hunting grounds of the Squamish. Griffen, too, the companion of a hundred camp-fires, has placed a barrier between us. He has taken to himself a wife, and is now too much occupied in his domestic surroundings to answer to my beck and call as he was wont in former days. Yet in my altered circumstances, in my quiet moments my thoughts will always turn to Yo as a bright green spot in my life of twenty-five years in the mountains.

But night is upon me, the goat has faded away in the surrounding gloom, and guided by our camp-fire I pick my way back to camp. My companion is already asleep, while the Indians are squatted before the fire broiling slices of mountain goat. It will be a night of feasting for them.† The old Indian is relating to his younger companions a story of a *Salolikum*‡ which once haunted this mountain, and for a while I follow the old fellow's yarn, but drowsiness overtakes me and I roll myself in my blankets and say good-night.

JOHN FANNIN.

VICTORIA, British Columbia.

*Indian mat.

†I have known Indians, after the usual evening meal, to set to work roasting and eating mountain goat or whatever game might be in abundance in camp and keep it up till long after midnight, and the amount of fresh meat that two or three Indians will "get away with" on these occasions is sometimes wonderful. But no matter how scant our gamebag might be I have very seldom had an Indian complain of hunger.

‡Salolikum, anything supernatural, a beast or bird that successfully eludes the power of man. In this case it was a grizzly bear.

MOOSEHEAD IN FLY TIME.—I.

THE average man likes to go a-fishing; and as every one knows he is prone to expatiate on his adventures with the finny tribe and tell fish stories, which his friends receive with as much credulity as his reputation for veracity will admit. As this paper is to a certain extent a fish story, the Scribe begs the indulgence of his readers, and will endeavor not to overstep the line which divides the plain, unvarnished truth from—well, from fish stories in general.

The Scribe enjoys nothing better than going a-fishing, and when one day his friend William said, "Let's you and I go down to Moosehead fishing," it only needed the reply, "All right; when shall we start?" to bind the bargain. The Scribe belongs to that ubiquitous class known as commercial drummers, and William is one of his customers. Of course a salesman is bound to please his customers, even to the extent of going fishing with them, and as drummers are proverbially innocent and truthful, the above statement is additional guarantee that this narrative will not be exaggerated. After we had agreed to go William remarked, "I hardly deem it safe to risk myself alone down in the woods with a fiery untamed drummer; you might get me down there alone somewhere and sell me goods enough to swamp the concern before I could get away. I think I'll take the youngster along too," referring to his son Lloyd, a sturdy lad of thirteen years.

Ignoring this unkind compliment to his abilities as a salesman, the Scribe replied, "Well, then I'll take my brother Harry along, and the trip will do them both good."

In addition to the fishing outfits William and the Scribe were each to take their photographic apparatus and a goodly supply of dry plates, and though we did not much expect to use them, a rifle and shotgun were added to our impedimenta.

The trip to the lake by rail was uneventful, and on Saturday afternoon, when the train drew into Greenville at the foot of the lake, the two advance members of the party were among the disciples of Izaak Walton who alighted therefrom. There were a score of other devotees of the gentle art, who had also made Moosehead the Mecca of their piscatorial pilgrimage. After dinner we went aboard the steamer and were fairly afloat on New England's largest lake. And a jolly set we were, each one seeming to feel that now the cares of business and the restraints of the city were behind us and that our faces were fairly turned toward the free life of the woods and the open air. One party, with their guides and canoes, were bound for Deer Island, and another to the East Outlet dam.

A fishing club from Boston were going to Mount Kineo, which was also our objective point, and where we were to meet our guides. The view from the wharf at Greenville is not very impressive, but soon after leaving it one is in the midst of wild and beautiful scenery. The steamer passes Mile Island and Ledge Island, the latter a mass of granite, and soon afterward Moose Island, beyond which a magnificent view of Squaw Mountain is to be had. Big Squaw guards the southern end of the lake and lifts her dusky head far toward the clouds, her sides and slopes covered with dense forests down to the very shore of the lake, whose waters reflect the wavy outlines. Far away beyond the eastern shore, itself ten miles distant, the Lily Bay Mountains loom up, a huge blue mass of rugged peaks against the lighter blue of the sky. The steamer's course lies between Deer and Sugar islands, at the former of which we made a landing, and after emerging from the narrow channel we had covered half the distance to Kineo (ten miles) and were in the widest part of the lake, where it is fifteen miles from the East Outlet to the head of Spencer Bay. Look which ever way we would the horizon was notched with mountain peaks. Over toward Spencer Bay the two Spencer Mountains rise alone, with no foothills to detract from their grandeur; to the northeast are Lobster Mountain and Little Kineo; to the northwest the Blue Ridge, Miscree Mountain and the great mass of Bald Mountain. Straight ahead, to the north, the great cliff of Kineo stands like a grim sentinel, a huge black silhouette against the sky. Straight toward its frowning front the little steamer held her course, the little group of buildings at its base becoming more and more distinct, till at last we sailed into the little bay and glided gently to the wharf. A number of canoes were drawn up on the beach, and guides and sportsmen stood about, watching the arrival of the boat.

Our first duty was to discard the habiliments of civilization and don the soft hats, flannel shirts and knee breeches which were to constitute our costume for the coming days, and which formed the prevailing dress of this free and easy place. This done, we felt more in harmony with the surroundings, and went out to look up our guides and lay our plans for the campaign. The fishermen and guides were just coming in from various parts of the lake, the latter a bronzed, hardy, fine-looking set of fellows, as a rule, with their hat bands stuck full of flies and carrying the results of the day's sport. Some were Indians, some Yankees and a few French Canadians. The fishermen, themselves, their faces tanned and sunburnt also, a laughing and jolly crowd, compared notes and proudly exhibited their speckled trophies or looked enviously at their more fortunate brethren, as they discussed their different experiences. Among them all there was no prouder nor happier person than a young miss of some twelve summers, who never tired of showing the largest fish of the lot, a speckled trout which weighed nearly five pounds and which she had caught herself.

After supper, as we sat on the piazza, certain small insects made their presence known and felt by their persistent efforts to investigate the interior arrangements of our ears, noses, eyes and mouths, and their patient endeavors to sample our life's blood. A gentleman who sat near us, a new arrival, was expending his strength in vigorously beating the air with his handkerchief in a vain hope of keeping them away. They were not going away, though, as fast as was his temper, and he turned to the Scribe and asked: "What are these miserable things, anyway?"

"Those, my friend, are the famous black flies, the *bête-noir* of the woods at this season."

"Is that so? I have heard of them, but never made their acquaintance before;" and he retired to the house.

Soon afterward we also retreated in good order, discretion proving the better part of valor.

One of our American humorists once sagely remarked, "It is the little things of life which annoy us; one can dodge an elephant, but he can't dodge a fly." If he re-

ferred to the black fly, he spoke truly. This little pest attacks on sight and forces the combat, and is supported by unnumbered legions of his fellows. He goes up your sleeves and down your shirt collar. He gets into your hair and beard; and wherever he goes he bites, and a purple, bloodshot mark reminds you of him for days. No wonder the deer come out of the woods and take to the water in fly time. Various preparations are made for protection against black flies, but the Scribe's experience has been that the most efficacious is a compound of oil of tar, oil of pennyroyal, glycerine and gum camphor.

The flies were unusually thick this year, owing very likely to the height of the water, which has left many stagnant pools in the woods. Former visitors to Moosehead will realize the height of the water in June, 1887, when I say that that favorite fishing place, Table Rock, in Kineo Bay, was entirely under water, and the group of pines known as the Three Sisters were washed by the waves.

Sunday we spent quietly about the house. It was one of those calm, sensuous, dreamy summer days, which invite one to a prolonged siesta; and we were willing that for that day our motto should be *Dolce far niente*. The soft summer haze hung over the distant mountains, and on the surface of the lake not a ripple disturbed the mirrorlike expanse. Peace and quietness reigned supreme, and the whole day was a perfect prelude to the more active ones which were to follow. William and Lloyd were coming on the boat Monday afternoon. Our guides were all ready and our preparations all made for an early start Tuesday morning.

To fill in the day Monday, Harry and the Scribe took the rods and camera and went down on the morning boat to the East Outlet dam, instructing the captain to call there on his return trip in the afternoon. Before trying the fish we went down the left bank of the river and took two pictures of the dam. A collection of tents, comprising a river drivers' camp, were pitched near by and the crew formed a curious and admiring audience as we got the focus and exposed the plates. A general invitation to "take a look under the cloth," which we extended, was accepted by a few, but the unanimous verdict was, "I don't see nawthin'." We then packed the camera and went out on to the dam, crossing on the timbers which stretch between the piers, and were soon casting our flies in the swift water.

Above us was the placid expanse of Moosehead Lake with the dim, blue mountains in the distance; below us the Kennebec River rushed and foamed over its rocky bed, while beneath our feet the water roared over the dam. The logs were running and as they plunged over into the abyss of seething water, we likened them to huge water monsters fleeing from some even greater enemy. But instead of escaping, they were approaching their fate in the form of sawmills far down the river, in whose insatiable embrace they would be converted into a commercial commodity—lumber. Some half dozen fishermen were trying their luck, but a glance at their baskets showed that their success was not phenomenal. We cast our flies for some time without a rise, and then decided to try bait as the others were doing. We hired a small boy, to procure us some worms, and when he returned with them we started for the further side of the stream, where the water ran around the end of the dam, forming a hole which looked like a good place for trout. We could cross most of the way on the timbers, but between the last pier and the shore the only way was along the sloping edge of the dam, which here projected about a foot above the water. Some logs which had lodged there afforded a precarious footing, however, and Harry, crossing first, leaped safely from the end of the last log to the edge of the dam and thence to a log which served as a foot bridge across the hole. But the Scribe, who carries more avoirdupois and whose legs are shorter, made an inglorious failure of the leap, or rather of the alighting part of it, for his feet struck the sloping surface of the planks and he slid gently into the water to his armpits, while his companion executed a war dance and was convulsed with throes of laughter. He seemed to have an insane idea that something funny had occurred. The Scribe pulled himself out and soon stood on the foot bridge. The performer of the war dance remarked, "I should judge that this water was rather wet." This sarcasm the Scribe haughtily ignored, and proceeded to impale a worm on his hook, which he cast into the pool below. It had hardly disappeared under the water before there was a flash, a jerk and the reel began to click. Little the Scribe cared then whether he was wet or dry, and to Harry's credit be it said, that he ceased his bantering and seized the landing net. The lancewood bent and swayed under the strain, the captive at the other end of the line darted to and fro and leaped from the water, the sunlight glistening on his sparkling sides, but in a few minutes the net slid under him and our first trout was safe in the creel. A beauty he was, too, and he soon had plenty of company, for we had good sport there and might have caught more than we did, but we stopped when we thought we had enough. What exhilaration we experienced as we stood there with the forest at our back and the rushing river before us; the swiftly moving logs and the foam and spray and dashing water below the dam, our baskets becoming heavier the while, only a lover of the rod can know.

But we began to feel that it was dinner time, and the flies were finding out that the tar oil on our faces had not been renewed, so after once more besmearing ourselves we retraced our way over the dam and ate lunch. We went up to Wilson's, who keeps the house at the outlet, and had only a short time to wait for the boat. The flies had improved their opportunities while we were busy with the trout, to get up the sleeves of my shirt, and evidently had found my arms to their liking. Harry's closely clipped head also showed the results of their depredations under the rim of his hat, but when we glanced at our creels we felt that we might, perhaps, even forgive the black fly. The sun had dried my clothing, so that before the arrival of the boat I was myself again. As the steamboat approached the pier William and Lloyd were seen waving their hats from the bow, and we were soon on our return to Kineo, greetings having been exchanged and the contents of our baskets inspected.

We were now fairly launched on our outing. There was time before supper to walk over to Pebble Beach on Kineo Bay and expose several plates, which resulted in some good pictures of the cliff and beach. Our programme was to go the next morning to the Northwest Carry, try the fishing in that part of the lake, then paddle around to the Northeast Carry and cross to the west branch of the Penobscot. We had chartered a small steamer to transport us and the canoes to the head of the lake, thus avoiding a long paddle of twenty miles. Our guides, Bill and Cy, were stalwart young backwoodsmen, experts in canoe navigation and forest craft. The canoes were of canvas, that material having in a great measure superseded birch bark in their manufacture, though the genuine birch is not yet numbered among the things that were. Several of these craft, so associated with the romance and poetry of the wilderness, were among those drawn up on the beach, and how much more fitted to the surroundings they seemed than their canvas companions. The birches, with the pitch exuding from their seams, were as if to the manor born; begotten of the woods and wedded to the lonely northern waters. They were a link between us and the red race whose ancient hunting grounds were around us. They were aboriginal and traditional. Specimens of the savage skill and woodcraft of the native race, while the boats of canvas betokened the white man, and were unmistakably his handiwork. The canvas canoe wears longer, however, and will stand more hard usage; it is more easily taken care of and is cleaner to handle. The birch has to be pitched often to keep it water tight, and when turned bottom up in the sun the pitch exudes, making it sticky and disagreeable to handle.

The next morning a small steamer left Kineo, and rounding the peninsula, headed for the Northwest Carry. Two canoes were lashed to her sides, and six healthy specimens of the genus homo, with rods, guns and cameras, formed her passenger list and cargo. The summer wind fanned our faces and the lake glistened and sparkled under the morning sun; over by the mouth of Moose River a steamer was slowly toiling along with a great raft of logs in tow; ahead of us two loons were sporting and diving in their element, and the shifting scenery of the shores was a panorama of which we never tired. As we sailed by Kineo we took two instantaneous pictures of the great flint rock. The climax was reached when we saw, away off to the east, towering grandly above the intervening hills, its sides seamed and furrowed with the tracks of slides and avalanches and its summit crowned with snow, the great bulk of Ktaadn. Between us and it were miles of trackless forest, yet it dominated the whole landscape. Majestic, massive, imposing, the sovereign of the mountains of Maine. Looking in the opposite direction, we saw the Russell Mountains and Bald Mountain over by the Canada line.

In due time we arrived at our destination, and old Joe Morris, who lives at the carry, came down to the shore to welcome us. We lowered the canoes gently into the water, paddled ashore and prepared for dinner. Joe's house stands in a small clearing and is a typical log structure, one story, long and low. We had to stoop as we entered the door. Behind the cabin were the hovels which served as barn and stable. The room which we entered was chamber and living room combined. On the side opposite the door was a huge bunk, six feet in width and running the whole length of the apartment. There was room in it for a dozen men, and across the end of the room were two other bunks, one over the other, which would accommodate four more. A large box stove stood in the middle of the floor, and a long bench, a couple of chairs and a table completed the furnishing of this backwoods boudoir. A rifle stood in the corner, and antlers of two caribou and a deer hung on the wall.

While we sat there waiting for dinner we noticed that William got up several times and went outside, returning in a short time with a look of satisfaction lighting up his handsome face. (William was the good-looking man of the party.) At last the Scribe's curiosity was aroused, and he went out, too, just in time to see William turning the tap of a keg which stood beside the door. He held a tin cup into which a stream of amber liquid was running from the keg. He looked up and proffered the cup to the Scribe, saying, "Just try that; it's prime." The Scribe took it, and before he returned it he had imbibed some of the best birch beer he ever saw, and which, as William said, "went to the right spot." We could always trust William to discover anything in the beer line. By this time Joe's wife announced, in a mixture of broken English and French patois, that dinner was ready, and six hungry mortals filed into the *salle-à-manger*. The room in which we ate was smaller than the living room, and was sheathed with slabs, split and shaved by hand. On the home-made table was a repast of fried trout and pork, eggs, bread and butter, the latter excellent and made by madame herself. Our dessert was of wild strawberries and delicious cream. Joe's sugar had given out, so we sweetened our coffee with molasses. Madame Joe, evidently thinking that William and Scribe were beings of a higher degree of civilization than the others, had placed beside their plates clean handkerchiefs to serve in lieu of napkins, and at one end of the table a tumbler held a bunch of purple iris. This little touch of feminine taste was unexpected in this out-of-the-way place, and the bit of color really reemed to light up the dim apartment. On the floor near the table stood an iron pot containing a smudge or smouldering fire, intended to keep the mosquitoes from being too demonstrative in their attentions. A number of these birds of prey hovered over the table notwithstanding the smoke. They were so large that William thought they were humming birds; but then William had been lowering the high-water mark in Uncle Joe's keg of beer.

Dinner disposed of, we went out to catch trout for supper and breakfast. It was a bright sunshiny afternoon with not a cloud in the sky nor a breath of wind to stir the leaves. The canoes appeared to rest on, not in the water, and they made scarcely a ripple as they moved over the glassy surface. The trout did not seem inclined to bite, and we had gone a mile or more down the lake before a fish was struck. The Scribe was the lucky man and reeled in trout weighing about a pound, which had taken the second fly on his leader. Soon afterward Lloyd got one and then Harry captured a three-pound laker. During the afternoon we had fair luck, but as usually is the case, the biggest fish was the one we didn't catch. Harry, who was trolling, struck a big fish, and after considerable work got him near enough to the canoe so that we could get a good look at him, but with a sudden leap he shook himself free from the hook and departed for parts unknown.

As the sun began to disappear behind the treetops on the western shore, we paddled homeward. How that little word "home" clings to us, no matter where fate or caprice may lead one's wandering footsteps. "Home" is perhaps the most expressive word of the English tongue and suggestive of the most endearing memories. As the canoes glided noiselessly along past the silent shores, where the shadows were already deepening in the forest, the Scribe's thoughts reverted to a happy home which once was his, but from which the life and light went out when its young mistress went to her other home up there above the blue sky.

After Cy and Bill had cleaned the fish we had supper and then sat on the bench outside the door and smoked our cigars. Behind us and on either side of the clearing, the woods formed a dense black wall. In front was the lake and over the water came the wild demoniac calling of a loon, a sound so strange and weird and thrilling, as if the evil spirit of the wilds was aboad in the night. The shrill quavering laughter seemed to intensify the stillness instead of breaking it and made the solitude of this lonely spot only more complete. W. A. B.

MAINE FISH AND GAME.

THE height of the dull season for trout is upon us. Perhaps it would be better to say the depth of the dull season. August is a poor month for trout in New England, and yet it is curious to note the number of fishing rods that go out on every train that leaves Boston for the North and the East. In one case an old and a very respectable tea merchant went down to the farm last week. This going down to the farm means a visit to several small farms way up among the mountains in Maine, which farms have fallen into the hands of the merchant, for the reason that from the kindness of his heart he could not help lending the poor owners money, till at length the whole have come gradually to be his own. This gentleman takes his fishing rods with him. But the chances are that he will get but few trout, for the country urchin, with his piece of string, his pin hook and worm, has had all summer to angle. The brooks in that part of Maine are badly depleted. They are capable of sustaining a good supply of large trout, but they are taken when mere fingerlings.

At the great lakes in that State the season just now is excessively dull. A couple of letters now at hand. Both speak of no sportsmen and very warm weather. At the hotels in the region about Rangeley and Phillips there are reported to be a full showing of guests, but they are of the summer tourist order, rather than sportsmen with the rod and line. Their time is taken up—judging from the reports—in junketing and excursions about the lakes rather than in fishing for trout. Occasionally a party visits a far-off stream in the woods, and then come tales of the slaughter of hundreds of trout. If these vacationists are indulging, as on former seasons, in jacking deer, they are doing it more on the sly than ever before, for the accounts fail to reach the ears of those who would like to see these poachers punished.

But the fall season will open before many weeks have passed, and a lively one it promises to be. The sportsmen who visited the Maine lakes in the spring, some of them for the first time, have become enthusiasts, and they long for September days. It certainly looks as though the exodus of sportsmen to the Maine waters this fall would be greater than ever. They will drink their fill of the glories of autumn in the woods by the borders of the lake, but what the prospects of sport are it is hard to tell. There has been a great abundance of rain in nearly all New England this summer, but there is still time enough to make a very dry autumn. An abundance of water usually means an abundance of trout, but at the same time the July and August fishing this year have been rather poor. It may, however, all be in store for September.

Among those who will take to the Maine woods this fall the desire to shoot is also very strong. But all must remember that the open season on deer, caribou and moose does not begin till the first of October. The generous proposition of the Maine Fish and Game Commission to add September to the open months on this game, was defeated at the last moment in the Legislature of the State last winter It is claimed that the lumber interest did it, and it is certain that the speech of a "Down East Lumber Head" had much to do with the defeat of the bill. He argued that the lumber interest of Maine could ill afford to open up another month to the dangers of the hunter's fires in their beloved forests. But the wise ones said at the time that his object was rather to save the moose and deer from the hunters in legal season, in order that they might be killed by his men in the winter close season. Deer and moose thus obtained came cheaper to him than beef. But enough of this just now. The lumber interest of Maine that allows deer and moose to be killed in the winter season in violation of law is yet to be shown up in FOREST AND STREAM.

SPECIAL.

Not one of the least important items in the attractions and advantages Louisana offers to tourists and immigrants is its rich resources of game for the gun and rod of the sportsman. A writer from Shreveport to the Dallas (Tex.) *News*, enlarging on the charms of the lake region of Caddo and adjoining parishes on the upper Red River, says: "In winter ducks and fish are so plentiful that the margins of the lakes have become the scene of shameful slaughter, when sportsmen, unable to control their instincts, degenerate into killers. To the Northern seeker after amusement, who is not drawn to Florida in search of the springs of perennial youth which Ponce de Leon immortalized in fable, the quietness and balm which hang over those lakes when Jack Frost has closed the gates of the North offer an irresistible charm, and the fact of those lakes not having been more generally advertised accounts for their not being the most frequented winter resorts in the United States. The shooting lasts from the middle of October until April, during which time boats of suitable size and model can be hired at a trivial cost. Ducks of every variety and in numbers that almost obscure the sun, when the quacking tribe rise between it and the observer, frequent those lakes and can be shot at either en masse or in line, as the hunter may elect. There is the canvasback duck—without question the finest that flies as well as the largest and gamest—the redhead, but little inferior to the canvasback; the mallard; blue and green-winged teals; the wood duck, deliciously tender; the pintail, which feeds on the chincapin, and any other number of ducks from the rarest to the toughest and most hardened. Of other birds adjacent to the lakes there are snipe, plover, curlews, killdees, sandpipers, and other select varieties. Here, unlike in Florida, the hunter has not to go miles to find an egg to make his eggnog. Darkies' cabins are everywhere on hand in Caddo parish, and there is no darky's cabin without a supply of eggs.

Natural History.

THE PIED DUCK.

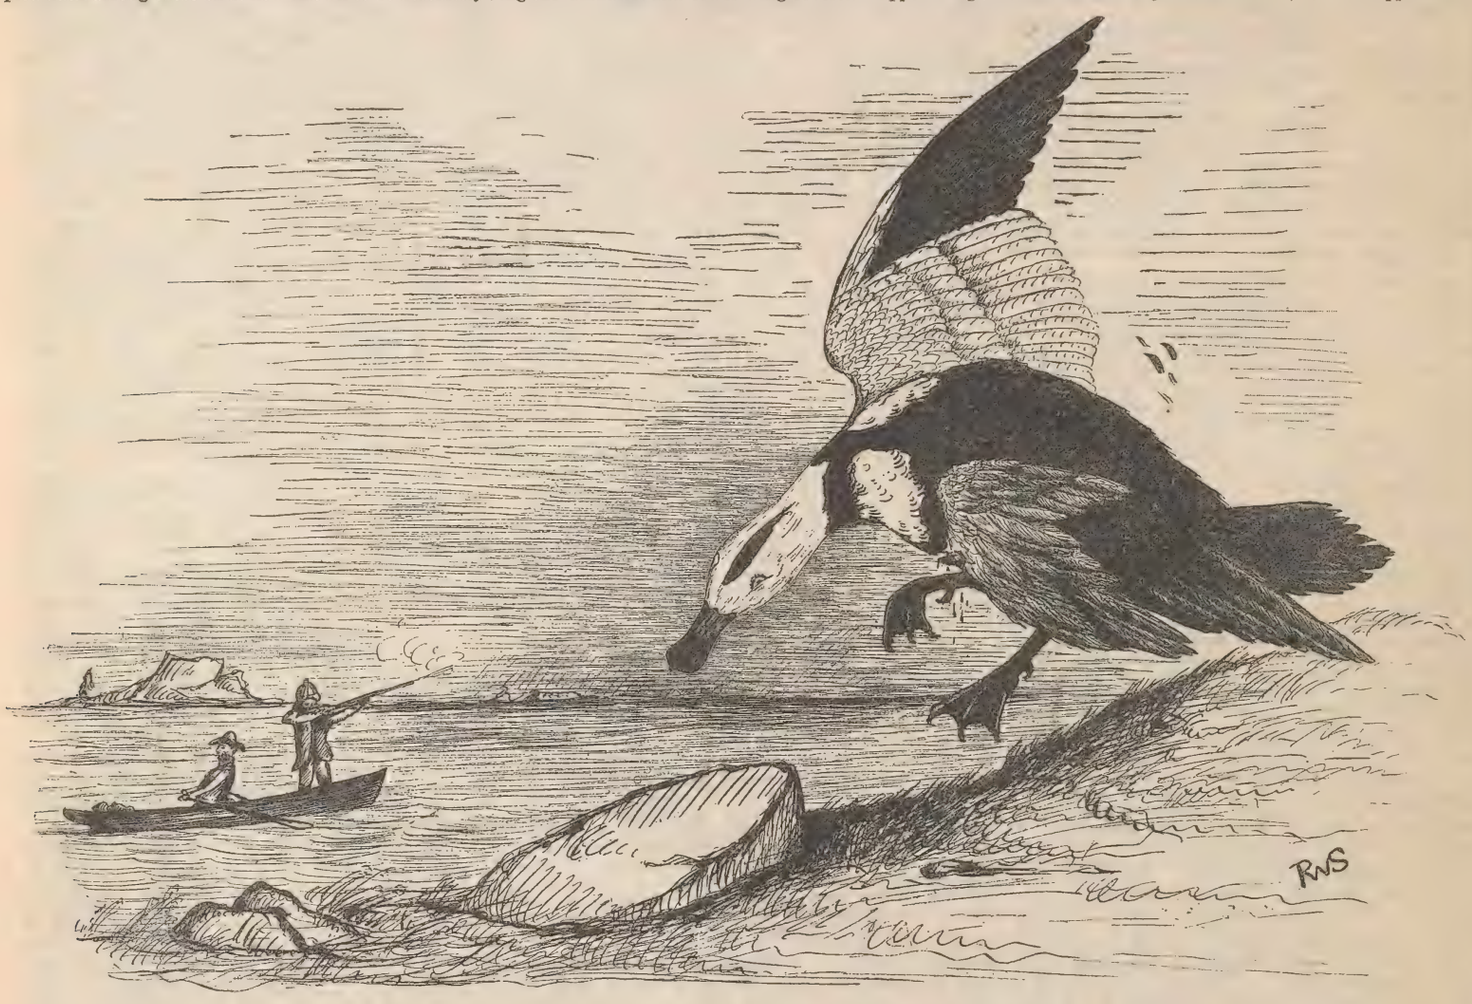
Camptolaimus labradorius.

BY R. M. SHUFELDT, C. M. Z. S., ETC.

NOT long ago (January, 1886) the writer of the present article published in the *Century Magazine* an article entitled "Feathered Forms of Other Days," wherein, after dwelling upon the ancestry of birds now so clearly revealed to us through the discovery of the remains of extinct avian, avireptilian and reptilian forms, he came to consider the list of those birds in different parts of the world which have been exterminated, through one means or another, within comparatively recent times. Among these latter no little attention was paid to the history of the subject of the present article, the pied, or Labrador duck; and in my *Century* essay a figure was given of this interesting bird. In some particulars, however, that illustration was not quite as satisfactory as I should liked to have had it; but that is neither here nor there so far as our present purpose is concerned.

For more than a year after the article I refer to appeared, I received communications from various sources, and often of an exceedingly interesting character, which, in the main, questioned the propriety of including the pied duck among those birds now known to be absolutely extinct. Some told me that they had shot specimens within five years, and others had seen it in the flesh even within a more recent date than that, while one correspondent knew the duck perfectly, had seen one within a month in a market, and would soon be able to send me a pair in alcohol to be used as anatomical material!

It is needless to add, however, that notwithstanding the intention of my good correspondents, I have not up to the present writing been overburdened with specimens of that particular duck. In one or two instances, I must confess, the descriptions sent me, sometimes by old duck hunters, of birds they had recently shot as pied ducks, were very accurate indeed, and I was more than inclined to believe that a *bona fide* capture had been made. And in view of these facts, and inasmuch as the American Ornithologists' Union still keep this duck on our Check List as "now extremely rare, and perhaps extinct," I believe another word about it here will hardly be considered untimely.



There is before me my copy of Audubon's figure of this duck, a splendid colored plate, and some three or four years ago, Mr. Smiley, the talented photographer of the U. S. National Museum, made me a fine photograph of the mounted specimen of the male pied duck in the collections of the Smithsonian Institution. This is also at my hand, and from the two sources in question I have ventured to produce a sketch of the bird myself to illustrate what we have to say here in regard to him, but chiefly to place before sportsmen a figure of the bird which cannot be easily mistaken, and which will serve as a guide in diagnosis in case a specimen be taken upon any of their expeditions. For we will all agree that it would be a shame to pluck a pair of these ducks for the table when not long ago a pair of skins sold in London for $ 00 cash—yes, only the skins and feathers, to say nothing of what a pair of alcoholics might have brought, which not only include the skin and feathers, but all the structural characters besides! I have no doubt that a good pair of these birds, adult specimens in perfect plumage, would command a price of $300 at the present writing.

A pied duck was shot in Halifax harbor in 1852, and I am unfamiliar with any record that is of later date. Audubon painted his pair in his admirable figures of the plate to his work from two he had had presented him by the "Honorable Daniel Webster, of Boston, who killed them himself on the Vineyard Islands, on the coast of Massachusetts."

Granting that a few of these birds are still in existence, a male specimen may be known by having length of about 20in., measured to the end of the tail, and to the end of the claws 22½in., and to the end of the wings only 18½in. Alar extent, 30in.; so it will be seen that it is an unusually large duck. Audubon's specimen weighed 1lb. 14½oz., and he tells us that in it the "bill with the basal space between the nostrils running into a rounded point in the middle, pale grayish-blue; the sides of the base and the edges of both mandibles for two-thirds of their length, dull pale orange, the rest of the bill black. Iris reddish hazel. Feet light grayish-blue, webs and claws dusky. Head and upper half of neck white, excepting an elongated black patch on the top of the head and nape. Below the middle of the neck is a black ring, anteriorly is a broad band of white, passing backward on each side, so as to include the scapulars. All the under parts black, excepting the axillaries and lower wing coverts. Upper wing coverts and secondary quills white, some of the inner quills with a narrow external black margin; alula, primary coverts, and primary quills, brownish-black. Tail [14 tapering feathers] brownish-black, tinged with gray, the shafts black; upper tail coverts dusky, minutely dotted with reddish-brown." The female is smaller than the male, and in general coloration is of a brownish-gray, with bill, feet, etc., as in the drake; it has, however, white on the sides of its forehead, and some seven or eight of the secondaries of the wing likewise. The remainder of the wings and the tail as in the male; so if a male bird happened to be collected, any such appearing companion taken with it, ought surely to be preserved and with fully as much care.

These birds ought to be carefully looked for during the winter season from Labrador to the southern coasts of New Jersey; they have never, I believe, been taken in the interior.

If a specimen in full plumage is captured, there is no reason why it should not furnish, not only a first-class skin, but the entire skeleton and soft parts besides. It should as soon as possible be committed to a jar containing sufficient pure, clear alcohol to cover it completely, when it can be converted into the aforesaid material just so soon as it comes into the hands of a skilled preparateur, and one who fully realizes the great value of the specimen upon which he may be called to operate.

THE PIED DUCK (*Camptolaimus labradorius*).—MALE; WINTER PLUMAGE.

ALBINO HEDGEHOG.—Methuen, Mass.—Mr. C. F. Richardson asked in your issue of June 7 if any of us had ever seen white hedgehogs. Last September I was in the town of Sutton, N. H. Scott Littleade, of that town, had two of them alive, and with them a white woodchuck or ground hog.—C. G. C.

WHIP SCORPION AND GILA MONSTER.

Editor Forest and Stream:

In your issue of July 28 Dr. R. W. Shufeldt gives your readers an interesting sketch of what he calls the whip-tailed scorpion. In southern Arizona, where I first saw this creature, nearly thirty years ago, the natives called it "Venegraea," as near as I can come to it, and I found it quite common in the entire southern portion of the Territory, especially in the neighborhood of old Fort Buchanan (subsequently renamed Camp Crittenden), where one had only to turn over a few old logs or loose stones to find one or more of these interesting creatures. My sole object in writing this is to place on record at least one case in which the bite of this insect proved fatal. In one of the numerous expeditions after the Apache Indians in that Territory in 1858, the company to which I belonged at the time, D Troop, First Dragoons, captured among other things a small Indian boy, at the time probably six years old. This youngster, while tractable enough in most things could not be induced to sleep under a roof, and preferred to make his bed in an old tent in which a number of packing boxes were stored. He always slept on the ground. The boy took a fancy to me, and one morning he came and tried by pointing to make me understand that something had bitten him on the head, and that it hurt him very much. On examining the place, right in front of and a little above the ear, I noticed that he certainly had been bitten by something; the wounds exuded a yellowish serum, and I supposed at first that it was the bite of a tarantula, for tarantulas were very common also. The boy was at once taken to the hospital, which was then in charge of Asst. Surgeon B. J. D. Sroin, now Lieut.-Col. and Surgeon U. S. Army. The doctor was noted and beloved by the men of that command for his skillful treatment and the tender care bestowed on all his patients, and he had his hands full in that unhealthy place. The writer himself would in all probability have long ago joined the great majority had he fallen in less careful hands than those of genial Dr. Sroin. But to come back—everything that could be done for the Indian boy was done, but notwithstanding he steadily grew worse, his head swelled up to an enormous size, and after lingering for a few weeks or so (as nearly as I can remember) he died. At the suggestion of Dr. Sroin the tent in which the boy slept was thoroughly searched at the time, and some half a dozen or more fully grown insects of this species were found under the boxes, and one of these was nearly dead when found, probably injured by the boy when it bit him. This is the only instance coming under my observation.

Again in your issue of August 4 the indefatigable Dr. Shufeldt furnishes your readers with a most interesting article and an excellent drawing of the little known Gila monster (*H. suspectum*), a reptile met with by me on several occasions during my service in southern Arizona. Perhaps I may be able to add a little to the Doctor's account, which may be interesting to some of your readers. While encamped on the present site of Fort Lowell, Arizona, seven miles from Tucson, on the Rillotto Creek, during the summer of 1872, one of these lizards took up its residence under a board floor in my tent. How long it may have been there before it was discovered I don't know, but as I did not consider it a desirable neighbor it did not stay there long after I located it, and the speci-

men is now in a much better place, among the reptile collection of the National Museum, Washington, D. C. If I remember rightly, this specimen contained about eight fully formed eggs, all about ¾in. in length by ½in. in width, bluntly pointed on each end, resembling the egg of an alligator in shape, but with a smooth, soft, white skin instead of a hard, glossy shell like the latter. These eggs were sent along at the same time among a number of other alcoholic specimens. For some reason or another both the native Mexicans as well as the Indians are extremely afraid of these reptiles, which they call "Escorpione," while they do not seem to mind so much the numerous other poisonous creatures found in that Territory. I had an unusually intelligent Apache attached to my command in 1872, Antonio by name, who firmly believed that the very breath of this animal was deadly poison, and who could not be induced to go within ten feet of one under any circumstances, although it was well known that he was a brave and courageous man on many another occasion. For some reason this belief seems to be universal among the natives there. All the specimens I saw were from 16 to 20in. long, and I have found them fully as often miles from water as along river bottoms. They are not rare about Tucson. There is no doubt about their being poisonous. A specimen now alive in Washington bit a young alligator in one of its legs a few months ago and the alligator soon thereafter died from the effects of the bite. C. E. BENDIRE.

Editor Forest and Stream:

Another name of the whip-tailed scorpion in Florida is "scruncher."

During a residence of nearly three years in that State I became quite well acquainted with this creature and listened to the warnings and exclamations in regard to it from the Crackers, of which "I'd a heap sooner be bit by a rattler," is a fair sample. But I never heard of any one who was injured by one, though I was always on the lookout. I never took any special pains to test the matter on myself. I have several times given live ones to my hens and chickens, and they always disposed of them as readily as they would of any large beetle, never showing any sign of being poisoned. From my own observations I am of the opinion that they are not more dangerous than the true scorpion. I shall investigate the matter more perfectly and will report to FOREST AND STREAM. C. L. HOPKINS.

WASHINGTON, D. C.

SOME BIRD NOTES.

I HAVE been expecting, since the exquisite poem on the cheewink appeared in No. 25, July 14, to hear from others of our corresponding sporting naturalists. Now I have little doubt in my own mind that the chorister mentioned was a genuine catbird (*Galeoscoptis carolinensis*) and not a cheewink or ground robin. The catbird is a veritable and very accurate imitator of other songsters, so much so that almost any farmer boy of central New York knows him as the "northern mockingbird." I know that he used to go by that name in our locality, and many an hour have I, hidden in the deep recesses of a prickly ash copse, listened to his wonderful impersonation of the different songsters of our glen. As with a flip of his tail he jumped from the ground or limb to limb, he was first a cat calling for its young or mate, then came the carol of a robin, as a robin only can or does carol just before sunset or a storm; then a whistle of the chipmunk, as he seeks his hole, with the note of oriole or chickadee-dee-dee, and many other feathered inhabitants of this neighborhood. In fact I have even heard them giving a good "*who who*" at times. Yes, it might easily have been, and more probably was our mouse-colored mercurial jackanapes—the catbird.

Another article in your last number rather amused me, the duel between the hummingbird and the English sparrow. Of all the fish and snake stories this will compare favorably. The little tender honey and small insect sucker penetrating the tough breast of an English sparrow, to say nothing of a kingbird. Well, what next? To be sure our Assistant Ornithologist, by way of a let down, says, "It is possible that the kingbird and sparrow killed each other." I should say so. Or perhaps one of the minute insects that it is said the hummer extracts from the innermost depths of the flowers, perhaps one of these stung the sparrow and the kingbird in their little throats and thus punished their audacity. But I am glad to see these woodland matters agitated in your columns. Let us hear from more of our sportsmen naturalists. We all have reminiscences of "wood notes wild," and having eyes can see. Let us tell each other. These chatty, short items are generally read first. JACOBSTAFF.

SKELETONS OF THE GREAT AUK.—A St. Johns, Newfoundland, dispatch to the Boston *Herald* reports: "News has just been received here that the cruise of the United States Fish Commission schooner Grampus on the Newfoundland coast has been highly satisfactory in its results. One of the main objects of the expedition was to obtain skeletons of the great auk, a sea bird larger than a goose, which was once found in myriads on the low rocky islands off the eastern coast, and even out as far as the banks. For more than half a century no specimen has been seen of this remarkable bird, and it is 'wanted' badly for scientific purposes, as in all the museums of the world only nine skeletons are found. Prof. Baird dispatched the Grampus to search Funk Island, where three skeletons were found many years ago. Funk Island lies thirty miles from the mainland, exposed to the swell of the Atlantic. There is no harbor or cove, and it is only possible to land on it from a boat in very calm weather by leaping on one of the narrow ledges of rocks. It is about half a mile in length, bare, rocky, and without water. At certain places are guano deposits formed in by-gone ages, and the hope was that buried in these heaps were skeletons of the great auk, still well preserved. A safe landing was effected by the scientific party, which spent two days on the island. Capt. Collins forwards the intelligence that they came away entirely satisfied with the collection made. They believe they secured specimens of everything on the island—animal, mineral and vegetable. It is thus evident the Smithsonian Institution will be enriched by rare prizes. The researches of the Grampus will continue northward as far as Labrador. In addition to dredging and collecting natural history specimens, Capt. Collins is charged with the duty of verifying reports of the appearance of mackerel off the northeastern shores."

BEAR TRAPPING.

AS suggested in the FOREST AND STREAM the other day, there is not the slightest doubt that bears are on the increase in the north woods of New England. This is especially true of the northern part of the western counties of the State of Maine. In the region of the Androscoggin lakes this increase is certainly very noticeable, or else the fact that the region is being more thoroughly visited by sportsmen and amateur hunters is bringing accounts of bears to light with much greater frequency. The newspapers teem with items concerning bears killed, and did not the fact of how they were killed stand out with prominence, the heart of the real sportsman would be fired with enthusiasm. The farmer's sheep fold is entered and havoc is made. Then the assistance of the local bear hunter is employed. He comes, not with his trusty rifle—he may have an old shotgun with him—but with a steel trap, weighing sometimes over a hundred pounds. Some of the sheep or lambs that bruin has killed are used for bait and the live ones of the sheep-fold are now carefully housed each night. After a few days bruin becomes hungry, and if he cannot find live sheep on which to satisfy his appetite, he seeks the dead ones and falls into the trap. This trap is rarely ever chained up solid, but a heavy log of wood is attached. This the bear can drag away and his attention is given to moving off, rather than to twisting his leg out of the jaws of the trap. It is presumed that the trapper is soon on hand to dispatch the bear, but such is not always the case. The instances are numerous on the records of any old bear trapper where the trap is found containing only the foot of the bear, and often where the bear is dead in the trap.

Now, what I desire to ask the readers of the FOREST AND STREAM is, if this is hunting? Is it sport worthy the name to thus trap even a bear? The story of J. A. French, of Andover, Me., and his son Tom, already recorded in the FOREST AND STREAM, is sufficient to open the eyes of any true sportsman to what might be done. These two dead shots with the rifle asked the farmer to house the sheep the bear had left alive and to leave the dead ones undisturbed for a few days. On the third day the moon would be at its full. The night was grand. French suggested to Tom that the old fellow would be there that night. Without even informing their neighbors, they took their rifles and stole silently out of the little village. Not even the people at the house knew their errand. By 10 o'clock they crouched in ambush behind the fence and within easy rifleshot of the dead lambs. Soon they saw an enormous black object break from the woods on the other side of the clearing. It crept toward the bait and was cheered on its mission by the peculiar cry of a companion in the mountain a short distance away. On came the bear, for such it proved to be. The hair of French or Tom—only a boy—stand on end, and they turn and flee for their lives? Not a bit of it. At the proper moment French gave the word, and both rifles rang out so near together that French asked Tom why he did not fire, to which question Tom indignantly replied that he did fire. In the meantime the old bear had given one leap into the air and had fallen over dead. Both bullets had taken effect in a vital part. The bear proved to be a very large one. Does not his capture open a new idea in bear hunting? Is it sport to set a steel trap even for a bear? Has not even a bear some sense of pain? Is it pleasant for a true sportsman to think that he has been the means of even a dumb animal falling into a terrible trap, from the effects of which the poor beast must die after days of suffering?

Here is a case in point. A party of sportsmen visited their camp in the Androscoggin Lake region this spring. They had the best of fishing, and enjoyed their trip with all the zest that the sportsman is entitled to. They caught a live fox and had him tethered with a long chain in front of their camp. To their credit be it said they let the fox go when they got ready to break camp. But to other animals their kindness was not of so much avail. They discovered the work of bears in the old logs back of the camp. They had scratched the wood to pieces in search of ants, and a trap suggested itself. One of their guides went out to the settlement and got the trap. It was set a day or two before the party broke camp. The guide was directed to visit it, as he had a chance afterward. But he came out to the settlement and weeks passed before he had occasion to visit the trap. He reached the ground. The trap was gone. He had not far to follow where the clog had torn up the earth and logs before the odor began to tell him that the trap had done its work. He found the bear, a large one, in such a state of decay that he could not skin him, but he secured a claw or two and sent them to Boston to members of the camp as trophies of the bear hunt. Was that a noble bear hunt? Did that poor bear with both feet in the trap suffer untold agonies before death came to his relief? Can a true sportsmen afford to be the author of such misery, even to a bear?

It brings to mind the story that sent a chill to the heart of all who read it a few years ago. A poor Canadian Frenchman, living on the borders of Maine, went out to set his bear trap one day in the early autumn. He was never afterward seen alive. The next year a party of hunters found the bleached bones of a man in the woods in that vicinity, both forearm bones of which were in the jaws of a terrible bear trap. The poor Frenchman in setting his trap had got caught by both his arms. He probably knew, as no other man ever knew, the agonies that even a bear suffers when caught by the leg in a trap. It is still worse to leave the trap unattended. Such creatures we are obliged to kill—indeed we may kill them for sport, and noble sport it is—but every thing we kill is entitled to a quick, and, as far as possible, a painless death.

Bear trapping is dangerous, and especially so now that hunting has become so much the practice in all parts of the country. It is next to impossible to set one of those infernal steel traps where some hunter may not fall into it. Cases where human beings have fallen into bear traps are not unusual. One comes to mind which actually took place in the mountains of Milton Plantation, in Oxford county, Maine, several years ago. Two brothers, with a little son of the elder, had started up the side of the Glines Mountain, then noted as blueberry mountain. They had started in quest of that fruit, and had their baskets with them. The elder brother was ahead, and the boy, only eleven years of age, was between them. They were following a rather indistinct path up the side of the mountain. The younger brother suggested that it might be a bear path, and had scarcely spoken the words when the men both saw the bait, a part of a sheep that the trapper had hung up to attract the bear. Both now uttered words of caution about the possibilities of a bear trap hidden somewhere. But they little thought that it was right in the path, buried in the leaves, and that the elder brother had stepped over it, till a scream and a groan from the poor boy showed him with his little leg in the trap. Both men jumped each for one of the springs, and by almost superhuman efforts the springs were brought down far enough to liberate the poor boy. His leg was not broken, but the teeth had cut so that he was bleeding badly. The men took him by turns on their shoulders, after binding up his wounds with a handkerchief and such bandages as they could improvise from their clothing, and brought him to the settlement. The boy recovered from his wounds, but either of the brothers would shudder for years afterward when telling of the incident, and at the suggestion of one falling into such a trap when alone, or even if one of the men had been alone with the boy. The trap weighed over 75lbs., and the suggestions about what might have been the case under slightly different circumstances are enough to make one hate the sight of a bear trap. A brother of the boy is living in Boston to-day, and to say the least, he does not think much of setting bear traps. The hunting season is close upon us. Bears are plenty in Maine, and let those who go into the woods after other game beware, for there are bear traps and bear traps. On the whole, would it not be sport to try and shoot an old fellow at night, as did French and Tom?

SPECIAL.

BEARS IN ARKANSAS.

ABOUT twenty-five miles from Beebe and nearly seven miles above Des Arc, on the White River, is a section of country that is overrun with all kinds of wild game; and reports came to me the other day that the bears were destroying whole fields of corn. Now, I have always wanted to kill a bear, but up to this hunt I had never been able to as much as sight one, although I have put in a great deal of time hunting for them. This was an opportunity not to be missed, so I washed out my old muzzleloading rifle, sixty to the pound, lock a trifle out of repair; sharpened my hunting knife, put some bread in my game sack, and about 7 o'clock, July 19, when the sun had set, I started, for I prefer to travel after night in this hot climate. I footed it. Just as my watch pointed to 1:40 A. M. I reached the house of a friend, John Malcom, in the strip of country infested by bear. Well, the folks were all "chilling" when I got there. This is the worst feature of life in Arkansas. From July 1 until frost flies it is in fact the main feature. Those of the family who were able to talk reasonably were glad to see me; and when they learned that I was down on a bear-killing trip the old man told me that there were four bears down in the bottom that came in his corn every night and had destroyed more than two acres and had run him and two more out of the field that night just after dark. I listened to it all and made due allowance for a certain propensity which I knew was second nature with my truthful friend; and I came to the conclusion that perhaps I might find a bear track somewhere within a mile or two of his corn.

As soon as it was daylight I was out looking up sign and laying my plans for killing my first bear. I went through my friend's cornfield as a starting point, and was compelled for once to own that Malcolm could tell the truth. The destruction was immense; the corn was broken down in piles and the ground was literally covered with sign old and new. As I was walking along looking carefully at the tracks my attention was suddenly drawn to other matters. I heard a grunting, growling sound behind me; and turning around with my rifle in readiness for a shot, I saw a cub bear about one year old walking toward me as if he owned the land and I was trespassing. Within 20ft. of me he stopped, and then for the first time he saw me, and turned to run. This was my chance. Catching a quick sight at the base of his right ear I fired; and at the report he turned as complete a summersault as I ever saw and lay still. I dropped the butt of my rifle on the ground and loaded as rapidly as possible, putting down two round balls. Then I walked up to my bear and turned him over. He was stone dead; the ball had struck him at the base of the ear and carried away the whole top of his head. This was my first bear; and although I hunted day and night I got no more shots nor saw any more bear. Still I could find plenty of fresh sign; but as I had no dog, as soon as the bear took to the cane I lost him. Deer sign is plenty, and as soon as the season for killing deer comes round I will write you of my first deer hunt of this year. G. J. B.

BEEBE, Ark.

QUAIL AND RAINS IN GEORGIA.—Augusta, Ga., Aug. 8.—*Editor Forest and Stream:* The unprecedented rains in this section for the past two weeks have ruined the bird crop. A rainfall of over eight inches in six days caused a freshet in all the lowlands and swamps hereabouts, and the young birds have been drowned out, and we came very near suffering the fate of the birds. Only a day before the floods came I saw young quail that could not fly, and many hens were yet on their nests. The upland birds have also suffered. We have had two freshets in one river, which covers a large area of bottom land, and it has been raining steady for two days and we are expecting another. Up to two weeks ago the season was splendid for quail, and I could have found a dozen coveys in a day's tramp in the lowlands; but all my anticipated pleasures have vanished, and I am afraid I won't be able to send you the swamp quail specimens this season. Sorrowfully yours, J. M. W.

WARRENTON JUNCTION, Va.—This has been a splendid summer here for game birds of all kinds. We had a great many old birds left last fall, therefore I am not surprised to hear from all quarters of large numbers of young birds. One party tells me of seeing over 100 young turkeys in two days. So far as I can learn the law is well respected here.—WM. HODGSON.

IN THE CHEROKEE STRIP.—IX.

IN the morning we said good-by to the 21 ranch and to the good, square-toed boys who run it. They all treated us so well that we felt bad over it. We went there strangers, some of us, and inflicted three men, three horses and five dogs on them, just as if the outfit belonged to us; and we did this when we were not allowed to make any recompense whatever for it. I wonder if we could drive into a place that suited us in New York, and act the same way. If thanks and good wishes go, we want to square up that way with all the ranchmen we met in the Cherokee Strip. They won't let us in any other. But lest some thoughtless hunters, moved by what has been said herein, should escape the soldiers long enough to impose upon the ranchmen in that country, I will state again that Mr. Allison was well known there, and that we had some claim as his friends. Our absent host, Mr. Greever, we never saw at all, except during the hurried meeting on the way down.

Now do you suppose Mr. Streeter would let us go on through to Kiowa and get back to our business? No, sir. We had to stop two days at his ranch, just below the line, and chase coyotes. Of course, if we must, we must; and we must; so we did. Here we made the acquaintance of Mr. Streeter's married son and his son's wife, who live in a very elegant interior in the very picturesque-looking ranch house—Mr. Streeter himself living with his family in Kiowa. This ranch house is jammed into the bank at the edge of a pretty little basin, and is prettily overgrown with trees which spring out of the bluff. I don't know of what style of architecture you would call that house. It had a good deal of bark to it and some shingles, and, I believe, some boards, and perhaps a few logs, or split logs. But it made the best picture, Ricker said, that we found on the trip. If you could paint it, and mark it "Swiss chalet," you could sell it for a pile of money to somebody who is making a collection like the A. T. Stewart art collection. Nothing like getting outside of this country for some folks. And then again for others there is nothing like getting around on the inside of it.

Our coyote hunting was interrupted on the second day by a bad fall Mr. Allison got from his horse, spraining his wrist and laming his left shoulder. Old John is usually sure-footed, but this time, in jumping a gully he did not recover quick enough, stumbled against the rise beyond and fell half upon his rider. That coyote got away. Old John was badly lamed in the shoulder, too, and indeed this fall, coming upon two weeks of continuous hard riding, much of the time at full run, used the old veteran up so badly that we could not get him home, but left him in care of a farmer nearly a hundred miles south of Hutchinson. As has been said before, coursing on the Western plains is sport which is not free from danger, and if one is not ready to take a fall, and perhaps a serious one occasionally, he would better stay out of it. It is sure to catch him sometime, if he rides right to stay with the chase.

Strung along the eaves of the cattle sheds at Mr. Streeter's ranch were countless tails of coyotes, with the trophies of four gray wolves. The latter animals are much dreaded by the ranchmen, because of their destructiveness among calves and young cattle. Mr. Streeter showed us the body of a yearling they had recently killed. But to offset this he showed us, tacked out against the house, a big gray wolf skin, which made our eyes bulge with wonder—a perfect monster of a wolf, such as you read about in the books. The hide, tacked out while frozen and never properly stretched at all (they are so careless about these things on the ranches), measured 6ft. from the nose to the tip of tail. There was a wolf for you! And there was a wolf fight for you, too. This big brute did not seem to try to run away at all, but stood and waited for the hounds to come up. Judge now, if old Prince be not a dog of simply tremendous power and courage. When he saw the wolf stand, he never stopped an instant, but ran right in on him alone. The wolf and dog reared up on their hindlegs together like two fighting dogs, their hair bristling all over, and each doing his best to cut the other's throat. The clinch resulted in Prince getting the wolf by the side of the neck and throwing him by a sudden wrench. At this juncture the big blue dog, which is Mr. Streeter's other mainstay, got up and caught the wolf by the opposite shoulder. And yet such was the size and strength of the wolf that it rose to its feet with those two great dogs hanging to it and actually began to walk off with them both, until the other hounds got in, and Mr. Streeter ended a serious encounter by a bullet through the shoulders of the great brute.

When Mr. Streeter had first spoken of this skin, down at the 21 camp, I public y coveted it and I am afraid had bad taste enough to want to buy it of him. I never did know a cattleman to sell anything—although they often buy things—and Mr. Streeter laughed at me and said he would give me the skin. As Mr. Allison had given me a very beautiful wildcat skin, and as I knew he himself much wished this big wolf skin to put in a robe, it might have been a little nicer in me to let Mr. Allison have it. But I figured it this way: Mr. Allison had his dogs and could come nearer to catching a gray wolf than I could; also, if I let him take that skin, he might forget some day—his dogs having secured him so many trophies—and sort of tell some of the boys just how he killed that wolf himself. Now, I knew Mr. Allison would be sorry if he ever did make such a mistake as that, and so I disinterestedly resolved to prevent it. In short, I compromised by telling him he could have the wolf skin when I got done with it.

Mr. Streeter's last act of hospitality was to pull down this grand trophy—so rare a one that any hunter must value it, no matter how much he hunted—and give it to me, whom he had not known a week. What can you do with such a man? Nothing, I suppose, but go into the cattle business yourself, and be as near like him as possible. When I sent the big wolf hide in to the furriers at Chicago, to have it made into a rug, they wanted to know what price I put on it. I wonder if they took me for a cattleman and thought I would give it them. I didn't. No one can ever have that skin but Mr. Allison. He can have it when I am done with it; in fifty or sixty years. If Mr. Allison had not been good to me he couldn't ever have it at all.

We said good-by again to friends whom it seemed we had known a long time, and then we rolled on out of the Territory.

We were a melancholy-looking outfit as we pulled north, and showed hard work all over. Mr. Allison carried his arm in a sling; old John, gaunt and uncurried, hobbled along with painful steps; the livery ponies—though Mr. Streeter had given Ricker and myself fresh horses at every hunt we had while at his place—were tired, and went with drooping heads; Mike was in the wagon, too lame to walk; Jim limped badly and had a swelled ankle; Terry had two toes nearly torn off and went very lame, and had besides a bad-looking nose; the two foxhounds were beginning to look blear-eyed and jaded from the dust of the road; all the dogs were torn and sore from their numerous fights; Ricker and I were unshaven and disreputable-looking; even the old Black Maria—fit vehicle for so funereal a band—flopped a melancholy torn curtain to the breeze. We were a used-up outfit. And it seems fit that our halting procession should at last hobble off from these pages and make room for something better. E. HOUGH.

HUNTING IN THE HIMALAYAS.

Lights and Shadows of an Indian Forester's Life.

XIII.

THE following day being Saturday we not only took lunch with us, but we determined to make a day of it, and give the elephants a rest on Sunday.

There were a dozen camels doing nothing, and calling the drivers they got orders to bring in two loads of elephant fodder each, to which of course they demurred and which they did in spite of their demurrer. The sun just made his appearance as we entered the valley the party had taken on Thursday. There was a fresh tiger's track on the pathway, and when it crossed the stream a mile up there were so many fresh tracks that it was evident the place must have been quite lively during the past night.

We beat up as far as the bog without result, and after an attempt to struggle through it, an attempt in which the ponderous elephants sunk to their bellies, and were only kept from sinking altogether by the coarse grass, we were very glad to get on terra firma again. After a short council, it was decided that I should work along the outer edge of the bog and throw shells, while the Colonel and S. took up positions one at each end of the bog on the side next the hill. As soon as they had got into position about a quarter of a mile apart, I lighted a fuse and sent in a first shell, without effect; twenty yards further I threw in a second, and this time I saw some grass wave fifty yards ahead. Advancing abreast of it I threw a third shell as far as possible, and saw sign of something working through to the hill. I tried to get nearer, but the elephant put one foot down in the bog, and immediately drew back. By this time all was still again, and I tried another rocket without result. I could not throw far enough, and tried a rifle shot. This was followed by a rush in the direction of the Colonel, and as the grass parted in a straight line, I determined to keep up the excitement, and fired a second shot, which elicited an unexpected roar. I had shot him! but the distance was over eighty yards. He made right away for the Colonel, taking the hill about fifty yards from him. I kept my ground, expecting the Colonel's shot would turn him, but he kept on steadily up the hill, the Colonel peppering him as he went. It was too rough ground for the elephants, and motioning S. to join us, I made for the Colonel, who claimed a hit; both his mahount and shikaree testified that the tiger went up the hill on three legs. As soon as S. came up, we dismounted, and arming the shikarees, set out on foot, and after a little search were rewarded with a sight of blood. It was in scanty measure and we had great difficulty in tracking it; and after two hours, in which we had not advanced more than a mile, we reluctantly gave up the chase.

Returning, we went up a steep, dry water course, flanked by pretty steep hills rising about 200ft. on either side of us, and, chatting as we went, with our eyes straight before us, were not a little startled by a whispered "Sahib!" from one of the shikarees, and following his eye, behold! on the crest of the hill to our left, keeping pace with us and watching our movements, was a tiger, evidently taking a philosophic interest in us. The instant we paused he turned toward us, and, sitting on his haunches, challenged us to a pot shot. "Steady," said the Colonel, flushed with excitement, "and all together." I sat down with my back against the hill for a steady pot (for a tiger has no great breadth of beam), and sighting him close to the ground, commenced to rise slowly, until at the word "Fire!" half a dozen barrels belched out their contents. There was no roar, but there was a display of very considerable activity on the part of the tiger. He gave a spring back, and left me with the impression that it ended in a roll over; one of the shikarees, too, declared that he saw him fall behind the crest. It was rather a steep hill to breast, but by advancing another hundred yards or so up the ravine we were able to execute a zigzag, and soon reached the crest. There was no tiger, but on reaching the spot from which he had surveyed us, blood was sighted, and some 10ft. behind it there were signs of a liberal flow, not in drops, but in mass, showing that he had rolled over. There was no difficulty in tracking him down the hill, and as we neared the ravine all sighted him simultaneously lying on his side and gnashing his teeth. He made a vain effort to rise, and weapons were leveled, but the effort was so evidently vain that I called out to spare the skin. I was very sure I had hit the game, and I wanted to determine who else had, which would have been impossible if she—for it was a tigress—had been riddled with another volley. There was no possibility of getting the elephants in, the beast would have to be skinned where she lay, and after a little discussion S., to save time, advanced to within 5yds. and gave her a quietus.

Lighting our pipes we sat down for five minutes to let the claws get rigid, and then turned her over to examine the wounds. There was one express shell in the abdomen which must have disturbed her internal economy very considerably, and would have proved fatal, but it would not have stopped her at such easy distance; the business had been settled by a ball a little on one side in the throat which, from the profusion of blood, appeared to have cut the jugular. A third shot had cut through the muscles of the forearm without injuring the bone, the other three shots had missed. As regarded the abdominal shot, credit for it lay between the Colonel and S., who had both used a 4-50 express and fired shell. The neck wound was caused by a solid ball, and I told the shikarees to cut it out. After some search we found a sapling which would serve to sling the skin on, a chuprassee's "cookrie" (hunting knife) severed it at a few strokes, and in less than an hour the skin had been taken off, my ten-bore spherical ball extracted from its lodgment against a neck vertebra, and the party was on its march to join the elephants.

It was now long past noon and the sun pretty strong, the tramp over the hills had heated us and it was a long step to the next cover; after a little discussion it was decided to go back to camp, try to get a hog deer at a piece of nice cover at the mouth of the valley, which we had not passed through, go home to a comfortable tiffin, and wind up the week with mahseer fishing. Making straight for the cover we put up a stag and two hinds, the former of which fell to the Colonel's rifle. S. and I fired simultaneously at a boar, and succeeded in stopping him. The stag was lashed into his place, the boar had his throat cut and was left for Ram Buksh and his friends to bring in. We seated ourselves once more in position for home, when out sprang a tiger not fifty yards from us; before weapons could be brought to the level he had put a clump of grass between himself and us. We pressed forward, but only in time to catch a glimpse of him for a moment as he dashed up the hill, adding one more to the list of tigers lost by turning up when they are least expected.

SHIKAREE.

RANDOM NOTES FROM CALIFORNIA.

SACRAMENTO, August 7, 1887.—There is that indescribable something in the atmosphere—at least in the atmoshpere of Central California—which tells the sportsman that the days of falling leaves are not far off; the glorious season of autumn, which calls him to the hills. We have felt it for the past week, and a glance at the calendar tells us that our senses have not misled us. Soon the grain fields will be cleared of their piles of golden wheat, and the stubbles will, ere four weeks hence, be taken possession of by the grand goose army which is now gathering its forces and selecting its flock-leaders in the far north. The home-bred ducks are skimming over the marshes at nightfall, and many of the young quail are already as large as their parents. Here in this glorious climate of ours, the sportsman is favored with long seasons. In just four weeks our quail (grouse) season opens and will continue until the 1st day of March next. Just think of it, six months, lacking ten days, in which men may enjoy themselves afield, to say nothing of the deer shooting from June to December, and dove shooting from May until January. Snipe and ducks have no protection, but shooters generally spare them in the breeding season. Of course, after the long, dry summer in the valleys there will not be much pleasure in hunting the quail before the middle of October, as the ground will be too dry to enable the dogs to do good work. But then we are liable to have some rain in September, and if we do the sport will begin almost before the water dries on the leaves.

From all accounts the quail have bred well this season. There seems to be plenty of them in every direction, and those who have enough spirit and energy to engage in this kind of sport will find all of it that he can attend to.

Just now the mountains are full of campers from the plains and the cities by the sea, and wonderful are the tales sent to the local newspapers of desperate encounters with bears, and of the number of deer slain daily. Unfortunately, there is too much truth in the latter. Deer are killed by the score, just out of that sheer wantonness that some individuals dignify by the name of sport. Three or four young men, whom one deer would supply with meat for a week, frequently kill twenty or thirty in that time, and of course they can only leave them as food for the buzzards. Were it not that there are some portions of our mountains where the average city spoilsman cannot—for lack of experience in woodcraft—penetrate, it would not take many years, at the rate at which the deer are being killed, to practically exterminate them.

We of this portion of California—the central and northern sections—are anticipating one of those "booms" that Eastern people have been inaugurating in the West, and which has been sweeping over the southern counties of this State for the past two or three years. Here we have as fine a climate as any part of the globe, and here nature has been far more lavish of her favors than down along the southern coast. Instead of dry, arid wastes, where water must be brought long distances at great expense, here are rich meadows and fertile valleys interspersed everywhere with natural water courses. Here the orange, and lemon, and olive grow to perfection, and ripen two months earlier than in Los Angeles, and it is here that all the deciduous fruits—the pears, peaches, nectarines, grapes, apricots, etc.—which you New Yorkers purchase every day at your fruit stands, are grown.

Southern California cannot grow cereals nor the kinds of fruit above mentioned (except grapes) to any extent. Oranges alone are the chief product there. In my yard in this city I could show you to-day, hanging from the trees over the sidewalk, young oranges as big as good-sized peaches, and the trees were only put out two seasons ago from the nursery. The finest lemons I ever used were plucked from my own three-year-old trees last winter. And these fruits will be fit for eating next November, while the earlier citrus fruits of the southern counties will not be marketed until February and March. But Eastern capital is doing wonders down there in the building of railroads and hotels, establishing water enterprises, banks, etc., while barren lots just big enough to squat upon are bringing fabulous prices. If new people, foreign capital and Yankee energy can do so much in the old sleepy Spanish town of Los Angeles, what will they not do when turned loose in this favored section?

To go back to my original topic—I have seen the question often asked if quail will breed in confinement. Some quail certainly will. My next-door neighbor, General Cosby, secured a pair of Arizona quail last spring from a poultry dealer, who had received a thousand from Arizona and was selling them alive for table purposes. The pair were put in a wire cage about six feet long, three feet high and two feet deep. The hen at once made a nest in one corner, and though daily and hourly annoyed by the General's pointer dog she went to work, laid her eggs and hatched out eighteen little beauties. Some of them got through the meshes of the wire and were lost, but the others are now nearly grown. On the Fourth of July the children dropped a firecracker on the cloth roof of the cage and burned a hole therein, and the old birds got out. They were seen to fly over the neighboring houses, and it was supposed that was the

last of them. But that evening the male came back and found the yard. He perched on the cage and piped forth his treble-noted call, and the next morning the family found the hen running about and trying to get back into the cage, where her mate then was. After much delay she found her way inside and has since been with her little chicks. Wherever quail have been given opportunity here they have bred in confinement.

Recently a specimen of a northern diver from the Arctic Ocean was left in charge of Miss Maynard, the Librarian of the California State Mining Bureau, and was on exhibition for a few days. It is the property of Miss Nellie Hutchins, who found it in Hayes Valley district, Alameda county, where it fell exhausted. The bird lived for two or three days, but would eat nothing. Its bill is about 2in. long, the head is jet black down to the neck, where the color changes to a dark shade of green. The back is black, dotted uniformly with spots of white.

N. E. W.

SUMMER SANITATION.

To the Proprietors of Resorts at the Sea-shore, in the Mountains and the Woods:

It has been my good fortune from time to time to pass days, weeks, and months at various hotels and boarding houses, expensive and cheap. I have fared in all sorts of ways at the table and have occupied all sorts of rooms, even to the hunter's cabin and the tent on the beach. What I am going to say, therefore, is not the outcome of an unfortunate experience for a single season on a hard bed and a poor table. It is not in this direction that complaint is to be made, for these may sometimes be conducive to health if not so agreeable as we could wish. Besides, there are many soft beds and abundant tables where there are not the far more essential things of pure water and pure air *owing to defective sanitary arrangements.* I emphasize these last words in order to call attention to the chief drawback upon the comfort and health of nine-tenths of our summer resorts, whether in the country or at the seaside. We leave our well-appointed houses in the city, where the best attainments of sanitary science have been employed to secure freedom from nauseating sights and smells, and rush hither and thither in search of fresh air and the fragrance of woods and pastures or the bracing whiff from the salt sea. What do we get the first night that we open our window, if we are not fortunate enough to secure a room on the front side of the house? It may be the unsavory odor of a sink spout, of a garbage heap, or of that which in polite terms is misnamed a water-closet, but which in fact is not even an earth-closet. I will not stop to discuss the sanitary condition of country houses at other seasons. That is the affair of country people and their doctors. But when these same houses are crowded in summer with three or a dozen times their usual occupants, when the summer hotel, which is closed all the rest of the year, is opened to its hundreds in August, do not common prudence and common decency demand that extra precaution be taken against the offenses to the senses and dangers to the health of those who are guests? It is no apology to say that water in abundance cannot be had and plumbers cannot be afforded. Common earth, a shovel and a common laborer for a few minutes morning and evening, or even every hour in the day, would be dollars in many a proprietor's pocket, from whom guests now steal quietly away with some feigned reason for sudden departure, because they cannot make up their minds to give the real reason and cannot stand the offense. And all the time the less sensitive, or too busy, or penurious proprietor may not have the least suspicion of what is sending his guests elsewhere, or more likely home, to better and healthier surroundings. And if in the autumn it is not discovered that the guests have brought away with them the germs of disease under the cover of a browned face and temporary increase of appetite, then they are very fortunate.

The remedy for this is so simple that failure to employ it should be accounted criminal. But if proprietors will not employ nature's own elementary provision of earth or water without compulsion, let every person in making inquiries for summer board include this one as to that which concerns him more than bed and board. It can be done easier with pen and ink and more effectively than after arrival, and is more economical than to pack up suddenly for another house to find the same evil there.

SANITAS.

RECOLLECTION OF LONG POND.—In my letter in the last issue of the FOREST AND STREAM either my topography is wrong or my bad chirography has led you to an error, for "Saranac River" should read Raquette River, and "Long Pond" Long Lake, and "waiter" writer.—ELK.

Mr. R. W. F. GRIFFITH, of the Schultze Gunpowder Co., of London, called at this office on the occasion of a visit to America to establish an agency for the sale of this powder here.

THE WILD RICE CROP is said to be very large this season.

Camp-Fire Flickerings.

"That reminds me."

221.

GERMAN gunners are, as a rule, good story tellers. These gunners' stories are called *Jäger-Latein*—gunner's Latin. In other words gunners here in Germany do not enjoy the reputation of relating "the truth, the whole truth, and nothing but the truth." As every country has its special class of gunners' tales, the German hunters' stories differ somewhat from the American type. To afford the readers of FOREST AND STREAM an opportunity to judge of the gift of German hunters in the way of story telling I furnish this example:

It is a November evening; the rain and darkness make the night gloomy. A number of gunners are gathered in a country tavern and fill the small room with smoke, creating an aroma which would drive an American miles away from the spot. The noses and lungs of German hunters however, are accustomed to such an atmosphere. At one of the tables in the barroom are sitting four persons, among them a healthy-looking fat fellow, and the best story teller. It is the Government forester, a man feared as much as the devil himself by all lumber thieves and game sneakers.

"How about your last trick, Forester, when you transformed a hare into a common cat in the bag of a farmer's boy without ever (as the story goes) opening the bag?"

A smile can be noticed in the forester's face, and he is induced to relate the occurrence:

"It happened in this way. As you know, a forest hunt for hares was arranged. But the preceding night brought us a heavy snow, so that the sport had to be given up for that day. Several of the invited gunners, however, could not be notified in time and made their appearance on the designated point of meeting. I asked them to come with me to the tavern, and we came into this very room on the second story. The floor, as you notice, has an opening near the stove, covered only by a light board. This opening happened to be open on that day and I was sitting near it, so I could see everything that occurred in the room below on the ground floor. Presently a farmer's boy enters the lower room with a bag on his shoulders. I noticed at a glance that the bag contained a live animal. The peasant carefully looked over the room, and finding himself alone, deposited his bag in the case of the old clock standing at the wall. When the proprietor entered the farmer's boy asked him for a whisky, and after drinking this left the room without the bag, saying that he would soon be back. I stepped down to the room and made the proprietor acquainted with my observations. We took the bag out of its hiding place, opened it, and found a live hare, which somehow had come into possession of the boy through an illigitimate channel. We took the hare out of the bag, placed it in an old oats box, and substituted for the hare an old sick cat, which had long been an unwelcome inmate of the tavern. I tied a loop around the bag and placed it again in the clock case."

"Good, good," was heard from all sides.

"Hold on," continued the forester, "the best is still coming. I left the tavern and had been about an hour in the woods, when suddenly whom should I meet on the road but the very same farmer's boy with his bag over his shoulder. I approached him and asked him what he was carrying. 'A cat,' was the prompt answer. 'A cat?' I said, 'only a cat? Do you think you can fool the government forester in such a way? I can look through your bag as if it were glass and I see plainly a hare in it.' 'I assure you,' again said the peasant, 'it is a cat, an ordinary cat.' I noticed that the bag had not been opened since I had handled it, for my loop was still in order, so I took the bag from the man's shoulder, ordered him to hold it with both hands, and with a sober face I said, 'You want a cat in your bag, you shall have one.' Then I touched the bag with my hands, made three crosses, uttering at the same time a few Latin words and winding up with an oath, I ordered the half-to-death-scared fellow to go on. Of course the farmer's boy found a cat in his bag when he opened it at home, and since then the whole neighborhood swears that I am in some way or other on good terms with the devil."

After the roar of laughter had subsided, the forester continued: "The same hare was made use of in connection with another practical joke. I and a few of my friends were passing our evening in this room, when a party of hunters put in an appearance apparently in ill-humor. One of them soon made known the cause of his troubles. They had been out hunting all day and not got a single hare, although the same fellow had promised to bring a hare for his wife's birthday the next day. 'I would give four bottles of champagne,' he said, 'for a fresh-killed hare.' 'If that is all you want,' I remarked, coolly, 'I think I can cure you of your sorrows.' 'I make it a half a dozen bottles, forester, if you bring me a hare between now and the morning, but it must be a fresh shot hare.' 'Very well,' I said. Addressing the proprietor, I continued: 'Give me your gun and a cartridge loaded with No. 4 shot.' The gun was brought out, also the cartridge. Out of the latter I took all the pellets except three, and explained this by saying that I had a whistle with which I could bring all the hares at any time, day or night, three yards from my feet. I left the room, and the proprietor, a smart man who knew what I was about, met me at the front door and handed me the hare, the same hare we had taken from the farmer's boy. I killed the hare with my stick, made three holes with a nail in the hare's head, walked about 200yds. toward the field, sounded my whistle, fired a shot in the air, returned to the tavern with the hare, and laid it on the floor before the champagne-loving gunner. He lifted it up, felt that it was warm, scanned the three holes in the animal's head, and after he had recovered from his surprise, ordered the tavern keeper to bring six bottles of Heidsieck dry. Before we parted, however, a dozen empty champagne bottles could be counted on the table."

ARMIN TENNER,

BERLIN, S.

When Mr. Lincoln heard of the scattering of the Confederates under Hood by Gen. Thomas, he was reminded of the following anecdote: "Out in Lower Illinois, in a little village, there was a butcher named Sykes, who had a large, wicked, mischievous bulldog, which was regarded as a town nuisance. Fowl were killed, clothes were pulled from the lines, meat houses were robbed, children were scared, and 'Sykes's dog' was blamed for all and blamed justly. Now, there was a man named Henderson who had a fine turkey killed by this dog of Sykes's, and he swore revenge. So he took about a quarter of a pound of powder and did it up in a piece of buckskin, tying up a piece of punk so that it projected out of the little bundle of powder. Then he put the bundle in a large piece of corn bread, and had it in readiness. It was not long before Sykes's dog came trotting along, and Henderson, lighting the punk with his cigar, threw the bit of bread to the cur, who gobbled it at a mouthful. The next minute there was an explosion. The dog's head was blown over a fence into the creek, his hindlegs and tail were sent up and lodged on Henderson's porch, his forelegs were thrown across the street, and the rest of the bow-wow was laid about in small pieces. 'Whorra!' exclaimed a looker-on, 'you've rather used up Sykes's dog, hain't ye, Henderson?' 'Yes,' replied Henderson, 'I rather think that as a dog Sykes won't find him of much use.' And so of the rebel army," added Mr. Lincoln, with one of his sad smiles, "as an army Hood won't find it of much use."—*Ben: Perley Poore, in the Boston Budget.*

Whaler Irick came along Wednesday, and alighting from his wagon in front of our door, deposited a box containing a pair of growling demons, which he coolly requested we credit on his subscription, as we had advertised to accept country produce, etc., of all descriptions. Well, we had to accept the critters; but we hereby revise our too sweeping proposition and leave wildcats out, for such the varmints proved to be.—*Throckmorton (Texas) Times.*

Sea and River Fishing.

CAMP ADAMS.

NEWCASTLE, Miramichi, N. B., Aug. 4.—While accounts of poor fishing in New Brunswick waters seem to be the order of the day, yet, as is the case in many other localities, there are exceptions, as this report will show. Kindly insert same, not only for the benefit of the many who have been disappointed by the poor fishing, but also to let those who have had good luck see that they will have to work hard if they wish to make a record such as has been made at Camp Adams this season.

Mr. M. Adams, accompanied by Mrs. Adams, visited the head waters of the Northwest Miramichi recently on a fishing trip. They first went to Camp Adams, where they rested a day. Mrs. Adams rode eighteen miles over a portage road on a buckboard wagon and stood the fatigue of the journey amazingly well. Camp Adams, which has the reputation of being the best fishing grounds in New Brunswick, not being excelled for affording intense enjoyment of the rod by any of the well known places on the Restigouche, is situated on a very beautiful portion of the river. On a large plateau at the foot of high hills and at the very side of the swiftly running river, is located the house known as the camp. It is a neat, nicely painted story and a half building of the Swiss cottage style of architecture, and is furnished in a way that makes camping out a luxury. It is roomy, and the beds and windows are supplied with screens and netting that defy the ingenuity of the mosquito to penetrate. Beneath these the fisherman can rest after the fatigue of the day secure from the attacks of his greatest enemy, the mosquito. A cook house, hovel, and smoke house are on the grounds near the camp. There is a salmon pool in front of the camp, where salmon can be landed almost from the verandah. A great number of fine pools are all along the river, each one having a record of killed and wounded salmon that would satisfy any sportsman. The pools lie close together and are of easy access. A few hundred yards above the camp is the famous Falls pool, which lie at the foot of a falls of some four or five feet high, and where salmon lie in great numbers and can be taken at almost any time during the summer. A day at this pool generally gladdens the heart of the fortunate fisherman that reaches it. The Falls are a picturesque spot, where the lover of natural scenery would find much to enthuse over. Mr. Adams spent a couple of days at the camp, where he landed 37 grilse, a feat not equalled this year probably on any of our rivers. He then, with Mrs. Adams, proceeded up the river in a canoe for a distance of nineteen miles. The party camped all night near the foot of the Bald Mountains, Mrs. Adams thus winning the honor of being the first white woman who ever set foot in that wild region. They returned to the camp next day, Mrs. Adams enduring the rough canoe passage in a spirit not excelled by the most enthusiastic sportsman.

Camp Adams comprises some seven hundred and fifty acres and extends for some miles on both sides of the main Northwest Miramichi River, about 35 or 40 miles from the town of Newcastle, a station on the Intercolonial R. R. of Canada. The grounds are reached by taking a wagon from Newcastle to John Way's about 20 miles over a good highway, thence by buckboard or portage wagon 15 or 18 miles over a portage-road to the camp.

The record so far this season has been for two fly-rods fishing eight days 64 salmon, and when it is taken into consideration that a great deal of time has been lost in going up the river in a canoe, just for the sake of the trip, I think that brother fishermen will agree that we still have some good fishing in New Brunswick and that they have a record ahead of them hard to beat. SALMO.

MARKING FISHING LINES.

Editor Forest and Stream:

Two or three seasons ago I began a practice which has so added to my own pleasure in fly-fishing that I am induced to suggest its general use.

Having provided some bright-colored oil paint (I use artist's vermillion), measure off 50ft. from the fly-end of a salmon line, or 30ft. from that end of a trout line. There paint a band about half an inch wide around the line; measure 10ft. more and there paint two bands close together; 10ft. more and there paint three bands; 10ft. more and there paint a band about an inch long, and so on, until as much and a little more line than its owner thinks he can possibly cast has been marked. Let the paint dry. Then if the color is not so solid as to be sufficiently conspicuous, give another coat. When the color is quite dry, give the bands one or two coats of varnish to increase their wear.

The length of the leader in use being of course known, the angler by reference to the marks on his line can at all times tell within a foot or two just how far he is casting. Though this is of some practical advantage, more especially in salmon fishing, still its main recommendation is the pleasure which certainty gives over mere conjecture. What fly-fisher has not in every outing again and again wished he knew exactly how far he was casting.

One thing may be safely predicted. Many will be astonished to see, when the idea of long distance casting is absent, how seldom in actual fishing the 50-foot mark will appear on a trout line, or the 70-foot mark on a salmon line. HENRY P. WELLS.

SAMUEL ALLCOCK & Co., makers of fishing tackle, Redditch, England, send us a large catalogue of angling goods, fully illustrated, and which contains four handsome colored plates of trout and salmon flies. They have appointed Mr. James C. Groendyke, 14 Murray street, New York, as their agent. It is not a price list, but consists of 38 plates of hooks, reels, floats, etc., on calendered paper. Messrs. Allcock & Co.'s advertisement will be found in our columns.

A BIG CATFISH.—The Indianapolis *People* says that a catfish was taken by Charles Albertsmeyer at Hog Island, on last Wednesday, that weighed 60lbs.

BLACK BASS AT RICE LAKE, Ontario, are giving good sport this year. The route is via Port Hope.

WHY WE FISH WITH THE FLY.

IT is not infrequent that some one, laboring under the delusion that it is all of fishing to catch fish, writes to the editor of this paper a letter in which he sets forth his views in regard to the "fly lunatic," and implies that fly-fishing is all right as a science, but is not worth much to catch fish; and that all fly-fishermen, when alone, do not hesitate to use anything as a lure, provided it will be successful. While in some instances this notion may be correct, still I think a large majority of fly-fishermen fish in this manner because they derive more enjoyment from it, and because it is more in harmony with their surroundings.

It has occurred to me, while I have watched gentlemen fishing, that the temperament of the individual has a great, although not recognized, influence on the movements of the fisherman. While the habits of the professional or guide are moulded by their occupation, and their temperament must necessarily be influenced or changed by their habits, those of the pleasure seeker, whose time is limited to a few days or a few weeks at most, are not so changed, and while on the stream they are very much the same men they were at home, only they are a little more subdued.

I think all will agree that the great majority of our fly-fishermen are professional or business men, men who for eleven and a half months in the year are busily engaged with mind and hand in the great struggle to make two dollars grow where there was only one before, and that in so doing they have aquired habits which will not allow them to sit down quietly, but on the contrary are always calling for change or excitement; and in the short time that they allow themselves for rest and recreation these habits are not much quieted down. For this class still-fishing possesses very few attractions, while fly-fishing gives that which they require—action and excitement.

Should you meet a gentleman supplied with fishing paraphernalia trolling in a direction which would encourage you to believe he was after trout, and inform him that by going in a certain direction he could find in a cold spring twenty-five pounds of nice trout all dressed which he could have, or that by going in an opposite direction five times as far he might catch a few little fellows all alive and beautiful from some mossy brook, in which direction do you think he would go? If he were a true sportsman he would go to the brook; but some persons would go to the spring. This shows that it is not the fish that the sportsman wants, it is the hope that he may catch them that is such an irresistibly impelling force that he cannot withstand it. For a man of active temperament and hopeful disposition, fly-casting is perhaps the only kind of fishing which will give the rest desired, as by its constant motion it gives the activity and excitement which soothe the very feelings that still-fishing irritate.

Circumstances have a great influence on cases, and however much a man may like casting the fly or dislike fishing with bait, there are times when he may be obliged to give up his favorite method or go without fish; but after the desired amount of fish are caught the bait is thrown aside and the dainty fly is substituted, and should he be so fortunate as to catch one fish, he views it with far more satisfaction than all those previously caught with bait. There, are however, a few fly-fishermen who will not use anything but a fly, and if they cannot catch fish with that will go without them. This heroism receives its reward, for such fish as they do catch are looked upon, both by their friends and themselves, with much more satisfaction than if they had been caught in some other manner. This spring I was fortunate enough to make a good catch trolling, but if I had succeeded in getting the same fish by fly-fishing, the sport would have been greater and my enjoyment more intense; but although I knew that when I started, still I did not have the courage to stand by my convictions. I can stand by and see still-fishermen catch more fish with bait than I can with a fly, but when they begin to catch larger ones I "cave in." Perhaps if I had the skill of some of my friends I need not resort to bait. I frequently think of an incident which occured at Middle Dam a few seasons ago. A gentleman from Connecticut, who had for a number of years spent his vacations at that resort and who was a fly-fisherman in the fullest sense of the word, had been for a week or two casting around the dam, but did not seem to be catching many. He could not be induced to use bait in any form, although repeatedly urged to do so by his friends. One day a young man who had noticed him said to a mutual friend, "Who is that man over there on the dam?"

"That is Mr. F., from Connecticut."

"He is crazy, aint he?"

"Crazy, no; what made you think so?"

"Why, for a week he has been thrashing those flies of his all around here; first down below the dam, then on this side, then on that, but he don't catch a fish."

His friend said nothing, but the next day he saw the young man near a car in which Mr. F. had some nice large fish, and he said, "Come here, I want to show you some fish." Upon looking into the car the young man said, "Great Scott! who caught those?" "Oh, that crazy man over there." "Well," said he, "I thought he was a fool, but I guess it's I."

It has been truly said that "it is not all of fishing to fish," and it is not all of fishing to catch fish. If the fish are so plenty as to take away the excitement, then the pleasure of catching them is gone and the sport is robbed of all its attractions. For the weary and worn business man who wants to take a vacation, but can not or will not sit around on a hotel piazza, fly-casting on a river or pond is the ideal of pleasure, as in each cast he has a chance to work off some of the activity with which he is overcharged, and also the excitement of watching for the fish which he each time expects will rush for his fly and which he must be prepared for or his chances of success are small.

But this is not all the reason why the fly is preferred. No one will doubt that the handling of a fly-rod and line is more artistic than any other style of fishing and more in keeping with the scenes around which memory loves to linger, and that there is nothing in fly-casting which tends to take the mind from the beauties of nature to the digging of worms. The contemplation of the secrets of nature and the admiration of its works are to one whose mind is not drawn from them by more common-place things, a source of great pleasure, and the days thus spent are among the pleasantest we have to remember. Wandering down on the bank or in the bed of some noisy river, casting a fly here or there, behind this rock or in that eddy, taking a trout here and expecting to take another just below, getting glimpses of arboreal beauty on either hand, and being surprised at each turn of the stream by a scene more beautiful than the last; all this is to my mind far more pleasing than still-fishing of any kind.

We have in this country very few rivers or streams which can be fished with the fly with any satisfaction, from the fact that nearly all large streams have no trout in them, but our Canadian neighbors are more fortunate and they have hundreds of rivers which can be fished with the fly with good results. But although the yield of fish will be large, we who are accustomed to our beautiful streams will experience a sense of disappointment which no amount of fish will dispel, for their woods lack many of the varieties with which we are familiar, and the banks of the streams have a forsaken look which impress one with a sense of solitude and antiquity that is rather depressing. But to compensate for this they do not have the overhanging bushes which are so vexatious to us.

The most perfect enjoyment to me is to be on some small pond or lake, just as the shadows of the tall pines on the hill are beginning to grow longer, as the sun, having run its race, sinks down in the west, and having quietly paddled my canoe into the shade of the bank of some inlet, there to cast the fly and watch the ready response with which it is met. There is not a ripple on the surface of the lake, and except when a trout, larger than the other, breaks the still surface into a series of rings, or some loon, in search of its mate, rises from its long dive quite near us, only to disappear again more quickly than it appeared, the whole surface looks like a mirror of polished steel, brightening into silver and then into gold as it approaches the further shore, and having the inverted likeness of the beautiful green walk around it and the soft heavy clouds as they float along, coming from no man knows whence and going no man knows where.

The songs of the birds as they bid good-night to the departing day, the music of the brook as it rushes along with ceaseless flow, and the mysterious noises of the forest arising on every side blend with each other and make a grand overture to the coming night.

As we sit in our canoe, now and then making a cast, while we watch the effect of the sunset on the mountain opposite, seeing the shadow creep up and change the yellow to green, then to dark green, then to blue green, and at last to black, we can not help thinking that it is no wonder the Indian looked for gods in the mountains, for no matter how well one may be acquainted with a mountain and how often one may have looked at it, it is never the same, and in this case at least familiarity does not breed contempt.

But we have not been idle as we have noticed this, for the trout have begun to move, and nearly every cast has been rewarded by one or more rises. We have on some very large flies, which the little fellows cannot take in, and so we do not catch any babies. But now, as the shadows deepen, we notice a marked improvement in the size of the fish which come up to the fly, and soon we hook a good one. The guide, who has been lost in a cloud of smoke, which has at last crowned his efforts to kindle a fire in the bowl of his pipe, wakes up into activity, and with a few strokes of the paddle puts the canoe out into the lake, and we then and there, amid that most beautiful of all scenes, proceed to take the most beautiful of all fish in the most scientific manner.

And then we return to our old place and do so some more, until the shadows have grown so long and dark and mysterious, and the stars come out one by one to be reflected in the water like drops of gold in burnished silver, and the hooting of an owl in the forest behind us admonishes us that it is time for us to retire, which we do with the conviction on our minds that when the Creator pronounced this world "good" he must have been looking at our forests, ponds and rivers. C. D. C.

NORTHUMBERLAND, N. H.

THE WHITE PERCH.

"WHAT has posterity done for me that I should do anything for posterity?" I think there is something to be said very much in favor of posterity by the FOREST AND STREAM, and, therefore, I propose to put in a word for old Father Time. It seems to me that the younger members of the great sportsman's fraternity have claims that ought to be considered. My boy delights to hear of adventures with rod and gun; he wouldn't be a boy if he didn't. Therefore, an article treating on giving pleasure to the young people will be surely well received. By giving them a chance, don't you see, of course, how many future readers and subscribers you are enlisting? Why, certes, Q. E. D. Therefore, I connect perch and posterity; therefore, I think I prove my case. I address all three—*pater familias*, perch and posterity. As I get through with posterity I say to *pater familias*, take your boys out, if you live anywhere near the dear old North River, give them a frolic on the river, and only see what fun and enjoyment you can get out of the trip. One glance at the laughing eyes of the merry youngster as he pulls the fish over the side of the boat, and are you not paid in advance for going on the trip?

Genio C. Scott calls the white perch a little fish ranging from 3oz. to 3lbs. I never saw one caught up our way in the Hudson weighing anything like 3lbs., but they make up for loss of weight by their quality; and they are a fish for boys to catch all the while; and I an "old boy" will tell you how to catch them. The first thing should be a good safe rowboat; also you are to have a good stout long rope and heavy stone for anchor, let it be heavy enough to ho'd your boat and square enough to tie the rope to. And here on the start you have the fun of rowing to the neighboring island or shore and selecting your anchor, and the fun of letting it go souse, plump overboard when you come to go home at night. We are going to spend the day on the river; we are going for white perch. Next you want, each of you, a good long strong white cotton line, suitable for the depth of water you are going to fish in, say 75 or 100ft., and a good-sized dipsey or sinkers at the end. Above this, far enough to clear your sinker, fasten on a piece of whalebone pierced with holes for your snelled hooks to pass through. You want small snelled hooks, four on each whalebone, two on a side. Above the first whalebone put on a second, high up enough to clear the lower one. Pass your line through a hole in the center of the above and fasten it securely. it is a good wrinkle to attach to each end of the whalebone a small piece of line and fasten it to the main line. Boys would call it "the apex of the triangle," but the line or the fish won't mind that in the least. Now comes another streak of fun, and that is digging your bait. Don't be afraid of "scraning your back." Clams are not always come-at-able, and worms will fetch perch at any time without fail. Now your mother has put up lots of good things for you in your basket, all things are ready. Tell your father to light his pipe and start for your boat. See you have everything in its place, handy and shipshape. You are going to learn more things this pleasant morning than how to fish for perch. Your father sits in the stern sheets with his hand on the tiller; you being quite a big boy are to pull stroke oar and let your younger brother pull bow. Of course you both know how to swim and row. Let me tell you, my young fellows, you should hardly be able to remember when you could not do both of these things. Now, then, wave your hand to mother and your sister, and give way. Pull an easy, quiet stroke, feather your oar; so; don't put your oar in too deep; better! that's right! and watch the youngster in the bow; don't pull him round, see how eager and delighted he is, encourage him. Away we go; the island is not two miles away; and slack water for half an hour. What a lovely day on the water. Just a light breeze, and yet how animated a picture. See that three-masted schooner as she fans along, bound up the river for a load of coal. Look at that tow coming down the river; some of those boats have come down through the canal from Whitehall; those people live on board as do the Chinese. What was that splash? Oh, what a big fish. You are right; that was a sturgeon; they used to be very plenty in these waters years ago, but now they are disappearing very rapidly. Oh, yes; sometimes they jump into the boats, but very seldom; they are a sluggish fish, and not much fight in them; the moment they are caught in the net they give up without a struggle.

When I am home I can look out of my window and see very nearly to a pond across the river, where a gentleman had a large sturgeon put in to the pond, with a harness so fixed that he could secure him to a small boat; then he would get in, poke the fish up and make him carry him along. We call them "Albany beef," and the fish are all sent up to the river to Albany and sold for about $3 apiece. Well, you are getting a little tired of rowing, still you stick to your oars, both of you; that is right, it won't hurt you if you do get a little tired. In oars; there's where we want to anchor, where you see the water boiling and bubbling up; there's the reef, steady, all ready with your anchor, look out your feet don't catch in the rope, overboard she goes—splash! there, you've struck bottom; give her a little slack and fasten your rope well so it don't get overboard. Now then, out lines and fall to work fishing. Cast your eye over to where your little brother is getting ready; that's right, lend him a helping hand. Now for the first fish. You will soon feel him bite, but with the hooks you have baited you need not be in a hurry. Twitch, twitch; now all hands are pulling up. See there, you have each of you three or four silver-plated shiny fellows. Bait and throw overboard again. Toss them into that basket and keep the cover over it, to keep off the sun. How the little fellows do bite. Why, there must be no end of them down there. Hardly does your line touch the bottom before they are at the bait. What kind of a fish is this I've caught? Oh, that is a striped bass; no better fish swims these waters. There are large three and five-pounders in the North River, but when you get a little older you will find out how to capture them with rod and line. The shad fishermen catch them sometimes in their nets weighing 25 or 30lbs. Oh, what a bite I just had! Well, pull up. Oh, what have I got? Dear me, there's a nasty eel. What shall I do now? Patience; I told you you would learn more things than one to-day; take a lesson in patience; don't worry now nor fret; try and get him off and I will help you. Nasty fish? Well, I don't like eels myself, and yet no fish is more fond of clean nice bait than is the eel, and you know in old times he was considered a great delicacy. Grasp him firmly behind his fins, work your hook about a little, so; now you're clear of him. Yes, let him go overboard. Now disentangle your hooks and line, start all over again. Now you're just as good as new. Don't bite as fast as they did? Must be getting thinned out? Well, look at your basket, more than half full. Begin to feel hungry? I don't wonder at it; very good sign. Twelve o'clock. Here come the day boats, Troy and Alida; they meet just about here, half way from New York to Albany. Do you see that white house, glinting up there through the trees? Well, the other day I met an old-time North River boatman and he told me, "Many and many a salmon and lobster and New York newspaper have I chucked into the river off that house. I would lash them to a stick of wood and a man would row out for them." There were no railroads in those days, nor Herreshoff steam launches.

Now comes the tug of war. Heave ahoy! All hands together. Up she comes. Now we will pull off to the island and go ashore and enjoy our lunch! See that your boat is tied up carefully so she can not float away. Now then spread the cloth. Get the grub out of your basket, and fall to. No water to drink? My dear boy, water everywhere. Hudson River water good to drink? Well, I should think it was. Why even now I can name you grown up old boys who will tell you they would rather drink the Hudson River water than the Croton. I am not sure but they are right. It's good enough for me anyway.

Well, what famous appetites; no better friends could you have. Now, while I smoke a quiet pipe you can rest yourselves, and bye-and-bye we'll have a swim. Plenty of time to fish later. I promise you you shall have all you want to catch. Now then, all hands for the water. Take it coolly. Keep your mouth shut and breathe through your nose. Don't get flurried in the water; plenty of time for everything. So for more fish. Let's drop down a little way below here. Softly, bring the old pine tree and that smaller island in range; now let her go. Zip! Water is not quite so deep here. There. Now, go to work with a will.

Well, now, we have spent a day on the water and our basket of sandwiches is empty, but our basket of fish is full. The sun's going down and we will pull for home. Heave and pull all hands. Steady! Hand me the knife. Look out! Cut, splash, dash! You won't use that stone again. And off we pull for home. Eh! What? Have I

been dozing forty winks in my old armchair? Papa, you snored! Oh, no, you must be mistaken. Well, boys, this is a sort of a dream that was not all a dream. I can see the Catskills and 'Sopus Island and the fishing grounds from my window; and many a long year ago I went on just such a fishing expedition as I have written about, and I have thus written because I want to see our boys grow up fond of outdoor sports and pastimes, hardy, strong, courageous, able to stand "wear and tear," and stand it cheerfully, thanking God for being in this lovely world and for the capacity of its enjoyment, loving the woods and waters and all things therein, loving truth and courtesy and manliness, and despising mean people and mean ways. Mark the man who treats dumb beasts cruelly; he will do the same by you if you fall into his power. No Sandford and Merton, angelic youths, too good for this world altogether, but good, honest boys.

I was "bow oar" in the boat that went after perch, and the "stroke oar" is even now fishing up on the Restigouche; and only last week (you see, he never forgets his younger brother) he sent me two salmon, 25-pounders, delicious fish they were. And though we have fished many waters and caught many different kinds of fish, I doubt whether we ever enjoyed anything in the fishing line more than the first time we went for white perch in the waters of the dear old Hudson. CAPT. CLAYTON.

RESORTS FOR WASHINGTON ANGLERS.

Editor Forest and Stream:

The National Capital is credited with 150,000 or more inhabitants. Among these one can find scarcely more than a "corporal's guard" who have seen or even eaten a brook trout. This, added to the fact that all—save such as retain State domiciles—are disfranchised American citizens, makes a desert of our Eden.

And what is worse, if we would angle for trout we must journey to the far away mountain streams of Pennsylvania, western Maryland and West Virginia, following thus the example of our Chief Magistrate; but, let it be known, that as trout have not yet differentiated benedicts from bachelors, the latter do not need to follow the President's example further, and add a wife to the other expenses of the trip.

The case is far different as to black bass, which may be caught at our very doors, so to speak; for a walk of four miles up the Potomac will bring one to bass fishing grounds—the broad water above Little Falls. The fishing improves as we ascend the river. Seneca and Point of Rocks are famous resorts. Harper's Ferry (where the Shenandoah joins its waters with the Potomac) is further on and but fifty miles from the city. Some distance beyond the Ferry a club, known as the Woodmont, and composed of gentlemen from Washington, has purchased a tract of land and built a club house. There the bass fishing is excellent, and last year, President Cleveland and some members of his cabinet, availing themselves of the invitation of the club, spent some days there with successful result.

The Shenandoah and other large tributaries of the Upper Potomac also afford most excellent bass fishing. Among them, Goose Creek, a very beautiful stream, despite its unromantic and uneuphonious name, is probably the most celebrated. It joins the Potomac at Edwards Ferry, or Ball's Bluff, sadly celebrated for a bloody disaster to the Union troops, under Gen. Stone, early in the war. There is good fishing almost from the mouth of the creek to Lenz's mills, where the best catches are made. Last year Messrs. Chadwick and Laird, two successful and locally well known fishermen, caught seventy-five bass in about twelve hours, and all the largest were exhibited in a restaurant window on Pennsylvania avenue. Messrs. Gardner, Redmond and a friend also caught sixty-five in part of one afternoon and two hours of the following morning. In each case the water was just clearing after having been muddy several days. This has been, however, an "off year," owing to the late spring and much rain; and hence so good catches have not been made. Yet Mr. Chadwick and a friend caught fifty-six fine bass on July 4 and 5, in the Susquehanna, near Port Deposit, some forty-five miles beyond Baltimore. Perch and rock (striped bass) fishing is also good at the same place, but generally we do not need to go so far. Both kinds (but no large specimens) may now be caught off the Navy Yard bridge and Arsenal Point, which are within city limits. Rock may in fact be found from the Little Falls—the limit of the tide—to the mouth of the river, a stretch of about 120 miles.

Four miles below the city the small stream called Four Mile Run empties into the Potomac on the Virginia side. For half a mile from its mouth it is very broad. Boats and minnows being always obtainable, and the place being very easily accessible by railroad, it is naturally more frequented than any other fishing resort in this vicinity. It also affords excellent shooting at various seasons. Some actors (among them Geo. Denham, well known as support of John E. Owens, Joe Jefferson, Mary Anderson and other stars, and Walter Allen, the popular buffo of the Emma Abbott Opera Company) have erected a comfortable club house, and provided themselves with boats and all the other accessories and necessaries of a good fishing and hunting outfit. Here they can "lie off" as unreservedly as if in the wilderness, and yet reach the city on fifteen minutes' notice. Here resides Jesse M., who has been previously noticed in FOREST AND STREAM as the only fisherman known to Washington annals who never fails to fish (or hunt) every day, rain or shine, without, however, neglecting his professional duties in the city. Rockfish, perch, chub, sunfish, catfish (one caught by J. M. weighed 5½lbs.) and occasionally a black bass and carp are caught here. So far as I have heard, black bass are not found at any point further down the river; but their place is supplied by tailors (the young or "southern" bluefish), and sheepshead, drum, spot and crocus are caught at places near the mouth of the river, especially at Piney Point, a popular resort for Washingtonians.

At Bay Ridge, about thirty miles away on Chesapeake Bay, spots may be caught in plenty. They and their first cousins, the crocus, are esteemed the kings of the pan fish of this locality. "Shedder," or soft crab and worms are the bait they prefer. An expert bass or even perch fisherman does not usually succeed in catching many spots, on first trial, and is often compelled to see himself eclipsed by some "chump" who doesn't know a Henshall rod from a walking stick. He finally learns to use no float, a very small hook, a very heavy sinker (on the extreme end of the line), and to hold the line taut and jerk instantly when the fish bite. I know of no fish more difficult to catch save the blackfish or tautogs that live around the rocks at Nantasket Beach, Mass. They are genuine experts; while only 200yds. from shore the same kind of fish can be caught with comparative ease. So it seems the shore-huggers have learned by experience to bite the "off side" of a hook. Fly-fishing has not been much practiced in this vicinity. The following, quoted (without permission) from a recent letter to a friend by one of the two pioneers in fly-fishing here—Mr. G. A. Brandt, an intelligent gentleman connected with the War Department—may prove of general interest and profit, although having for the most a local application:

"There is not to my knowledge any book in existence which contains the information you desire, nor do I think you require anything except what experience teaches you is the best. I believe I have read everything worth reading concerning fly-fishing, and my conclusion from personal experience as well as the opinions of master anglers, such as Thad Norris, is that there are about fifty times as many flies as are necessary for practical purposes. One eminent angler (whose name I cannot now recall) used to say that he found four flies sufficient for his purposes, and I think he was not far from right; on the other hand, some dilletanti have a different fly for each day in the year.

"As regards fly-fishing hereabouts I believe John Hyer, an examiner in the Patent Office 'and myself were the pioneers. The field is yet comparatively a new one; in fact I know, personally, no one except yourself who habitually devotes himself to the fascinating pastime. I have many flies, but those I generally use are a 'yellow-sally,' ibis (only occasionally, in cloudy days and in discolored water), black-gnat, coachman (red body), and the white-moth or miller (about sundown or at dusk)."

POTOMAC.

WASHINGTON, D. C.

SOMETHING ABOUT A PORCUPINE.*

AT 5 o'clock Wednesday morning, June 8, 1887, Mack and I found ourselves approaching Mackinaw City, Mich. The sun was shining bright across Lake Huron, bidding us fair day. Steamers and sailing vessels were seen in every direction. Off to the right a few miles was the island of Mackinac, and to the left we could see away across Lake Michigan. The train stops, the porter calls out "twenty minutes for breakfast," and we step off the Wagner. "Just look at that woman, Mack; she's got a grip, four bundles, a bandbox and a bird cage. That means a three months' visit." After our breakfast of lake trout, strawberries and coffee, we get aboard the ferry for Point St. Ignace, where we arrive in half an hour. Nearly all the natives call this place "The Point" and the tourists pronounce it Saint Ignace, with the accent on the ace. We found our Racine sailboat, which had been waiting for us several days, and in a short time our traps were aboard and we were pulling out of the harbor toward the north. A stiff breeze was blowing and we kept pretty close to shore in case of a spill. At 5 P. M. we arrived at Gros Point. The wind had been blowing strong all the afternoon, but now it had reached a point not much short of a gale. Carp River was still four miles away and we wanted to reach there that night if possible; but after a hard pull of two miles we gave it up and went to shore and made camp. Two as tired and hungry fellows as ever were sat down to bacon, potatoes, onions, bread and butter and coffee, and pronounced it the best meal they had ever eaten. By morning the wind had abated some, and we were up early preparing to move on. The view here is across St. Martin's Bay. To the south the humpbacked island of Mackinac could be seen in the distance. Directly east is St. Martin's Point, ten miles away, and in the mouth of the bay lie the beautiful St. Martin Islands. After a hearty breakfast, we started up the bay and landed at the mouth of Carp River at 8 o'clock. We wanted to try the fishing before setting up our tent, so we got our tackle ready at once and started up the river. Arriving at the rapids we found that some men were running logs, and we tried casting for an hour without getting a rise. This discouraged us very much, and we wished we had gone where we knew we could at least get enough trout to eat. I was not willing to give up until we had tried again, so at noon, when the men were at dinner and the logs stopped running, I went to the rapids and in half an hour succeeded in landing five very fine trout. I walked back to the boat much elated, and Mack was as much pleased as I was to see trout once more. The five weighed 3lbs.

Dinner was the next thing in order, and we lost no time in getting the trout cooked. We were as hungry as wolves and devoured all the fish. In the evening we had a couple of hours' fly-fishing, taking twenty trout each. We gave Mrs. Tripp a mess of trout and in return she gave us a pan of milk. The rapids near the mouth of the river are called Big Rapids, and extend about half a mile in length. Two miles up are the Little Rapids, of about the same length. Ten miles further on is the dam, and for two miles below the dam the river is a succession of rapids and pools. The river can be waded at any of these places mentioned. There are no snags, roots nor overhanging trees to bother the fly-fisherman, and, best of all, the river is full of trout. In the rapids the bed of the river is very rocky and the water shallow, but there are miles of deep, slack water, affording fine protection to trout in winter. On the morning of the 10th one of the men came down from the dam with a team, and he told such glowing accounts of the fishing up the river that we concluded to go back with him. By 8 o'clock we were on the road, and of all the roads I ever saw this was the worst. We laughed a good deal at the horrible jolting and got considerable fun out of the ride. Arriving at the dam at 10:30, we soon had the tent up and were ready for business. The dam proper is about 200ft. across, and the sluice is 25ft. wide. Slash boards are set across the sluice every morning at 6 o'clock and remain until the following morning at 4 o'clock, when they are knocked out and the "flood is on." The head of the water gained is 12ft., and when it is let off the river below rises 6ft. in three minutes. In two hours the river is down to its natural stage and the slash boards are put in again. During the flood the men work the logs over the rapids to the mouth of the river, where the logs are boomed and towed to the mill at St. Ignace. Nearly all the land fronting on this river is owned by the Mackinaw Lumber Company, and men and teams are employed the year round in getting out logs. Mr. John O'Malley is superintendent and Mr. Tripp has charge of the farm and boarding house. The company keep two men here to watch the dam, John Boynton and William McCune. They are nice young fellows and attend strictly to their duties. In three weeks we never heard either of them swear, which is rather singular for this country.

For the first few days we fished at the dam, and such fishing we had never had before. Just below the dam is a deep hole about 50ft. across, and this was fairly alive with trout, and big ones too. We saw several that would weigh from 2 to 3lbs. each. Half-pounders were common and we took one-pounders every day. The two largest we caught weighed 1¼lbs. and 2¼lbs. We began with a gang of three flies, but got into so much trouble trying to land triples that we used only two flies. It was almost impossible to drop a fly anywhere in the river without getting a rise. We could not tell what they liked best, for they seemed always on the alert and eagerly took whatever we gave them. When we got tired of fishing around the dam we could wander down the river a mile or two for a change. There were many beautiful places along the river, and we visited them day after day, never becoming tired of gazing on the rushing waters and circling pools. This stream is as pretty as the famous Jordan, Boyne or Boardman rivers, and has more and larger trout than all three put together. A number of gentlemen came here to fish during our stay, but they rarely tried the rapids, preferring to stand on the floor of the dam and "yank" them out with a short pole. It made me flinch fairly to see the trout sailing through the air and strike the bridge of the dam with force enough to kill a cow. Perhaps it was as merciful as my way of killing them, but it did not seem so. We estimated that three thousand trout were taken from the pool below the dam while we were camped here. We did not get to fish above the dam as the river was full of logs for seven miles, but John said it was fine fishing when the logs were out.

One morning as Billy stepped outdoors, he saw a bear only a few yards away, but before he could get the gun the bear was gone. We scarcely believed him until he took us to where the bear had gone through a gully, but there were the tracks in the clay as plain as could be and we were convinced. The tracks were nearly round and measured over six inches across. We had several pet porcupines that came around the camp at all times of the day. Billy told us that these curious little animals would go a mile out of their way for a chance to climb an axe handle, so we left our axe convenient and waited developments. Sure enough every porcupine that came around would climb that axe handle. It was a comical sight and the performance amused us greatly.

Three of our party arrived on the 21st, Harry, Frank and Harvey. The boys brought letters from home and a newspaper, the first we had seen for two weeks. For the next few days we did not see much of the sun and it rained considerably, but we put in the time very well and would have enjoyed ourselves completely if it had not been for the mosquitoes. In rainy weather the mosquitoes were pretty thick and we had to use the "dope" freely to get any peace. On the 26th we pulled up stakes, and with many regrets left this beautiful place where we had spent so many happy hours. Arriving at the mouth of the river at three o'clock, we set up our tent and put in the rest of the day in visiting the Tripp family and picking strawberries. The next day we tried the lower rapids again with good success. The trout seemed to be more plenty than ever, and there was no need to take small ones, and all under half a pound were dropped back into the river. Fifteen of the largest we caught that day weighed 12lbs. They made a pretty string and Harvey and I held them up and had their pictures taken. We broke camp in the evening, putting our traps in the boats, and at 9 P. M. took a "bee line" for St. Martin's Point, 11 miles across the bay. The moon was shining and we had a delightful row of it, landing at the Point at 12 o'clock. We built a fire and soon had coffee and lunch ready, and none of us will soon forget our midnight supper at St. Martin's Point. After resting a couple of hours we pulled out going directly east to Point Brulée, which we passed at 4:30 A. M. and at 6 o'clock landed on the north side of Marquette Island. Our tent was put up on a bench of the hill about 20ft. above the lake, and after breakfast we all took a few hours' sleep.

The Cheneaux (The Snows) are a group of several hundred islands, Marquette Island is the largest, comprising about five thousand acres of land, and they range all the way down to the size of a big girl's hat. Among these islands, "in the narrow deep channels and winding bays," we had been told that black bass were abundant. On the map all the good places were marked "The home of the gamy black bass," "The best bass fishing in the State," etc. And the book said that "bass, perch, muskalonge, Mackinaw trout, pickerel and pike, of the largest and most gamy varieties, fairly swarm in every direction." So we thought all we had to do was to row to these places and haul them in. But we went to the "home of the gamy black bass" and he wasn't in, and we went to the neighbors and he wasn't there. We fished in all the "elegant" places for miles, we tried all kinds of bait, but did not get a bass in five days' fishing. Notwithstanding our poor luck with the bass we were very well contented. We had a splendid camping place, and when we were not eating, sleeping or trying for the "gamy," we passed the time in picking berries, examining Indian graves and taking in the beauties of the landscape. Frank had brought a camera and negative plates with him and obtained a number of fine pictures of our several camps and scenery along the route.

On Friday, July 1, we packed up our traps, and at 4 P. M. boarded the steamer Golden Eagle, bound for St. Ignace. The captain and steward were jolly fellows, and we had a pleasant voyage, arriving at St. Ignace at 7 P. M. All of the party, except myself, stopped at Mackinac to spend a few days, intending to take a steamer there for Detroit. I reached Mackinaw City, by ferry, at 10 P. M. and took the Michigan Central train for the south. I stopped over Sunday with my family, who were at Huronia Beach, and met the rest of the party in Detroit on the 4th, arriving home the same night at 11 P. M. Our trip had been a pleasant one and we all voted to go again. JACK.

COLUMBUS, O., Aug. 9.

*But more about fishing.

PENNSYLVANIA FISH INTERESTS.

IN a former issue we gave some extracts from the report of this Commission for the years 1885 and 1886. Of the fisheries at Erie, the only port of importance on Lake Erie which is within the State, they say:

The importance and value of Erie as a fishing town, and the benefits to be derived from the artificial propagation of whitefish to be turned into Lake Erie, may be questioned by persons seeking information on those points. It may be stated, in anticipation of such question, that Erie is the only considerable fishing town on the lake in this Commonwealth, and the importance of its fishing industry may be seen by a glance at the following statistics, submitted by Mr. Louis Streuber, one of the principal fish dealers of that city:

Men employed	350
Number of boats used	41
Tugs	19
Sailboats	22
Small skiffs	58
Value of nets	$40,000
Value of boats	80,000
Value of docks and buildings	25,000
Value of other apparatus	60,000
	Pounds.
Whitefish	61,500
Herring	160,000
Pike	320,000
Trout	10,000
Sturgeon	10,000
Various other kinds	180,000
Total	741,000
Value of fish caught and sold in 1886	$175,200

Such an industry is well worth preserving and encouraging. It might be answered that the fishing interests of the lakes should be able and willing to take care of themselves. Such does not appear to be the case, however. All the States bordering on the lakes, New York, Ohio, Michigan, etc., have been at work for years by artificial propagation and penal laws in efforts to maintain and preserve the fish supply. And, though much good has been done by them, more remains to do, and it is only equitable and courteous toward our neighbors that Pennsylvania should do her share, and, as is shown by the above report of the Erie fish industry, it would seem to be the interest of the Commonwealth to do everything needful to save the valuable whitefish from extermination.

The western hatchery is situated near Erie, and is mainly devoted to whitefish, and during the two years 24,008,000 fry were hatched and planted from it, in addition to 1,000,000 received from the U. S. Commission. The eastern hatchery is upon the Little Lehigh River, near Allentown, and has twelve ponds containing 34,000 breeding trout, both brook and rainbow, besides the ponds of carp. In 1885 there were 300,000 trout fry distributed, and in 1886, 260,000, besides 189,500 rainbow trout, 1,103 black bass and many thousand carp.

Of the black bass they say: "There is no fish better adapted for stocking inland waters than black bass, and none that will give more abundant and satisfactory returns. Being a remarkably hardy fish, easy of transportation, transplanting has been very successful, and being in addition very prolific, it has multiplied immensely wherever the fishery laws have been respected, and in a great many instances where the legal statutes for its protection at certain seasons have been set at defiance. Whenever even moderately fair opportunities have been afforded them, the black bass have well repaid the trouble and cost of transplanting, which, unfortunately, has not been the case with the introduction of other game and food fishes.

"The habits of the black bass furnish very interesting subjects for study, they do not seem to depend closely on temperature, having no opportunity of avoiding the cold they sink to the deepest part of their watery domain at the approach of winter, and if the chill penetrates to their retreats their vitality is diminished, their blood flows more slowly, and they feel no need of food, and forthwith enter into a state of hibernation. In deep lakes, however, they sink below the reach of surface chills, and here they are sometimes caught with hook and line through the ice.

"The spawning season occurs on the approach of warm weather, and the oldest fish, it is said, sometimes anticipates the ordinary season, while many late spawners are occupied with family cares until the last of July, and some young fish are not ready until October and November. Leaving the deep water early in the spring they resort to the shallower, where they pair off for breeding, generally selecting for their spawning beds gravelly or rocky bottom, and water from eighteen inches to three feet in depth, though at times water of greater depth is chosen. The eggs are usually deposited on the bottom in rows, and stick to whatever substance may be found there; they hatch in about a fortnight, the time depending upon the depth and temperature of the water. The parent fishes maintain a vigilant watch over the spawn, driving off intruders, and after the eggs are hatched the vigilance of the parent fishes appears to be redoubled.

"The young emerge from the egg almost perfectly formed and remain on the bed from three to six days, when they seek deeper water or places where they can readily take refuge from the pursuit of enemies. The parental guardianship is maintained until the young fry are able to take care of themselves.

"They grow rapidly, attaining, when food is plentiful and of the right kind, the weight of a pound during the first two years, the annual increase thereafter being about the same proportion until the maximum, which is from five to six pounds, is reached, though heavier ones of the small-mouthed variety are claimed to have been caught.

"There are few fresh-water fishes more palatable than the black bass. Its flesh possesses the desirable qualities of firmness, flakiness and whiteness, combined with solidity, proper juciness and rich flavor. As a pan fish it is fully equal to the well known sea bass, and the larger ones are by many as greatly esteemed for boiling or baking as sheepshead. Taken as a whole, when it is properly served it has few superiors, and if the salmon and brook trout are excepted, probably none. It is cosmopolitan, thriving equally well north and south, demanding only pure cold water, plenty of it, and to be let alone during its spawning seasons."

Editor Forest and Stream:

In FOREST AND STREAM of Aug. 4 I notice in the fish commissioners' report reference to the inefficiency of protective laws in this State. This results, not from lack of proper laws, but for want of any means of enforcing them. The whole work is left to the people and to the constables and justices; and experience has taught that they will do nothing to enforce game laws.

I hope that the Legislature will "get on to" what has long been apparent to all thinking sportsmen, *i. e.*, that we have plenty of game laws, and as good as we are likely to get, but that they are worse than useless unless some provision is made for enforcing them.

A perusal of the game laws of this State would lead one to suppose that game and fish were well protected here; but on the contrary game is killed, whenever and in whatever manner a person may choose. It is the same with fish. In a twelve-mile ride along the Allegheny River last April, I saw more than fifty men and boys openly fishing for bass, though the season does not open until June 1.

The Allegheny was formerly one of the finest rivers for fish in the country, and there is no natural reason why it should not continue to furnish abundance of fish for all time. It is a rather rapid river with gravel bottom alternating with deep eddies and shallow riffles; just the right kind of water for breeding fish.

Within the last ten or twelve years good sport could be had catching bass, pickerel and other varieties of fish; fish were of good size and plenty. Now one may consider himself lucky if he gets two or three bass of one pound weight for a day's fishing. This decrease is directly traceable to the use of dynamite, and to the influence of the numerous tanneries and oil refineries located along the river and the creeks which flow into it. Dynamiters have been at work for the last five years all along the river from Pittsburgh to Olean, and although the residents disapprove of the practice, they do nothing to punish the offenders. I know of only two instances of arrests under the game laws (in this county) and they were for dynamiting fish. I furnished the evidence in both cases. I do not know what laws we have to apply to the tanneries, oil refineries and acid works, but if there are not laws there should be some laws enacted and enforced strictly.

What the fish commissioners say in regard to fish protection applies with equal force to all kinds of game. Unless we have special officers paid to attend to the enforcement of the game laws we may as well abandon all efforts at protection and repeal all the game legislation we have. There would be at least one advantage to the latter course; the decent sportsman would have an equal chance with the hoodlums and pot-hunters. Mc.

EAGLE ROCK, Pa.

POLLUTING THE WATERS.—The Fish Commissioner of Indiana promises the inconsiderate city cleaners and hygienic promoters who are in the habit of dumping their vault collections into the river, murdering the fish in the water and sleep in the bed chamber, that he will stick the fanged and forked law into them as far as he can drive it if they don't quit. It is a blessed threat, like "threatening weather" in a drouth. At times, when a southwest breeze in a moist, warm atmosphere is blowing, the odor that comes up from these dumping places bears just as little resemblance as can be found in this world of contrarities to that borne on the—

"Gale that sighs along
Beds of oriental flowers."

It is a positive and most unpleasant fact, a *News* reporter's family has been sickened with the smell of the abominable filth at the distance of a full half mile. The Board of Health does not appear to have much to do, or do much, but it might lend a little help to the Fish Commissioner, whose only legal ground of action is the needless and nasty destruction of fish.—*News.* Yes, it might, but the question is, will it? As the custodian, in a measure, of the streams of the State, the Fish Commissioner is in duty bound to see to it that they are not made so unwholesome that fish cannot live in them. This is now about the condition of lower White River. All good citizens should help to hold up the hands of the State Fish Commissioner, who is determined, if possible, to purify the stream.—*The People (Indianapolis).*

FIXTURES.

DOG SHOWS.

Aug. 30 to Sept. 2.—Hornell Kennel Club Show, Hornellsville, N. Y. J. Otis Fellows, Superintendent.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 29 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. A. M. Grau, Secretary, 552 East Water street.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5296.**

ETHAN ALLIN SETTERS.—The following card from the veteran sportsman, Mr. Ethan Allin, explains itself: "Pomfret Center, Conn., Aug. 10.—*Editor Forest and Stream:* I wish to caution the public against buying pups purporting to be genuine Ethan Allin American setters unless they are sure of their breeding. Certain men are trying to speculate on the reputation my dogs have justly won by their fine field qualities and keen scenting powers, to make money by selling mongrels of their own breeding as pure bred American setters, some even copying the pedigree of Trap (published in FOREST AND STREAM, June 17, 1886) verbatim and claiming it to belong to their dog, thereby swindling the unwary and damaging mine before the public. I will cheerfully answer all inquiries addressed to me for the benefit of all concerned.—ETHAN ALLIN."

TEXAS FIELD TRIALS.—The second annual field trials of the Texas Field Trials Club will be run near Marshall, beginning Jan. 10, 1888. There will be a Derby and an All-Aged stake, open to amateurs only. Entry $5, members free, entries close Jan. 9. The prizes offered in such stakes are silver cups valued at $50 and $20, and a silver medal valued at $5. The address of the Secretary is W. L. Thomas, Marshall, Texas.

THE MEDAL RULE.

RULE 25 of the American Kennel Club reads thus: "All clubs, members of this association, shall be required in future to pay all regular prizes strictly in accordance with the description given of them in the published premium list. When medals are awarded, if they are described as gold or silver, their purity shall be that of United States coin. If manufactured of any other material, no description shall be given of its material. It shall be merely called the club medal."

The Hornell Kennel Club's announcement of premiums states that the medals given by that club are of bronze. Commenting on this Mr. W. Wade writes:

Editor Forest and Stream: Your lively neighbor down stairs has done a service in pitching into the Hornell Kennel Club for their nullification of the A. K. C. medal rule, and I am almost tempted to say that "Uncle Dick" has rendered the rules a service by his non-compliance with one, for attention is thereby more directly drawn to the rule than dozens of newspaper articles could do. The Hornell Club announce that they will give medals as prizes, and like honest men say just what their medals are made of; who in the world would think that an announcement, so plainly in the interest of common honesty and truth, could be a violation of an A. K. C. rule? Yet sure enough, the rule is not directory, does not say that the club may call a pewter medal "the club" medal, but expressly forbids them to say what it is made of, should it not be silver or gold! In the name of common sense what does this mean? What possible wrong can there be in telling the whole truth? Medals are justly objects of suspicion; a club cannot afford to give cash prizes and offers medals; has not the title of "club" medal a somewhat suspicious flavor? True, it involves no deceit, and may be innocent enough; but why the express provision that there must be such rigid secrecy as to honestly saying what a medal is made of? Wouldn't you rather compete for a medal that you are told is bronze, than one that may be bronze, pewter, copper or pig iron? Will not the author or authors of this rule say why it was so constructed that a club cannot tell the whole truth without violating a rule of the A.K.C.? This beats the Jews! Your wicked neighbor gives the Hornell premium list a slur by calling it a "substitute for a premium list." Exactly, but it is just the very thing that has been looked for by small shows who must economize in every proper way or give no show. This list gives the breeds for which classes will be provided, directions for entries, and entry blank, all on a little piece of paper 6x7in. True, it does not give the A. K. C. rules; it would be better to do so, but "half a loaf is better than no bread," "cut your coat to suit your cloth," and a dozen more aphorisms bear on the point of the wisdom of trying to make outlay come within income; and one of the most threatening dangers to dog shows has been the almost universal losses made by shows this year and last. This year New York and Boston are the only ones said to have made money. Last year Pittsburgh did also. How long are shows to be carried on at a loss?

The wisdom of the A. K. C. could be exerted in no better way than by such a modification of rules as would allow shows to incur as little expense as possible, consistent with propriety.

But whatever they do, let them knock out such pewter rules as their present medal one.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the August number of the *American Kennel Register:*

CHESAPEAKE BAY DOGS.

5207. Poule d'Eau, C. Phelps.

COLLIES.

5208. Gypsy Lass, A. E. Manly.
5209. Lady Gaffa, F. C. Evans.
5210. Victor II., R. S. Nowland.

GREAT DANES.

5211. Nellie, F. C. Evans.

ITALIAN GREYHOUNDS.

5212. Dick Steel, C. J. Tanner.
5213. Nellie White, C. J. Tanner.

MASTIFFS.

5214. Charlotta, E. H. Moore.
5215. Cedric, J. Boyd.
5216. Count Robert II., C. G. Derr.
5217. East Lake Media, C. C. McLean.
5218. Edwy, Victor Kennels.
5219. Egbert, Victor Kennels.
5220. Elgiva, Victor Kennels.
5221. Emma, Victor Kennels.
5222. Eoppa, Victor Kennels.
5223. Ethel, Victor Kennels.
5224. Eumer, Victor Kennels.
5225. Grim, J. H. McManus.
5226. Hero IV., C. E. Bunn.
5227. Jessie II., G. Kerr.
5228. Juno VI., E. H. Moore.
5229. Max II., G. Kerr.
5230. Patty, E. F. Woodcock.
5231. Tiff, H. C. Brush.

NEWFOUNDLANDS.

5232. Follie, W. W. Silvey.

POINTERS.

5233. Dan III., John Aiken.
5234. Doc Hyer, A. M. Hyer.
5235. Fritz IV., Geo. F. Howard.
5236. Gypsey, C. L. Parker.
5237. Jessie, Charles G. Dunshee.
5238. Jim, George F. Howard.
5239. Miss Duval, Dr. J. Derham Palmer.
5240. Sam, C. L. Parker.
5241. Sue II., C. L. Parker.
5242. Tammany II., J. S. Dunshee.

POODLES.

5243. Pierrot, Anna P. Stevenson

PUGS.

5244. Bradford Bonnie, J. P. Davis
5245. Carl, H. R. T. Coffin.
5246. Dumps, Geo. McD. Blake.
5247. East Lake Belle, C. J. Tanner.
5248. East Lake Clara, C. J. Tanner.
5249. East Lake Gipsey, Geo. B. Pengeman.
5250. East Lake Laddie, Chas. J. Tanner.
5251. East Lake Lassie, Chas. J. Tanner.
5252. East Lake Toddie, Abel Hoover.
5253. Foster, H. R. T. Coffin.
5254. Jim, R. H. Howard.
5255. Juliet, Forest City Kennels.
5256. Jura, B. S. Shaw.
5257. Princess, Forest City Kennels.

ST. BERNARDS.—ROUGH-COATED.

5258. Beauty II., Forest City Kennels.
5259. Cadess, Weimer and Lincoln.
5260. Don M., Malachi Taylor.
5261. Judie, Weimer and Lincoln.
5262. Leo Bonivard, C. S. Baker.
5263. Prince of Valley View, H. G. Wells.

SMOOTH-COATED.

5264. Apollinaris, J. B. Stacy & Son.
5265. Cato, H. R. T. Coffin.
5266. Gretna, Forest City Kennels.
5267. Rodolph, C. H. Puffer.
5268. Trojan Tick, J. R. Draper.
5269. Victor, A. G. Holmes.

SETTERS—ENGLISH SETTERS.

5270. Black Chief, H. T. Payne.
5271. California Girl, H. T. Payne.
5272. Claudius, J. J. Mellus.
5273. Dandy Gladstone, J. R. Taylor.
5274. Elsinore, H. T. Payne.
5275. Iron Duke, Jr., C. M. Snell.
5276. Los Angeles, H. T. Payne.
5277. Punch II., Eugene Halpin.
5278. Royal Sput, Tony Bright.
5279. St. Patrick, H. W. Patton.
5280. Signet, C. E. Fout.
5281. Tom Paine, J. F. Holbrook.
5282. Trifler, H. L. Jordan.

IRISH SETTERS.

5283. Fannie, Mrs. Oliver Tebbets.
5284. Glenvan, Wm. Canning.
5285. Mina, Chas. J. Miller.
5286. Nino, Chas. E. Perry.
5287. Rovene, L. & J. Backer.
5288. Sligo Moor, B. D. Sullivan.

SPANIELS—FIELD AND COCKER SPANIELS.

5289. Frou Frou, C. M. Nelles.
5290. Jette, J. F. Macdonald.
5291. Junie Obo, W. L. Dearborn.
5292. Keno II., Wm. A. Markell.
5293. Phyllis, Harry D. Brown.

TERRIERS—BULL-TERRIERS.

5294. Blossom, B. D. Mintz.

FOX-TERRIERS.

5295. Belvoir Trap, T. J. Flack.

YORKSHIRE TERRIERS.

5296. Ben, Peter Cassidy.

DOGS FOR BIG GAME.

CALDWELL, Kansas, Aug. 11.—*Editor Forest and Stream:* Being a complete cripple from a recent attack of articular rheumatism, I take great pleasure in reading your paper from end to end, including every advertisement in it. Your republication of "Leatherhead's" article on what he thought would make the dog for big game afforded me much amusement. It showed me very plainly that he was not a practical sportsman after big game, such as we have in the great West. I years ago advocated through the FOREST AND STREAM what I and every old hunter knows to be a fact, that there are but two breeds of dogs in the world that can and will catch and kill a coyote, a gray wolf or a black wolf. These two breeds are the English greyhound and the Scotch deerhound. A great many greyhounds are too timid to fight and stay to the death, but when they are bred and worked right they are the gamest dogs on earth. A Scotch deerhound bred from tried and broken stock never flinches in the hottest fight. It takes a dog of extraordinary speed and staying powers to catch a gray wolf before the fight begins. The moment you breed any other blood into these two breeds you loose speed and your dogs can't catch their game; and unless they can first catch it they certainly can't kill it; and hence have no use for their bulldog or boarhound cross. I have eight dogs in my hunting pack for this fall (rheumatism being willing); five of them have never seen any game. I have a bet now standing that they kill the first gray wolf they see. Four of them are greyhounds and four deerhounds. The best dog in my pack and the best one I ever saw is as fine a greyhound as ever lived. He is extra fast and dead game, always goes to the game first, and amuses it until the rest of his companions get in.

Mr. Victor M. Haldeman in his article in your issue of Aug. 4 is right in his inference as to my selling the pack of dogs to the Sun River Range Association of Montana. I sold them seven dogs and one bitch, and hired a huntsman to them to work the dogs on the cattle range for six months after coyotes and gray wolves. Although none of these dogs had ever seen a gray wolf, I guaranteed them to kill the first one they saw. I had seen them kill coyotes, and the way they did that work satisfied me that they would kill any animal they could handle. The first wolf they wanted these dogs to kill on their arrival was one that had killed cattle and sheep in one locality for four years. Mr. I. W. Porter, the huntsman, wrote me that he was afraid of his job, as the people told him the wolf was much larger than any dog he had, and it was only fun for him to kill two or three cur dogs at once. The second day the wolf came to the corral early in the morning and killed four sheep; and after daybreak Mr. Porter with five dogs gave chase, two of them only ten-months-old puppies. The wolf was wily and cunning, dodging into brush and behind rocks so that he was not caught short of ten miles work, and then the fiercest fight ever witnessed was fought and the wolf killed. He was estimated to weigh over 100 lbs. One of the dogs weighs 82 lbs., and this wolf was much larger every way.

The next letter received from Mr. Porter he stated that they were doing valiant service for the cattle association; that he had that day got on to a band of fifteen gray wolves and killed twelve of them with only six dogs, including the two eleven-months old puppies; but that in this fight some of the dogs were badly used up. He also stated that he was told that these gray wolves often went in bands of fifty. I answered him that whenever he got on to a band of that sort I would bet on the wolves. The cattlemen on the Cherokee Strip are offering $20 bounty for every wolf killed. In many parts they have become so destructive of cattle, not calves, but three and four-year-old steers, that cattlemen have been compelled to leave their ranges and drive closer to settlements. This has happened within twenty miles of here, and as soon as it gets cool enough to run dogs I expect to have some genuine sport, and should be much pleased to show Mr. Haldeman, and as many more Eastern dog lovers as may choose to come, what are the best breeds of dogs for the killing of big game. We have plenty of deer, wildcats, turkeys, chickens and quail near by.

Q. VAN HUMMELL, M.D.

AMERICAN COURSING CLUB MEETING.—The second annual meeting of the American Coursing Club will be held at Great Bend, Kan., Oct. 17 to 22. Two stakes will be run. The All-Aged stake for 64 greyhounds, entry fee $10, winner to receive the title of champion of America, the American field cup, value $100, and 25 per cent. of entrance money. The runner-up 25 per cent. of the remainder, two greyhounds 10 per cent. each of the remainder, and four 5 per cent. each of balance. The Great Bend Derby for 32 greyhounds, 18 months old and under, entry fee $5, winner to receive 50 per cent. of entrance money, the runner-up 50 per cent. of the remainder, and two 10 per cent. each of balance. There will also be a bench show for greyhounds with prizes of $15 and $10, with a special prize for the best bitch winning a prize in any field stake. Entries close Oct. 10 at 6 P. M. Drawing takes place Oct. 15 at 8 P. M. Should the stakes not fill the management reserves the right to run off the stakes with a smaller number or arrange for other events should there be an excess of entries. Those who wish their dogs fitted for the meeting should write the secretary at once. His address is G. Irwin Royce, Great Bend, Kansas.

MILWAUKEE DOG SHOW.—We have received the premium list of the second annual dog show of the Wisconsin Kennel Club, to be held at Milwaukee Sept. 20 to 23. In champion classes the prize is $10. English setters, Irish setters, pointers (any weight) and pugs have a class each for dogs and bitches. In other champion classes both sexes compete. In open classes the prizes are $10 and $5, with $5 and $3 for puppies. The club offers cash kennel prizes, for four or more, of $20 each for mastiffs, St. Bernards, Great Danes, English setters and pointers, $15 each for Irish water spaniels, cocker spaniels, foxhounds, beagles, dachshunde, collies, bull-terriers and pugs. Also 23 cash prizes of $10 each for the best of prominent breeds. Entries close Sept. 10. The secretary's address is A. M. Grau, 552 East Water street, Milwaukee, Wis.

MR. GERMAN HOPKINS arrived from England on the Denmark last Sunday. He reports a capital time, and states that the dogs are all in fine condition. He brought over two white English terriers, dog and bitch, both prize winners; two fox-terrier bitches and three fox-terrier puppies, a dog and two bitches.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Prince Albert and Philadelphia Prince. By Frank F. Dole, Philadelphia, Pa.) for white bull-terrier dogs, whelped June 7, 1887, by Count (A.K.R. 3178) out of White Violet (Dutch—White Rose, A.K.R. 2906).

Blackness. By Detroit Kennel Club, Detroit, Mich., for black cocker spaniel bitch, whelped May 30, 1887, by Master Shina (Young Obo—Shina) out of Wilmer Jet (Obo II.—Gipsey).

Gun Bondhu and Bell Bondhu. By E. E. Haines, Charlestown, Mass., for blue belton English setters, dog and bitch, whelped March 23, 1887, by Gus Bondhu (Dashing Bondhu—Novel) out of Lynn (A.K.R. 2420).

Mischief. By Chautauqua Kennels, Sheridan, N. Y., for black and white and ticked English setter bitch, whelped Nov. 19, 1886, by Ted Llewellin (A.K.R. 599) out of Marcella (Prince Phœbus—Stella).

Beppo. By Harry A. Fletcher, Portland, Me., for red Irish setter dog, whelped May 24, 1887, by Prince (A.K.R. 1968) out of Meg Merrilies (A.K.R. 2181).

NAMES CHANGED.

Miss Black Pete to Darkness. By Detroit Kennel Club, Detroit, Mich., black cocker spaniel bitch, whelped April 19, 1887, by Black Pete (Obo, Jr.—Phonsie) out of Althea (A.K.R. 842).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Edith—Shady. C. E. Gilchrist's (Charlestown, Mass.) cocker spaniel bitch Edith (Brush II.—Olivia) to F. S. Perrin's Shady (Obo II.—Darkie), July 25.

Rose Pape—Fleet. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Rose Pape (Joe Pape—Nellie Pape) to their Fleet (Bodine—Ruby Croxteth), July 13.

Judy—Fleet. Detroit Kennel Club's (Detroit, Mich.) pointer bitch Judy (Trim—Sybil) to their Fleet (Bodine—Ruby Croxteth), July 30.

Princess Louise—Dashing Berwyn. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Princess Louise (A.K.R. 117) to Arnold Burges' Dashing Berwyn (Dash II.—Countess Bear), Aug. 13.

Spright—Little Jim. Detroit Kennel Club's (Detroit, Mich.) fox-terrier bitch Spright (Barney—Flash) to their Little Jim (Wasp—Fannie), Aug. 13.

Flash—Avenger. Detroit Kennel Club's (Detroit, Mich.) fox-terrier bitch Flash (Trojan—Fannie) to Walker's Avenger (E. 9,804), July 30.

Dewdrop—Warren Jim. T. J. Tyrrell's (Philadelphia, Pa.) fox-terrier bitch Dewdrop (A.K.R. 4222) to L. & W. Rutherfurd's Warren Jim, July 30.

Mel—Sarsfield. J. H. Conklin's (New York) Irish setter bitch Mel (Elcho, Jr.—Meg) to Dr. Jarvis's Sarsfield (Garryowen—Currer Bell II.), May 27.

Jess—Johnny. W. G. Young's (Ottawa, Can.) Clumber spaniel bitch Jess (Jack—Jill) to Mercer & Hill's Johnny (Ben—Joan), Aug. 2.

Flora—Bob White. G. H. Nixon's (Leesburg, Va.) pointer bitch Flora (Dr. Chamblin's dog—Leith's Belle) to his Bob White (Joker, Jr.—Fussie), July 22.

Dolly—Bob White. C. M. Williams's (Hamilton, Va.) pointer bitch Dolly (Doctor H.—Jill) to G. H. Nixon's Bob White (Joker, Jr.—Fussie), July 15.

Bizreena—Chief. Onota Kennels' (Pittsfield, Mass.) Irish setter bitch Bizreena (A.K.R. 2876) to Max Wenzel's Chief (A.K.R. 231), Aug. 9.

Blue Queen—Cecil. G. F. Clark's (St. George's, Del.) English setter bitch Blue Queen (Druid—Leda) to E. W. Jester's Cecil (Rex Gladstone—Leah II.), July 2.

Fairy II.—Pilate. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Fairy II. (A.K.R. 4387) to W. Crawford's imported Pilate (Lord Sefton's Bang—Lord Sefton's Nora), Aug. 11.

Vixen—Leader. J. B. Dunn's (Providence, R. I.) beagle bitch Vixen (Ringwood—Maida) to Wakefield's Leader (Flute—Queen), May 15.

Marion—Black Prince. C. V. V. Sewell's (Tarrytown, N. Y.) spaniel bitch Marion to A. C. Wilmerding's Black Prince (A.K.R. 62), Aug. 13.

Countess Flirt—Glen Rock. G. F. Clark's (St. George's, Del.) English setter bitch Countess Flirt (Tempest—Flirt) to E. W. Jester's Glen Rock (Druid—Princess Draco), July 4.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Bobbie. Mr. Sievert's (New York) spaniel bitch Bobbie, Aug. 10, five (one dog), by A. C. Wilmerding's Black Prince (A.K.R. 62).

Newton Abbot Lady. A. C. Wilmerding's (New York) spaniel bitch Newton Abbot Lady (Bend Or—Ladybird) June 5, four (three dogs), by Willey's Black Pete; all black.

Bonita. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch Bonita (A.K.R. 2891), July —, seven (two dogs), by their Brant.

Frou Frou. Brant Cocker Kennels' (Brantford, Ont.) cocker spaniel bitch Frou Frou, July 24, four (two dogs), by their Brant.

Ida. Charlottesville Field Trial Kennels' (Charlottesville, Va.) English setter bitch Ida (Dashing Rover—Ranee), Aug. 14, seven (four dogs), by W. A. Coster's Buckellew (A.K.R. 30).

Belle of Piedmont. Charlottesville Field Trial Kennels' (Charlottesville, Va.) English setter bitch Belle of Piedmont (A.K.R. 3569), Aug. 9, ten (eight dogs), by B. F. Wilson's Count Noble.

Vixen. J. B. Dunn's (Providence, R. I.) beagle bitch Vixen (Ringwood—Maida), July 15, seven (three dogs), by Wakefield's Leader (Flute—Queen).

Ruby Croxteth. Detroit Kennels Club's (Detroit, Mich.) pointer bitch Ruby Croxteth (A.K.R. 1268), July 20, nine (three dogs), by their King Bow (A.K.R. 83).

Dudley Rage. F. C. Wheeler's (London, Ont.) fox-terrier bitch Dudley Rage (Pickle II.—Old Frolic), July 3, five (two dogs), by D. S. Booth's Senator (Vulo—Vehement).

Kelp. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Kelp (A.K.R. 110), July 27, nine (four dogs), by E. V. Hale's Pride of Dixie (Gladstone—Countess Druid).

Patti M. C. M. Munhall's (Cleveland, O.) pointer bitch Patti M. (Donald—Devonshire Lass), Aug. 8, ten (five dogs), by C. J. Peshall's Nick of Naso (A.K.R. 4391).

Temptation. Manhansett Kennels' (Jersey City, N. J.) pointer bitch Temptation (A.K.R. 1500), Aug. 2, five (three dogs), by C. J. Peshall's Nick of Naso (A.K.R. 4391); one dog since dead.

Miss Nance. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Miss Nance (A.K.R. 1313), July 24, seven (four dogs), by J. P. Willey's Black Pete.

Doris. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Doris (Black Pedro—Jet W.), April 21, eight (four dogs, by J. P. Willey's Black Pete.

Russet. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Russet (Rowdy—Zulette), May 17, six (five dogs), by J. P. Willey's Black Knight (Obo II.—Darkie).

Ruth. S. R. Hemingway's (New Haven, Conn.) cocker spaniel bitch Ruth (Black Pete—Miss Nance), April 28, seven (five dogs), by J. P. Willey's Obo II.

Mel. J. H. Conklin's (New York) Irish setter bitch Mel (Elcho, Jr.—Meg), July 27, fourteen (eight dogs), by Dr. Jarvis's Sarsfield (Garryowen—Currer Bell II.).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Obo, Jr. Black cocker spaniel dog, whelped Feb. 3, 1883 (A.K.R. 1481), by C. M. Nelles, Brantford, Ont., to P. G. Keyes, Ottawa, Ont.

Countess Windʼem. Black and white English setter dog, whelped Dec. 25, 1882 (A.K.R. 2560), by G. F. Clark, St. George's, Del., to W. Lansford, Roanoke, Va.

Prince Albert. White bull-terrier dog, whelped June 7, 1887, by Count out of White Violet, by Frank F. Dole, Philadelphia, Pa., to G. G. Knupp, Auburn, N. Y.

Philadelphia Prince. White bull-terrier dog, whelped June 7, 1887, by Count out of White Violet, by Frank F. Dole, Philadelphia, Pa., to Franklin Weston, Dalton, Mass.

Nana. White, black and tan beagle bitch, whelped Aug. 23, 1885 (A.K.R. 3099), by C. W. Willard, Westerly, R. I., to W. H. Rose, Barrington, R. I.

Rem. White, black and tan beagle dog, whelped Dec. 10, 1884 (A.K.R. 2115), by C. W. Willard, Westerly, R. I., to W. H. Rose, Barrington, R. I.

Lady Bright. Black, white and tan English setter bitch, age not given, by Rink II. out of Aida, by Frank Pitzer, Washington, D. C., to Chas. A. Brown, same place.

Daisy Bright. Black, white and tan English setter bitch, whelped April 25, 1887, by Gun out of Lady Bright, by Frank Pitzer, Washington, D. C., to T. J. Coffey, same place.

Belle of Dixie. Black, white and tan English setter bitch, whelped April 25, 1887, by Gun out of Lady Bright, by Frank Pitzer, Washington, D. C., to Millard F. Bragg, Roanoke, Va.

Sister in Black. Black greyhound bitch, whelped July, 1885, by Memnon out of Fan, by Chas. D. Webber, Newark, N. J., to N. E. Stevens, Pontiac, Mich.

Pembroke. White and black greyhound dog, whelped May 28, 1885, by Memnon out of Mother Demdike, by Chas D. Webber, Newark, N. J., to W. J. Arkell, Canajoharie, N. Y.

Beppo. Red Irish setter dog, whelped May 24, 1887, by Prince (A.K.R. 1698) out of Meg Merrilies (A.K.R. 2181), by Harry A. Fletcher, Portland, Me., to H. Brooks Young, Montreal, Can.

Cora C. Black and tan collie bitch, whelped Sept. 1, 1886, by Circler (A.K.R. 2928) out of Myra (A.K.R. 5133), by W. V. Crawford, Circleville, N. Y., to J. P. Covert, Montgomery, N. Y.

Ottello. Fawn mastiff dog, whelped January, 1887, by Brutus out of Juno, by D. A. Goodwin, Newburyport, Mass., to Associated Fanciers, Philadelphia, Pa.

Barney. Red Irish terrier dog, whelped Sept. 4, 1886 (A.K.R. 4603), by H. S. Reynolds, Poughkeepsie, N. Y., to Associated Fanciers, Philadelphia, Pa.

Bruce—Lady Red whelp. Red Irish setter dog, whelped May 21, 1887, by Associated Fanciers, Philadelphia, Pa., to H. S. Seely, Syracuse, N. Y.

Prince (A.K.R. 1698)—Meg Merrilies (A.K.R. 2181) whelps. Red Irish setter dogs, whelped May 24, 1887, by Harry A. Fletcher, Portland, Me., one each to Wm. E. Ramsey, Lake Charles, La.; H. Brooks Young, Montreal, Can., and W. B. Neal, Gardner, Me.

DEATHS.

Spinaway. Liver and white pointer bitch, whelped 1880 (Garnet—Keswick), owned by the Westminster Kennel Club.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

T. W.—1. What shall I do for two bull-terrier puppies five months old? The teeth of one are all brown, cannot see the least enamel on them, otherwise seems in good health. 2. The dog puppy had the hair come off the shoulder the size of a ten-cent piece, and it keeps getting larger and has got to be the size of a silver dollar. I think it must be a ringworm. Ans. 1. See if trouble is traceable to any particular food, drink or medicine. Consult a local doctor or vet. 2. Get the following:

℞ Hydrarg. oleati ..... ℥ss
Ung. zinc oxid ..... ℥i
Mix. Sig. Rub in after washing twice daily.

Give four drops of Fowler's solution of arsenic three times daily. Feed lightly. Keep bowels open and give no meat.

WASHBURN INTERSTATE CUP.

MINNEAPOLIS, Minn.—*Editor Forest and Stream:* The National Guard of Minnesota congratulate themselves upon the donation of a beautiful and costly cup to be competed for in interstate matches. It is the gift of our public-spirited townsman, Hon. W. D. Washburn. The first competition will occur at Fort Snelling in October next. Teams of 12 men from the active militia of any State or Territory in the Union, 10 shots each at 200 and 500yds., winners to hold the cup one year and return it to Fort Snelling for next competition. The tournament of the National Guard occurs at the time of the great Minneapolis Exposition, and reduced rates ought to induce Eastern teams to visit this State in October. All are invited.

C. M. SKINNER,
Brigade Inspector Rifle Practice, M. N. G.

NEW YORK, Aug. 15.—The eighth marksman's badge match was shot at Creedmoor on Saturday, Aug. 13. The weather was cool and pleasant, and a light northerly breeze made the conditions very favorable for shooting; the scores made were very good. The attendance was large, and following are the scores of 42 and over, those marked * being the winners. The gold marksman's badge was again won by a new man, which makes eight who have a mortgage on it, and causes a little rivalry as to who will be the final winner:

	200yds.	500yds.	Total.

F. N. WITHREL, Sec.

ST. PAUL, Aug. 15.—The change in the conditions of the contest for the regimental team shoot to occur next month, and the additional matches which have been ordered by the State, have created an interest in the fall meeting of the National Guard Rifle Association. An effort will be made to make the next meeting of the Association equal, in proportion to the strength, to the fall meeting at Creedmoor. In addition to the matches for the Stillwater badge, the Reeve match, the Skinner match and the Pillsbury match for company teams of six, two or three other matches are assured which, together with the State matches, will make up a programme never before excelled in any rifle tournament in the Northwest. Applications for membership, entrance fees and dues should be sent to C. S. Williams, Secretary and Treasurer, 327 Nicollet avenue, Minneapolis, Minn.

ROCHESTER, N. Y., Aug. 14.—The Rochester Schützengild will have its annual shoot, commencing Aug. 29 and lasting four days. A team of the Rochester Schützengild will have a challenge shoot with a team of the Flour City Club some time next month. Score of the Schützengild, Aug. 12, 200yds, off-hand, standard target: C. Green 89, J. Harvey 88, C. Tarba 79, F. Schwikert 77, C. Harvey 74, E. Watson 68, G. Wolff 61, E. Maier 59, J. Witman 59, A. Schakelton 55, C. Eisenberg 51, C. Kühles 51.—G. B.

MALDEN, Mass., Aug. 13.—The rifle match between teams from Company L, 8th Regiment, Malden Rifles, and Company A., 5th Regiment Light Guards, of Wakefield, was shot this afternoon at the Bears Den range here. The weather conditions were favorable, although at times there was quite a breeze blowing. Company L, Meriden Rifles, won by 7 points. Following is the result of both teams:

Malden Rifles, Co. L.		Richardson Light Guard, Co. A.	
E C B Erickson	5444444—29	G W Babbitt	5454444—30
A W Hatch	4344444—27	E J Gihow	4444544—29

J F Parker	4444434—27	W E Grey	4434344—25
C F Sorley	4344433—25	P J Flanders	4335504—24
J H Whittekind	0444344—23	C A Cheney	4434404—23
E A Coburn	3244304—20—178	F H Thorndike	0303043—13—171

JERSEY CITY.—A bit of practice with a 22-calibre rifle took a queer turn in this city on Sunday last, according the the New York *World:* John Schaffer lives at No. 35 Laidlaw avenue. One of his methods of seeking enjoyment is by shooting at a target in the basement of his house, which he has converted into a shooting-gallery. He also loves to see others have the same enjoyment. On Sunday he had a pleasure party. They had a very pleasant time and enjoyed an excellent dinner. After smoking their cigars all accepted the invitation of Mr. Schaffer to visit his extemporized shooting-gallery. The gentlemen amused themselves for a time firing at targets with a 22-calibre rifle when Joseph Crosby, a six-year-old boy, received a ball from the rifle in his back. He was at the time seated on the curbstone in front of his home, which is directly opposite the Schaffer house. A man, said to be Siegfried Schneider, of New York, was near the boy when the accident took place, and ran to his assistance. Near by were a number of Irishmen. They also had heard the reports of the rifle from time to time and saw the boy fall after the last shot had been fired. When they saw the German run to the boy's assistance, without a moment's consideration of the result they rushed up to him. Apparently they thought the man had deliberately shot the lad and one uttered a shout: "Lynch him, the murdering wretch!" This was echoed by the dozen men who were with him, and with a Donnybrook Fair yell they pounced on the terrified German. While a number of the gang held the man a prisoner others went in search of a rope. One of them found a clothes-line, which was quickly cut from the posts and conveyed to the place where the prisoner was excitedly protesting his entire ignorance of the accident. The self-instituted executioners quickly adjusted a rope about his neck. They had dragged and driven him several paces when the party in Schaffer's house rushed out of the building and explained that the shot had come from there and that the man the mob desired to hang was innocent. He was at once released, and made a bee-line for the ferry. A careful examination of the boy's wound showed that it was not serious. The affair was reported to the police and Mr. John Schaffer and his guests were arrested and locked up. The shooting was, of course, accidental, but it is claimed it was criminally so.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

YONKERS, N. Y., Aug. 13.—Shooting tournament at live birds under auspices of Yonkers Gun Club, Aug. 11. Sweeps open to all. Owing to heavy thunder showers in the morning we did not get started till nearly 12 instead of 10 A. M., as intended. This did not leave much time for four sweeps so that instead of shooting off all ties as intended, the majority agreed to divide. The weather was rather against us as we had a dull dark day with frequent showers. The birds as a rule were very good though a good many were rather slow to rise, but when once started got away pretty lively.

First sweep, 5 birds, 1 barrel, 25yds.:

J H Feidler	11100—3	Jas Welsh	01011—3
J Thompson	11011—4	E Thompson	01110—3
W Sims	01001—2	B Burnan	10111—4
O Austin	10010—2	A L Kolb	11001—3
L J Schlesinger	11101—4	Geo Langran	01111—4
O'Brian	01011—3	P Pankon	10010—2

All prizes divided, making a rather peculiar sweep in which here were no blanks.

Second sweep, 5 birds, 25yds., 2 barrels, second barrel to count bird:

O'Brian	1 0 0 0 1—2	W Sims	0 1 1 ½ ½—3
L Kolb	1 1 1 ½ 1—4½	LJSchlesinger	½ 0 1 1 1—3½
Burnan	0 1 0 1 ½—2½	J Welsh	1 ½ ½ 1 1—4
Quinn	0 0 ½ 0 ½—1	P Pankon	1 0 0 1 0—2
J Carpenter	0 0 1 1 0—2	J Thompson	1 1 1 1 ½—4½
W Ward	1 1 1 1 1—5	E Thompson	1 1 1 1 1—5
J H Fiedler	0 0 0 1 1—2	G Langran	1 1 1 ½ ½—4
J Davis	0 0 ½ 1 0—1½	E F Ward	1 1 ½ 1 1—4½
Hall	1 0 0 ½ 1—2½		

Third sweepstake, both barrels, 25yds.:

A L Kolb	11111—5	E F Ward	10111—4
J Thompson	01111—4	H B Waring	01111—4
B Burnan	10111—4	E Thompson	11111—5
W Simms	01111—4	A B Hall	11101—4
P Pankon	10011—3	J Elliot	11100—3
J H Feidler	11000—2	J Brown	11010—3
J O'Brian	11011—4	J Davis	11001—3
S Secord	10111—4	J Carpenter	11111—5
W Ward	11111—5	Wm Rowland	11101—4
J Welsh	10110—3	Geo Langran	11111—5
L J Schlesinger	11110—4	Hoffman	11110—4

Fourth sweep, both barrels, second barrel ½ bird, 30yds.:

E H Fox	1 0 1 ½ 1—3½	E F Ward	1 0 ½ ½ 1—3
J Thompson	1 1 ½ 1 1—4½	E Thompson	1 0 ½ ½ 0—2
A B Hall	0 0 ½ 0 1—1½	W Ward	1 1 0 ½ 1—3½
B Burnan	0 0 0 1 1—2	J Welsh	½ ½ 1 1 1—4½
E Elliott	1 1 0 ½ ½—3	Hoffman	1 1 1 1 ½—4½

TRENTON, N. J., Aug. 11.—Monthly shoots of the Trenton Gun Club, Ligowsky clay-pigeons, 5 traps, 18yds. rise. July score:

C H Allen	10111 10111 11101 10011 10111—21

JERSEY.

SAN FRANCISCO, Aug. 6.—The nine members of the Blue Rock Club who assembled this afternoon at Adams Point were evidently not in shooting trim. The score for the first round would have presented a uniform line of goose eggs had not Ireland chipped a flyer from the center tray. The blame for poor shooting was first laid to the gun and cartridges, then to the heavy atmosphere, but finally the marksmen acknowledged that they had encountered a decidedly off day. The regular monthly shoot was not held during July, and for that reason the back scores were shot. Will Golcher and Fox making the highest score of 13. Cate, also of the Lincoln Club, succeeded in breaking the same number, but he together with Walters and F. Cate joined in the shoot by invitation; their scores for that reason were not counted. In the August shoot the average was very poor; the traps probably worked too rapidly. The conditions of the match were 23 blue rocks, 12-bore guns, 16yds. rise; 10-bore, 18yds. W. L. Eyre acted as judge and referee. Following are the scores:

July Shoot.

Golcher	0001110101111011101—13	Ireland	1000000011000000011— 5
Crandall	0111010100000000000— 5	Briggs	0110011001110010010—10

WASHINGTON, D. C., July 30.—Capital City Gun Club. Match at American clays, No. 1, 5 traps, N. G. A. rules, club prizes:

Wilson	0110010100010010— 6	McLeod	1101001001111110— 9
Collison	1010011001111100— 8	Whitman	1100011110001111—10
Cunningham	0011111101111001—11	Mills	0111011111111111—13
Green	1011101011111111—12		

First Team Shoot.

Mills	11111—5	Wilson	10111—4
Cunningham	11111—5	McLeod	01111—4
Green	10010—2	Jackson	11010—3
Collison	11011—4—16	Whitman	00010—1—12

Second Team Shoot.

Green	11101—4	Whitman	11011—4
Jackson	11111—5	Collison	11101—4
McLeod	11111—5	Wilson	11110—4
Cunningham	11111—5—19	Mills	01011—3—15

Aug. 2, match at American clays No. 1, 5 traps, N. G. A. rules, club prizes:

Wagener	1011100011111110—10	Collison	1110011111111—12
Carter	1101010101001100—7	Thompson	1100111000111001— 9
Cunningham	1110101111111—13	Hart	0100001010100000— 5
Wilson	1100111111111—13	Green	1111010111101001—12
Mills	1111111111111—15		

Aug. 13, same condition:

Williams	1110110111111111—13	Green	0101010101101111— 9
Myers	1111111000001100— 9	Whitman	1011101010010011— 9
Wilson	1110100101010111—10	Collison	1110001111111111—12

First team shoot:

Mills	10111	Cunningham	11111
Wilson	11011	Williams	01001
Collison	10101	Woodbridge	11101
Meyers	00101	Green	10000
Whitman	00111	Thompson	00011
Daw	11100—19	DuBois	11101—17

Second team shoot:

Mills	11111	Cunningham	01110
Woodbridge	11011	Wilson	11110
Collison	11011	Williams	11110
Meyers	10110	DuBois	11010
Green	10111	Daw	11010
Whitman	11100—23	Thompson	10111—21

Third team shoot:

Mills	11111	Cunningham	10111
Woodbridge	11011	Williams	11011
Collison	00011	Wilson	11111
Green	10011	DuBois	11001
Whitman	10111—18	Thompson	11111—21

QUIRT.

TORONTO, Aug. 10.—The West End Gun and Dog Sports Club held their second summer meeting at Duck's place, Humber Bay, to-day. The attendance of members was not as large as usual, nevertheless the competition among the members was close, the interest great and the shooting good. Peoria blackbirds were used as targets from three screened traps, 18yds. rise. Two prizes were given in each class, each competitor in the first class shot at 20 birds and the other two classes at 15 each:

First Class.

Blea	0111111111011111111—18	Dollery	1000110011111111111—15
Jones	1011011111111111111—18	Davis	1011100110101111111—15
Wakefield	1011111111101101111—17	M'Dowall	1111011110111011110—15
Bailey	1011110110101111110—16		

Blea and Jones shot off the tie for first place, the former winning.

Second Class.

Clark	1001111111111—13	Boswell	1101011101010101—10
Jackson	0111011001111111—11	Beatty	0000101001111010— 6

Third Class.

Evans	1101101111011101—11	Spiller	1101110000001100— 6
Habart	0010111100010001— 7	Watt	1010000101110000— 6
Gomersall	1110111000100001— 7	Ranney	0101000101010001— 6

Ties for second place shot off, Habart winning.

UNKNOWN GUN CLUB.—Brooklyn, Aug. 12.—There was a large attendance of the members and friends of the Unknown Gun Club yesterday (Aug. 11) at the regular monthly club shoot at Dexter's Park, Long Island. The birds were lively. Sixteen members competed for the club championship badge, which was won by H. Rankin, defeating H. Vroome on shooting off the tie. I. Houseman was the winner of second, defeating three others that tied him with six birds killed out of seven. H. Knebel, Jr., tied four others for third and won by killing an extra bird:

H Pope (24)	1101101—5	H Vroome (22)	1111111—7
I Houseman (25)	1111110—6	R Monsees (25)	1111011—6
W Gilman (23)	1110101—5	J Rathjen (25)	1110111—6
H Knebel, Jr (23)	1011110—5	R Stillwell (22)	0110010—3
H Rankin (21)	1111111—7	H Plate (25)	1110001—4
H Martin (23)	0000111—3	J Detliefsen (25)	1101111—6
H Van Staden (23)	1111100—5	H Knebel, Sr (23)	0111101—5
J Hass (23)	0111010—4	J Bohling (25)	1100000—2

NEW DORP, S. I., Aug. 11.—New York German Gun Club, live pigeons, H. and T. ground traps, 21 and 25yds. rise, 80yds. bound, club rules; prize, gold medal:

Hassinger (21)	1111111111—10	Müller (21)	1111011010—7
Lucas (21)	1000011111— 6	Schmitt (25)	0101111110—7
Schlicht (25)	1101101101— 7	Kunz (25)	0011010 001—4
Bossenecker (25)	0110001101— 5	Bonden (21)	0011010010—4
Bierbaum (25)	0111110010— 6	Breen (21)	0111000110—5
Hunt (21)	1110100110— 6	Schiller (21)	1111101110—8
Sauter (21)	1111111110—10	Greitner (21)	0110101110—6
Dannefelser (21)	1010100001— 5		

Ties on 10, 3 birds, 21yds.: Hassinger, 011 001—3; Sauter, 101 101—4. Gold medal to Capt. Sauter.

BROOKLYN, Aug. 9.—The members of the North Side Gun Club had a good day's sport to-day at Woodside, L. I. It was the regular monthly shoot of the club for the championship badge and there was a large attendance of Long Island wing shots present. Sixteen members went to the trap to shoot for the badge and some fair scores were made, the birds, furnished by Bonden, being very fast ones, as out of 148 shot at 51 were scored as missed. J. Kroger, W. Krumbeck and G. Sieme tied for the emblem, and on shooting off J. Kroger won. The score of the shoot is as follows:

J Weinholz	0101100—3	S Lyon	1110101—5
A Duryea	1111011—6	W Bohmcke	1100011—4
Dr Franz	1100010—3	L Chevallier	1110001—4
M C Manning	1111110—6	H Evers	0010011—3
K Barlow	1011111—6	J Shand	0000010—1
A Eberhardt	1101110—4	W Krumbeck	1111111—7
J Kroger	1111111—7	G Sieme	1111111—7
H Wahlen	1011111—6	J Grau	1100000—2

BRADFORD, Ontario, Aug. 8.—A shooting match took place here to-day for the W. M. Cooper cup at 10 birds each, resulting as follows:

James St. Clair	0101111101—7	W H Lowrey	0001011010—4
Medcalf	0111111100—7	D Sutherland	0100101110—4
F Lilliards	1110010101—6	J Armstrong	0111100000—4
R Neilly	0010110000—3	P Rudblock	0101000000—3

The ties between J. St. Clair and Mr. Medcalf was settled at 5 birds and won by J. St. Clair.

A CHALLENGE TO DR. CARVER.—New York, Aug. 15, 1887. —Dr. W. F. Carver: Dear Sir—I shot the first international match against all comers, East, West, North and South, at 50 single and 50 double birds, which I won, and have never since been defeated for the championship (if such it be called). Yourself I consider the equal of if not superior to any shot in America, and I now propose a friendly contest for any moderate sum (such being more for the feat than money with me) and to please some hundreds of friends anxious to see such a match, as they now consider me on the shelf, which I do not. I will shoot you a match on the following conditions: At 25 pairs double birds each, from 5 traps, 21yds. rise and 100yds. boundary, or the field the bounds if so fenced; or at double and single. I will shoot at 15 pairs double rises, 21yds. rise, and 20 single, 25yds. rise; one barrel for each bird only; to be shot some time in September, 1887; time and location hereafter agreed upon. Yours respectfully—WILLIAM KING.

AN AMERICAN SHOT ABROAD.—J. Seaver Page, of this city, returned home on the 13th on the Etruria, after a two months' visit to Great Britain and the continent. He spent the time he spent in Britain to great advantage, for he acquired a wide reputation in English sporting circles as a first-rate shot. The English sporting press spoke of his skill in high terms, and he carried off prizes amounting in value to about £80 or $400, from the various pigeon-shooting contests in which he took part. "That's the gun that did it," said he to a *Tribune* reporter last night; and as he spoke he nodded to the little beauty which in his hands sustained the credit of America so well. "I was introduced to the Hurlingham Club through the courtesy of Mr. Phelps, the American Minister," he went on. "That is one of the most exclusive clubs in London. You may have an idea of its style when I tell you the grounds alone cost half a million dollars. We have nothing like it here. Compared with England, we are sadly lacking in outdoor clubs. My introduction to the Hurlingham Club gave me an entrance to the best circles, and I think that the thoroughbred English gentleman, once you get to know him, is one of the finest fellows you can meet. I shot with the Hurlingham Club, the Gun Club, the Ranelagh Club and at the international contest at Southwick, near Brighton, and was successful at all of them." At Ranelagh Mr. Page shot three matches with Count de Bertinoro, the terms agreed on being to shoot at five birds each. Mr. Page brought down fifteen birds out of sixteen; his opponent killed nine out of twelve and gave up. At Southwick, near Brighton, Mr. Page did nobly for America. Shooting with representative marksmen from all the world over he tied for three prizes and carried off one, attracting the admiration of the entire field of thirty or forty shooters. "The British bet very heavily on these matches," remarked Mr. Page. "I was astonished on one occasion to see a youth of twenty-four or so venture $15,000 on a single shot—and he won."

GALION, O., Aug. 10.—The second annual tournament of the Galion Gun Club opened to-day with a large attendance, and everything passed off very satisfactorily. The following is the score of the day's shoot: No. 1—9 blue rocks, 10 entries: First money, Ball and Ackerman; second, Clubb and Burnison; third, C. H. Kelso. No. 2—9 Peoria blackbirds, 20 entries—First, Burnison; second, Ackerman, L. O. Jones and Beecher; third, Pinkney and Clubb. No. 3—9 blue rocks, 25 entries: First, Williams, W. S. Beecher, Ryan and Hoffman; second, Pinkney; third, West, Mayer, Valentine and North. No. 4—12 blue rocks, 32 entries: First, Valentine; second, Ball, North, Ackerman, Alsop, Seard; third, Pinkney, Williams, Quayle, Ryan, West and E. S. Kelso; fourth, Burnison and L. A. Jones. No. 5—7 live pigeons, 24 entries: First, Ball, North and Kelso; second, McCartney and Maxwell; Quayle, Pinkney and Valentine; fourth, Ackerman and W. H. Beecher. No. 6—3 single and 3 pair blue rocks—First, Hoffman; second, Ball; third, Quayle and Schaeffer.

NEWARK, N. J., Aug. 13.—The Night Owl Gun Club was organized on Aug. 8, with the following officers: Geo. H. Meisel, President; J. G. Yeager, Vice-President; W. Taylor, Recording Secretary; J. Dalton, Financial Secretary; H. Allen, Treasurer; T. W. Robshaw, Sergeant-at-Arms.... The score of the weekly shoot of the West Newark Gun Club, on Aug. 8, was as follows in shooting at 25 composition birds: C. Doty 19, J. Weber 19, G. Deister 15, A. Assman 13, G. Hilfers 9.... The second match at clay-pigeons between the South Orange and East Orange Gun Clubs took place on Thursday, Aug. 11, at the grounds of J. Fisher, Lodi road, Kearny. The result was a tie, each team scoring 138 breaks out of a possible 180.

WELLINGTON, Mass., Aug. 13.—There was a fair attendance at the grounds of the Wellington Club to-day. Following are the winners in the several events: 1. Six clay pigeons—Perry first. 2. Six clay pigeons, straightaway—Stanton and Gerry first. 3. Six clay pigeons, straightaway—Stanton and Gerry first. 4. Six clay pigeons—Stanton first. 5. Six clay pigeons, straightaway—Gerry, Stanton and Sampson first. 6. Six clay pigeons—Brown, Warren and Stanton first. 7. Six blue rocks—Warren first. 8. Six clay pigeons—Swift first. 9. Six blue rocks—Brown and Gerry first. 10. Six clay pigeons—Warren first.

BROOKLYN, Aug. 13.—The third annual picnic of the Excelsior Benefit Gun Club, of Canarsie, took place to-day, at Grotz's Willow Grove, Rockaway Beach. About forty participated in the shooting. In the contest in Class A, Joseph Harris, James Powell and George W. Serene broke sixteen glass balls out of twenty. The tie will be shot off at some later date. The first prize is a gold badge. The first prize in Class B was won by John S. Schenck. In Class C the gold medal was awarded Michael Howland.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A. C. A. AND W. C. A.

IN July 1885 the Western Canoe Association was organized. A small minority of its members were members of the A. C. A. For a year the fact had been known to many men in the A. C. A. that it was advisable to arrange for several meets in different parts of the country each year if the A. C. A. was to be kept up. Only a small minority of the members could attend any one meet, no matter where held. The question was, "How to manage it." It has been the policy of the A. C. A. for years to be conservative, and rightly so. The idea of making the A. C. A. a group of divisions was under discussion, and the necessary changes in the constitution were being written in various forms so as to get the thing in the best possible shape to take action upon. The W. C. A. held their meet and sent word to the A. C. A. under what conditions they would join the A. C. A. The A. C. A. could not accept those conditions constitutionally. The original plan of the A. C. A. was to hold annual meets on Lake George and elect commodores in succession from New York, the West, Canada, and the East. The A. C. A. had become too big for Lake George in 1883. In the fifth year of the A. C. A.'s life the commodore was elected from New York, following the original plan. The sixth year the commodore was to be elected from the West, and Geo. W. Gardner's name was proposed, and it was suggested that the sixth meet be held in the West. The W. C. A. elected Mr. Gardner commodore and arranged for an independent meet, and as a union between the two could not be arranged, the A. C. A. elected a Canadian commodore.

The new constitution comprehending the division idea was drawn up in November, 1885, and later adopted by the A. C. A. In 1886 two divisions were recognized and [be it understood that the members of these divisions were previously all A. C. A. members] admitted, and the third, the Northern, will be formally admitted at the general meeting this month. This year the constitution has been further amended and revised in accordance with the results of experience, to cover all points in question regarding divisions. It was supposed by the executive committee that the methods, ends and aims of the A. C. A. under its new constitution would recommend themselves to the W. C. A. and that a union of the two would have been possible. With a view to this end a letter was sent to the W. C. A., formally asking it to join the A. C. A. and become the Western Division. The W. C. A. discussed this matter at their meet business meeting and took a vote on the question, the result of which was that the majority decided to decline the A. C. A.'s invitation. The letter from the W. C. A. secretary informing the officers of the A. C. A. of the decision will be read at the A. C. A. business meeting, and there the matter will end—at least for a year.

It is to be regretted that such is the result. The canoeists of the country have accomplished much, and in a short time. They have a uniform set of racing rules, and rules governing the boats that can enter races. Yachtsmen have not been able to arrive at such a result after fifty years of rule making. What the indirect results of the A. C. A. meets have been in the improvement of canoes and rigs is well known. The new arrangement, having meets in each division every year, makes it possible for nearly every member to attend a meet. Having the principal meet in each division once in three years—in a different territory each year—insures a certain mingling of men from different parts of the country to leaven the loaf—for it is pretty certain that the crack sailors will go to the division meet at which the trophy is raced for—even if it is a long way from home. In this connection it will perhaps be well to state what objections the W. C. A. members raised to the proposed union, so that the A. C. A. members in meeting can consider them, and take measures another year to modify some of the conditions, or show the W. C. A. men that their ground is not well taken, and by clearly stating the advantages of union convince the Western men of their error of 1887.

Mr. Blow, of California, made the first speech when the question of joining the A. C. A. was put before the meeting. He alluded to the gentlemanly letter from the A. C. A. secretary, and asked for a full discussion of the subject before calling for a vote. He requested the member from New York to make a statement of the advantages to be derived. The FOREST AND STREAM representative made such a statement, covering the points that have been urged over and over again, and closed his remarks by stating that he could not see any disadvantages that would accrue to the W. C. A. by becoming the Western Division A. C. A.

Commodore Ellard urged that there were absolutely no advantages to be gained by a union—that independence would be sacrificed and some money.

Mr. Bartlett stated that he could not understand what the W. C. A. would receive in return for the 30 per cent. of their dues that would go into the A. C. A. treasury.

Mr. Kirkpatrick (president of the League of American Wheelmen) stated that the advantages of one general meet each year were questionable, that the L. A. W. had tried it for seven years and would never again hold a general meet. He said the small meets were most enjoyable, less costly, and involved less work on all those having the matter in hand, and therefore he voted against a union which would tend to make the entire organization unwieldy. Several other gentlemen also spoke, urging much the same points. Secretary Sbiras urged union and made a good argument in its favor, stating for one thing that the W. C. A. Year Book, which cost money, would no longer be necessary, and its cost should be deducted from the 30 per cent. due the A. C. A. if the exact cost to each member of joining the A. C. A. was to be calculated. Quite a number of the members undoubtedly had strong personal reasons for not wishing to join the A. C. A., and these were, of course, not stated, but contributed more to the final result than the formal objections made by the speakers.

The 30 per cent. of the division dues, which it is proposed to put in the A. C. A. treasury to meet expenses that should be shared by all the divisions, is only experimental as to amount. If so much is not needed, less will be asked for another year. The treasurer's report will be published and every member can see what the money goes for and protest if it is not expended economically for the benefit of all in his opinion. In the A. C. A. letter to the W. C. A. the percentage was simply put at 30 to form the basis for a discussion, and was not stated to be an absolute unalterable amount. There being provision made for a division meet every year covers the objection made by Mr. Kirkpatrick.

Whatever the final outcome of this matter shall be, let A. C. A. and W. C. A. men remember that they are canoeists and go canoeing for fun, and therefore nothing but the most friendly relations should exist between them, whether they go in one road or follow parallel lines. Their interests are identical, the advancement of all canoeing matters. The universal good fellowship that existed in the early days of canoeing must not be forgotten. Let us have one sport at least free from petty bickerings and sectional jealousies, and let that sport be canoeing, the most independent of all sports.

NORTHERN DIVISION MEET, STONY LAKE.

DURING the past two weeks Stony Lake has again been alive with canoes, as in 1883, and its many islands have been white with tents. The camp, under the command of Vice-Com. Col. Harry Rogers, has been most successful. A large number of Canadian canoeists were present, besides Dr. C. A. Neidé and his father and brother. On Aug. 3 and 8 large camp-fires were held in the evening and on Aug. 4 there was a cruise to Eel Creek. On the following day the review and illumination took place. On Monday, Aug. 8, the unlimited sailing race for decked canoes was the first called, with 10 entries, Dr. Neidé winning, with W. A. Leys second and S. Britton third. The sailing race for open canoes followed, won by Colin Fraser, with W. Reid, J. S. Hawkins, and H. F. McKendrick in order, there being 9 competitors. Reid, Hawkins and McKendrick were ruled out for fouling the buoy.

The one mile paddling, Class 2 and 3, was won by Dr. Douglas, from five competitors, with Colin Fraser second. The one mile tandem paddling, open canoes, resulted as follows:

P. W. Strickland, Lakefield, and H. S. Greenwood, Royal Military College, Kingston..... 7 00
John N. McKendrick and Harry F. McKendrick, Galt..... 7 03
Samuel Britton and A. P. D. McGachen, Lindsay..... 7 04

The upset sailing race was very amusing. Each canoe carried mainsail only, upsetting at the signal. Colin Fraser won. The tournament was a success, giving good sport. J. N. McKendrick was finally victorious. On the following day the first race was the paddling, won by H. F. McKendrick, with W. A. Leys second. Mr. Leys also won the next paddling race in his canoe Dawn. The three-paddle race resulted as follows:

P. W. Strickland, H. S. Greenwood and Arthur Blade.....1
D'Arcy Strickland, R. C. Strickland and Dr. Douglas.....2
J. N. McKendrick, H. F. McKendrick and W. A. Fraser.....3

The winners used two double and one single blade, the second men one double and two singles, and the third all double blades, paddling badly. The next was a tandem, lady and gentleman:

Dr. Douglas and Mrs. Wright, Lakefield.....1
H. McKendrick and Miss Topsy Hall, Peterboro.....2
D'Arcy Strickland and Miss Bloomfield.....3

The portage race was won by H. S. Greenwood. The "catch the duck" race was a novelty. A young boy was sent out and five canoes chased him, the test being to hold him for five minutes. He finally kept clear for the allotted time and won, after upsetting several by diving under their canoes.

A special tandem race for boys, the prizes being two belts given by Judge Dartnell, of Whitby, was won by E. Talt and F. Lefever. The officers of the Northern Division were elected in the evening. Commodore, A. T. D. McGachen, of Lindsay; Rear-Commodore, Wm. G. McKendrick, Toronto; Purser, Sam L. Britton, Lindsay; Executive Committee, Wm. Graham, Lakefield; John N. McKendrick, Galt; John Miller, B. A., Peterboro; Kirwan Martin, Hamilton; Wm. J. A. Read, Bobcaygeon. The first three of these are members of the Executive Committee of the A. C. A., and the other two are members of the division board only. Some discussion took place about the financial relations of the A. C. A. and its divisions, resulting in the passing of the resolutions recommending that the initiation fees of new members should go to the divisions, and that the general secretary of the A. C. A. should receive no fees except through the division pursers.

The officers of the meet were: Regatta Committee, Roland C. Strickland, Lakefield, chairman; J. G. Edwards, Lindsay, and John M. McKendrick, Gault; referee, Dr. Douglas, Lakefield; judges, Judge Weller, Peterboro, and Geo. W. Strickland, Lakefield; starter, James Graham, Lakefield; clerk of the course, Wm. M. Graham, Lakefield; timekeeper, J. L. Harstone, Lindsay.

THE FIRST BRITISH CANOE MEET.—The united meet, under the auspices of the R. C. C., has been very successfully organized on the gem of all the Norfolk waters, namely, the Bolton Broad, near Lowestoft. So far, excepting heavy thunder showers on Sunday afternoon, the campers and sailors have been favored with simply perfect weather. The heat has been tempered by a gentle breeze, and the sun somewhat gently veiled by passing clouds. The place of honor in point of attendance is deservedly won by the intrepid Mersey members, who equal, if they do not exceed in actual numbers, the R. C. C. men in camp. Their boats, which are so different in model, and so much simpler in rig and fitting to the ordinary canoe with which we are familiar in these home waters, attracted a good deal of favorable comment. There is no doubt that they are a development of a boat that owes its origin to the waters on which they have to sail, namely, a tidal estuary. Quick in stays, smart and shippy looking, with plenty of room for stores, they are certainly handy crafts—under canvas, at any rate. The boat that seems to please most men, and which created favorable comment from yachtsmen as well as canoeists, was Mr. Wilmer's recently-launched craft, which no doubt will be, if it has not already been, described in the *Field*. Perhaps Mr. Wilmer will put his ready pencil to work, and favor the readers of the *Field* with the lines, dimensions, rig and fittings of the said canoe, if he considers it is entitled to be classified in the canoe navy. The towns represented, and this is mentioned to indicate the wide area from which the men have traveled to attend the meet, are Manchester, Liverpool, London, Leeds, Hull, Stoney Stratford, Chester, Woodbridge, Beccles, Stratford, Kingston-on-Thames, etc. There are six or eight ladies, who seem to have a most pleasant time of it on the gaily-painted and neatly-finished wherry, while there are upward of twenty canoes, besides other sailing craft, as instance Mr. Holmes's new yawl, which can hardly be classed as canoes. There is a total muster of about thirty people. It remains now for those who are interested in popularizing a canoe meet as an annual occurrence, to consider in what way and at what place the 1888 meet is to come off, and how far they, as individuals, can help it.—*Severn in London Field, Aug. 6.*

A. C. A. MEET.—The camp is now established at Bow-Arrow Point and canoeists are coming in daily with every prospect of a large and successful meet. We shall give a full account of the meet and camp next week, and of the racing in the following issue,

KEYSTONE C. C.—A fall regatta will be held (the first in the history of the club), at which several prizes will be raced for and all members are expected to take part. Mr. Norgrave has just returned from a cruise up the Delaware as far as Trenton and the falls above, and on the return cruised up several of the creeks, which are numerous along this river, where a canoeist will find no end of sightseeing. The accident to a canoe (fresh in the minds of canoeists) some time ago has set canoeing a little backward, but the manner in which a canoe can be handled by a careful person can be seen by the following: On returning from a trip up one of the creeks a small gale was blowing, in which the Picnic skipped along under all sail, and it was a dead beat to windward, and upon arriving in the open stretches of the river, the canoe fell in with a fleet of boats known as duckers, cuts of which have appeared in the FOREST AND STREAM, and in the course of a few miles several duckers were capsized, drowning one man while the others were rescued with difficulty. The club house has now been occupied several months, and is being fitted up by degrees, the first floor being well stocked with canoes, only three racks remaining vacant, and the upper floor being fitted as a parlor. A singular coincidence, which I think has not happened in any other city is, the Philadelphia C. C., the K. C. C., and Q. C. C. C. are situated one alongside of the other, all three using the same slip and float.—R. B.

REGATTA AT LAKE HOPATCONG.—The yacht club at Lake Hopateong, N. J., held a regatta on July 30, and had a sailing race for canoes and rowboats. There were eight entries, five canoes and three boats, but it was very soon seen that the canoes had the race among themselves. J. L. Douglas, in the Idlemere, was the first to finish, with Geo. P. Douglass, in Old Ironsides, second. On the first leg to windward, during a squall and shower, the tandem canoe No Name, occupying third place, carried away her mainmast and retired. When the squall and shower were over and some fifteen minutes from the start, Mr. Culver bravely started with large sails (the wind having fallen greatly), in a racing canoe to overtake the others. He did not do so, although his time was quite close to that of the Idlemere.—O. I.

BAYONNE C. C.—The regatta of the Bayonne C. C. was held on Newark Bay on Aug. 14, the races being as follows: Semi risingles, paddling, 1 mile with a turn, F. A. Boardsley in 4:57, beating F. P. Collins, second. Junior singles, A. Oliver in 4:40, J. L. Collins, second. Senior tandem, G. Knowles and A. O. Oliver, in 3:02. A rush of a quarter of a mile with the tide and paddling, R. Peebles, in 2:50. One-quarter mile with the tide, standing up, F. B. Collins in 0:55. Upset, R. Peebles. The club will hold a fair about the middle of September to raise funds for a better club house.

TORONTO C. C.—Messrs. H. Neilson, G. R. Baker, Arthur Mason, Fred Mason, J. W. Kelly, H. C. McLean, J. H. Cameron, A. C. Anderson and Fred Morphy are on a three weeks' cruise to the Muskoka Lakes. Mr. W. G. McKendrick is now in England.

Yachting.

NEW YORK Y. C. CRUISE.

Morgan Cups, Vineyard Haven to Marblehead, Aug. 8-9.

THE story of the cruise last week came to an end with a brief and incomplete summary of the race for the Morgan cups, the long and tedious drift making the finish too late for a fuller account. The race, though very unsatisfactory, proved another victory for Volunteer, and is worthy of a longer story than time then permitted. Much of the glory of the cruise has naturally gone to Boston, but that the yachtsmen of New York are not lacking in spirit and liberality is shown by the prizes offered on the present cruise. Mr. Goelet's generous gifts have been repeated for so many years that they are looked upon almost as a matter of course, but this year they were supplemented by additional cups from Mr. J. Pierpont Morgan, of the steam yacht Corsair, offered in the following letter:

NEW YORK HARBOR, Aug 1, 1887.
STEAM YACHT CORSAIR, N. Y. Y. C.

To Elbridge T. Gerry, Commodore in command of the N. Y. Yacht Squadron, New London, Conn.:

DEAR SIR—With a view to increase the interest in the approaching cruise of the New York Yacht Club at Marblehead, and to insure, if practicable, a combined movement of the fleet to that port. I wish to make you officially the following proposition to be laid before the meeting of the captains of the yachts at New London on the 3d inst.

I am prepared to offer cups to be raced for by the yachts belonging to the New York Yacht Squadron on the run from Holmes Hole to Marblehead Rock. One cup, value $1,000, for schooners; one cup, value $500, for sloops over 71ft. on waterline; one cup, value $500, for sloops 71ft. or less on waterline. The yachts to start at one gun signal from an imaginary line drawn north from start at one gun signal from an imaginary line drawn north from East Chop Light, and the time of finish to be taken at a stakeboat to be anchored in a line between Marblehead Rock and the southern point of Lowell Island. The yachts to be in cruising trim. The conditions I impose are simply that at least four yachts shall enter in each class, and that the race shall take place as soon as weather will permit after the Goelet Cup race at Newport, giving one week day thereafter for the yachts to reach Vineyard Haven from Newport.

As I cannot be present at the meeting on the 3d of August, will you kindly lay the letter before the captains and advise me of their decisions by wire to Highland Falls, Orange county, N. Y.

Yours respectfully, J. PIERPONT MORGAN.

The course for the race was off East Chop Light, past Cross Rip, Handkerchief and Pollock's Rip lightships, and finish off Marblehead Rock, the distances being Pollock's Rip 30 miles, Marblehead Rock 75 miles, total 105 miles.

The fleet was astir early as the orders were to start at one gun at 7 A. M. Atlantic and Clara had joined, making the entries as follows:

Norseman, Ogden Goelet.....allows.
Resolute, C. A. Postley.....not measured.
Palmer, Rutherford Stuyvesant..... 7 57
Mohican, H. T. Burnham..... 8 05
Wanderer, G. W. Weld.....not measured.
Sachem, Jesse Metcalf..... 37 36
Phantom, G. G. Haven..... 37 03
Nokomis, R. P. Carroll..... 52 12
Republic, C. H. Watrous..... 17 51
Troubadour, L. G. Smith..... 34 24
Varuna..... 35 05
Iroquois, T. J. Coolidge..... 45 18
Magic, T. N. Motley..... 37 47

SINGLESTICKERS—FIRST CLASS.

Volunteer, C. J. Paine.....allows.
Mayflower, E. D Morgan..... 2 06
Atlantic, Homans & Chauncey..... 5 10
Priscilla, A. C. Canfield..... 7 30
Puritan, J. M. Forbes..... 9 48

SECOND AND THIRD CLASS.

Titania, C. O. Iselin.....allows.
Gracie, Joseph P. Earle..... 04 41
Huron, Bloodgood & Kelly..... 18 25
Fanny, Fred B. Fiske..... 09 28
Stranger, G. H. Warren..... 15 53
Pocahontas, Jas. D. Smith..... 06 20
Bedouin, Archibald Rogers..... 03 22
Clara, Chas. Sweet..... 56 38
Cinderella, W. E. Iselin..... 52 16
Iseult, C. W. Wetmore..... 1 42 53
Vision, A. J. Watson..... 10 16
Ulidia, E. Padelford..... 01 25

The wind was blowing fresh from northeast as the fleet worked out about 6:30 A. M. Electra being in position off the East Chop light. The one gun start was a success, the fleet going over promptly and the leaders earning all they made by sheer skill. The times, as taken unofficially, show the actual start as follows:

Puritan	7 00 34	Nokomis	7 04 47
Volunteer	7 01 10	Titania	7 05 00
Stranger	7 01 32	Iroquois	7 05 21
Gracie	7 01 34	Sachem	7 05 29
Gitana		Vision	7 06 03
Cinderella	7 02 15	Magic	7 06 20
Bedouin	7 02 30	Clara	7 06 22
Wanderer	7 02 31	Palmer	
Iseult		Pocahontas	7 06 57
Atlantic	7 02 31	Ulidia	7 07 16
America		Norseman	7 07 16
Huron	7 03 29	Mohican	7 07 40
Mayflower	7 03 32	Republic	7 08 42
Resolute	7 03 53	Fanny	7 10 44
Troubadour	7 04 06	Varuna	7 11 15
Priscilla	7 04 32	Phantom	7 12 13

Clara was hindered by two fouls above the line, a large schooner on port tack putting her about. At the start the little Iseult, the smallest yacht in the fleet, lost her topmast, but pluckily continued the race. The experiment certainly shows the practicability of a one gun start, the fleet being as large as in any of the ordinary regattas and all going over promptly without a mishap. America started in the race by consent of the Committee.

Volunteer and Puritan were at the head of the procession as the fleet began to stretch from a compact mass into a long, straggling line. Puritan was a little ahead, Volunteer to windward of her; Gracie, Bedouin, Wanderer, Stranger, Atlantic and Cinderella were nearly abreast, with Stranger to windward; astern of them were America and Palmer; and Mayflower, to windward, was in Bedouin's wake. Grouped together in the middle of the fleet were Resolute, Troubadour, Sachem, Huron, Norseman, with Priscilla astern of them, and Iroquois after her, while the rest were strung out astern. Mayflower soon came up with Bedouin and Atlantic, passing Bedouin to windward. Mayflower touched but came off on the Stone Hedge, injuring her board, though the full extent was not known for some days.

At 7:20 Mayflower was up with Atlantic, Bedouin was in Mayflower's wake, both well to windward, Stranger was astern of Bedouin, and Priscilla on Stranger's weather beam, while Titania, with working topsail only, was astern but to windward of Priscilla. On a line with Titania, but to leeward, were Huron, Resolute and Sachem, with Troubadour on Resolute's port quarter. Most of the fleet were swinging clubtopsails. Stranger and Bedouin had balloon foresails, and Sachem had a balloon jibtopsail, as had the large single-stickers. Titania came up on Stranger and at 7:50 was ahead of her. At 7:50 Norseman made a try for Troubadour's weather, but failed to get beyond her quarter. A little later she tried again and with better success, passing to windward of Troubadour. Early in the fight Huron singled out her old rival, Stranger, and by 8:30 she had worked to windward and abeam of her. By this time the middle of the fleet was abreast of Cross Rip Lightship, the leaders being timed:

Volunteer	8 22 00	Palmer	8 39 00
Puritan	8 26 00	America	8 39 00
Mayflower	8 29 40	Norseman	8 41 00
Atlantic	8 31 20	Sachem	8 39 30
Priscilla	8 32 00		

Priscilla had caught Atlantic and left her to leeward about 8 A. M. Gitana had started with the rest, but near the line she met with a mishap to her bobstay and was compelled to put back for repairs. The wind had fallen lighter and was more nearly ahead as the yachts worked for the Handkerchief Lightship, the leaders changing their positions but little. It was 9:33 when Volunteer first tacked and 10:20 when she passed Shovelful Lightship, having passed Handkerchief at 9:53. Bedouin was well ahead of her class, with Gracie second. The times taken at Pollock's Rip were:

Volunteer	10 41 45	Bedouin	11 10 33
Mayflower	10 57 30	Gracie	11 11 02
Priscilla	10 59 50	Sachem	11 23 55
Atlantic	11 01 32	Palmer	11 28 33

At 11 A. M. the fleet was scattered between Pollock's Rip and the Handkerchief Lightship, most of the yachts being close to the low and sandy shores of Monomoy Point. The wind was very light, the weather pleasant, not too warm and with a glorious blue sky, such as most of the cruise was blessed with. The leaders now around the point are placed by the figures above. Sachem had stood well in by the Point on port tack, crossing Palmer's bow; Stranger was ¼ mile to windward of Fanny; Iroquois was in near the land with Titania to windward, while astern of her came Troubador and then Resolute. Astern of Resolute was Norseman, while Pocahontas was on Resolute's lee quarter some distance away. Coming up astern was Cinderella, with Clara overtaking her, while Mischief was still further in the rear. Stranger led Titania at Pollock's Rip, but neither were timed.

The race had now become a drift, most of the yachts holding close in shore, while Gracie, Resolute, Varuna, Vision and Mischief stood far out to sea. Electra left the fleet and steamed for Marblehead, arriving at 5:15 in the afternoon, and taking position off Cat Island, where the Commodore and regatta committee stood watch and watch all night. Slowly the hours passed, but they were better off than the sailing division becalmed off Chatham and Nausett. Those in-shore anchored, but some were too far out to do so and simply drifted. An old sea rolled in, tumbling and tossing the boats about for a dozen hours until every timber creaked and groaned and every fibre of steel and manilla was strained and tortured. Canvas was lowered on some of the yachts, but others had just enough of the delusive wind at intervals to induce them to keep mainsails up. Slowly the boats would roll to port, over went the sails, every individual reef point in each beating its own tattoo, and then, just as slowly and irritatingly would she roll to starboard. Puritan and Titania lost their topmasts at this work in a flat calm, but none of the rest suffered any damage at the time, though a number parted on Thursday for the heavy rolling and straining of Monday night. Dawn brought a little wind to some, but the offshore division still lay and rolled until nearly noon, when a light S W. breeze came in and sent them home.

All through Monday afternoon and evening the rocks of Marblehead had been black with crowds of spectators who watched for the leaders of the fleet, and early on Tuesday morning they were in their places again. Boston's cup of glory and victory had been full the night before, when she turned out in force, with her mayor and council at the head, to do honor to one of her sons, the great, the only Sullivan. A statesman? No. A poet, an artist, a sculptor, an actor, a man who has won triumphs through discoveries in the world of science or achievements in the domain of art and letters, who has done something to aid his fellow men? Nothing of the kind; on the contrary, a prize fighter, the boss slugger, a man who can stand up longer and hit harder than any of his kind. Proudly and triumphantly Boston and her dignitaries had clasped the golden belt around the massive waist of the slugger, and it seemed as though the summit of her glory had been reached, but still another triumph, if a lesser one was in store, for the fleet Volunteer was even then stealing quietly away from her fellows and fanning on toward the finish, though it was not until long after daylight that her sails were made out in the distance, too far away to distinguish her. At 7:42:13 she crossed the line and sailed into Marblehead Harbor. There was little wind at the time and the rest of the fleet came up very slowly, the last not being timed until 4:30 P. M. Mayflower came second at 10:07:28, Priscilla at 10:22:18, and Sachem at 10:40:04. Titania gave up and went into Boston, and Puritan did the same, for a new topmast in time for Thursday's race. Bedouin led her class and took the $500 cup, while Clara beat Huron, Stranger, Fanny and Pocahontas of the class above her, as well as Cinderella in her own class. Little Ulidia also beat Pocahontas. Iseult, with no topmast, did not arrive until the night, while several others that started did not finish. The official times were:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Sachem	7 00	10 40 04	27 40 54	27 08 18
Iroquois	7 00	11 34 40	28 34 40	27 49 22
Magic	7 00	12 33 22	29 33 22	28 45 46
Troubadour	7 00	2 26 02	31 26 02	30 51 38

Pocahontas	7 00	4 08 10	33 08 10	33 01 50

There was little in the race to make it a fair test, but taken with the other races of the cruise it shows still more plainly the leaders in each class, Volunteer, Sachem and Bedouin. The evening was spent quietly, most of the yachtsmen visiting Eastern Y. C. house on the Neck.

Marblehead Harbor, Aug. 10.

It was just as well that a day of rest intervened between tedious work of the long race and the sharp contest that all looked forward to on the morrow over the new triangular course Eastern Y. C. In the scanty and meagre history of the fis of the Northmen to the shores of the new world no mention is made of any permanent settlement in the neighborhood of Marblehead, but to any disinterested stranger who spends a day there, especially if he comes in a yacht, there can be no shield to the origin and ancestry of the ancient portion of the inhabitants, especially those whose vocations are overalls, ancient characteristics of the Norse race are still plainly are easily recognized in their more modern phase of hide has disappeared, but the unmistakable brazen and hardened cheek that is a far better

boots and slouch hat he may fall below his forefather in the scale of picturesque poverty, but not a whit behind the older pirate is he in the extent and rapacity of his demands. The skin-covered galley of yore has long since rotted away, but in its place is the dory, in which the modern Eric makes a descent on the helpless schooner or cutter which necessity drives within his grasp. No robber castle of stone crowns the rocky heights, but if the visitor has by craft or force of arms managed to make his way over the little strip of water without losing all his cash and valuables in return for the passage by dory, he is likely to part with the balance of his possessions in return for a very small amount of provender at the great hotel with an unpronouncable name that ornaments the hill. The harvest at Marblehead is short, but brilliant in proportion, and it has been estimated by one impecunious scribe that the profits from one $20 dory are in the neighborhood of $1,000,000 per week. It is related that not more than twenty years since the natives were in the habit of stoning away the crew of any strange boat that chanced to take refuge in their harbor, but under the softening influences of civilization all this is changed, and now they take the stranger in and care for him. Yachts by the hundred put in there through the season and leave hard cash in plenty in return for supplies of all kinds for yacht owners are proverbially generous and liberal in their expenditures. The rocky front of the town boasts but two landings, the ferry float, always crowded, and a small and dilapidated float with a rickety gangway leading to an unpaved and muddy coal wharf. This latter is used of necessity by the yachtsmen in their trips for ice and supplies, being, bad as it was, the only accommodation. Before the fleet sailed each yacht was treated to a demand for $2 wharfage, made by the Bay View Boat Club, a local organization, which claims the ownership of the float in question. The flagship was, of course, included, and after paying the amount the following letter was sent to the club:

Commodore of the Bay View Yacht Club, Marblehead:

SIR—I am instructed by the Commodore of the New York Yacht Club to say that should the boats of your club at any time visit the city of New York, the courtesy of landing at any of the floats of the New York Yacht Club will be extended to them without any charge whatever for "wharfage." I have the honor to remain yours, KORTRIGHT, Fleet Captain, N. Y. Y. C.

Newport has suffered in times past from the extortion and rapacity of the tradesmen, and Marblehead will be wise to take warning in time and avoid the same course. Yachtsmen as a class are willing to pay liberally, but they will avoid in spite of its natural advantages, any place with a reputation such as Marblehead is making for itself. The town profits much by the yachts which constantly visit it and it would be an advantage to its trade, as well as a matter of courtesy to the yachtsmen, to build a suitable public landing with respectable approaches which they can use freely.

On Wednesday morning a meeting was held on board the flagship at which it was decided to row the gig races in the afternoon, to join the E. Y. C. race on Thursday, and to sail on Friday for Vineyard Haven, leaving there on Monday to race to Newport for the Providence cups, and on Tuesday to race off Newport for the Newport cups. At 2 P. M. the fleet saluted the Eastern Y. C. by hoisting the E. Y. C. pennant at the fore and firing a gun from each yacht, after which the club pennant was again hoisted, and the fleet dressing ship; every yacht bursting out with colors from truck to bowsprit and boom ends. With so many together the display was most beautiful. During the day there came in the Oneida, with Messrs. Booth and Barrett as guests of the owner, Mr. E. C. Benedict; the little Culprit Fay, with Mr. Matthews at the wheel and the Knickerbocker pennant aloft, and the Mariotta, also of New York, flying Seawanhaka colors. At colors in the evening Puritan anchored with the fleet, her topmast set up, while Titania and the new Burgess cutters Zigeuner and Wona were also in harbor. Beside the yachts which had raced from Vineyard Haven there were also the Fleetwing, Harbinger, Altama, Halcyon, Pappoose, Shona, Nupareil, Gitana, Ambassadress, Grayling, Haze, Tioga, Latona, Wave Crest, Peerless, Winona, Rebecca, Sylph, Diana, Clytie, Princess, Mischief, Saracen, Carina, Rad, Dare, Vixen, Dream, Volante, Lilly, Viking, Nebula, Rondina, Kelpie, Edith, Alga, Medusa, Concord and the steamers Lucille, Hanniel, Susquehanna, Magnolia and Corsair. Scattered among the big ones were dozens of small craft of all rigs, cats, cutters, sloops and spritsail boats.

The races for the Gamecock and Owl colors, and for the naphtha launches were started from the flagship in the afternoon, the course for the rowing races being from outside the harbor to a finish off the Commodore. The first race for four-oared gigs had three entries, crews from the Republic, Resolute and Gitana. The Republic's crew pulled a light black gig with spoon oars, while their rivals had heavier boats and straight ash oars. The Republic's crew won after a good race, with Resolute's crew a good second. Magic and Palmer each sent crews for the dinghy race, the former, pulling pair oars, beating the latter with double sculls. The Commodore added cash prizes to the colors, so there was something for the men to work for, and it seems a pity that so few entered. There is no reason why these rowing races should not attract much more interest throughout the fleet, and call out a good number of entries each year. The men are very willing to race, and with a little practice under a good coxswain there might be some sharp racing, with a corresponding improvement in the boat drill throughout the entire fleet. One restriction is necessary, the race must be limited to the regular service gig of the yacht and working oars; as soon as special boats and oars other than those used every day are introduced the value of the competition is destroyed.

Following the dinghy races was a contest of naphtha launches, a number of which are among the fleet, though but three, from Mohican, Corsair and Republic were started, a fourth coming along after the race had begun and going in chase. Corsair's launch, being much larger, was handicapped four minutes, finally taking second place to Mohican's. A number of ladies witnessed the races from the deck of the flagship, while among other guests of the Commodore were Messrs. Booth and Barrett and Mr. Geo. L. Schuyler, the latter gentlemen being on the Electra during the entire cruise.

In the evening a reception was given by the Eastern Y. C. to the visiting yachtsmen, the house being decorated with bunting and lanterns, while fireworks were sent up from most of the yachts in the harbor. A band was in attendance during the evening. The day closed with every indication of a good race day on the morrow.

E. Y. C. Regatta and Herald Cup Race, Aug. 11.

It would be a hard matter to decide which is the most indebted to the other, the yachting world or the press. Of course if the question were put to the yachtsmen they would without hesitation assert that they care nothing for the papers; that all newspaper men are but necessary evils, and that they would much rather race and cruise quietly than to have their movements reported. The truth of all this is easily tested, the scribe need only leave a boat alone for a time and the owner is ready to recant; better to abuse her outright than to neglect her. Beyond doubt the yachtsmen owe much to the papers, which have heartily espoused the interests of yachting and have brought the sport to a prominence and popularity which it would never otherwise have attained. On the other side, the scribes would claim with equal vigor that they supply the yachtsman much that he would have to return for a very little information asked from each, to say nothing of the valuable advice and aid always tendered so generously to regatta committees. As for the papers, especially the dailies, they are certainly indebted greatly to a sport which furnishes columns of acceptable news at a time when business and other interests are duller than usual, and which brings thousands to the bulletin boards and to buy extra after extra. The question would be easily answered, however, if the example of some of the Boston papers were followed by their rivals in other cities, as this season two of these have certainly laid all yachtsmen who love to take part in, to see, or to read of a good race, under great obligations. The last enterprise of the Boston *Herald* is a departure that speaks much for the wealth, the enterprise and the liberality of the paper, besides being a substantial recognition of the place which yachting has secured in popular favor.

When the Eastern Y. C. determined to celebrate the visit of the New York Y. C. fleet to their waters by an extra summer regatta the Boston *Herald* at once came forward with an offer of a cup to cost $1,000 to be raced for by the first and second class single-stickers. The trophy is in the form of a silver loving cup, lined with gold, being 16in. in diameter and 16in. deep, the total weight being 250oz. The surface is oxydized, with the figures in relief. The three feet are in the form of shells, and three solid handles run from the top edge to the base, entwined with seaweed, kelp and other marine plants. The upper edge of the bowl is wave shaped, and around the base of the bowl the hammered silver represents waves, out of which the head and upper part of the body of old Neptune rises. He holds in his left hand a shield and in his right hand a trident. On the shield which he is holding will be engraved a history of the trophy. On each side of the shield rests a sea nymph; one is holding high the garland of victory, which circles the top of the center piece, and the other is blowing a conch shell lustily. The silver garland wreath is made up of coral and other sea products. The design is the same on each of the three spaces between the handles, and the only difference will be the inscription on each of the shields. One will have a representation of the old Roman galley well manned; another will be reserved for a few appropriate words by the donors, and the third will bear the record of the event in which the trophy shall have been won. The design is by Mr. L. E. Jenks and the makers are Messrs. Bigelow, Kenhard & Co., of Boston. Besides the cup cash prizes were offered by the E. Y. C., $250 and $50 for schooners; the same for first class singlestickers; $100 and $50 for second class and $75 for third class. The triangular course, that sailed last June, is beyond doubt the finest on the Atlantic coast for match racing. At New York a run of 20 miles is necessary to reach the start, while here it is only a couple of miles from a good harbor. At Newport there are two open courses, but the one usually chosen and sailed for the last three years is very apt to give no weather work. Why racing yachts do not enter races is a question that it might be well to assign to a special commission to sit next winter. Here were good prizes, a glorious course, and a fleet of racers, and yet but a few, especially of the schooners, started; and some of them turned back on the first leg. Mohican, Wanderer, Palmer, Varuna, Norseman, Crusader, Phantom, Halcyon, Grayling, Fleetwing and Republic, a fine fleet, laid lazily at anchor, or sailed out under easy canvas to see their fellows start. The only jumpers were Gitana, Resolute, Troubadour, Sachem, Iroquois and Magic. It speaks little for the stay-at-homes that they declined such a fight as this. In the single stick classes the entries were better, Bedouin, Gracie, Titania, Fanny, Stranger, Huron, Clara, Cinderella, Dream, Vixen, the old New York racer, and the new cutter Zigeuner, besides all the first class, leaving Mischief, Pocohontas and Vision at anchor.

The day broke with cloud and fog, but a moderate S.W. wind soon dispersed the latter and promised a good race. The fleet worked out at about 10:30, the start being set for 11:30 for schooners and first class, 11:40 for second, and 11:45 for third class. The start was off Half-Way Rock, between a mark boat to the eastward and the Rock, thence 12 miles S.S.W. to a buoy off Harding's Ledge, thence E. 3 miles to a buoy, and thence N.W. by N. 12 miles to start. With the wind S.W. by S., in which quarter it held pretty steadily all day, the first leg was almost a dead beat, and the fleet was assembled to leeward of the Rock in readiness for a long struggle to windward, most of them carrying clubtopsails. The race was a most remarkable one in one respect, the number of serious mishaps, as Bedouin, Titania, Stranger, Fanny, Clara, Cinderella and Dream all suffered more or less damage. The wind was puffy at times, but not to an unusual degree, while the sea was smooth all day, and the only explanation seems to be that all the gear and iron work was severely strained in the rolling that the yachts passed through on Monday night off the Cape. The first mishap occurred just before the start, as the starboard topmast backstay on Cinderella parted. The damage was quickly repaired, but some time was lost at the start. America, though not in either of the clubs, was permitted to start and sailed the course, but with ensign at the peak and burgee at each masthead and no indication to the others that she was in the race.

With a fleet of 23 yachts, large and small, an open course and the first leg a long one to windward in a good breeze, it follows that it was impossible for any one person to see all the race, much less to describe it accurately. Within half an hour after the start the fleet were so widely scattered that many were practically out of sight, while it was exceedingly difficult to follow all the manœuvers of those in view. Perhaps the best idea of the race may be given by a description of the leading groups into which the fleet soon divided, before going into the details. First, the large boats, with the exception of Puritan and Mayflower, worked inshore toward Nahant, and by the legs was limited to short and tacks; Volunteer, Atlantic, Priscilla and Bedouin making the vanguard, the latter capping her previous good work on the cruise by a splendid bit of sailing, and fairly holding a place with the first class. Astern of this division were the two white schooners, with Iroquois in the lead, then came a large group pretty closely bunched and tacking together, Resolute, Gitana, America, Magic, Gracie, Troubadour, Fanny and Huron. Far out to sea was Puritan on one long leg on starboard tack, while Mayflower was chasing her. The third class sailed a middle course, between Puritan and Volunteer, following more closely the general direction of the first leg of the course by short tacks. At the first mark Volunteer came out ahead and Atlantic crossed the bow of Puritan as she came from the south. The schooners and second class came up and turned some distance ahead of third class. Such was the general plan of the fight over the first leg, now for the details.

When the whistle blew the fleet was well bunched about the Rock, with Puritan very close to it. As the start was given Volunteer, who had come on Puritan's weather, crossed the line with her, but just then Atlantic, who had run along the line and tacked, came in after her old fashion and cut between Volunteer and the Rock, a clever manœuver and well executed. After the three came Mayflower, then Priscilla, while just to leeward of the two were Iroquois, Gitana, Sachem and Resolute, with Troubador following the latter. Atlantic's gain by good handling was of little value when it came to an issue of pointing and footing, for Volunteer had hardly settled down to work before she began to head working ahead and to windward in the same time. Puritan seemed to hold to Volunteer and both were gaining on Atlantic. By this time the second class was well away, Titania first, but to leeward of Gracie, while Bedouin was to windward of the sloop. Stranger coming up went over on Bedouin's weather, while Fanny and Huron followed. The third class was led by Clara, with Zigeuner. Cinderella, Vixen and Dream in order, the latter soon losing her topmast. The official times are:

Puritan	11 31 02	America	11 36 15
Volunteer	11 31 03	Titania	11 40 55
Atlantic	11 31 05	Gracie	11 41 20
Iroquois	11 31 33	Bedouin	11 41 44
Mayflower	11 32 10	Stranger	11 42 02
Priscilla	11 32 47	Fanny	11 42 12
Gitana	11 32 23	Huron	11 43 03
Sachem	11 33 28	Clara	11 46 12
Resolute	11 33 45	Zigeuner	11 46 41
Troubadour	11 33 47	Cinderella	11 50 33
Magic	11 34 08	Vixen	11 50 55

All went over on starboard tack, heading off shore, Troubadour being the first to break tacks just five minutes after she had crossed the line, Priscilla at once following. Volunteer and Puritan were still about even, while Atlantic and Mayflower were in single file astern, when at 11:45 Volunteer tacked across Atlantic's bow, having gained so much in only 11 min., Priscilla at the same time going on starboard tack again. Atlantic held on for three minutes before going on port tack, and after she did so Iroquois, Sachem and Gitana followed her. Iroquois then went well to windward of Sachem, with Gitana astern and between the two.

Meanwhile the second class was hurrying on, Bedouin pulling out past Gracie to windward, while Titania was leaving her to leeward, when the latter's topmast went aft, falling across the gaff and causing a general wreck. The disaster was due to the shearing of a steel pin in the shackle of the lower block of the topmast backstay, as in the case of Iroquois in the June race. The wreck was cleared as soon as possible and Titania put back. Bedouin now had a good lead, with Gracie to leeward, Stranger astern of Bedouin, and Fanny and Huron in the rear.

Mayflower made her first tack at 11:50, Priscilla going on port tack again 4m. later, well on Mayflower's weather. Resolute made her first tack at 11:55, and Troubadour, Magic and Gracie followed her, Bedouin still gaining. Mayflower made but a short leg inshore and then went on starboard tack at noon in chase of Puritan. Captain Crocker had hoped to gain some benefit from the tide by working off shore, but in this he was disappointed, as it proved, the wind being better inshore. At 12:02 Gracie made a tack to port in order to get from under Bedouin; but the cutter was awake, and at once came about well on her weather bow, the pair crossing the wake of Resolute 2m. later. At 12:05 Volunteer went on starboard tack, Atlantic following at 12:07. Priscilla, on port tack, was heading for the two, but fetched far astern of Volunteer, and at last passed under Atlantic's stern at 12:09. Volunteer was standing well up to her work, pointing well to windward and going through the water faster than any of her rivals.

The start of the fight was now working into the bay, shown on the chart,* between Tinker's Island and Nahant, Volunteer and the other two well ahead, Bedouin clear of her class and hanging on to the skirts of the leaders, while the schooners, with the second class, were some distance astern. Iroquois, heading inshore on port tack, was ahead, Sachem, on starboard tack, crossing her wake at 12:09. Astern of Iroquis was Gitana and then Fanny, both on port tack. Troubador, Resolute and Magic were to windward of this pair and on the same tack, while Huron had come up, Stranger losing her topmast and retiring.

At 12:12, when Priscilla went on starboard tack in Atlantic's wake, Volunteer was a long way ahead of Atlantic, while the latter had a safe lead on Priscilla, though the iron boat was to windward. At 12:16 Volunteer tacked inshore, but Atlantic held on for nearly 10m. before following. Iroquois was still holding the long tack inshore, and at 12:20 Sachem, on starboard tack, passed between her and Resolute, weathering the latter by ¼ mile. At 12:25 Resolute went on starboard tack and Gitana began to overhaul her to windward. At 12:30 when the two were abreast, Bedouin, on port tack, passed in front of the pair at a good distance from them, tacking 3m. later, while Gracie was then to leeward of Resolute and abeam; with Fanny and Huron astern of her. Iroquois, too, tacked and stood off shore just at this time.

Meanwhile Puritan had made her first cast inshore at 12:21, crossing Mayflower's bows easily at 12:30, the latter tacking in her wake at 12:33. The two divisions were now closing in as they neared the weather mark, and it was evident that Volunteer was an easy winner thus far, but who would be second none could say. Atlantic had been sailing at her best all day, but still was nowhere near the new boat either at footing or pointing, while she was too widely separated from Puritan and Mayflower to be measured by them. Mayflower was evidently sailing far below her old form, and was as far astern of Puritan as she should have been ahead.

All this while the third class was having a battle royal far from the others, Clara and Cinderella being at it again. They had met on Monday for the first time this season, and though the race was largely a duke for all the fleet, Clara had overcome the disadvantage of a bad start and fairly collared Cinderella at Pollock's Rip, before the breeze fell, to say nothing of her finally coming into Marblehead next to Bedouin and Gracie. Clara's unbroken string of victories for two seasons, her many battles with Cinderella last year, and the way in which the latter has been sailing this season combined to make the present race the most exciting that has yet taken place between these cracks of the third class, and day and course were perfect for a fair fight. Cinderella had made up the loss due to her mishap at the start, and the pair were easily leading their class and nearing the weather mark when Clara's weather spreader gave way, so that her clubtopsail had to be taken in at once. The damage was partly repaired and t e sail set when, just as it was sheeted home, the bowsprit went up in the air, the topmast broke, and she was hardly less of a wreck than Titania had been an hour before. Her chances were gone and she headed for home under mainsail and jib. The immediate cause of the breakdown was that the bobstay clevis, which is carried down far under water, had pulled off over the heads of the copper bolt which held it. The yacht has laid for nearly a year in the Corinthian Basin at Staten Island subject to the foul action of sewage and sludge acid, and as she was very hastily fitted out the parts under water were not examined carefully. Clara has probably the lightest spars, gear and rigging of any yacht in this country, and this is the first mishap that has befallen her in fourteen races. With her out, Cinderella had the legs of her class, doing as she pleased with Vixen, while the little Zigeuner pegged away steadily in the rear.

To go back to the big ones, at 12:40 Volunteer, Atlantic and Priscilla were on port tack in shore, Bedouin next, then the two white schooners, Sachem was running along inshore on starboard tack, while Iroquois was further out on port tack. At 12:45 Sachem crossed Iroquois' bow with a good margin. The leaders were now near the Graves, while Gitana, Resolute, America, Gracie, Fanny, Huron, Troubadour and Magic were well together near Egg Rock, four miles astern. The movements of this division of the fleet were quite interesting as there was some sharp work between the schooners, while Fanny gave Gracie a hard fight all day, with Huron following close after both. Gitana left Resolute for the time and was standing off shore. Magic was still astern of Resolute, crossing her wake at 12:47, and five minutes later, when close in to Egg Rock, Resolute and America came together. America was on starboard tack, but as she flew an ensign at the peak and burgees at mastheads there was no indication that she was in the race. She held her course, but Resolute managed to squeeze past by a close shave, soon after tacking to windward of her.

Troubadour and Resolute had been hammering at each other all day and now they came together again, Troubadour just shaving across Resolute's bow at 1:13. Gitana was to leeward of Resolute was Gracie, with Fanny on her port quarter, while Huron was about ¼ mile astern of the pair.

The leaders were now past the Graves black buoy, Bedouin passing at 1:24. Far ahead the sails of Volunteer presented a most peculiar appearance; on the horizon was a low bank of bluish clouds, against which her hull and lower sails were invisible, but standing out, white and beautiful as an angel's wing, against the lighter background of the upper stratum of cloud, was her snowy clubtopsail, a graceful triangle of curved lines as the tapering topmast bent and the slender yards buckled under the strain. For a short interval only was it visible, then the clouds shifted and the lower sails shone out as she danced on toward the weather mark, now but a short distance ahead. At 1:24 she went on port tack and a little later she had rounded the mark.

Now the two stragglers from the south were coming in to join the fleet, and the great question was, "Who will be second?" Puritan was far ahead of Mayflower, but as she came up she failed to weather Atlantic and the latter ran well to windward of her. She fell into line some distance astern of Atlantic and just ahead of Priscilla, while Mayflower brought up the rear. Bedouin should have had a place with the first class at the mark, but as she came up her starboard spreader broke, the big clubtopsail swayed to leeward as the topmast, a tough stick, bent from heel to truck like a fly-rod, and only the quick work of her crew saved the stick by taking in the halliards. She did not give up but turned the mark, but with her wings shot away she was helpless in such a wind with sail and sheet, and at last withdrew from the race. Astern the two white schooners were fighting hard, with all the odds now in favor of the larger boat. Iroquois had sailed well for a long time after the start, but once astern there was no chance for her. She held on and did all that her inches were capable of, but the extra 6ft. of Sachem told as it always will.

Meanwhile Fanny had been setting a pace that Gracie found it hard to follow, and at 1:24, when on port tack, had passed to windward of Gracie and taken the lead from her. At 1:31:30 Fanny passed to windward of Graves buoy with Gracie to leeward of it and a little astern. Resolute passed at 1:32 also to leeward and on Gracie's weather quarter, while Troubadour passed to windward of the same mark at 1:32:45. Fanny was outpointing that sloop and had decidedly the best of the fight thus far, while Huron was still the last of the class. Resolute was trying to get away from Troubadour, but in vain; she went on port tack at 1:57, the other following at once, and after three minutes she tried again with the same results. Fanny tacked for the mark at 1:58 and Gracie a minute later. America and Gitana after standing off shore were also coming up, the former ahead and rounding with Troubador, while it was plain that Gitana was so far astern that she must follow Resolute. As they came together and this was clearly seen, Gitana bore away for home and gave up the race. The times were:

Volunteer	1 27 30	Bedouin	1 57 30
Atlantic	1 35 15	Fanny	2 05 10
Puritan	1 39 15	America	2 06 10
Priscilla	1 40 55	Troubadour	2 08 05
Mayflower	1 43 15	Gracie	2 08*50
Sachem	1 52 32	Huron	2 10 25
Iroquois	1 55 35	Resolute	2 13 20

Puritan had lost much ground by the course she took, and Mayflower had suffered some in following her and more from poor handling and the attempt to carry a large jibtopsail to windward. Volunteer had beaten Atlantic by 7m. 45s., Atlantic had beaten Puritan by 4m., and Priscilla by 4m. 7s. Sachem had taken 5m. off Iroquois and Fanny had beaten Gracie by 4m. 35s. In this, the best piece of windward work during the cruise, it was most unfortunate that Puritan and Mayflower parted tacks with Volunteer and Atlantic, for with the same wind, and also that Mayflower was so badly sailed, as a most valuable opportunity to test the new boat was lost. It can only be said that her behavior to windward was in itself perfectly satisfactory, and that in the wind in a moderate breeze she showed as well as she had previously done in lighter weather and on a reach. It would be very gratifying to know just how she rates to windward beside Puritan and Mayflower in her old form, but this is still an open question, though there is every reason to believe that she will prove the equal of the others in stability, as well as in ability to windward.

Fanny deserves a good word for her work with Gracie, beating the larger boat very cleverly in a fair race, but all the honors of the class must go to Bedouin for her grand sailing up to the time her spreader gave way. The before teatime cruise she had become May fast that in all styles, and she has never done a better piece of work than on this occasion, holding on for two hours to boats that were from 2t to 26ft. longer than she. Those who were ready to crow over her defeat by Titania have thus far found "de 'scursion postponed," and from the way she has redeemed in all the sailing of the cruise, the beating of the Seawanhaka race, it seems likely that they will wait still longer. Bedouin, representing the medium type of cutter, has fairly beaten all of the old sloops, Gracie, Fanny, Mischief, and the rest, not once or twice, but repeatedly. What she will do with the new boats is, except for her work thus far with Titania, a matter of mere speculation, a beamier boat may or may not beat her, but we venture to predict that it will be a long time before she meets a boat of any other type that will equal her in speed and a fair average of good qualities as a racer and cruiser. When considering her as a racer only it must not be forgotten that she is probably the strongest and staunchest yacht in America to-day, and so proportionately heavy compared with many of her rivals.

Once around the mark all set balloonjibtopsails and started sheet a little, running for the second mark with a good breeze on the starboard quarter. Some complaint was made as to the position of the second mark, either the buoy being misplaced a little or the course being wrongly given, at any rate Volunteer steered by com-

*See FOREST AND STREAM, June 30, 1887.

pass, finally fetching well to windward of the mark, a red ball on a raft at no great elevation above the water and not easily seen as the weather grew thicker and a light vapor arose. Once picked up she bore away for it, thus giving the course to those following, and they were not slow to avail themselves of the advantage, saving some distance on her. The times of the leaders at the second mark were:

Volunteer	2 43 00	Priscilla	2 55 42
Puritan	2 53 27	Mayflower	2 57 29
Atlantic	2 54 02		

The leading schooners were not timed, but the order was Sachem, Iroquois, Troubadour, America.

The second division jogged along together, Fanny to windward, Resolute next, then Gracie, with Huron to leeward, the running being pretty even. Magic and the third class were still far astern. The times as the boats turned the second mark were:

Huron	3 36 00	Resolute	3 38 45
Gracie	3 36 50	Magic	3 46 00
Fanny	3 37 06	Cinderella	3 56 30

All jibed and came by the wind, which was now heading them. It had been light for a time over the second leg, but now increased, while the sky was dark and cloudy and rain began to fall heavily. The leaders were out of the squall and nearly home, but it struck the following boats with some heavy puffs at times. Fanny ran up a small jibtopsail and challenged Gracie for a luffing match as she tried to pass to windward, but Gracie had the best of the bout and Fanny bore away again. Huron had swung a clubtopsail and jibtopsail all day and still hung to them, with a good chance of beating the larger boats even. Only four minutes after she had passed the mark Fanny's topmast went, half way above the cap, and the jibtopsail was afloat beneath her lee. As the wind was freshening she did not miss the sail so much, but she lost considerably by the drag, as it was some time before the wet sail was safely aboard, Gracie meanwhile leaving her. Gracie, however, soon took in her jibtopsail and club, setting working topsail, Huron boldly holding her clubtopsail. Volunteer had lost some of her lead on the others, and Puritan, after passing Atlantic on the second leg, had been unable to shake her off. Sachem increased her lead on Iroquois. Troubadour and America changed their positions but little as far as the two were concerned. Resolute left the sloops and finished ahead, both Gracie and Huron overstanding to windward near the Rock, while Cinderella, well in the lead of her class, lost some time in a calm streak during the rain on the last leg, as Galatea did in the June race, during which Zigeuner managed to come up within her time and take first prize. The full times are:

FIRST CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Volunteer	11 31 03	3 50 54	4 19 57	4 19 57
Puritan	11 31 02	3 58 45	4 27 43	4 23 44
Atlantic	11 31 05	3 59 05	4 28 00	4 25 53
Priscilla	11 32 47	4 02 12	4 29 25	4 26 57
Mayflower	11 32 10	4 04 08	4 31 58	4 30 56

SCHOONERS.

Sachem	11 33 28	4 07 16	4 33 48	4 28 08
Iroquois	11 31 33	4 14 16	4 42 43	4 32 02
Troubadour	11 33 47	4 33 43	4 59 56	4 53 34
America	11 35 00	4 34 12	4 57 57	4 55 07
Resolute	11 32 45	4 42 27	5 08 42	Not meas.
Magic	11 34 08	Not timed.		
Gitana	11 32 23	Withdrew at first mark.		

SECOND CLASS.

Bedouin	11 41 44	Carried away spreader.		
Titania	11 40 55	Carried away topmast and gaff.		
Stranger	11 42 02	Carried away topmast and gaff.		
Huron	11 43 03	4 51 35	5 08 32	4 59 49
Gracie	11 41 20	4 51 29	5 10 09	5 03 19
Fanny (lost topmast)	11 42 12	4 54 36	5 12 24	5 04 26

THIRD CLASS.

Clara	11 46 12	Carried away bowsprit and topmast		
Zigeuner	11 46 41	6 04 36	6 19 36	5 42 39
Vixen	11 50 55	6 01 41	6 16 41	5 44 36
Cinderella	11 50 33	6 00 55	6 15 55	5 52 05
Dream		Lost topmast at start.		

The timing of the yachts was not as well done as usual, Republic appears in the official list as starting, while Magic was not timed all day, and Huron finished ahead of Gracie, though the contrary appears in the official times. The table posted in the club house gave a very incomplete idea of the race, Gitana, who withdrew, being omitted, as well as those broke down. The above, we believe, gives all the starters and their records.

The comment was freely made after the race that all the cutters broke down, but that is a matter that will bear looking into. The large class fared well enough, probably because the wind was so much lighter in proportion for them. In the second and third classes there were entered, as by the above table, Bedouin, Stranger, Huron, Clara, Zigeuner, five cutters; Titania, Gracie, Fanny, Cinderella, Vixen, Dream, six sloops. Of these three cutters, Bedouin, Stranger and Clara, broke down, and four sloops, Titania, Cinderella, Fanny and Dream, so that honors are about even; while to the sloops' score can be added the two topmasts jumped out in a calm by Puritan and Titania, and two centerboards injured by Mayflower and Titania. The race as it stands was the most important one of the cruise, and yet, as we noted before, it fails to tell just how much better than her two sisters Volunteer is, especially in a breeze to windward. That she is better no one who has seen her sail can doubt, and she has already brought confusion on the critics who predicted evil results from the cutaway forefoot. The day ended in a rainstorm that turned the dusty streets into mudholes and made navigation on shore a matter of difficulty, but still the club house was crowded with ladies, while a band was again in attendance. The usual display of fireworks, conducted in the usual reckless manner, took place, but beyond the burning of a new maintopsail on the Resolute by a rocket from another yacht no damage was done.

Cruise to Vineyard Haven, Aug. 12–13.

A clear day followed the rain and mainsails were set at an early hour, the signal from the Commodore saying "Start for Vineyard Haven." Many of the yachts were in no condition to go, but early in the day Atlantic was off with a light breeze ahead. Mayflower lifted her hook and threaded her way through the crowded harbor until she was nearly clear, when she swiftly ran her bowsprit inside of Latona's topping lift, and found herself hung up. Her stern payed off as her mainsail swung broad to the wind and she threatened to go down on Troubadour's jibboom, but swung clear, and after some trouble was released from her embrace of Latona. The sloop Black Cloud, of Gloucester, ran into Medusa and quickly cut an extra scupper in the cutter's starboard bulwark, twisting off the end of her own bowsprit. One by one the yachts dropped out until only a few were left. Priscilla and Crusader were to go East, the former probably to Bar Harbor, and by noon the anchorage was almost deserted. Electra left at 10:20, reaching Vineyard Haven at 6:35 P. M.

The yachts certainly have not felt any lack of prizes this year, as they have had more offered than they could take time to race for. One of the most liberal offers was that of the citizens of Providence, who gave their prizes freely for a race wherever the club preferred to sail it. With the second and third class nearly all in hospital it would be far preferable to have postponed the races until next month, sailing both the Newport and Providence cups off Newport, but it was decided to sail both at once, as the trial races would take up most of next month. This left out a great part of the fleet, as but few came around the Cape in time, and of these Grayling, with Mystic and Mischief, continued on to Newport, Volunteer and Puritan anchoring at Wood's Holl over Sunday, and Atlantic at Edgartown, and the only yachts in Vineyard Haven being Sachem, Halcyon, Troubadour, Wave Crest and Mayflower, besides Electra and Oneida. The yachtsmen spent Sunday very quietly at Cottage City.

Providence Cups, Vineyard Haven to Newport, Aug. 16.

The conditions for the final races of the cruise on Monday and Tuesday are given in the following extract from general order No. 6:

The race for the cup offered by the citizens of Providence, viz., one cup, value $200, for schooners; one cup, value $200, for first class sloops, and one cup, value of $100, to second class sloops.

The start will be from a line drawn from the flagship to East Chop light, the New York Y. C. rules to govern. All yachts crossing the lines to be regarded as entered for the race, and there will be no limit as to time in sailing the race. The owners of the schooner Sachem offer to double their time allowance to smaller schooners and to receive none from larger ones.

The finish will be between Brenton's Reef Lightship and the flagship anchored to the southward of it.

Preparatory signal will be given from the flagship at 9:45, and the starting signal at 10 o'clock precisely if possible. Fifteen minutes later there will be a second gun fired, when the time of each yacht will be taken as it crosses the line. Ten minutes later there will be a third gun fired. Yachts sailing in the race will carry their private signals at the main peak, and a number upon their mainsail, which, if not already supplied, will be furnished upon application to the regatta committee on board the flagship up to the morning of the day of the race. The time allowance will be that followed by the club rules.

The following prizes are offered: One, value $650, for schooners 71ft. or over waterline length; one, value $650, for sloops 71ft. and over waterline length; one, value $350, for sloops and cutters 55ft. and under 71ft. waterline, and one prize, value $200, for sloops and cutters under 55ft. waterline. The Newport course to be one of the two regular courses.

Monday morning was clear and warm, with a good breeze from S.W., making a beat out of Vineyard Sound.

The Electra took her position off East Chop at 9:30, and at 9:45 a gun was fired to prepare. When the gun fired at 10 Mayflower was first over on port tack, with Sachem and Volunteer close astern, all being well in toward the buoy off East Chop. Puritan was not as quick as usual at the start. Atlantic was within sight but did not start, and Resolute was delayed waiting for guests from Cottage City. The times were:

Mayflower	10 01 14	Halcyon	10 03 45
Sachem	10 01 44	Puritan	10 03 55
Volunteer	10 01 48	Norseman	10 04 20
Magic	10 02 22	Palmer	10 05 22

The fleet of 50 which had left a week before from the same point had fallen off badly in numbers. The singlestickers at once left the schooners, standing over toward Naushon. Sachem was first to tack at 10:30, with Halcyon at 10:32 and Volunteer at 10:39, Mayflower 10:41:30 and Puritan 10:44:15. Volunteer now led Puritan by nearly a mile, while Sachem led her class by an equal distance. Mayflower was sailing as badly as usual and the cause was not discovered until night, when it was found that her boat had been badly damaged, presumably on the race to Marblehead, when she touched on Hedge Fence Shoal, the damage increasing until several planks were torn away. Puritan continued to leave her, and just before noon Sachem crossed her bows. At this time Volunteer was off Cuttyhunk, leading Puritan by 1½ miles, while Sachem was third and Mayflower fourth, Palmer being fifth.

Over the rest of the course Volunteer continued to increase her lead, while Mayflower lagged far behind. The full times were:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Sachem	10 01 44	2 24 59	4 23 15	4 23 15
Palmer	10 05 22	2 46 40	4 41 18	4 41 18
Magic	10 02 22	2 54 28	4 52 06	4 49 54
Norseman	10 04 20	2 51 23	4 47 03	4 47 03
Halcyon	10 03 45	3 03 46	5 00 01	4 50 03

SLOOPS.

Volunteer	10 01 48	2 05 41	4 03 53	4 08 53
Puritan	10 03 55	2 18 32	4 14 37	4 11 07
Mayflower	10 01 14	2 26 57	4 25 43	4 24 57

The schooner allowances are calculated on the terms so generously offered by Mr. Metcalf. In the evening a meeting was held on board the flagship, at which a vote of thanks was passed to the Commodore for the manner in which the cruise had been conducted, and it was decided to disband after the following race. A large force of men was put to work on Mayflower's board by electric light.

Newport Cups, Aug. 16.

The last race of the cruise, that for the Newport cups, $650 for schooners, and $650, $350 and $200 for each of the single-stick classes, was sailed over the Sow and Pigs course, the same as the Brenton's Reef race of Aug. 5, on Tuesday. The entries were small, but Gracie and Mischief turned up for the second class prize, and Fanita and Bertie came along to try with Cinderella in the third class. Mayflower's board was repaired in time, and she entered with Volunteer and Puritan, while only Magic faced Sachem for the schooner prize. The start was off Beaver Tail at 10:48, all the larger class being handicapped, the times being:

Fanita	10 49 41	Bertie	10 57 03
Cinderella	10 50 21	Mischief	10 57 44
Sachem	10 52 21	Volunteer	10 58 15
Magic	10 52 28	Puritan	11 00 27
Gracie	10 55 22	Mayflower	11 03 31

The wind was light southeast, making a mere drift to windward for the long leg, the boats shifting berths as chance favored them, until 5 P. M. when a southwest wind came in and started them off. At Sow and Pigs the times were:

Volunteer	5 45 30	Sachem	5 53 36
Magic	5 48 17	Gracie	5 56 30
Puritan	5 49 25	Cinderella	5 56 56
Fanita	5 53 15	Mayflower	6 10 20

Volunteer gained on Puritan on the leg to Hen and Chickens, by nearly a minute in the 4½ knots. All could lay a course for Brenton's Reef Lightship on the long leg home, Volunteer finishing at 9:57:30, the full times being:

	Start.	Finish.	Elapsed.	Corrected.
Sachem	10 52 21	10 30 28	11 38 07	11 38 07
Magic	10 52 28	10 38 36	11 46 08	11 40 13

FIRST CLASS SLOOPS.

Volunteer	10 58 50	9 57 50	10 59 30	10 59 30
Mayflower	10 58 00	10 29 38	11 31 38	11 30 58
Puritan	10 58 00	10 13 07	11 15 07	11 11 32

SECOND CLASS SLOOPS.

Gracie	10 55 22	10 35 15	11 39 55	11 39 55
Mischief	10 57 44	Did not finish.		

THIRD CLASS SLOOPS.

Cinderella	10 50 21	10 42 59	11 52 38	11 52 38
Bertie	10 57 03	Did not finish.		
Fanita	10 49 41	10 51 43	12 02 02	11 53 38

The late hour of the finish prevented any formal disbanding of the fleet, but the day practically concluded the cruise.

L. Y. R. A. ROUND.

ON Aug. 1 the fleet raced at Rochester in a good northeast wind, the result being as follows:

	Start.	Finish.	Elapsed.	Corrected.
Atalanta	10 01 45	2 01 11	3 59 26	3 59 26
Oriole	10 02 51	2 11 47	4 07 56	4 05 13
Aileen	10 02 58	2 42 04	4 39 06	4 39 16
Ariadne	10 02 44	2 45 57	4 43 13	4 39 27

CLASS I.

White Wings	10 16 28	2 39 03	4 27 35	4 22 35
Garfield	10 16 14	3 01 41	4 45 27	4 44 03
Ethel	10 19 42	3 24 10	5 04 28	5 03 04
Verve	10 18 42	3 39 47	5 21 05	5 12 38

CLASS II.

Merle	10 35 03	1 45 26	3 00 23	3 00 23
Laura	10 36 50	1 58 18	3 21 28	3 20 23
Mollie	10 36 45	2 16 01	3 39 16	3 24 28
Fascin	10 38 30	2 38 39	3 57 09	3 52 31
Cyprus	10 36 32	2 20 19	3 43 47	3 37 54
Gem	10 33 33	2 41 28	4 07 55	3 58 19
Fannie F	10 38 07	2 37 38	3 59 21	3 48 05
Florence	10 38 42	2 52 27	4 13 56	3 57 02

The fleet raced at Oswego on Aug. 4, over a course of 5 miles to leeward and return, the result being as follows:

	Finish.	Corrected.
Oriole	1 17 25	4 16 22
Atalanta	1 17 28	4 12 38
Aileen	1 34 16	4 23 15
Ariadne	1 36 51	4 23 05
White Wings	2 11 16	4 56 15
Garfield	2 13 54	4 54 52
Ethel	2 29 38	5 15 09
Merle	12 27 52	3 06 08
Iolanthe	12 36 16	3 16 07
Laura	1 04 51	
Cyprus	1 06 05	3 38 47

Verve carried away the jaws of her gaff.

On Aug. 8, the Kingston regatta was sailed, with few starters, in a southwest wind. The times were:

CLASS I.

	Finish.	Elapsed.	Corrected.
White Wings	6 23 22	7 47 22	7 47 22
Garfield	6 27 10	7 50 00	7 40 38

CLASS II.

Iolanthe	3 18 20	2 31 20	
Merle	3 27 12	2 50 10	
Laura	3 51 25	3 13 45	
Cyprus	3 59 04	3 20 44	

Our correspondent "Port Tack" sends the following account of the Belleville regatta:

The annual regatta of the B. Q. Y. C., which took place on Aug. 11, was not a success in any sense of the word, owing to the paucity of entries and the marked superiority of the winner in each of the two classes in which there was a contest. The scarcity of starters was owing to ours being the last meeting of the circuit. The weather was unfavorable in the morning, a light rain falling which thickened into a heavy shower at noon, but after this it cleared and a fine breeze came out of the southwest, making one leg of our triangular course almost dead to windward. There was no contest in Class A, the Ariadne, which was entered and present declining to sail against the Norah. In Class I. White Wings and Garfield were the only starters, the Rochester sloop Ethel being prevented from starting by accidents to two of her crew. The former won easily by 21m. 46s., after allowing her opponent 5m. 22s.

In Class II. the sloops Iolanthe and Surprise, and the little English cutter Cyprus started. The latter sported gaff and jibtopsails, while the sloops were reefed, but she is too small to beat as big a boat as the Iolanthe, which, although sailed easily the last round, won by 11m. 15s., after allowing 4m. 22s. to the imported craft. The Surprise was disabled and retired on completing the first round. It was a great disappointment that the Merle was not here.

The result of the L. Y. R. A. circuit is highly favorable to the Canadian yachts, and especially to those of Cuthbert's build, which, out of 13 starts, won 9 first and 4 second prizes.

The Burgess boat Merle, of Oswego, which was built to beat our lake craft, did so until she met the Iolanthe, which, being in bad trim and badly handled at Oswego, was beaten, but revenged herself by a decisive defeat of the Boston production at Kingston. It appears probable that the Merle is the better of the two in heavy weather, but that in light to moderate breezes the Canadian sloop is the faster.

ANNISQUAM REGATTA, Aug. 6.—The open regatta at Annisquam was successfully sailed on Aug. 6, in a strong S. W. wind and with good entries. The times were:

KEEL CLASS.

	Length.	Actual.	Corrected.
Echo	24.08	2 05 00	1 26 12
Wona	23.06	2 08 24	1 27 48
Trudette	25.05	2 08 10	1 30 10
Prince Karl	28.01	2 06 00	1 32 24
Lochiel	18.04	2 34 20	1 45 08
Thelga		Withdrawn.	

FIRST CLASS.

Good Luck	22.01	2 02 10	1 19 34
Atalanta	27.11	1 55 00	1 20 00
Black Cloud	23.07	2 50 18	1 22 54
Viola	23.02	2 04 06	1 23 16
Comfort		Withdrawn.	

SECOND CLASS.

White Wings	23.00	2 24 40	1 39 04
Petrel	21.09	2 24 05	1 40 53
Tyrant	26.00	2 29 55	1 44 43
Silver Cloud	21.01	3 30 55	1 46 43
Climax, Osceola and Mavis withdrawn.			

THIRD CLASS.

Madcap	16.07	1 25 30	0 59 00
Alpine	16.02	1 26 00	0 59 00
Alice	16.00	1 28 59	1 01 57
Sassacus	16.00	1 33 20	1 06 08
Pilgrim	13.02	1 37 30	1 06 20
Spark	17.01	1 33 01	1 07 07
Arab	14.03	1 40 30	1 11 06
Ethel	14.02	1 58 05	1 28 35
Luna		Withdrawn.	

Prizes in keel class—First, Forbes silver cup, value $50, Echo; second, $15, Wona; third, $5, Trudette. First class—First prize, Forbes silver cup, valued at $75, Good Luck; second, $10, Black Cloud. Second class—White Wings, Forbes silver cup, valued at $50; Petrel, $15 and Tyrant $5.

NEW ROCHELLE Y. C. LADIES' DAY.—The second Ladies' Day race of the New Rochelle Y. C. was sailed on Aug. 6, the summary being:

FIRST CLASS.

Fanita	3 43 00	Santapogue	3 45 30

SECOND CLASS.

Curlew	3 41 45	Maida	3 45 55
Amazon	3 44 20		

THIRD CLASS.

Adele	3 43 00	Olive N	3 50 00

FOURTH CLASS.

Gracie L	3 48 00	Dollie	3 44 50

An entertainment was given in the club house in the evening.

NORTH SHREWSBURY RACES.—On Aug. 3 the last race of the series was sailed, resulting as follows:

FIRST CLASS.

	Start.	Finish.	Corrected.
Puritan, Wm. Cross	2 08 17	Withdrawn.	
Undine, C. James	2 06 03	3 43 20	1 37 17
Annie B., Chas. Burd	2 05 14	3 43 21	1 36 17

SECOND CLASS.

Daisy, H. B. Duryea	2 10 30	3 44 19	1 33 49
Fern, Brackett Bros.	2 11 22	3 54 31	1 42 54
Little Spot, F. R. Smith	2 10 50	3 48 57	1 37 17

AMERICAN Y. C. REGATTA, AUG. 8.—Course 20 miles. Weather, fair. Wind, southeast. Tide, high. All timed from 1:00 P. M.

	Length.	Turn.	Finish.	Cor.
White Cloud, Rodigrass Bros.	19.10½	4 06 44½	3 06 44½	3 04 47
Thorn, L. S. Coffin	18.05	4 08 19	3 08 19	3 03 50
Budge, P. J. Lowell	19.2½	4 07 31	3 07 31	3 04 50
Freak, W. C. Thompson	21.1½	4 11 12	3 11 12	3 11 12
Teaser, W. J. Teel	20.5½	4 07 30	3 07 30	3 06 14

First prize, Thorn; second prize, White Cloud; Third prize, Budge. Regatta committee: L. S. Coffin, H. T. Moody and H. D. Rodigrass. Judges: C. E. Huse, W. J. Hale and E. P. Pride.

SHADOW.—I think it no more than fair that a true statement of how the Shadow came to be built, should be given to the public. Dr. E. R. Sisson, who is considered one of the best local yachtsmen hereabout, employed his brother-in-law, Nathan Sears, a boat builder, to cut a model for a sloop yacht, which the doctor talked of building. The model was executed and accepted by Dr. Sisson, who gave Mr. Sears the dimensions. The doctor being desirous that the Herreshoffs should build the yacht, a run was taken down to Bristol, when the subject was brought to the attention of these celebrated builders, who informed him that they never built yachts after any other person's model. The doctor wishing to build from the dimensions in his model, asked if they would build on the lines named by him (Sisson), they to cut a model. This the brothers consented to do, and when the lines were given them they ridiculed the idea of building a yacht of the dimensions named, saying that a yacht built according to the plans would prove useless as far as speed was concerned. They rather demurred from undertaking the task, but the doctor insisted, and the Herreshoffs agreed to build for a certain sum. The yacht was finished, and when Dr. Sisson went to Bristol to take possession he found that they had charged him several hundred dollars more than agreed, and he would not take her. Finally the Herreshoffs, who had little faith in the craft, came down from their high horse and Dr. Sisson took the yacht as per contract. He brought her to this port, named her Shadow, and while owned by him sailed her in several races, when she was proven to be a fast sailer. In justice to Dr. Sisson, I think this brief sketch of how the Shadow came to be built should be stated, as a perusal of the article in the FOREST AND STREAM would lead yachtsmen to think that the Herreshoffs were the originators of this fast sloop, which has such a wonderful record. Take the lines of the farfamed Puritan and compare them with those of the Shadow, and it will be seen that they are an outcome from the plans originating with Dr. Sisson, the Shadow being the first deep draft centerboard yacht built in this country.—*Lewis Temple in New Bedford Standard.*

KNICKERBOCKER Y. C., AUG. 13.—The Knickerbocker Y. C. sailed a race on Aug. 13, for three classes. Class 1, cabin sloops and cutters, 31ft. and over. Class 2, cabin sloops and cutters under 31ft. Class 7, steam and naphtha launches. The course for all classes was around Fort Schuyler buoy and return. All yachts passed government marks and buoys on channel side going and returning, and turned buoy from leeward to windward. The time allowance was computed at the rate of one minute to the foot. Wacondah finished at 5:26:55, beating Dora by 14m. In the second class Swan finished at 7:06:42, beating Evadne by 9m. 37s.

DAUNTLESS AND GALATEA.—On Aug. 12 the schooner Dauntless arrived at Halifax, N. S., from the Azores, after a rough passage, having left Flores on July 30. Two cyclones were encountered and the yacht ran for a time under bare poles. On Aug. 4, in lat. 43deg. 22m. and long. 53deg. 10m., an iceberg was passed. Dauntless has docked at Halifax and will take part in the regatta there this week. Galatea has been cruising about Halifax and has also docked, preparatory to the regatta. No other large yachts are likely to enter.

THE TRIAL RACES.—At a meeting of the Cup Committee on board the Electra at Cottage City it was decided to sail the trial races to select a defender of the Cup on Sept. 13, 15 and 17, each race to be sailed next day in case of a postponement. Puritan will not enter the races, so the contestants will be Volunteer, Priscilla, Mayflower and Atlantic.

CAPSIZES.—On Aug. 7 the catboat Grover of the Greenpoint Y. C. capsized in the East River, the crew of six being rescued by the policeboat Patrol. On the same day at 10 P. M. a catboat capsized in the upper Bay. The three men on board were rescued by a ferryboat, but refused to give their names.

A NEW WORK ON YACHTING.—The Lithotype Co. have now in preparation a large work on American yachts and yachting, the text by Mr. Burgess. The book will be very handsomely made up, containing fifty large plates from photographs by Mr. N. G. Stebbins of Boston.

HARLEM Y. C.—The H. Y. C. union regatta will be sailed on Aug. 24.

COURSE OF CUTTER "THISTLE," FROM GLASGOW TO NEW YORK.—Donald Kerr, Navigator.

THISTLE.

FOR several days a silly and unauthenticated rumor of some mishap to Thistle, originating no one knows where, has been floating about, but was promptly set at rest on Tuesday morning, when, with the vice-commodore's pennant of the R. C. Y. C. aloft—a golden lion and crown on a blue field—she dropped anchor off Tompkinsville, Staten Island, after a pleasant and successful voyage of 21 days, 16 hours. The evening before a steamer arriving at Philadelphia had reported her as but 150 miles from Sandy Hook on Sunday, the only time, with one exception (on Aug. 6) that she was seen and reported by the ocean steam fleet. Several of the daily papers had tugs out looking for her, but all missed her except the New York *Herald*, whose tug sighted her in the fog off the Scotland at 3 A. M. on Tuesday morning and took her in tow. On board were Captain John Barr, commander; Capt. Donald Kerr, navigator; Alexander McDonald, first mate; Daniel MacKenzie, second mate, and a crew of 17 including steward.

Captain Barr went at once to New York to report home, returning later in the day. All day long the yacht was besieged by reporters, who boarded in spite of a formidable looking sign, and to whom information and access to the log and charts was freely given, though some pointed questions as to spars and underwater body were cleverly parried by Captain Barr. Small boats flocked in from all quarters with a hearty welcome. An old oyster skiff with a load of clams rowed slowly by, her crew resting on the oars to call out "Good luck to you." Busy tugs, some with big barges in tow, went far out of their course to see the visitor; steam yachts ran by and saluted her, and excursion steamers greeted her with whistles and cheers as they passed close by.

Her log reads as follows:

First Day.—10 A. M. under way from Gourock Bay; fresh westerly breeze, fine weather, occasional showers; 11:30 passed Wemyss Bay; at noon passed through Large Channel, where a large company of ladies and gentlemen joined us; in tow of the steamship Mohican to Whiting Bay, where company left; 3:55 P. M. cast off Mohican's hawser five miles S.W.¼W. from Pladda; wind S.W.; weather cloudy; tacked to southward; 4 P. M. tacked to westward; 6 P. M. again tacked to southward in light breeze and drizzling rain; 8 P. M. light easterly airs, weather fine; 9 P. M. passed Sanda, distant 2 miles; 2 A. M. passed Mull of Cantyre; 3:45 A. M. Rathlin bore S.W., distant 4½ miles, from which departure was taken; streamed log and set channel course; 9 A. M. increasing breeze, heavy cross sea, falling barometer; took in gafftopsail, double reefed mainsail and forestaysail; at noon strong and increasing breeze with rain; Tory bore by account S. true, distant 18 miles; run 152 miles; wind S.W.

Second Day.—Fresh breeze and lowering barometer; 4 P. M. took in jib in heavy cross sea; 6 P. M. moderate and we set the stayforesail; midnight breeze fresh, occasional showers; 4 A. M. breeze increasing, heavy squalls; double reefed stayforesail, took third reef in mainsail; 8 A. M. strong breeze and heavy head sea; 10 A. M. passed bark Hiawatha, of Londonderry, under very low canvas, bound west; moderate gale and heavy sea; yacht wore to S.W.; 155 miles, wind from S.W. to W. by S.

Third Day.—Strong gale and heavy head sea; yacht head reaching to S.W.; 8 P. M. weather moderated a little, set double reefed forestaysail; midnight wore to N.W.; wind backed to southward, barometer rising; set whole forestaysail; 4 A. M. strong breeze, cloudy weather, heavy sea; 8 A. M., rain; 10 A. M. strong breeze with occasional very heavy squalls; 70 miles, wind N.W. to W.S.W.

Fourth Day.—Strong breezes, squally weather; 4 P. M. more moderate, let third reef out of mainsail; calm at 6 P. M., with heavy sea from westward, 8 P. M. breeze started from N.W.; 10 P. M. wind increasing fast, took in forestaysail; midnight blowing a strong gale, took third reef in mainsail; 4 A. M. strong gale, very heavy sea; yacht behaved very well; weather unchanged at noon; 84 miles; winds S.W. to N.W. by N.

Fifth Day.—Strong gale and very heavy sea; head reaching to S.W. under three-reefed mainsail; 6 P. M. more moderate weather, set reefed stayforesail; midnight shook third reef out of mainsail; 6 A. M. set whole mainsail, jib and gafftopsail; 8 A. M. moderate breeze, dull, cloudy weather, heavy westerly swell; at noon we hoisted our number to a bark bound east, distant 8 miles; 93 miles; winds N.W. by N.

Sixth Day.—Moderate breeze and fine weather; all sail set by the wind; 8 P. M., tacked to S. W.; wind unsteady; midnight tacked to westward; 6 A. M., sighted a steamer bound east; 8 A. M. light breeze and fine weather; sights for chronometer; 103 miles; winds westerly and variable.

Seventh Day.—Light airs and calm; 10 P. M. light breeze from E. S. E., set spinaker; 2 A. M. moderate breeze, fine, clear weather; noon, breeze fresh and weather fine; 90 miles; winds, calm first part; latter part E. S. E.

Eighth Day.—Fresh breeze and fine clear weather; all sail set; 6 P. M. passed full rigged ship bound east, distance 10 miles; 8 P. M. spinaker halliards carried away; repaired damage and reset sail; 10 P. M. had fresh breeze and hazy weather; heavy cross sea; fresh breeze and overcast sky; 247 miles; winds easterly.

Ninth Day.—Fresh breeze, hazy and overcast; all sail was set; 12:30 P. M. less wind and drawing to northeast; gybed and set spinaker to starboard; 8 P. M., moderate breeze, light fog; 10 P. M., took in spinaker and set forestaysail; 4 A. M., moderate breeze, fine, clear weather; noon, light breeze, tacked to northwest; 158 miles; winds, E. N. E. to W. N. W.

Tenth Day.—Light breeze and fine, all sail set; 4 P. M., light breeze with mist rose; 8 P. M., showers; passed bark bound east, distant ten miles; 10 P. M., heavy rain; wind suddenly shifted to northeast; 4 A. M., strong breeze, cloudy weather; 8 P. M., strong breeze with heavy sea rose; passed bark bound east under lower topsail and foresails, distant eight miles; noon, strong breeze; weather, cloudy and overcast; 181 miles; winds, W. S. W. and N. E. by N.

Eleventh Day.—Strong breeze and heavy sea, soon more moderate, with occasional showers; 8 P. M., fresh breeze; 4 A. M., wind veered to eastward; set spinaker; 8 A. M., breeze fell, fine clear weather; 10 A. M., took in spinaker, set stayforesail; wind unsteady; noon, light airs and calm; 166 miles; winds, N.E. fore part and latter part variable.

Twelfth Day.—Light, variable breeze, tacked to N.W.; 6 P. M. tacked to westward; 2 P. M., moderate breeze, tacked to northward; 4 A. M., tacked to westward; 8 A. M., tacked to N.W.; fine steady breeze and smooth sea; 103 miles; winds, fore part variable from S.W. to N.W.; latter part steady from S.W.

Thirteenth Day.—Fresh breeze and fine clear weather, sea confused; 6 P. M. steamer passed, bound east, distant 8 miles; hoisted our number; midnight fresh breeze with heavy dew, N.W. sea; 6 A. M. strong breeze and haze; passed schooner bound west; strong breeze and fine weather; 198 miles; winds S.W.

Fourteenth Day.—Strong breeze and fine clear weather; 4 P. M. passed brigantine Anna Marie, of Nantes, bound for Bordeaux; 6 P. M. passed bark bound east, distant 4 miles; 8 P. M. showed signal lights to steamer bound east; 10 P. M. passed a number of fishing vessels; increasing breeze, falling barometer; took in gafftopsail and forestaysail; 2 A. M. strong breeze and thick fog; heavy, confused sea getting up; double reefed mainsail; 6 A. M. moderate gale with heavy sea and rain; took in jib; 9 A. M. sea more moderate, set reefed foresail; noon thick fog, kept horn constantly going; 219 miles; wind S.W.

Fifteenth Day.—Moderate gale, heavy, confused sea; 2 P. M. wind suddenly shifted to N.W.; 4 P. M. sky cleared up, set whole stayforesail; 10 P. M. breeze increased, with heavy sea; reefed stayforesail; after midnight squally until 6 A. M., when wind went down; sea still very heavy, with hard squalls occasionally; 8 A. M. set whole stayforesail; squalls less violent; 10 A. M. jib set; bark passed bound east; strong breeze and cloudy weather; winds, forepart, S.W. to N.W.; latter part, N.N.W.

Sixteenth Day.—Strong breeze, overcast sky; less wind and sea; barometer falling fast; set whole mainsail and gafftopsail; 8 P.M. fresh breeze, with occasional light showers; midnight, decreasing breeze, fine, clear weather, with wind backing to westward; 8 A. M. light breeze and smooth sea; passed large quantities of Gulf weed; light breeze and fine clear weather; tacked to N. W.; 167 miles; wind N.W. and westerly.

Seventeenth Day.—Light breeze, fine, clear weather; 4 P. M. light airs; 8 P. M. calm, close and sultry; light airs from eastward; set spinaker at 4 A. M.; moderate breeze, hazy and overcast sky; 8 A. M. fresh breeze and cloudy weather, sun obscured; 86 miles; winds, first part variable; latter part, E. by N.

Eighteenth Day.—Fresh breeze and cloudy weather, very heavy sea from S. E.; all sail set; 4 A. M. squally appearance to S. E.; took in gafftopsail; 8 P. M. less wind, sea very heavy; midnight moderate breeze and cloudy weather; sea decreasing; 4 A. M. moderate breeze, hoisted number to a steamer bound east; 8 A. M. less wind and sea, heavy banks of clouds and sultry atmosphere; hoisted our number to a steamer passing to southward, distant about 10 miles; noon light breeze and cloudy weather; 170 miles; winds east.

Nineteenth Day.—Light variable airs, cloudy weather; 4 P. M., light airs with heavy rain; 8 P. M., increasing breeze and dark, cloudy weather, heavy lightning to S.W.; steamer passed bound east; 2 A. M., heavy rain, wind changed to northward; 4 A. M., moderate breeze and cloudy weather prevailed; 6 A. M., moderate to fresh breeze, with we ther clearing; 8 A. M., hoisted number to three-masted steamer bound east, distant about eight miles; fresh breeze and cloudy weather; 137 miles; winds southerly first part, N.N.E. latter part.

Twentieth Day.—Fresh breeze and fine clear weather; all sail set; 4 P. M. sighted full rigged ship bound W., 10 miles distant; 6 P. M. passed bark bound E., distant 8 miles; midnight moderate breeze, fine, clear weather; 2 A. M. steamer passed, bound E., distant 8 miles; 4 A. M. passed four ships in company, distance too great for signals; 10:30 A. M. steamship Lord Clive, of Liverpool, bound W.; noon latitude 40deg. 4min. longitude 70deg. 55min.; Anchor Line steamer passed at same time, distance too great for signals; 175 miles, winds first part N.E., latter part N.W.

Twenty-first Day.—Variable airs, fine weather; 10 P. M., heavy lightning to southward; steamer passed bound west; 2 A. M., light breeze, smooth sea; 6 A. M., moderate breeze, cloudy; 10 A. M., breeze increased and veered to southward; set spinaker to port; noon, fresh breeze and fine; 95 miles; winds variable throughout.

Twenty-second Day.—Moderate breeze, dull, cloudy weather; 1 P. M., New York pilot boarded 41 miles southeast (mag.) of Sandy Hook; 8 P. M., light airs and calms prevailed, close and sultry, with lightning to southwest; 9 P. M., Navesink lights bore northwest (mag.), distant 20 miles; midnight, light airs and cloudy weather; 2 A. M., passed Sandy Hook Lightship, distant 3 miles; 3:20 A. M., passed Scotland Lightship, distant 2 miles; light airs; set spinaker to starboard; 4 A. M., steamer Wendel Goodwin took vessel in tow; 6 A. M., came to off Tompkinsville, S. I., in six fathoms of water.

The rig included her racing mast, a splendid stick about 70ft. from deck to upper cap, a topmast only about 20ft. above the cap, a bowsprit about 15ft. outboard, the ordinary trysail gaff, a trysail boom about 60ft. long, and a short spinaker boom. She carried her regular trysail under which she made her passages in England, a jib and staysail, small topsails, and a jury spinaker, her balloonforesail. This latter sail, of fine, soft linen, did duty as a spinaker when required on the passage but will be used as a foresail in the racing. The rig proved large enough to drive her at a very good gait, the best run being 247 miles, but the most important fact in connection with it is that she was run for long stretches at a time under mainsail alone, handling like a catboat.

In model Thistle is a very handsome boat, fair and true in her proportions and with each part beautifully modeled. That she is a Watson boat is evident at a glance, for she shows her relationship to Madge and the others, though with more beam. The sheer is peculiar and not, to American eyes, handsome, the bow is high, the sheer runs down very straight to a point but little forward of the after end of waterline, where there is a curve, fair, but sharp, from which the counter rises quickly, being quite high at the taffrail. The effect of this concentration of all the sheer at one spot is to make the apparent least freeboard very small in appearance, and the observer would say at once that it is less than Galatea or Genesta, which is not the case. Comparing her with the Burgess boats the sheer is less pleasing than the more even and regular circular sweep of Puritan and Mayflower. In the breadth line on deck the contrary is true, the bow shows fine on deck, in spite of a good flare in the sides from the waterline; the stern is much wider at the taffrail than the earlier Burgess boats and far superior to Volunteer, the consequence being that the great curve of the deck line amidships, especially noticeable in Mayflower, is not visible, the whole line from gammon iron to the taffrail being a fairer curve. Of course the lessened beam helps here, but still the difference in the breadths forward and aft is very marked. The rail is low, not over a foot at any point. The clipper stem has a character of its own that relieves the designer of any charge of copying American boats in this respect, as it is very different from the stems of our old boats, being really the old British schooner stem and such as Mr. Watson has employed for years, as in Lenore and Wendur. It is longer than Volunteer's or Sachem's, and unlike them the top side of the stem does not come close up to the bowsprit, there being a space of several inches between. The figurehead is a large thistle of gold, with the motto *Nemo me Impune Lacessit*—none touch me with impunity. From stem to stern the side rounds in a handsome sweep, the very long counter being both wide and flat, rounded into the rail, in fact there is no better simile than a duck's bill to convey an idea of the continuous curves of its surface.

On deck there is a large hatch forward of the mast, a skylight over the main cabin, a very large and wide companion, with a rather low hatch and slide, a skylight over the ladies' cabin, and abaft this a double hatch, the fore part serving to ventilate the after toilet room, while the after part opens into what is usually the sail room, but in this case is a boatswain's locker, for the reception of small stuff of all kinds, spare blocks, marlin spikes, etc.

Below deck is a large forecastle, with iron hammock cots, joining which is the galley. Of course there is plenty of headroom. Abreast the mast and amidships is a small room for the mates, to starboard of which is a very comfortable room for the captain. To port is a passage and pantry, while the cook's berth is forward in the galley. Abaft these rooms is the fore bulkhead of the cabin, a room such as probably was never seen before on a sailing yacht save a few of the largest schooners. The room is of the full beam of the boat, making over 19ft. from inside to inside, about 24ft. long, and nearly 8ft. from deck to floor, the space being broken by but two stanchions of round iron. About the sides are long lockers with closets at each end, the side above being divided into half a dozen square panels. The center of each panel is of light-colored cretonne, surrounded by a frame of plain oak, each panel being separated from its neighbors by walnut rails. The ends are similarly finished, the lockers are cushioned with the same cretonne and the room trimmed in walnut. The effect is light and pleasing while no weight is wasted. Against the fore bulkhead in a neat frame hangs the testimonial from the captain and crew of the steamer Harkaway, rescued by Thistle. Opening aft from the saloon is a toilet room on the starboard side of the companion, the latter opening directly into the saloon, so that sails can easily be sent up or down from deck, this saloon being the sail room in racing. To port of the companion is a passage to a large ladies' cabin, with separate toilet room aft and a wash basin under the stair. The immense saloon is a most striking feature, and the wonder is where so much room comes from. Even after a couple of good staterooms are ultimately cut off from it it will still be very large. In the companion at the head of the stair a roller of teak can be shipped to aid in running sails up and down.

On deck the appointments are simply perfect, teak finish everywhere with ironwork of the best design and handiwork. The bitts are built up of thin plate steel and angle-iron, a stout brace of round iron runs from bitts to gammon iron on each side of the bowsprit, and in each brace are half a dozen belaying pins. The fid is of greenheart, backed with iron. The bowsprit houses, with a bar bobstay such as Clara has, the bowsprit shrouds setting up with heavy turnbuckles to lugs on the side by the channels. There are 8 lugs on each side, the turnbuckle being shifted aft from first to second as the bowsprit comes in. There is not a lanyard on the boat, turnbuckles of heavy proportions being used everywhere. The double forestay leads to blocks on deck on each side of the bowsprit a couple of feet in from the gammon iron, and thence along the deck aft to the steel bitts, to which they are secured with turnbuckles. The shrouds, four on each side, are similarly fitted, and the rope lanyard is nowhere visible.

The forgings throughout the vessel are particularly fine, each part being carefully designed to combine strength and lightness, while the handiwork shows the perfection of the shipsmith's skill. The mast has two spider bands, the upper carrying a winch placed quite high above the deck, while the lower takes the main and spinaker goosenecks. The tiller is a fine stick of teak, nearly 15ft. long, while the main spreader, also of teak, looks to be double that length. The rail is of American elm. The channels are about 18in. wide each, giving the same spread as Volunteer. The only blemish on the fair round side is a sheating of plank laid over the chain plates to ease them through the water.

There are but few metal yachts of American build that do not at once reveal their close relationship to the great tinpan family by seams, butts, rivet heads and unfair spots in the plating; but from Thistle's side one would say that she was a solid mass of metal. Not a seam or a rivet is visible, and further, the side is round, fair and solid looking, none of the frames showing through the skin and without the slightest depression in the whole surface. The master workman is shown throughout, in model, in the handiwork of the hull, and in all the fittings and equipment. She will fit out at once at her moorings and remain about New York until she races. Com. John Clark's steam yacht Mohican left the Clyde for New York on Aug. 15.

ANSWERS TO CORRESPONDENTS.

☞ **No Notice Taken of Anonymous Correspondents.**

E. C. H., Lake George.—Will you please tell me where the caudal fin of the black bass is? Special laws here say no bass shall be taken less than 8in. from snout to caudal fin. There are few here that know where this fin is. Webster says caudal is tail. Ans. Webster is right, and the tail fin is the caudal fin. The tail proper is the fleshy portion behind the anal fin, and is the "caudal peduncle" of ichthyologists.

J. P. H., Fort Wayne, Ind.—Please give weight of largest smallmouth black bass, also weight of largest large-mouth black bass ever taken, the records of which are indisputable. Ans. The largest small-mouth bass we know of weighed 8lbs., and was taken in Lake Ronkonkoma, Long Island, and was on exhibition at Blackford's in Fulton Market. We have the mounted head of a big-mouth, taken in Florida, which is said to have weighed 23½lbs. The U. S. Fish Commission has the plaster cast of a big-mouth which weighed 14lbs.

New York City, May 1887.

The U. S. Cartridge Co., Lowell, Mass.:

Gentlemen—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours,

—*Adv.* (Signed) C. W. Cushier.

CHAMBERLIN CARTRIDGES!

The Only Genuine Machine-Loaded Cartridge in the Market.

UNEQUALLED IN QUALITY AND CONVENIENCE.

The superior quality of these cartridges is not the result of chance, but arises from the fact that the Chamberlin Cartridge Machine is so constructed that every charge of powder and shot is measured with mechanical accuracy, and the wads, which are made especially for use in these machines, are of uniform thickness, and placed upon the powder and shot with a suitable and unvarying pressure, an advantage which cannot be secured by any other method of loading cartridges. Every trap shooter understands the advantages of uniform velocity of shot in wing shooting; this cannot be obtained except the charges of powder and shot are alike in each cartridge, and the wadding placed upon each with the same pressure. This is accomplished in the Chamberlin Machine by means of graduated rammers, which are adjustable to any desired pressure, from five pounds to one hundred pounds. Thorough experiments have been made by which it is found that thirty-five pounds' pressure upon the powder wads gives the best results in Black Powder cartridges, and seventy-five pounds the best results in Wood Powder cartridges. Previous to the invention of the Chamberlin Cartridge Machine, experiments in this direction could not be made, for the reason that no means for ascertaining the pressure that was applied to the wads had been devised. A blow of the mallet was an unknown quantity, and no two blows were alike, and the same can be said of hand pressure upon the rammer.

The following *REMARKABLE SCORES* were made with Chamberlin Cartridges: Match at Cincinnati, Ohio, June 20. Conditions, 50 singles and 25 doubles:

J. R. Stice	94	out of possible	100
B. Teiple	90	"	"	100
McDuff	88	"	"	100
A. Meaders	86	"	"	100

On July 11, same place and conditions:

J. R. Stice	broke 90	out of possible	100
McDuff	" 90	"	"	100
A. Meaders	" 87	"	"	100

This, we believe, is the highest average ever made at 700 clay-pigeons, one-half being doubles, and shows the superiority and uniformity of the Chamberlin Machine-Loaded Cartridges.

PRICES OF CHAMBERLIN CARTRIDGES.

12-Gauge, Club or Climax Shells, loaded 3 1-4 drams powder, 1 1-8 oz. shot,	Per 100, $2.50

Supplies Illinois, Iowa, Wisconsin, Minnesota, Nebraska and Dakota.

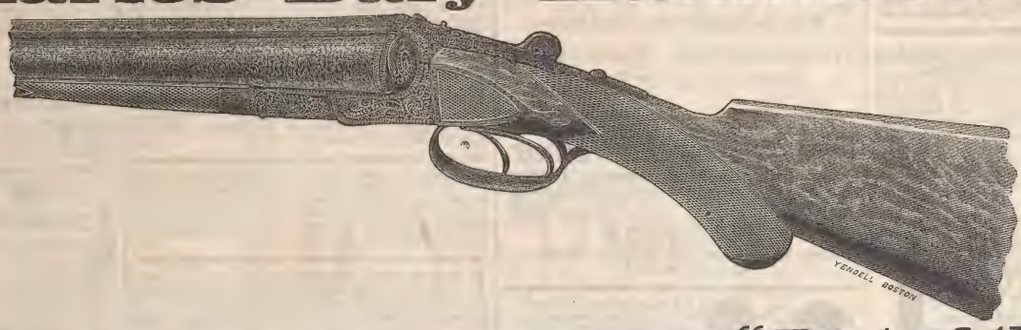
Selby Smelting and Lead Co., San Francisco, Cal.,
Supplies the Pacific Coast and Colorado, Arizona, New Mexico and Wyoming Territories.

Trade in Georgia and Florida
May be supplied either from New York or Cleveland.

All the above named companies operate Chamberlin machines, under the Chamberlin patents. **Beware of all imitations.** "Chamberlin Cartridges" printed on all our labels.

Blue Rock Pigeons and Traps
Supplied from all above named depots.

CHARLES DALY 3-BARREL.



The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, 85.00
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the West, who, like hundreds of others, believes the Daly is the ONLY gun:

CHICAGO, April 28, 1887.

F. P. TAYLER, ESQ.—DEAR SIR: The Hammerless Diamond Daly ordered herewith is to be the same weight, drop and trigger pull as my old gun purchased of you in the spring of 1881. The old hammer gun and I will never part company if it can be avoided, and I only hope the new one will prove as good in every respect. I do not expect to get a better one, because I do not think a better one can be made. This gun has been shot in the field and at the trap during the past seven years more than falls to the lot of half a dozen ordinary guns, and it is still solid and good for many years more hard shooting. It carried off the $500 Diamond Badge, representing the State championship of Illinois in 1885, when, owing to a gale of wind and strong birds, very close, hard shooting was required to stop a bird within bounds. In this contest many of the guns (57) on the grounds did not do justice to the men who held them. Now, I want as fine a gun as you can turn out. If it is too pretty to shoot with I have the old one to fall back on. I can only say in conclusion that I am wedded to the Daly gun, and intend to own one as long as I can carry it.

Very truly yours,
GEO. T. FARMER.

SELF-COCKING.

Automatic Ejecting.

This new Revolver is now ready for delivery. It is almost a fac-simile of the celebrated SMITH & WESSON, and is guaranteed equal in quality and finish to **any pistol in the World.** At present will be made only for the .38-caliber S. & W. cartridge. .32-caliber to follow.

Retail Price, $11.00.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.
BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.
PAR M. ANTONIN ROUSSET.
Translated by
REV. S. W. POWELL.
The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.
Price in cloth, 75 cts.; paper, 50 cts.

Fox-Terriers at Stud

Champ. LUCIFER (as in præsenti)—Fee $50.
To a few approved bitches.
Sire, champion Splinter; dam, Kohinoor, winner of many cups and prizes in England.

BACCHANAL—Fee $20.
Winner of many prizes in America and England.
Sire, ch. The Belgravian; dam, ch. Bedlamite.

REGENT VOX—Fee $10.
Prize winner.
Sire, Tackler; dam, Sandy Vic.

RESOLUTE—Fee $20.
To a few approved bitches.
Sire, champ. Result; dam, champ. Diadem.

Lucifer and Bacchanal have returned from England with fresh laurels. Lucifer winning 1st in open dogs at the Jubilee show in the strongest class ever shown.
Address GERMAN HOPKINS,
tf Hempstead, L. I.

Irish Setter Sarsfield.
(Champion Garryowen ex Currer Bell II.)
In the Stud. Fee $25.00.
Imported to breed to Elcho and Glencho bitches. His breeder, Mr. Giltrap, says: "He will be even handsomer than Garryowen. His performances for a puppy in the Irish setter field trials were very superior." The London *Field* says: "The puppy Sarsfield was the fastest animal on the field, carries himself splendidly, and will make one of the best working Irish setters of the day. Address W. H. PIERCE, Peekskill, N. Y. jy14,3mo

STUD FOX-TERRIER
LITTLE SWELL,
Sire champion Spice, dam Relish; winner of many prizes in England. Fee $15.
BLACK AND TAN TERRIER
CHAMPION VORTIGERN
At stud, Fee $15. Puppies by the above dogs for sale. EDWARD LEVER, 906 Walnut st., Philadelphia, Pa. may19,tf

IN THE STUD.
Yorkshire Toy Terrier.
English champion FEARNOUGHT (E.K.C.S.B. 18,079), a typical Yorkshire, coat of even, full color, perfect texture, measuring 17in. across (8½in. on a side), weighs 4lbs., is half brother to champion BRADFORD HERO. Photographs 50 cents; complete pedigree and winnings free.
Address with stamp, P. H. COOMBS, No. 1 Exchange Block, Bangor, Me. jy28,1mo

CRICKET.
Small prize pug dog, imported stock, weight 10lbs. (A.K.R. 3230), in the stud. Pedigree and full particulars. HENRY C. BURDICK,
150 Bridge st., Springfield, Mass.

CLIPPER.
A typical collie with the proper coat. See press notices. By champion Eclipse out of Nestor. This is the strain that produced Glenlivat, Glengarry, Clipsetta, Heather, Luella, Helen, etc. Fee $20. One or two good dog puppies for sale. JAS. WATSON, P. O. Box 770, Philadelphia.

STUD.
WHITE ENGLISH BULL-TERRIER
YOUNG ROYAL PRINCE.....(A.K.R. 2102)
Weight 45lbs. Fee $15.

Weight 27lbs. Fee $15.
ROYAL DIAMOND.....(A.K.R. 4311)
White English terrier, weight 13lbs. Fee $15.
Pups by above dogs for sale. Address J. W. NEWMAN, 87 Hanover st., Boston, Mass.

Nick of Naso
IN THE STUD.
Fee $50. Limited to six approved bitches. Address NASO KENNELS, Ramsey, N. J. JOHN N. LEWIS, Manager. feb17,tf

The Kennel.

FOR SALE.—A VERY HIGH-BRED LAVERack dog, about 6 mos. old. For pedigree and price address DR. JOHN J. MILLS, 348 Main street, Poughkeepsie, N. Y. aug11,2t

FOR SALE CHEAP.—MASTIFF BROOD bitch Nell, winner 2d, Boston, and 1st, Hornellsville, 1886; a sure breeder and will be shortly in season. Color, fawn, black points, muzzle quite short. Four-month old mastiff pups also for sale. SANDYCROFT KENNELS, Milford, Del. aug11,2t

FOR SALE BEAGLE HOUND LITTLE NICK (Racer—Spangle), field broken; half brother to champion Little Duke. FRANK QUINBY, White Plains, N. Y. 1t

FOR SALE CHEAP.—PUPPIES BY GLADstone's Mark, champion Gladstone ex champion Bessia A. out of Trusty Gladstone, Gun ex Pearl Blue. OAK POINT KENNELS, 1015 Washington avenue, New York City. aug18,2t

TO BREEDERS.—I OFFER MY RED IRISH setter bitch Meg Merrilies (A.K.R. 2181)—Champion Elcho—Peg Woffington. She is rich in color and good points. The dam of prize winners, perfectly healthy, good mother. Will sell at $50 if taken at once. Address H. A. FLETCHER, 241 Commercial st., Portland, Me. aug18,tf

FOXHOUND PUPS.—I HAVE SEVEN FINE puppies for sale at $5 each. H. C. NEWELL, Ashburnham, Mass. aug18,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 25, 1887.

VOL. XXIX.—No. 5. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

MR. WILLIAMS SLAYS A MOOSE.

ANOTHER aspirant for huntsman's glory has come to the front in the person of one D. J. Williams, of Little Falls, N. Y. Mr. Williams has long chafed under the humiliating thought that his name and fame were unknown outside of his own town, save when appended to advertisements of bargains in dry goods, printed in the Herkimer county journals, and this year he undertook a long journey in quest of some worthy object on which to display his valor and establish his claim to wider renown. Returning in triumph and bearing with him the trophies of his gest, he hied him (a hunter always hies himself) to the office of the local journal and in due time beheld his name in print and his exploit heralded in glowing language.

Mr. Williams killed a moose. As the editor of the Little Falls *Times* puts it, he "made a record." It was on the grounds of the Dwight-Wiman Club, two hundred miles north of Toronto, in Ontario; and it all happened in August. "Our Hunters," the *Times* editor heads his account, and between the lines one may detect an earnest striving to report the feat in heroic diction befitting such a glorious deed, with an equal effort to tickle the vanity of Williams, whose advertising card of drygoods is by no means to be despised by the thrifty newspaper man. Here is the exciting recital:

He first saw the animal standing along the shore about one mile off, and started off in that direction with his gun, accompanied by the guide. When about half a mile from the four-footed beast a shot was fired which took effect. The moose started away slowly, but was easily followed by a trail of blood. Suddenly Mr. Williams surprised the moose by approaching too near. Its hair along the spine began to erect itself and curl forward, its ears to lie straight back and its eyes grew green and glassy; then, quicker than a flash, it swung on its hind legs like a pivot and ready for an attack. Mr. Williams was somewhat surprised to see the animal so large and was a little alarmed at its actions, when the guide shouted to aim for its eyes and fire. Mr. Williams never having fired off a gun before, and thinking that it would not make much difference whether he aimed very accurately or not, pointed the rifle in the direction of the moose in a careless manner and fired. Simultaneously with the report of the gun the animal fell, the charge having taken effect in the windpipe. Provision was getting low and the meat was much relished by the party. It weighed 1,200lbs. and had attained a height of over six feet at the foreshoulders. Mr. Williams has suddenly grown famous among sportsmen here, that have been, some of them, for the past twenty-five years in the North Woods hunting moose, and within all that period never having seen one. This animal is almost extinct in this State and very scarce in Canada. Mr. Williams will have the head preserved, which will be presented to the Astoroga Club of this village.

Not every man in this world of unequal blessings, where hunters are so many and moose so few, can thus at one pull of the trigger bring to earth the bristling-maned monarch of the wildwood and cover himself with glory as with a garment. It was one chance in a lifetime, and D. J. Williams was not the man, in this supreme moment, to stay his hand, because hindered by any such consideration as that the law of the country he was visiting forbade moose killing save only between October 15 and December 1. Such foolish notions might do for your "sportsman," but for the law-respecting proclivities of sportsmen, in the genuine sense, Mr. D. J. Williams has only contempt; nothing of that sort should stand between him and his moose and the fame he already saw as his own when the *Herald* editor should chronicle the exploit.

The Dwight-Wiman Club and the Ontario authorities are concerned in this matter, the club, because a man who was presumably one of its guests, while enjoying its hospitalities violated the law for which it ought to be the aim of the club to claim respect from its guests; the authorities, because this Little Falls man is liable to a fine of $50, which he ought to be made to pay into the treasury if he ever sets foot in the Dominion again. He will, of course, not mind a little sum like this, for what is $50 in comparison with the value of this renown earned by D. J. Williams, one of "our hunters."

THE LATEST "INDIAN WAR."

SO FAR as can be gathered from the despatches from Meeker, Colorado, the sheriff of the county has involved the State in a trouble which cannot fail to be very expensive and very disgraceful, and which may cost many lives. The threatened war with the White River and Uintah Utes seems to have had its origin in the thievishness of one or two white men, and the rashness and stupidity of Sheriff Kendall. As for the Indians, they do not at all understand what the trouble is about.

Notwithstanding the blood-curdling accounts of danger which were at first telegraphed to the East, it does not appear that there has been any serious collision between the whites and the Utes, nor has a single white man been hurt, except a valiant militiaman who fell into a hole in the ground a hundred miles or two from the seat of the war and broke his leg. Three Indians have been wounded. And yet the papers talk about the "uprising of the Utes."

The trouble between the Utes and the whites seems to have had its origin in nothing more important than a horse race and the dishonesty of some white men. The story that is told of the beginning of the quarrel is that it is the outgrowth of a horse race which was run between the Utes and some white men several weeks ago. The Utes, as is well known, have good horses, many of which come to them in the way of trade with the Navajoes, and Colorado and his band are said to be particularly well provided with fast running horses. Like all Indians, they are fond of horse racing and will stake their last buckskin or their last blanket on the speed of their favorite horse. They are pretty sure to be successful, too, when they are racing with white men, and nothing pleases them better than to win a race which the whites are confident is theirs. It is a common thing for white men on the border to import horses which have a considerable infusion of thoroughbred blood in their veins for the purpose of beating an Indian "crack." It is stated that this was done in the present case, and that besides all the outside bets made, the horses which were to run were put up in the stakes. As is often the case in such matters, the project of the white men lacked one essential feature of success. Their horse did not run fast enough, and was beaten by the Ute pony, whose owner, of course, claimed the stakes. The white men, however, declined to give up the racer and some other horses they had lost, and the result was that at night the Indians broke into the white men's corral, and taking the horses they had won made off with them. Then the same white men went before the Grand Jury at Meeker and had the Indians arrested for horse stealing. They resisted when the Sheriff proceeded to serve the capiases, and hence the Ute "uprising."

The war, so called, seems to be only a bullying attempt to save to a lot of gamblers the stakes which they lost with their eyes open. The precipitancy of Sheriff Kendall when he attempted to arrest his men caused a number of shots to be fired, and ever since then there has been a wild hullabaloo in Colorado about the "Ute war." It is stated that the trouble so far has cost the State of Colorado $100,000, and it is quite possible that if matters are left in charge of the hot-headed and inexperienced persons who are now in command, many lives will be lost. This will be rather a dear price to have paid for the rescuing of a few hundred dollars' worth of horses, belonging to a gambler.

For many years it was the boast of the Utes that they had never shed a white man's blood, and this was true up to 1879. The Utes can fight, and if too hardly pressed they will do so, and so far as can be gathered from the news received from the front, Sheriff Kendall will be responsible for every drop of blood shed in the war that may ensue.

From a knowledge of the Utes extending over many years, acquired by long residence in their camps, we have no hesitation in declaring that it would have been a perfectly easy matter for the Sheriff to have gone without arms and accompanied only by an interpreter into the Ute camp and to have returned with the indicted men or the horses. This we would have undertaken to do. Instead of pursuing such a course the Sheriff proceeded to frighten the Indians out of their wits by "holding them up." In the alarm a few shots were fired and three Indians wounded. *Hinc illæ lachrymæ.*

A LIFE OF USEFULNESS.

THE death of Spencer F. Baird has brought to its close a career of great achievements in practical scientific enterprise. Professor Baird had a genius for hard work. The full magnitude of his labors can never be adequately appreciated by the public. Some hints of what was demanded of the man and what he actually accomplished may be found in the reports of the Smithsonian and the Fish Commission, the complex institutions over which he presided with such rare ability, devotion and honesty of purpose. To his guidance is due the rapid development of the Smithsonian Institution, the founding of the National Museum, and the success of the United States Fish Commission. Distinguished at home and abroad as a scientist, he has also left behind him a shining record by his wise administration of the vast appropriations intrusted to him by Congress for the prosecution of the work of fishculture. In Professor Baird's ability and integrity Congress and the Executive Department of the Government had the most implicit confidence, and it was a trust which he held with scrupulous and conscientious regard. So sensitive was he in this respect that the suspicion cast upon the administration of the funds of his office by a sensation mongering newspaper is said to have preyed upon his mind and actually shortened his life.

As a scientist, an officer of the Government, an unselfish patriot, and a man, Spencer F. Baird has won for himself an assured place among the men of his time.

ESOC QUET.

A PARTY of American and English sportsmen, consisting of Gen. Rodney C. Ward, Judge Gildersleeve, Chauncey Marshall, Eugene Underhill, Wakeman Holberton, Col. William Hester, Murray Boocock, George C. Masters and Dr. C. M. Hoagland, have left New York for a rich claim, staked out by them in the Northwest, where big game and fish of unprecedented quality and abundance are said to be awaiting their coming. The exact spot was selected after months of inquiry, correspondence, study of surveys and cross-examinations of Western hunters; and each individual member was sworn to secrecy as to the party's destination. A reporter inquired the location the other day and the reply was "Esoc Quet." These words appear in the New York *Times* of yesterday, and it is clear that the reporter took them to be the name of the place to which the party has set out, for the *Times* says that they are going "to Esoc Quet, a wild spot in Idaho." Now, Esoc Quet is not a geographical appellation. It is an Indian phrase, of the Kalispel dialect, meaning "What are you giving us?" or as some authorities translate it, "Come off the roof, cully." As used by the member of the party interviewed by the *Times* reporter, it was evidently adopted as a polite way of saying: "Go to. Do you think we are giving this thing away? Not much. It has cost us time and money to discover this bonanza, and we don't propose to find somebody else's tin cans on the stumps when we get there."

SPENCER F. BAIRD.

AFTER an illness of many weeks Prof. Spencer F. Baird, Secretary of the Smithsonian Institution and United States Commissioner of Fish and Fisheries, died at Wood's Holl, Mass., last Friday, Aug. 19. He had gone to Wood's Holl in June, much broken down in health and spirits, but there had subsequently been such improvement that his recovery was hoped for, and his death when it did come was sudden and unexpected.

Spencer Fullerton Baird was born in Reading, Pa., Feb. 3, 1823. He was of mixed Scotch, English and German descent; and the name Spencer came from an ancestor, a

preacher whose war sermons were so powerful in Revolutionary times that the British Government put a price on the sturdy patriot's head. At an early age the boy displayed those tastes for natural history which were to direct the course of his life and in after years make him distinguished among his contemporaries. When fourteen years old, with his brother William, he began a collection of the birds of Cumberland county, Pa., and the materials then brought together afterward formed the nucleus of the Smithsonian collection of birds. The brothers contributed notes to the Philadelphia Academy of Sciences, and so, his love of ornithology becoming known, young Baird found a warm friend in Audubon, with whom he exchanged specimens and to whom he contributed materials for the great naturalist's works. Graduating from Dickinson College in 1840 at the age of 17, he entered upon the study of medicine in New York, but interrupted his course, and in 1845 accepted the chair of Natural History, and later that of Chemistry, in Dickinson College. Here he found abundant opportunity for pursuing the studies most congenial; and it was his habit to make long pedestrian tours in quest of specimens and in investigations of animal life. While at Dickinson he became associated with Agassiz, and the two projected a work of joint authorship on the fresh-water fishes of the United States; this, however, was never completed.

In 1850, Prof. Baird was elected Assistant Secretary to the Smithsonian Institution, and in this new field he very soon gave exhibition of those rare powers of observation and high administrative capacity which marked his life work at Washington. He instituted methods of work in the Smithsonian which are still followed there; it was largely owing to his influence that the study of special branches of natural history were intrusted to individuals in the employ of the Government. On the death of Prof. Henry he succeeded to the Secretaryship.

In 1871, Congress having provided for a United States Commission of Fish and Fisheries, President Grant placed Prof. Baird at the head of it. To this position he brought ripened powers, and assuming the tremendous responsibilites which carried with them no added compensation, for the office was an unsalaried one, he devoted himself with unselfish enthusiasm, organized a corps of assistants, and set about one of the greatest economic undertakings known to history, with what success is well known. The work of the United States in investigating the causes of the depletion of food fishes and in restocking the waters was inspired and directed by Prof. Baird.

His printed contributions to science were numerous and valuable. A chronological catalogue of his works, prepared by order of the Smithsonian Institution and only carried down to 1882, includes 1,063 titles. In 1849 he had translated and edited the text for the "Iconographic Encyclopædia," the English version of "Heck's Bilder Atlas." Between 1850 and 1874 he published several works upon North American natural history, and from 1870 to 1878 he was scientific editor of Harper Bros.' periodicals, besides being the author of their yearly cyclopædia of science. A partial list of his writings during these years would include: "Catalogue of North American Reptiles," by Baird and Girard (1853); the "Pacific Railroad Report on Mammals" (1857), in which were contained accounts of seventy species of mammals additional to the lists of Audubon and Bachman; the "Birds of North America" (1858), the "Review of North American Birds" (1864-66), the "Geographical Distribution of North American Birds" (1865), the "History of North American Birds," in connection with Brewer and Ridgway (1874).

As a scientist Prof. Baird enjoyed world-wide fame; his services and attainments were recognized and rewarded by medals and other testimonials. He received the degree of Doctor of Physical Science from Dickinson College, and that of Doctor of Laws from Columbian University. In 1878 he was awarded the silver medal of the Acclimatization Society, of Melbourne; in 1879, the gold medal of the Société d'Acclimation of France, and in 1880 the Erster Ehrenpreis of the Internationale Fischerei Ausstellung, at Berlin, the gift of the Emperor of Germany. In 1875 he received from the King of Norway and Sweden the decoration of Knight of the Royal Norwegian Order of Olaf. He was a member of the leading scientific associations of England, Austria, France, Germany, Holland, Portugal and New Zealand. Over thirty-three distinct genera and species in North, South and Central America and the West Indies have been named in his honor. He was one of the early members of the National Academy of Sciences; served two years as permanent secretary of the American Association; was one of the trustees of the Corcoran Art Gallery; was a trustee of Columbian University; a president of the Cosmos Club, of Washington, and was the director and official head of the National Museum.

A published description of Prof. Baird's workshop in Washington tells us: "You will find it in the basement, and truly it is a busy place. There is not much furniture in the room, but it is all in use by the busy occupants. Here are a couple of clerks and a stenographer, and scattered around about, yet in the most perfect order, are books and maps and drawings and castings and models of every description. The professor is a great worker, and he utilizes every moment of the day. He arises at 7 and by 8 o'clock he has had his breakfast and is at his desk. For five hours every morning he keeps the stenographer busy attending to correspondence and writing out reports, instructions, letters and scientific articles. This part of his work can be done by no one else. By 1 o'clock he has finished, and, leaving his stenographer to prepare the papers for his signature, he leaves the residence for the institute. Here for two or three hours he receives callers and attends to the routine work of his office. He is also the head of the Fish Commission, and he gives that an hour or two each day. But this and many other things with which he is connected do not come properly within the province of this article. Prof. Baird is essentially a worker. When one has written of his work, nothing remains to be told. His habits are simple. He retires at 11 o'clock and arises at an early hour. He never goes to a lecture or to the theatre, and the dinners and receptions he attends during the season can be counted on the fingers of one hand. He gives it out in confidence that the first reason why he doesn't go out is that he knows he will go to sleep, and the second is that he doesn't want to, but prefers staying at home with his books. What does he do with his leisure time? Well, he has precious little of that delightful commodity, and what little he has is spent in reading novels (strange to relate) of the blood and thunder order."

The following description will convey an idea of the surroundings amid which he labored, with a graphic portraiture of the man: "The house in which the scientist lives is not a very elegant one, but it is situated in a very fashionable locality. Standing on the little porch, waiting for our knock to be answered, we can see the residences of Secretary Bayard, which is only a few doors below, of Senators Morrill, Allison and Payne, and of Justice Miller. It is one of the most desirable neighborhoods of the capital, and within a circuit of a quarter of a mile can be found the residences of hundreds of public men. The house is of brick, three stories and a basement high, with a bay window of good dimensions running up the front. There is also a mansard roof, and a large anemometer help to make the house noticeable. The visitor is ushered into a prettily furnished parlor at the left. From this vantage he can have a good view of the rooms of the house on this floor, as they are all connected by folding doors. The prospect is not great or rich, but it is a model interior for a man in comfortable circumstances and of refined tastes. The parlor is furnished with modern furniture, and there are scores of etchings and paintings and photographs on the walls. On the stands are rare little articles of bric-à-brac gathered here and there and everywhere in pedestrian tours over the country and in continental travel. Next to the parlor is the library, and it is very much like the former room, except for the bookcases reaching to the ceiling. The books are, for the most part, of a literary character, though here and there a ponderous work looks out at us from between the dainty volumes in blue and gold. * * *

"We take cognizance of these surroundings while waiting for Prof. Baird, and now his rather ponderous tread is heard upon the stairs. He enters the library with hand extended out to you, and a welcome smile from his intellectual face and bright, penetrating eyes. Over 6ft. high, broad shoulders, heavy set and altogether massive, he is not, by any means, an ordinary appearing man. Yet, few people you meet on the street could tell you who he is. Very likely they would not be asked, for he is not a man who would cause remark on account of his personal appearance. He is careless in his dress, and skulks about the capital with his gray suit and slouch hat, looking more like a Virginian farmer than one of the foremost of American scientists. He rarely notices his surroundings, and will pass his most intimate friends on the street without a sign of recognition. His thoughts are no doubt far away during these moments of pre-occupation. He is perhaps thinking of some new scientific discovery, or a discovery is in process of formation in his ever active brain. But he is not always absent-minded, for in his social and business intercourse he is one of the most agreeable of gentlemen, and his conversation is singularly fascinating."

The following tribute to Prof. Baird's worth is by Prof. J. W. Powell, the director of the Geological Survey: "I have known Prof. Baird for the last eighteen years; he was like a brother to me. There has been nothing of importance that I have undertaken in that I have not first consulted with Prof. Baird. He was the greatest man I ever knew. He knew more than any man I have come in contact with. He knew every subject with which he had to do thoroughly. He mastered all the details. His pre-eminent quality was perhaps his ability as an organizer. It was given to him to accomplish what few men are capable of in a lifetime, the organization of two great institutions—the National Museum and the United States Fish Commission. Prof. Baird was a man of great practical sense. He could see the outcome of matters and had a broad comprehension of the relative importance of details. He was an unselfish man; his personal interests were lost sight of in the interest of the institutions under his care. He expended public money with the careful scrutiny that most men give to their private affairs. His entire unselfishness and devotion to his work, as well as his practical sense, was appreciated by the committees of Congress when he appeared before them to explain the needs for the money asked for. Prof. Baird was a great scientist, and it is a singular fortune that the Smithsonian has had in succession two such eminent men as Henry and B. 1 d."

Prof. S. P. Langley will probably succeed to the Secretaryship of the Smithsonian, and Mr. G. Brown Goode to the Commissionership of Fisheries.

The Sportsman Tourist.

ORIGIN OF THE MEDICINE LODGE.

THERE are certain western Indian tribes who have an annual religious ceremony called by frontiersmen the Sun Dance or Medicine Lodge. None of these tribes have been more faithful in the performance of this sacred duty than the Blackfeet. Some, indeed, have given up the practice since the disappearance of the buffalo: and it is very likely that the Blackfeet will never build another one.

According to Blackfeet tradition, the origin of the Medicine Lodge was as follows:

In the beginning there was no war. All the tribes were at peace. Now of the people was one, a very rich man, and he had three wives and a daughter. This girl was the most beautiful young woman in the whole camp. She had been asked for by several young men, but had refused to marry any of them. As time passed many who were rich and handsome sought her for a wife, but she always replied, "No, I will never marry."

Then her father said: "Why this, why take no man?"

"Why," she replied, "should I take a husband? I have a rich father and mother, our lodge is good, the parfleches are never empty, there are many robes and tanned skins, plenty of soft fur for winter. Why, then, should I marry?" Then her father spoke not.

The Raven packers held a dance; they all dressed carefully and wore their ornaments; and many asked for this young girl, and again she said no. Then the Bulls, the Foxes, and others of the E-kûn-ûh'-kah-tse, held their dances, and all those who were richest, handsome and brave asked this man for his daughter, but none succeeded. Then was her father angry and he said: "Why now this way? You have your choice; all the best men have asked for you, and still you say no. Now I do believe you have a secret lover."

"Ah!" said her mother. "What shame for us should a child be born and our daughter still unmarried."

"Father," said the girl, "pity! I have no secret lover. But now the truth. That Above Person* told me, 'Marry not, for you are mine; thus shall you be happy and live to great age, and again he said: 'Take heed, marry not, for you are mine.'"

"Ah," said her father, "against his words no man may speak." And they talked no more about it.

There was a poor young man, very poor. His father and mother were dead, and all his relatives too. They also had departed to the Sandhills.† No lodge was his. No wife to tan his robes or sew his moccasins. Entered he a lodge here to eat and sleep, and to-morrow he went to another; thus he lived; but there were those of kind heart, and when they saw his poverty they gave him a robe or leggins, or moccasins, thus was he clothed. Said those rich young men, "Why now not ask her who has refused us to marry you?" and they laughed. "Ah," said he, "as you say, I will go and ask her," and he went down by the river. By the water he waited and she came along. "Girl," he said, "wait, I have words for you. Not as a designing person do I ask you, but openly where the sun looks down and all may see."

"Speak then," said the girl.

"I have seen the days," continued the young man. "I have seen you refuse those who would have you for a wife. To the rich, and those of brave deeds you have said no. Now, to-day have they laughed, and they said to me, 'Why do *you* not ask her?' I am poor, very poor. No lodge is mine. I have no food, no robes, no fur for winter. Neither have I a relative. All have gone to the Sandhills. Yet now, to-day, I ask you, take pity! be my wife."

Then hid she her face, and she brushed the ground with the point of her moccasin, back and forth, back and forth, for she was thinking. Then after a time she said. "True, all those have I refused. Yet now the poor one asks me and I am glad. You will I marry, and my people will be happy. You are poor, yet that will matter not. My father will give you many dogs. My mother will make us a lodge, and they will give us robes and furs, and you will be poor no longer."

Then was the young man very happy, and he started to kiss her, but she held him back and further said: "That Above Person has spoken to me, he has said: 'Marry not, for you are mine, and you shall live to great age,' and again he said: 'Take heed, marry not or you shall quickly die,' therefore I am not my own. I am his. But now I say: Go you to that Above Person and tell him, 'She whom you commanded heeds your words, yet now would she marry me, therefore am I come.' If he shall say yes, he will give you a sign for me. But if he refuse, then will you return not. Or, if in that far country you fail to find his lodge, then return not."

"Oh!" said the young man, "good at first your words and my heart was glad. But now it sinks within me. Now am I dismayed. Does the sun shine? Does the river flow? Are the trees in leaf? I cannot tell, for I look on the night and my heart is sad. Where is that far off lodge? and where the trail which no one yet has traveled?"

"Take courage, take courage," said the girl, and she turned to her lodge.

Then went he of sad heart to an old woman who had been kind to him, and he said: "Pity me, for I am poor. For now would I travel, make me then some moccasins and give me a sack of food."

Seven pairs the woman made, with parfleche soles, and she gave him too a sack of food, pemmican of berries, pounded meat and strip of dried back-fat. And when she had done the young man started to find the home of the Sun. Alone and with sad heart he climbed the bluff. "Shall I ever see the people again?" he thought, as he stopped to take a last look at the lodges, and with a sigh he went on.

Now many days he traveled along, and every day his sack of food became lighter. One night he stopped close by the home of a wolf. "Ha!" said the wolf, "what is my brother doing here all alone?"

"Ah!" replied the young man, "I seek the home of that Above Person. I go to ask him for a woman. She has told me to, for she is his own."

"I have traveled far," said the wolf, "I know all the prairies, and the valleys, and the mountains, yet I have

*The sun.

†Sandhills—A barren place where all the people go after death.

never seen his stopping place. Yet I know one smarter than I. Go ask the bear. He may tell you."

Another day, and again he traveled on. Here he found a few berries to eat, and there a root which he dug up, for his sack of food was light and he was very careful of it. At night he stopped near the home of a bear. "Where," asked the bear, "is your home? Why travel alone, my brother?"

"Now help, now pity me, my elder brother!" said the young man, "because of her words* I seek the Above Person. I go to ask for her."

"I know not his stopping place," said the bear. "I have traveled by many rivers, and I know the mountains; yet I have never seen his lodge. There is one beyond, that striped-face (the badger), who is wise. Go then and ask him."

Then quickly went the young man to the badger's home. He was in his hole. Stooping over, the young man shouted, "Oh, cunning Striped-face! Oh, much-knowing animal! I would speak with you."

"What do you want?" said the badger, poking his head out.

"That bear," said the young man, "told me to ask you. I seek that Above Person's home to ask him for her. She is his own, and therefore must I find his stopping place."

"Ah!" said the badger, "I know not where he lives. Over there in the timber is a wolverine's home. Go ask him. He is of much knowledge."

Then went he to the woods and looked all around for the wolverine, but he could not find him, and being tired he sat down under some bushes to rest. "*Hi-yu! Hi-yu!*" he cried. "Wolverine, take pity on me. Gone my food. Worn out my moccasins. Now surely I must die."

"What wants my brother?" he heard, and looking around he saw the animal sitting close beside him.

"She whom I would marry," replied the young man, "belongs to that Above Person, and by her words I am looking for his stopping place, because I must ask him for her."

"Ah," said the wolverine, "I know where he lives, yet now 'tis night. Wait then till morning, and I will show you the trail to the water's edge. On the other side of it he lives."

True his words. The trail led to the water's edge, but there—he looked and his heart almost stopped. Great was that water. The other side could not be seen, nor was there any end. In despair he laid down on the shore. His food was gone and he was weak from much travel. "Here," he thought, "must I die. No one may cross such far water, and too weak am I to return to the people. Yes, now must I surely go to that shadow land."

Not so. There were his helpers. Two swans came swimming by. "What," they said, "does our brother here? Far from his people's ground, why here alone?"

"I am here," he told them, "to die. Far away in the Blackfoot land is a beautiful girl, and I would marry her. But she is not her own. She belongs to that Above Person. Many days have I traveled, but I have not found the place. And now my food is gone. Far away the land of my people, my body is weary, I cannot return to them. Here, then, must I die; soon will my shadow depart for the Sandhills."

"Not so! Not so!" cried the swans. "Across this water is the home of that Above Person. Climb, then, upon our backs and we will take you there."

As if he had just set out on his travel, as he had eaten plenty, did his strength return and his heart was light. Quick rose he from the ground, and wading out reclined upon their backs. Deep and black that mighty water, and very wide. Strange people lived within its depths, and other mighty animals who often seize a person. Yet safe they carried him and took him to the other side. Ah! there it was, a big new lodge and painted on it the deeds of war and unknown animals. Yet now he dared not enter. What would they say? Great might be their anger. And full of fear and shame he crawled along and hid where tall green rushes grew upon the shore. There, as he lay, came Morning Star and found him. "Why hidden here?" he asked. "Where is your home? Why wandering far?"

"The Blackfoot land," he said, "is where I lived. Far have I come to see the Sun, yet now I see his lodge, I shame to enter."

"Fear not," said Morning Star, "he is my father. Come now with me, my mother sits within and she will give you food."

Then entered he with Morning Star and sat beside the doorway.

"Who," said the Moon,† "is this person?"

"He is a Blackfoot," replied her son, "and has traveled far to see my father."

Then the Moon gave him some food, and after he had eaten much he slept. When he awoke it was night and the Sun had already entered. "My son," he said, "has told me that you have come to see me and I am glad. Far is the Blackfoot land, tired your body, now. Stay with us then a while and eat and rest and sleep."

The young man stopped there a long time and he and Morning Star were great friends. Often the young man would say, "I must go back," but Morning Star would say, "No. When my father speaks you may go. Do not ask him or he will be angry. Wait for him to say."

One night the Sun said, "Now, young man, tell me, why came you here?"

Then said the young man, "Of our people is a beautiful girl and all the rich and brave ones asked for her, but she looked not at them. I am very poor, but I asked her to be my wife and she was glad. But then she said, 'I am not my own; to that Above Person do I belong. Go then and ask him for me.' Far have I traveled and long has been the trail. To you have I come to ask for her."

"True your words," said the Sun, "I have watched the days and I know it is so; and now I give her to you. I am the only chief. Everything is mine. I made the earth, the mountains, prairies, rivers, woods, people and animals. All these I made. I can never die. True, the winter makes me old and weak, but every summer I grow young again."

Then further said the Sun, "What one of all animals is smartest? The raven is, for he always finds food, he is the smartest. He is never hungry. Of all animals which is most Nät-o-yé?* The buffalo is. Of all animals I like him best. He is for the people. He is your food and your shelter. What part of his body is 'medicine?' The tongue is. That is mine. What else that grows on bushes is medicine? Berries. Those are also mine." Then further said the Sun, "You shall build me a sweat house, and you shall build me a great lodge. Those who are pure shall build it for me, and I will give them great age. Come now with me and see the world." Then the Sun took the young man to the edge and they looked down and saw it; round it is, and flat, and all around the edge the jumping off place [or the walls straight down]. "Thus," said the Sun, "shall you build my lodge, round, with walls. And the sweat house shall be like the sky above the world [*i. e.*, a hemisphere]. You shall make it of an hundred sticks, and one-half shall be black, and one-half red."

Further said the Sun, "Which is most knowledge? the heart or brain? The brain is; the heart often lies, but the brain, never. She who makes the vow shall be pure, and of good sense; the young men shall get the tongues, three hundred, and she who builds the lodge shall have to help her, other women who are pure, and they shall cut and dry the tongues. For the people, for their long life and food shall these be built. For I shall like the tongues and the berries and other presents they may give. But if one of lying heart, if one impure shall build the lodge, then will I be angry, and the people shall perish. And others shall make the vow, and if they give me of their body [meaning finger joints, bits of flesh, etc.] they shall survive, and reach great age. In war, the arrows shall pass them by, and sickness shall not destroy them. Here now, two raven tail feathers, they shall be the sign for her that I give her to you, and the husband of her who makes the lodge shall wear them on his head."

Then the Sun gave him beautiful war dresses, a shield, bow, quiver and arrows, and said: "Now you may depart, not by the long and weary trail you came, but by my trail. There the wolf road [the milky way], follow it, and you will reach the ground." And the young man departed.

Hot the day, all the lodge skins were raised, and in the shade of them the people sat. Very hot the day. Now there was one, a chief, who had many friends, and all day long they came and feasted with him. Out on a butte, beyond the camp, a person sat; early in the morning this chief saw him sitting there, close wrapped in his robe. And his friends came and went; the sun rose, and reached the middle and passed on down; and still the person sat there moving not. Now was evening come, and said the chief, "Why sits that person there? All day he has not moved. Great has been the heat, yet he has not drank. Now go and see, and if he be a stranger bid him come and eat with friends." Then went some of the young men to him and said, "Why sit there in the heat all day, oh stranger? There the shade of lodges, cool water, and food in plenty. Come now with us."

Then rose the person and threw off his robe and followed them, and great was their surprise. Beautiful his dress. Of strange make his shield and bow. But they knew his face and they ran ahead and shouted, "Here now is that poor young man returned, poor no longer, for he wears rich clothes and his shield and bow are of strange make." Then came all people to see him, and they said, "Where have you been so long? Where found you all these rich things?" but he answered them not. There in the crowd stood that young woman; and taking two raven feathers from his hair he gave them to her and said: "Far has been the trail and I nearly died. Yet by those Helpers I found his lodge. There the truth, the sign, he sends those feathers to you."

Great her gladness then. And they were married, and made the sweat house and the great lodge as the Sun had said. And the Sun was good; he gave them great age, and they sickened not. But when they were very old, one morning said their children, "Arise and eat." They did not move. In the night in sleep, without pain, their shadows had departed for the Sandhills.

The ceremony of the Medicine Lodge always takes place in July, about the time berries are ripe. During the preceding year a woman (often several of them) had vowed to build this lodge, in return for which she prayed for the recovery of some relation from a dangerous sickness, or for their success in battle. None but a virtuous woman might make this offering. It sometimes happened that the person died or was killed in battle. Then the relations of the woman all mourned; and ever afterward she was the butt of ridicule and the contempt of the whole camp. But there were always enough of those who made this vow to insure the building of a lodge each year.

First, three hundred buffalo tongues were procured, which, with prayers and songs to the sun, were cut and dried by those who made the vow and by others who were selected on account of their virtue. Great heaps of berries were also gathered by these women. Sufficient poles were then cut and piled up in the center of the village. With much ceremony, prayers and songs the walls were then made by sticking posts upright in the ground round a tree, leaving a space about 4ft. wide for a doorway. The diameter of this inclosure was about 40ft. Then a warrior renowned for bravery and success was chosen to cut a hide into strips, and while doing so he was obliged to rehearse his brave deeds. Long poles were then laid from the top of this wall to the tree, making a roof, which was securely fastened by the strips of hide. The walls and roof were then covered with brush, gathered by the women. In carrying this brush to the lodge they were obliged to stop at intervals and make a prayer to the sun, and on placing it on the lodge they also made a short prayer.

The lodge being built, a large sweat house was made of one hundred willows, and painted one side red the other black, and the whole covered with cow skins. The *O-kăh*, or woman, who made the vow then built a fire and heated the rocks, and her husband, calling together the principal men of the tribe, always including a Bear-man, entered the sweat house with them. The rocks, now red hot, were placed in a hole dug in the center of the house. A pipe was then filled and lighted by the Bear-man, who addressed a long prayer to the sun, informing him that a lodge had been built for him, and the proper food secured, and asking in return long life and prosperity for the people. That evening the woman who made the vow and her husband took possession of the lodge, and remained in it during the ceremonies, which lasted four days and nights. During this time they were not allowed to eat or drink, and only at night could they go outside. The next morning after the sweat house the "medicine food" was divided among the people. Many offerings to the sun were then made, wearing apparel, weapons, fine robes, ornaments and finger joints and bits of flesh. All these were tied in bags and hung near the roof on the center pole or tree. The next day was devoted to "making warriors." Slits were cut in the breast or back of these aspirants, rawhide ropes fastened into them, and suspended to the center pole, the men danced and jerked about until the ropes pulled out. A man was not called a "warrior" until he had gone through this ceremony four successive seasons. The remaining two days were devoted to the "counting of coups" and dancing by the warriors, and the E-kŭn-ŭh'-kah-tse. During all the four days prayers were constantly offered by the Bear-men for the health and prosperity of the people.

J. W. SCHULTZ.

*A Blackfoot seldom mentions a person by name, and will talk for hours about what this or that one said, and one must ask pointedly to find out who he is talking about.

†The sun and moon are supposed to be man and wife and the morning star their son.

*The word means "of the sun" and is generally translated as "medicine," not physical but spiritual.

A TRIP TO MT. MITCHELL.

ASHEVILLE, N. C., July.—The conversation turned upon the wonderful scenery and delightful atmosphere of this region. One and another mountain trip were suggested as being delightful and worthy of attempt when the proper time should arrive. While so engaged, Prof. E. Waller, of New York city, joined us. During the year of his sojourn here he had never made a mountain trip outside of the immediate vicinity of Asheville. The professor is charming company, and returns to his duties in the School of Mines, Columbia College, very soon. Different points within reasonable distance were freely discussed.

Finally Mt. Mitchell was decided upon. We planned to ride the first day to Big Tom Wilson's, the famous trapper, hunter and guide of the Black Mountains, and there take up our headquarters, the next day to make the ascent of Mt. Mitchell and camp over night, returning the next day to Big Tom's. Dr. Gatchell had made the trip a year before, and therefore was competent to guide us safely to Big Tom's house. Four responded to roll call at 6 A. M. Wednesday, viz.: Dr. Gatchell, Prof. Waller, George Lyons and the writer.

A refreshing shower had fallen the evening previous which had cleansed the air and laid the dust, so oppressive for several days, and the day promised to be fine but warm. We rode out the Beaver Dam road about four miles, then turned over Elk Mountain ridge. From here a beautiful view of Asheville, the valley and the distant Mt. Pisgah is obtained. Our next elevation was passing through the gap of Elk Mountain, and again we rested to look back and admire the landscape. When within a mile of "Chamber's" we took the wrong road and had gone two miles before discovering our error. We retraced our steps and were soon on the right track. This mistake cost us nearly two hours of time, so that it was noon when we rode into the yard surrounding Chamber's farm-house. Wandering around in the rugged fastnesses of the craggy mountains whither our false trail was leading us, was not the most pleasing prospect to contemplate, at least others report it anything but satisfactory, except to those who are hunting bears, and we were willing to accept their testimony without questioning. Many persons have lost their way in the craggies. Gregg Chambers, the genial proprietor of this mountain farm of 400 acres, cheerily called out: 'Light, gentlemen, 'light." The settlement about Chambers is called Vanceville and is located in Reems Valley.

As we sat watching the dark clouds of a thunder storm roll up the valley we conversed with Hardy Chambers, son of the proprietor, regarding the game to be found in and about the mountains. Speaking of bears, he pointed to a tawny rough-coated dog lying in the shade, and said they had killed twenty-five bears in the last three years with that that dog, assisted by others. The breeding of the dog he said was "part foxhound and part bloodhound." His teeth were certainly formidable, and although he was not a large or heavy animal, I did not doubt his ability to pull a bear. Hardy said there was one remarkable thing about that dog. When he found it was impossible to avoid being hugged by a bear he invariably turned his side instead of his own breast to the beast's breast, and thus saved his spinal column intact. He had been squeezed several times and still seemed as good as ever. Turkeys, wolves, pheasants (ruffed grouse) and quail are abundant. The two former in the mountains and slopes, and the latter in the neighboring thickets and fields. When pasturing sheep on the mountains, he said, wolves had often jumped in and carried off a mutton before help could be given it, especially at night.

At 3 P. M. we saddled our horses, and bidding our new friends "so long," turned our faces toward Big Tom Wilson's, sixteen miles away. Just before reaching Barnardsville Prof. Waller's mare strained her shoulder on a rolling stone, and after walking a mile we perceived she would be unfit for the trip, and he left her with a farmer until his return. His saddle bags and blankets were placed on my horse and the Professor started on foot, dropping into a swinging gait which was very effective and kept him in the lead. About 6 o'clock we came to the foot of Ivy Gap, and being tired of riding, I gave my horse to Geo. Lyons, who had previously vacated his saddle in favor of Prof. Waller, and started up the trail. I consider myself a good walker and have tramped many a mile fishing and hunting. We were rather late and pushed ourselves to reach the top and find shelter at Big Tom's, six miles away, before darkness should envelop us. It was warm and that rapid climb was exhausting. When we reached the gate at the summit, men and beasts were blown.

Here we obtained our first glimpse of Black Mountains. The appropriateness of the name impressed me. Environed as we were by high mountains the sun had set for us and although the tip of Mitchell's Peak was tinted with the glory of the lingering rays the remainder was a dark, terrible yet fascinating wall. The feat of climbing to its summit seemed an impossibility when we thought of the fallen trees, rocks, crevices, thickets and almost perpendicular sides of this highest mountain east of the Rockies. The trail down the Elk fork of the Caney River to Big Tom's on Big Caney is rough and requires time, so it was 9 o'clock when we rode up to his gate. To our severe disappointment we learned that Big Tom had that very morning left with his mules and wagon for Asheville

by the wagonroad 50 miles around. Big Tom is gamekeeper for Mr. Murchison of New York city who owns 13,000 acres of mountain land, bordering Big Tom's farm, and keeps it as a game and fish preserve. Included in Mr. Murchison's domain is Mt. Mitchell, on the very peak of which is the grave of Prof. Mitchell. Big Tom had gone to haul back some of Mr. Murchison's effects, for the first of August always finds the latter on his mountain preserve enjoying the invigorating air and scenery and prepared to indulge in the rich hunting and fishing. Our horses are cared for by the boys—Big Tom has ten children living—and soon supper is announced.

The night air is cool and rejuvenating and we slept soundly under abundant bedcovering and rose refreshed. The sun shone clear and promised a lovely day although it still continued warm. The forenoon was spent on the banks of Caney River with Sammy Wilson as guide. We fished—pretended to—some, loafed some and bathed in the clear, cold mountain stream. There are trout in these mountain streams, although one cannot expect to find them lying around loose.

At 2 P. M., Dr. Gatchell bade us good-bye and turned his horse's head in the direction of Ivy Gap and Asheville.

John Holden—one of Big Tom's sons—had our horses all ready, but a heavy thunder storm being in progress on the mountain we waited until 3 o'clock, then set out. For some distance our way led us alongside the Caney River and then branched, passing up and parallel to a small swift mountain stream emptying into the Caney.

At a distance of two miles we passed through a gate entering the domain of Mr. Murchison. Nailed conspicuously to a large tree directly in front of the gate was the usual notice against poaching. Soon we came to what might be called the region of the big trees. We rode around one mammoth poplar 11ft. in diameter and 32ft. in circumference 6ft. from the ground. There are many more 5 to 10ft. in diameter and 60 to 80ft. without a limb. Now our way led along the mountainside gradually but persistently ascending; down short but steep declivities to cross babbling mountain brooks only to scramble up the other side and pursue our tortuous course. At this altitude the rhododendron is just coming into blossom and the air is laden with perfume. How exquisitely lovely are the purple plossoms of these mountain shrubs; the leaves so large and of a brilliant dark green albeit somewhat stiff in arrangement. The rhododendrons about Asheville had long since covered the ground with their snow white petals. While anxiously and intently watching the narrow and difficult bridle path lest my horse should catch his foot in a root or slip on a rock, I availed myself of moments of respite to note the varied growth of forest trees as we ascended. They seemed to flourish in strata. First came the poplars, linden and cucumber, with occasional beeches and maples. Next magnificent maples and hemlocks from 3 to 6ft. in diameter. These are followed by the beeches, and then we pass into a solid growth of birches, the white, yellow and black. The large balsams are next in order. These seem to be of two varieties, at least the mountaineers distinguish them as the black and white. The first has a rough, dark bark with deep scorings. The other (*Abies balsamia* [?]) has a smooth bark the color of a beech, and it is this tree which furnishes the balsam used medically. The sap exudes and forms small blisters containing a few drops each upon the bark, which the mountaineers puncture, and by slow and tedious labor gather for the market. As is well known, this balsam has wonderful curative properties, especially for catarrh and throat and lung diseases, consequently two physicians of this place have adopted a method of vaporizing the balsam, which is forced into all the air passages and lungs with wonderful results. Last of all we found the stunted, low-limbed, wind-swept, knotted and twisted balsams of the summit. The ends of the limbs, containing the new growth, were tinted with most exquisite frosty gray-greens. The foliage is massive and heavy, although the limbs are not long, except as they lie along the ground. The limbs and twigs are thickly studded with spines or needles about an inch in length and are quite stiff and the wood is heavy and firm.

Before reaching the balsam growth we passed through a blackberry patch, the tops of the vines of which I could not reach from my horse. We were obliged to force our way through these vines, with the mud 8in. deep, due to the heavy rains and the numberless springs. The vines, bushes and trees were heavy from the previous showers, and the Professor, who led the way on foot, was drenched to the skin. We finally reached an open space, about a mile from the peak, and for the first time in our ascent obtained a view of the region round about. We exclaimed with wonder and admiration, but the guide interrupted with, "Come, gentlemen, it is late, we cannot stop; wait till you get to the peak." Just before arriving at this open spot John Holden had noticed a snowbird fly out from a mossy bank beside the trail, and, dismounting, he pushed aside the portiere of damp moss and thrusting in his hand brought out one of the delicate eggs for our inspection. The remaining mile the trail is composed of rough, loose stones and boulders, with an occasional ledge of rock. At last John, who is lame, slips off his mule, with the remark, "You'll have to walk to the summit." A huge flat rock, inclined at an angle of 60 and 15ft. long by 6ft. wide, with only a seam or ledge 2in. wide for a foothold, and situated on a sharp curve in the trail, must be overcome before we can stand upon the very peak. The mule goes up like a fly on a window pane. George's horse also does very well. Will mine do as well? I looked around to find some way by which I could dodge the obstacle. I dared not leave the trail, so scrambled up and called to my horse to follow. He made a good start, progressed about half way, his feet slipped, and, going on his haunches, he slid to the bottom, where he sat up, forefeet hanging like a poodle begging for a cracker. The sudden jerk nearly dislocated my neck and shoulder, and I was forced to follow my horse. Fortunately my feet found a small projection, and by pulling lustily on the bridle rein I prevented my horse from rolling over backward. Gaining my feet by the time the horse does his, I started again, and the horse came with a rush and gained the top, trembling in every limb.

We have reached our goal and stand beside the rocky cairn surrounding the grave of Prof. Mitchell, 6,711ft. above sea level. Our heads are bared to the breeze and the company stand several minutes lost in reverent admiration, wonder and delight at the magnificent panorama spread before us. Mt. Mitchell stands nearly in the center of a sea of mountain peaks more or less sharp, some of which are almost as high as itself. To the east and far below stands a curious shaped mountain called Table Rock. Its conformation justifies the name, and it guards a gap out into the valley of the Blue Ridge. Bald Mountain is in the northwest. The rugged Balsams stand far away in the southwest, while far beyond them, faint and hazy in the fading light, the great Smokies guard the boundary line between North Carolina and Tennessee. Below us to the southeast the Blue Ridge stretches along at this height more like a range of hills than mountains. Hawk's Bill in the north is very suggestive. Lying between us and Hawk's Bill are Hairy Bear and Cat Tail peaks in the order named. A short distance away, south southwest, stands Clingman's Peak, nearly as high as Mt. Mitchell. Pisgah, which from Asheville appears mighty and towering, with the ever-climbing, never-wearying Rat struggling up its crest, now has dwindled to an almost insignificant hill, and occupies a position 50 miles distant southwest. The Grandfather Mountains bound the horizon on the southeast. John says, "I wish pap was here, he could tell you the name of every peak and valley you see." I am told one can, on a clear day, look into seven States from Mitchell's Peak, and cover with his gaze a radius of 200 miles. John cuts our meditations short by saying "Come gentlemen, it'll soon be dark and the wood is wet." We turn reluctantly, and following him down a sharp declivity reached our camping place. A large shelving rock projecting out 12ft. or more and extending along the side of the cliff 30ft. offers us shelter. By extra exertions and much blowing we succeeded in starting a blaze. Balsam boughs are gathered, which, together with what have been used by a previous party of campers are to form our mattress. Some spread the blankets while two others go to a neighboring spring for water and to gather more wood for the night. Supper is next in order. During the progress of the meal George regales us with an account of his experience a year ago when some time in the night the horses concluded they had had enough of camping and left for pastures new and home. They were found in the morning by Big Tom half way down the mountain. We expressed the hope no such calamity would befall us, and John said "They won't go off, and if they do the trailing ropes will stop them." After a time John startled us with the exclamation, "I believe those doggoned animals have gone off!" Neither the horses nor the mule were in sight, and John and George jumped up and ran around the cliff. Soon they returned, leading the erring beasts, who, led by the mule Beck, were found on the peak headed for home. The horse Nig and Beck are securely tied and the other remains near. We reclined about the fire and caught what few stray tints were vouchfafed us from the setting sun reflected in the east.

The clouds were still heavy and low enough to hide the glories of the sunset which we had come so far to see, and we consoled ourselves with hopes for the morning. As night shut down a cooler breeze blew across the mountain, although coming from the west and our cave opening to the east we were in a measure protected. At four o'clock in the morning, as if by mutual instinct, Professor Waller and I simultaneously sat bolt upright and gazed upon the eastern sky as the first cool gray tints arose. We stood upon our feet and piling on a fresh supply of fuel placed our backs to the fire and watched. How thankful we were for the promise of a clear sky, with just enough of the floating cumuli to give value to the rising sun and his glory. Look at the mass of clouds below us. How cold and like the heaving sea frozen in its moment of action.

See this is a bold rocky headland upon which we stand. Yonder projecting peak is a mighty rock rising from the sea cold and dark, gray with its covering of seaweed and drift. Out there is a rocky island, while scattered about are inlets and rocks bordering a dangerous coast. Beyond is the almost landlocked harbor, out through the gate stretching far, far away is the frozen sea with its broken undulating surface. We cannot be deceived, this is a glimpse of the silent polar sea. Meanwhile the sky is flushed with the richest of crimson colors, and the mass below us reflected in cooler tints the glory above. About us twitter the snow birds as they flitted from rock to cliff and shrub to tree in cheeriest appreciation of the beauty of the scene. As the sun rose higher the ruddy richness of his countenance changed to a more metallic lustre, and the projecting surface of the motionless sea reflected a golden hue, while the cold blue shadows gave place to warm gray tones.

Prof. Waller likened the mass directly under our feet to a mighty glacier, its precipice here at the opening to the sea and its body stretching far up among the everlasting mountains. The sun has reached sufficient height to touch some of the masses of clouds, and as his ray penetrate and warm them portions are detached, and rising float away on noiseless wing like thistledown on the morning's breath. Language fails and adjectives lose their value. To very few is it vouchsafed to behold such a sunrise from Mt. Mitchell.

Holden has been some time astir preparing breakfast, and while eating we questioned John about Prof. Mitchell and how and where his father found the body.

Thirty years ago on the 8th of July, having searched for days, Big Tom Wilson found the body of Prof. Elisha Mitchell in a pool of water 18ft. deep at the foot of a cliff 40ft. high on Sugar Camp branch of the Cat Tail fork of Caney River. He had evidently wandered around, no one knows how long, lost in the darkness and jungles of the mountain side, and falling over the precipice had been drowned in the pool below. The remains were taken to Asheville for interment, but were afterward removed to the very summit of the mountain which bears his name.

Prof. Mitchell at the time of his death was sixty-four years of age, and had gone upon the mountain to verify measurements and observations taken at a previous time. Around the grave has been reared a cairn of loose stones picked up from the mountain top, and each visitor adds one to the wall in memory of the illustrious sleeper.

Breakfast over John said we must start soon in order to reach home for dinner. We cast one long, lingering look to photograph the picture on our memories, and just as we were passing off the crest I dismounted to cut a balsam stick for a memento. It was just nine o'clock when we left, and we anticipated reaching the house at eleven. On our way we started a woodcock feeding along the trail. The others did not recognize it, but the whistle was music to my ears.

It was 9 A. M. the next day when when we bade good-bye to the hospitable family and turned our faces toward Ivy Gap. At 1 P. M. we reached Chambers, and before leaving I planned with Hardy for a week's hunt some time in the fall. We reached Asheville at 7 P. M., tired but in jolly good humor, and reveling in the memory of what we had seen, having spent four days on the trip.

P. P. Staunton.

Natural History.

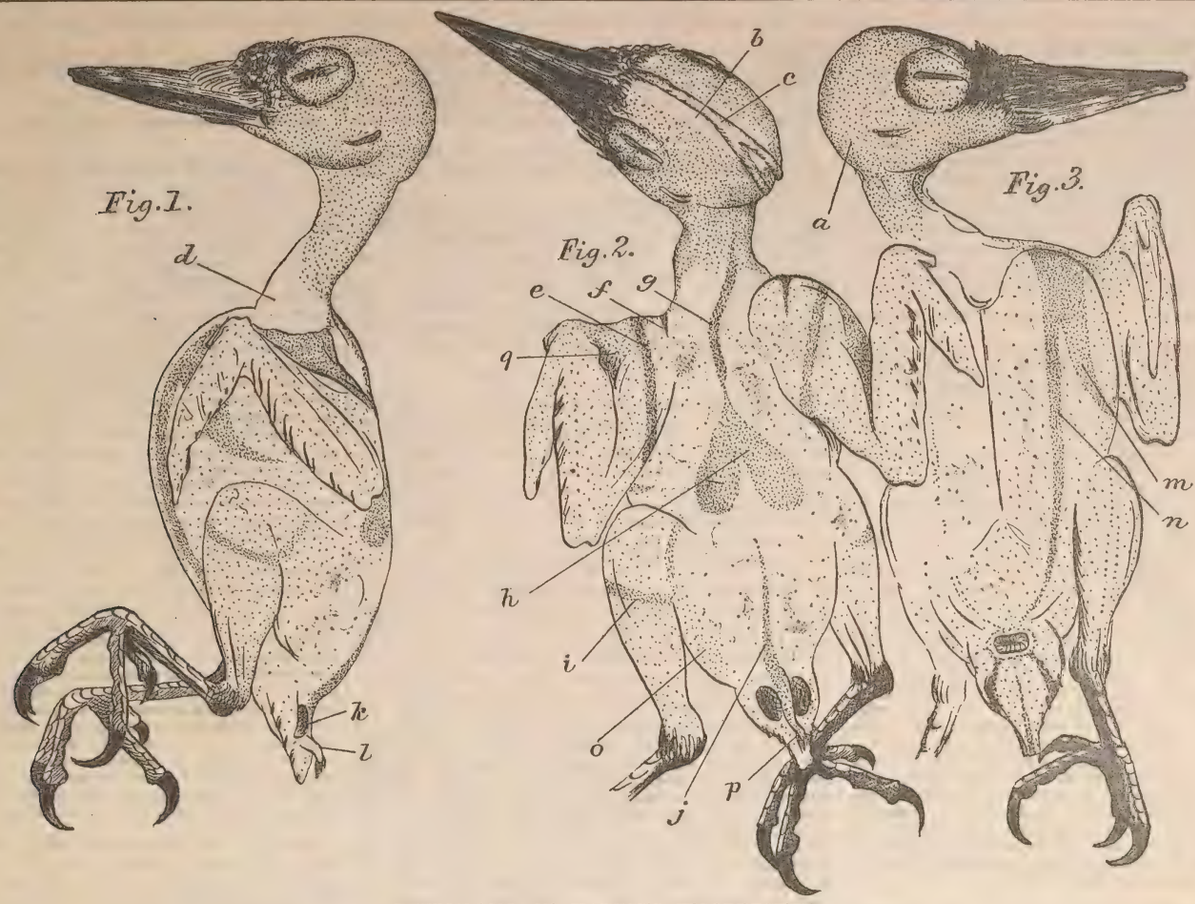
A CHAPTER ON PTERYLOGRAPHY.

BY R. W. SHUFELDT, U. S. ARMY.
Member American Ornithologists' Union, etc.

WERE the question propounded to any person who had never given the matter a thought—are the feathers of birds implanted in their skin in such a way as to spring from it by an even and unbroken distribution over the entire surface of the body, or are the feathers arranged upon any plan, so that were they all trimmed down close to the skin there would be presented to us some definite pattern of arrangement duly outlined by the remaining extremities of the quill-butts? I am inclined to suspect that not only that person but perhaps a great many people would at first say, "Why, a bird's body is entirely covered with feathers, of course, and they arise by an even distribution all over it." Now, the truth of the matter is that there are but a very few birds indeed that at all approach any such condition (penguins, toucans and ostrich-like birds), the vast majority of the class having their feathers arranged upon their bodies after some definite plan. This particular arrangement of a bird's plumage is technically designated by those engaged in investigating their structure as its PTERYLOSIS From the several parts of the body the feathers spring from the skin along certain lines, or from definite circumscribed areas, in either case known as "tracts" (*pterylæ*), while the unfeathered portions which occur in between these are defined as "spaces" (*apteria*). Such being the case science in due time sezied upon this discovery and enlisted so useful a characteristic in aid to the classification of birds, as men were not long in finding out that the pterylosis differed in the several families and orders of the class. A great continental naturalist, Nitzsch, has done more for us in this direction than any one else, and I may add that the pterylosis of a great many of our United States birds remains yet to be described, and that, too, in many important forms demanding a more correct classification than has thus far been awarded them. Further on I will demonstrate this latter statement by a forcible example, and as the pterylosis of a bird with due care can easily be described and worked out, it is the chief object of this contribution to excite the interest of naturalists and others in this subject, with the hope that further investigation in the field will be duly undertaken.

Nitzsch employed four principal methods of studying the pterylosis of a bird; (1) by examining nestlings; (2) by plucking adult specimens; (3) by clipping off all the feathers, wetting the body, and then examining it; and (4) by skinning the bird, and studying the *pterylæ* and *apteria* upon the inner surface of the skin.

In the present connection it is not the writer's intention to enter upon the subject of the study of the structure of the numerous forms that feathers themselves are known to assume, for as interesting as this is, space alone would prevent such a step here. Nor do I intend to dwell, and for the same reason, for any length upon the arrangement or number of the feathers-in-chief of the wings (*remiges*) or the tail (*rectrices*), both of which are known to be so various in birds. Much less do I intend to enter upon the character of plumage itself, and the fantastic variations it may display in a great many of the representatives of the class.



On the other hand, I shall aim to present the several names which have been bestowed upon the feather-tracts, to designate them; and by pointing them out by the aid of my drawings, herewith presented, show their relative position in one of our birds; and finally will offer another bird, nearly related, and with appropriate figures endeavor to point out the value of pterylosis in classification.

By this means I hope to lay a safe guide before any one, who in the future may have the opportunity to study the pterylosis of our birds, and especially in those forms which, up to the present writing, have not fallen into the hands of science except in dried skins, which are useless for such purposes.

Any *accurately* recorded pterylographical notes are of the highest importance to the science of ornithology.

Let us next investigate this matter in the way I have already proposed above, and for this purpose I choose an adult male specimen of Harris's woodpecker (*Dryobates villosus harrisii*), and an adult male specimen of the red-naped woodpecker (*Sphyrapicus varius nuchalis*). These birds are now before me; and first we will pluck them both carefully, commencing at the base of the mandibles in each case, and extending it down as far as the root of the neck.

It will at once be observed that in these two woodpeckers the head-tract or capital pteryla (*P. capitis*) is very different. In Harris's woodpecker there is a median naked space on top, for the most part overlying the elevation caused by the epibranchials of the hyoidean arches, which Nitzsch says occurs in all the woodpeckers he ever examined, but this authority never inspected a specimen of our *Sphyrapicus*, and in this bird the head is completely covered with feathers (Figs. 4 and 5), and no such median naked space is to be found. Moreover, as *Sphyrapicus* has a hyoidean apparatus very much as we find it in the majority of birds where the epibranchials are not curled over the top of the skull as shown in Fig. 2 at *c*, the skin is not elevated along that region. In some birds, of course, as the condors, the head is destitute of feathers. The HEAD-TRACT, as a rule, however, includes the head and the lateral tracts of the neck, merging below into the *ventral* and *spinal* tracts (Figs. 4 and 5). We may next completely finish the plucking of our two specimens, closely observing the position of the feathers as we deliberately remove them. Now it will be found that with some few, very few comparatively, birds a strip of feathers of uniform width run down the entire length of the back, but as a rule the greatest amount of variation exists in this particular. In the case of the two woodpeckers before us a marked difference is again seen, for this spinal-tract in Harris's woodpecker commences above

PTERYLOSIS OF HARRIS'S WOODPECKER.

Fig. 1.—Left lateral view of a plucked specimen of Harris's woodpecker (*D. v. harrisi*); adult male; *d*, upper part of the "inferior space" (*Apt. mesogastræi*); *k*, the uropygial gland of the left side; *l*, its external papilla with opening at its summit, which is also "tufted." Fig. 2.—Dorsal aspect of the same specimen; *b*, capital apterium; *c*, the median (at the point indicated) elevation of the skin caused by the epibranchials of the hyoidean apparatus beneath it; *g*, spinal tract; *f*, inner humeral tract; *e*, humeral tract; *h*, lower dilation of spinal tract (the saddle); *j*, lower part of spinal tract (rump tract); *i*, crural tract; *o*, femoral tract (very faintly seen in a woodpecker); *p*, caudal tract; *q*, alar tract. Fig. 3.—Anterior or ventral aspect of the same specimen, with its head turned to the left; *a*, capital tract; *n*, the ventral tract, and *m*, its external branch. All the figures drawn by the author from the specimen.

as a narrow, median, longitudinal strip, which dilates at the middle of the back as a bifurcated "saddle-tract" (Fig. 2, *g* and *h*); then occurs an interruption when a rump division of the spinal-tract commences and extends down over the tufted oil-gland (*j*), while that part which is carried over the caudal region (the true tail of a bird) is designated as the CAUDAL-TRACT. Turning to *Sphyrapicus* we note that there is no interruption in the spinal-tract,

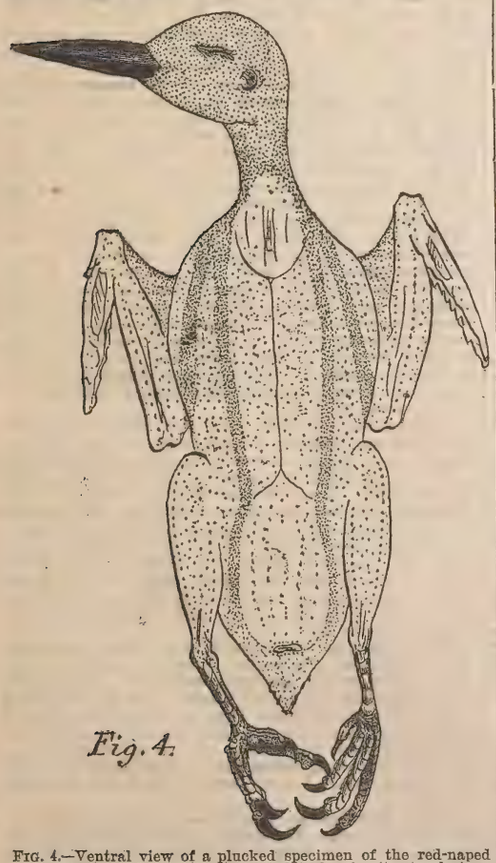


FIG. 4.—Ventral view of a plucked specimen of the red-naped woodpecker (*Sphyrapicus v. nuchalis*), showing its pterylosis or feather-tracts. (Life size, by the author from nature.)

and that the "saddle portion" is a lozenge-shaped area, as shown in Fig. 5. This is particularly interesting when taken in connection with the condition of the hyoid in this bird, for the arrangement is quite similar to the spinal-tract as it is found in passerine birds generally. Birds also show a great variation in their spinal tracts, and I hope some of the readers of FOREST AND STREAM will demonstrate this to their own satisfaction.

Still referring to Figure 2, we note that the humeral region of each arm is obliquely crossed by a narrow feather strip (*e*), which is known as the *humeral-tract* (the single long bone of the arm is the humerus), while in our woodpeckers we see a character quite peculiar to them, being present in both of our specimens, and shown at *f*, a little separate tract, called the *inner humeral-tract*. Nitzsch found only one woodpecker that lacked this characteristic feature, a Sumatran type (*P. luridus*). Such feathering as a wing may show, aside from the flight feathers, is collectively spoken of as the ALAR TRACT (Fig. 2, *q*).

Over the region of the thigh there is a tract known as the FEMORAL TRACT (Fig. 2, *o*), which is but very faintly indicated in woodpeckers, not noticeable at all in most specimens and species.

Then across the leg there is a well defined strip which we call the CRURAL TRACT, shown in Fig. 2 at *i*, and is even more conspicuously seen in *Sphyrapicus* (Fig. 5).

We may also see from these figures that the *apteria*, or naked spaces, are sparsely covered over in some places by small, downy feathers of an elementary character.

Turning next to Figures 3 and 4, we are enabled to study the feather-tracts as they are found to occur upon the ventral aspect of the body—and here again we note that no little difference obtains between our two specimens of woodpeckers.

Most often the VENTRAL-TRACT is a single broad one, extending from the region of the shoulder in front down to the vent, being situated about half way between the middle line of the body and the side, and not so well marked for its lower moiety as it is above (Fig. 3, *m* and *n*). In these woodpeckers, however, the upper part of this ventral-tract bifurcates, giving rise to an external tract seen at *m* and of quite a different form in *Dryobates* and *Sphyrapicus*.

A circlet of feathers usually surrounds the vent, and in Harris's woodpecker there extends down over the anterior aspect of the coccygeal region, from this point, on either side, a narrow feather tract, which, taken in connection with a median line over the same part, we might collectively name the POSTVENTRAL-TRACT, in the absence of any other designation known to me for it.

We have, then, the following feather tracts to study and compare in birds with the view of assisting us in our classification of this group of vertebrates, viz.:

1. The spinal-tract (*Pteryla spinalis*).
2. The humeral-tract (*Pteryla humeralis*).
3. The femoral or lumbar-tract (*Pteryla femoralis* seu *lumbalis*).
4. The ventral-tract (*Pteryla gastræi*).
5. The lateral neck-tract (*Pteryla colli lateralis*).
6. The head-tract (*Pteryla capitis*).
7. The wing-tract (*Pteryla alaris*).
8. The crural-tract (*Pteryla cruralis*).
9. The caudal-tract (*Pteryla caudalis*).
10. The postventral-tract (*Pteryla postventralis*).

There will, too, of course, be some anomalies to be on the lookout for, as we see in the "internal humeral tract" and such others like it.

This chapter will not have been contributed in vain if it but prove to be the means of inciting even one careful observer to enter upon this very fruitful field of research.

As for myself, I was never so fully impressed with the value of pterylography as an aid to correct taxonomy in birds, as I was when I came to investigate this character and compare it in the swifts and hummingbirds, forms hitherto supposed to be related to each, sufficiently so at least, to place them in the same order. I found the pterylosis in a swift widely different from the pterylosis in a hummingbird, a fact which further supports a former proposition of mine, elsewhere published, to the effect

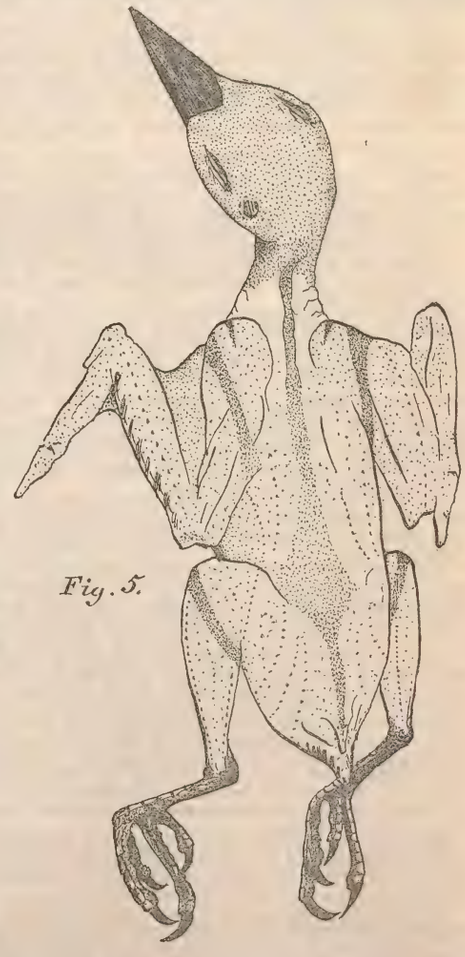

FIG. 5.—Dorsal aspect of the same specimen of *Sphyrapicus*, shown in Fig. 4, designed to illustrate its pterylosis. (Life size, by the author.)

that these birds belong in entirely different groups, they not having any special affinity whatever, as any one may see who has ever taken the trouble to fully investigate their structure.

ORT WINGATE, N. M., Aug. 4.

HUMMINGBIRD AND SPARROW.

WHO killed cock sparrow? I, said the hummingbird, with my little arrow. Lance would be the more correct word, but it wouldn't rhyme. "Jacobstaff" poohpoohs at the idea of a hummer transfixing a jack-sparrow with his bill. The presentation of bills often transfixes great, big, tough, brassy people, why shouldn't a mite of a sparrow succumb? Let me ask "Jacobstaff" an easy one: If straws can be driven through the weather boarding of a house by a cyclone, or tallow candles shot through a board, why not permit a persecuted and raging little hummer to thrust to death the tyrannous sparrow? Does he suppose the wee flash of gold and emerald could not infuse enough backbone into his bill, in his frenzied fury, to pierce even a sparrow's jacket? Go to. There be more things in heaven and earth than we have yet compassed.

If the correspondent is to be believed, the hummingbird was seen by him to repeatedly attack the sparrow as if thrusting his bill into him, and afterward the sparrow, kingbird and one or two other birds were found dead beneath the hummer's nest. Men have been hung on less powerful circumstantial evidence. The kingbird, mark you, was not seen to attack, nor even to make insulting and exasperating motions to the sparrow, nor was the latter seen to sidle toward the former, or "other birds," with his wings trailing and evidently using insulting and indecent language, nagging them in his only and inimitable way—none of this. These great hulks of birds were there for infamous purposes. It is an unwritten but not unsung law among the feathered tribes that, during the bringing forth of a family, outside parties must keep (not hands, but) feet off. How would "Jacobstaff" feel, supposing him to be a Benedict with the title of paterfamilias, to have noisy, tattling, and altogether disreputable interlopers around at a similar period in his family history? He'd attack them were they Brobdignaggian, and slay them had he nought more than a pen—and all honor to him for it. Then why belittle the deed of the valiant little David in slaying the Philistine? If I were a poet I would sing in immortal verse the brave deed of the hummer, and I here bespeak the services of some laureate at his earliest opportunity. It would have been proof more positive, possibly, if the hummingbird had been found dead with his little bill driven through one of his tormentors and clinched, but he had other fish to fry, and still no doubt lives and hums to protect his family and spear other marauding sparrows, et al. Give the humming bird his due. O. O. S.

UNUSUAL NESTING SITES OF BIRDS.

IN a paper read before the California Academy of Sciences, Aug. 1, 1887, by Mr. Walter E. Bryant, some interesting cases are cited of unusual nesting places of birds. He says:

One of the interesting features of the study of oölogy is the selection of strange nesting sites made by many birds when the circumstances of their environment compel a departure from their customary habits. This is especially noticeable in certain tree-building species, which avail themselves of low bushes and sometimes even the ground in the absence of trees.

During a recent trip to Carson, Nev., and vicinity, I was particularly impressed by the unusual and novel situation which had been chosen by birds whose nesting habits were well known. These had adapted themselves to various situations, the mention of which, together with instances noted from other localities where choice rather than circumstances seemingly prompted the departures, may be interesting.

CALIFORNIA PARTRIDGE (*Callipepla californica*).—Essentially a ground building species, but several cases have come to my notice of its nesting in trees upon the upright end of a broken or decayed limb or at the intersection of two large branches. A few years ago a brood was hatched and safely conducted away from a vine-covered trellis at the front door of a popular seminary. How the parent birds managed to get the tender young down to the ground is not known.

RED-SHAFTED FLICKER (*Colaptes cafer*).—Three instances are recalled when this species nested in unusual places. One of these was in a bridge bulkhead a few feet above the Carson River. The interior of the structure was filled with gravel and large stones, among which the eggs were deposited. Another pair used a target butt at a much frequented range as a substitute for a stump. A third nest was in a sandbank 3ft. from the top and 10ft. from the creek. This hole was apparently specially prepared, and not one made by a ground squirrel, such holes being sometimes used by these birds.

CALLIOPE HUMMINGBIRD (*Trochilus calliope*).—A nest was found built upon a projecting splinter of a wood pile at a height of 5ft. Another was secured to a rope within an outbuilding.

ARKANSAS KINGBIRD (*Tyrannus verticalis*).—An old and much flattened nest of Bullock's oriole was found relined and containing four kingbird's eggs. One of the most remarkable instances of persistency in nest building was met with in the case of a pair of kingbirds which had attempted to construct a nest upon the outer end of a windmill fan. A horizontal blade had probably been first selected, but an occasional breath of air had slightly turned the mill, bringing into place another and another, upon each of which had been deposited the first material for a nest until several nests were in different stages of construction, varying with the time that the windmill had remained quiet, while upon the roof below was strewn a quantity of debris that had fallen as the wheel revolved. Of course nothing but failure could be expected from their repeated attempts.

SAY'S PHŒBE (*Sayornis saya*).—A nest which could be conveniently reached by a person on horseback was found by Mr. Walter Bliss at Carson, placed within and close to the entrance of a deserted bank swallow's burrow.

BREWER'S BLACKBIRD (*Scolecophagus cyanocephalus*).—All the nests found at Carson were upon the ground, usually on the edge of a bank formed by an irrigating ditch, with the exception of one which was built 2ft. from the ground upon dry tule and well hidden by the growing stems.

CRIMSON HOUSE FINCH (*Carpodacus frontalis rhodocolpus*).—Besides the odd situations which they select about the houses, they avail themselves of the last year's nests of Bullock's oriole.

PARKMAN'S WREN (*Troglodytes aedon parkmanii*).—The species has been known to build in the skull of a horse, which had been placed in a fruit tree; in the nests of cliff swallows, and within an old shoe lodged in a tree.

WESTERN ROBIN (*Merula migratoria propinqua*).—A pair of robins built and reared a brood in a hanging basket suspended from the edge of the veranda at the residence of Mr. H. G. Parker, at Carson, Nev.

WESTERN BLUEBIRD (*Sialia mexicana*).—Dr. Cooper informs me that he has known a bluebird to build in a cliff swallow's nest.

MOUNTAIN BLUEBIRD (*Sialia arctica*).—Three incubated eggs of this species were taken from the nest of a barn swallow at Lake Tahoe, Cal., by Mr. Walter Bliss.

EUROPEAN SPARROW (*Passer domesticus*).—Since the introduction of this pest into our cities, many birds, hitherto common, have left for the suburbs, notably the cliff swallows, whose nests were appropriated by the sparrows. In these cases the limited space compelled the latter to dispense with the usual amount of rubbish, and carry in only a lining of feathers.

THE GILA MONSTER.—Benson, Arizona, Aug. 11.—The readers of your valuable paper should feel under obligations to Dr. Shufeldt for his highly interesting article on the Gila monster, in issue of August 4. While this creature is quite common in this vicinity, very little is really known about them, and naturally many erroneous ideas are commonly held in regard to them. One which I think is not questioned by the Mexican, credits it with the power of throwing its poison. I have often heard the statement made that its poison could be cast a foot or more. Of course there is no foundation in fact for such belief, but it goes to show how little is really known of the habits of the Gila monster in places where it is the most common. Others hold the opinion that they are entirely harmless. Two years ago, a very large one was on exhibition at a saloon in Fairbank, a few miles from here. A man came in, and after expressing himself of his firm belief that they would not bite, attempted to force open the reptile's mouth, in order to convince the crowd that they were all wrong in regard to its venomous powers. He finally succeeded in forcing open the jaws, but no sooner were they open than they immediately closed upon his thumb, puncturing the nail. Whisky was immediately administered in large doses but had no effect, the man sank into a stupor from which he never rallied, dying in about four hours from the time he was bitten. The Gila monster, tarantulas and centipedes are much more numerous during the rainy season, which is now upon us. Last season there was captured in the yard in front of our office a centipede which measured seven inches in length, the largest I have ever seen. Tarantulas are very common and attain a very large size. —G. N. K.

DISCOVERY OF THE NEST AND EGGS OF THE EVENING GROSBEAK (*Coccothraustes vespertina*).—At a meeting of the California Academy of Sciences, June 20, 1887, Mr. Walter E. Bryant read a paper under the above title. He said: "Although this species was first described in 1825, I believe that no description of its nest and eggs has previously appeared. Accordingly I take pleasure in announcing the discovery of the first nest and eggs, by Mr. E. H. Fiske, in Yolo county, California. Regarding this interesting finding Mr. Fiske has written me the following particulars from his field notes. The nest, containing four eggs, was taken May 10, 1886, but incubation was so far advanced that he was unable to preserve them. In general shape, color and marking, they were similar to eggs of the black-headed grosbeak, but in size he thinks they were somewhat larger. The nest was built in a small live oak, at a height of ten feet, and was a more pretentious structure than is usually built by the black-headed grosbeak, being composed of small twigs supporting a thin layer of fibrous bark and a lining of horsehair. It is hoped that Mr. Fiske will be successful in finding additional specimens from which measurements may be determined."

THOSE MYSTERIOUS MAINE CATS AGAIN.—New London, Conn.—*Editor Forest and Stream:* While on a trip down the Maine coast this summer, I stopped a few days at a granite quarry called Long Cave, about thirty miles below the Kennebec River. While there, in one store of the place, I noticed a queer animal. It was like a cat, excepting its tail and ears. The tail was similar to a skunk's, only being soft and fine hair. From the inside of the ears grew long feelers, that hung so as to form tassels. The animal was about the size of a large house cat, and perfectly tame and extremely playful. Color black and white, with stripings like a common black and white skunk. The inhabitants called it a "skunk cat," and said it was a cross between a skunk and cat.—A. B. C. [This must be a variant of the "coon cat" story, the animal being in all probability an Angora cat, or a cross between an Angora cat and a common cat.]

A SAD AFFLICTION.—We regret to learn that Dr. Morris Gibbs, on his return recently from a fishing excursion to northern Michigan, was prostrated by a stroke of paralysis, which leaves his right side completely helpless. He is now able to walk by the aid of a cane held in his left hand, but his right arm and hand are of no use whatever. Dr. Gibbs's interesting articles on the birds and mammals of Michigan will be remembered with pleasure by many of our readers. He is an ardent lover of nature, and it is to be hoped that his recovery and his return to his favorite pursuits may not be long delayed.

Throughout what used to be marked on the maps as Rupert's Land are extensive areas of low swampy ground, reed and grass grown, and hundred of small lakes. The Canadian Pacific Railroad winds for miles through a portion of this swampy region, and in every swamp and lake were thousands of mother ducks surrounded by their young, and scores of geese were also there. The region is the breeding ground of wild waterfowl. Snipe and plover ran along the shores of the open lakes and white gulls flitted softly over the lakes crying mournfully. I looked at these birds with great interest and quickly saw that the ducks were mostly mallards and there was not a drake among them. I asked an Englisman who breeds hunting dogs at Winnipeg and who is a sportsman, where the drakes were. "In the far north," he replied, and then he added: "They stay here until the ducks begin to set, then they suddenly disappear. A few weeks after the shooting season opens immense flocks of old green-head mallards arrive from the north and at once mingle with the young ducks. Yes," he repeated, "the drakes summer in the far north."—*Times Correspondence.*

A MICHIGAN WILD TURKEY.

IT is not in mental listlessness that the overworked mind finds complete rest: it is by diverting it into other channels of equal activity, but of less laborious thought, of more excitement, but of less responsibility. If the body has become weary with sedentary labors, it too needs a change to active muscular exertions, which will accelerate the blood and stimulate the secretions. For him who has a taste for the billiard table, the dancing hall, the horse race or base ball, these diversions may serve as a relief from oppressive mental toil; in them may be found the completest rest for both mind and body. Yes, there is rest for the body, even in its aching fatigue. The tired hunter returns to camp fairly oppressed with fatigue, pulls off his boots and jacket, and throws himself upon the blankets, which cover his bed of boughs, and feels an abandon of luxury which can only be enjoyed, but not described. The hissing of the frying-pan or of the stew kettle is music which charms the savage breast as well as his own, and the aroma of the coffee whets an appetite which a long day fasting in the wood has made so keen that it can give to the coarsest fare a luxurious relish. But it is rare that the camp table is reduced to coarse fare. This is proved by the fat buck that hangs on the limb of a tree hard by, a few brace of grouse, which hang on one antler, and on the other a string of speckled trout or black bass, fresh from the stream or lakelet, whose restless waters sing a cadence more harmonious than Æolian harp. Such luxuries as these with congenial companionship in the light of soft nature's smiles, or where nature's rugged features almost frown, constitute a feast in a banquet hall so broad that it has no limit, and adorned with pictures the like of which no artist ever painted. The perfume of pine and balsam and other fragrant trees and shrubs expands the lungs, and soothe to sleep so sweet and so invigorating that in the morning one can remember no disturbing dreams, but feels that a new lease of life has come and of a life worth living.

When one has lived for more than fifty years where game did greatly abound, most of which were interspersed with such pleasing episodes, the loss of vision, so that he can no longer shoot nor even fish with satisfaction, drives him to the memory of the past, where he can live over again the scenes which at the time filled his heart with joy. How vividly many particular incidents come up of long, long ago, when a very successful shot, or great luck with the rod and reel, that produced a thrill that penetrated the very soul, which seemed for the instant to fairly intoxicate him. These bright spots in memory are a sweet solace to one who can only read and write vicariously; but one can not shoot by the hands of another. To attempt this would be a mockery and a regret. One of these bright spots now shines out before me, as I contemplate the past, and I may again enjoy it and perhaps more fully by relating it.

About the first of November, 1847, when I was holding the circuit court at Hennepin in Putnam county, Ill., Mr. Poole, who lived on Sandy Creek about 10 miles south, came in and invited Mr. Cook and myself to go down and spend a night at his cabin and take a morning hunt. Both deer and wild turkeys were at that time abundant, and the temptation was irresistible.

Mr. Poole had himself been an old hunter, and had made several trips to Santa Fe, in New Mexico, in the employment of trains or caravans to supply them with meat, and his accounts of his experiments were always told in a charming and instructive manner. I was particularly struck with the description of the way in which he would determine the neighborhood of a herd of buffalo when he would start out before daylight in the morning. He would go a mile or so into the prairie, and there on the top of some knoll or ridge place his ear to the ground, and listen for their continuous grunt or heavy breathing when lying down and ruminating. A considerable herd acting in unison could in this mode be heard at a long distance, and their direction determined before they could scent the hunter, even though the wind was favorable for them. When a herd was thus located, he would secure a position to the leeward of them, and by cautious approach would gain a proximity by the time it was light enough to shoot, which would enable him to make a choice selection.

At that time the buffalo were very abundant, and he rarely had any difficulty in supplying the camp with an abundance of meat. Indeed it was not infrequent that a caravan was delayed by countless herds of buffalo crossing the trail. They were sometimes harassed by the Comanche Indians, who were at that time a terror to both the whites and their savage neighbors. Indeed it was claimed that a large portion of white blood was infused into the tribe which was obtained from white children which they had stolen from settlements at a great distance away, and brought up in their savage homes, and these Mr. Poole said became the worst savages of them all.

Those who have ever listened to an intelligent trapper or plainsman of fifty years ago can appreciate how we enjoyed that evening until near midnight. There is certainly a charm about the adventures which have occurred in the wild prairies, in the deep and sombre forests, and in the craggy mountains where civilization has not broken the charm which wild nature exhibits in her enchanting displays. If I could remember all that I have heard the old hunter relate, I could write a book of surpassing interest.

At last we retired to rest, but long before daylight we were up and out. There was a cornfield up the creek bottom, not more than half a mile away, which Mr. Poole said the deer frequently visited just before daylight. This position was assigned to me. Heavy forests were all around. The moon had gone down, and the starlight seemed insufficient to shed any light beneath the deep shade of the forest. I cautiously followed the path, which led alongside of and beyond the cornfield, intently listening for the sound of the deer, but heard nothing. When I had gotten beyond the field, I sat down upon an old log, waiting and listening till streaks of light began to shoot up in the east and show themselves above the tops of the great trees. No deer came.

No sound was heard. Not a breath of air was moving, but all was profoundly still. At last, when the light had grown stronger, at the very top of a very high elm I saw an object relieved against the sky, and I soon became satisfied that it was a wild turkey.

As I was now disgusted with deer hunting, I resolved to make an effort for the lesser game. While the tops of the trees were being lighted up, all beneath was yet dark. I saw a very large elm tree with a huge trunk, which I thought was within shooting distance of my game, and I lost no time in getting to a position where that tree would hide me from the bird.

With the extremest caution and as quickly as possible I approached this big tree, and when I had reached it and carefully pecked beyond I was delighted to see the turkey still in position, and that there was a clear space between him and me. I quickly brought my rifle up against the tree, but it was still too dark to see the sights distinctly. The bird stood out against the sky, but I could not tell whether he stood with his breast or his back toward me. He was evidently alarmed, probably by the cracking of some twigs as I carefully made my approach, and he stood up as straight as a penguin, his neck stretched out to the utmost. It was an anxious moment while I stood there waiting till the increasing light would enable me to see the sights of the rifle. I knew it was about time for him to leave his perch, and feared that that time might be hastened by his manifest alarm. I could not yet tell whether his breast or back was toward me, but as soon as I could see the sights of the gun I took a very deliberate aim at what I believed to be the center of his body. Oh my! what a crashing he made falling through the branches of that great elm tree, his wings in their spasmodic flutterings striking every limb and twig within their reach, and when he struck the ground it was with a thud which sounded very loud to me at least. That was the supreme moment of ecstacy to me. It seemed to twinge every nerve and almost suspended the throbbing of the heart. One would have supposed that such a fall would have knocked every spark of life out of him, but not so, for when I got up to him he had cleared a space of ten feet at least of all the leaves and other movable things, and was still tearing away like a flutter wheel.

Now, one who lacks experience in this matter can hardly appreciate what a fuss a great wild turkey can make when he has just simply lost his head and no more, and that was substantially the case with my bird. When he finally became quiet so that I could make a leisurely examination, I found that he had stood with his back toward me, and that his vertebra was exactly on a line with the flight of the bullet, which had ranged up along the back, scarcely breaking the skin and cutting off the neck close to the body.

That, I think, was the largest turkey I ever killed, and the thud with which he struck the ground was sweeter music to my ear than Patti ever sang.

I regret that for the want of proper facilities that turkey was never weighed, and as I am not exempt from the proclivities of a sportsman, I think it safer not to express an opinion of its weight, either from myself or from others. As that was the only game captured on that excursion, I must terminate my turkey story here.

JOHN DEAN CATON.

FRENCH WAYS.

Editor Forest and Stream:

Since my arrival in Paris I have been trying to find something in the way of sporting news that would interest the readers of FOREST AND STREAM, but so far without much success. Sportsmen there are indeed and in plenty; and among sportsmen I of course include fishermen. The fishermen of Paris are a well-known institution. For who is there that has ever visited this city that does not remember the blue-bloused *ouvrier*, with his long one-piece bamboo-fishing rod and little footstool, on which he stands patiently from sunrise to sunset? They line the Seine from the Pont de Passey to the Pont National away down below Bercey, which is as far as I have yet been; although from what I have seen I have no doubt that they line the river as far as Anteuil, in the same reckless profusion. I have watched them intently day after day when I could and should have been more profitably employed, but there is a singular fascination about their patient idleness, and I cannot resist the temptation to study them when in the vicinity.

I have endeavored time and time again to find out what manner of fish they had any hope of catching, or what they thought could live in such filthy water; but although they had been at all times extremely polite, I could get no response save shrugs and smiles. It may be that my French is at fault, as it is none of the best; or perhaps, as I am inclined to believe, they have not the slightest expectation nor desire of catching fish. I have indeed seen them frequently catch weeds, rags and old paper, the debris which is usually found in rivers whose banks are as densely populated as are those of the Seine, and once I saw an old man pull up from the bottom the body of an infant done up in an old petticoat. Again, I have seen them standing over and fishing in a rapidly discharging sewer, the dirty, foul-smelling water polluting the river for at least 10ft. in every direction. I have seen then on the large, open floats fastened to the banks, from which the women wash the soiled clothes, the water here being discolored in all directions with soap and many other foreign ingredients. Then again, most repulsive of all, I have seen them fishing off the very pier on which stands the morgue, in which there are usually from three to eight bodies taken, perhaps, from the water. I have watched them three or four times a week for the past three months, and I solemnly declare that, barring the rags, paper and the baby, I have as yet seen them take nothing. But say they did, in the name of decency who would want to eat it, knowing it came from where it did? Think of our fresh, clear mountain streams and the athletic trout, then ask yourself if you would care to come to Paris to "go a fishing." This picture may seem to you like exaggeration, but the facts are undeniable. So much for the fishing.

From what I can hear the hunting is not much better. It is true that when the first of September has come you can at any railroad terminus see crowds of, I was going to say sportsmen, but will modify that and say men going shooting. They are gotton up in the most gorgeous tyle, with leather hunting coats—on the first of September in Paris, think of it—leggins, heavy sole shoes, game bag, dogs, guns, hunting horn and valet to carry the game. All this to bring home what? I will tell you later; first let me tell you what it is necessary to undergo before one can legally take his place in this noble army. The following was thus told me by a personal friend, an ardent sportsman in the best sense, and a thorough backwoodsman. Imagine his disgust as he recited his experience.

"First you must get a license. That you must have to pull trigger in any part of France, whether you be French, American, English or of any other nationality. To obtain this you must have two well-known and respectable tradesmen, duly licensed to trade (no matter the business, a charcoal burner will do as well as another) who will vouch that you are neither a lunatic nor gauster, for these two characters seem to be the *bêtes noirs* of the French Republic. Having obtained the services of an obliging wine merchant and an equally accommodating shoemaker, the three of us marched to the office of the commissioners (equivalent to our magistrate). Having been duly introduced, I explained the object of my visit. The functionary narrowly inspected the credentials of my two friends and then apparently satisfied turned to me and asked my name, residence and profession. These are readily answered; but the fourth query was a sticker, 'Have you your baptismal certificate?' As this interesting ceremony had been performed about fifty years before, I did not have the document with me, but could no doubt procure it from home (America) if absolutely necessary. 'Are you married?' 'Yes.' 'Any children?' I was obliged to confess to two. 'Have you your marriage certificate?' 'No, sir;' and I humbly suggested that I called for a game certificate. 'I must have these papers or how am I to know who you are?' Fortunately I remembered an old passport I had in my desk at my apartments and suggested that it might do. 'That will answer, show it to me.' 'I will go get it at once.' 'No, come here to-morrow with your two friends and bring it.'

"The next day, about eleven, we three again went to the office. 'The *Commissaire* is at breakfast. Call at one o'clock.' We did so and the ordeal was renewed. My friends' credentials were again carefully inspected and my passport underwent a searching scrutiny. He, however, at last beckoned to his clerk to bring pen, ink and paper, and recorded my age, birth place and present occupation. He then said, 'Stand on that,' pointing toward a weighing machine. '*Cent-soixante-cinq*,' shouted the clerk after intently studying the machine; and my weight was recorded. The magistrate then moved toward me and scanned my outward man with a sort of photographic look. The color of my hair, eyes and eyebrows, the shape and size of my forehead, nose, chin, mouth and ears, all were carefully noted down. I then confidently expected my certificate and deferentially intimated as much. 'You must go down to the Prefecture between ten and four to-morrow; here is a memorandum; present it to the officer in waiting.'

"I went accordingly, alone this time, and was obliged to undergo another inspection, as this official did not appear to have the same faculty of distinguishing color, or the same power of phrenological description, and he altered his fellow official's portraiture accordingly. Ultimately, however, I received a piece of blue paper, some 17x15in., was asked for and cashed in 28 francs, and retired with the precious privilege of killing anything gamy within the jurisdiction of the Prefect of the Seine.

"After all this trouble I was told by one who had 'been there,' that the chances were ten to one that I would never be asked to produce it (as I found correct), and that should I by any chance be asked the chances were the same that the *Garde Champêtre* would not be able to read it. I have been out four times. My certificate and incidental expenses amounted to 213 francs and shooting all the game (?) I saw, I got one rook, two magpies, one lark and one rat. I shall refrain, he continued, from going shooting here any more, as I find that it is far more economical to get your game as other Parisians do, at the poultry shops."

MAC.

SNIPING ON SHINNECOCK BAY.

HAVING decided to spend my vacation at the seashore, I thought Shinnecock Bay would be the most likely place to get some shooting. After shaking hands with the landlord, the question of the day was debated on and the guides thought the next day would be a "good one" for a flight of the birds, as the wind was commencing to blow quite fresh from the south; so the services of Will were engaged on the spot and he said he would wake me at 3 A. M., to have time to get something to eat before starting. After a little shooting talk I went to my room to unpack my traps and get things ready for the morning. When the chairs and the floor were spread full of things to my great satisfaction, I turned in for the night, or, I should say, the morning, as it seemed as if I had just found the soft spot in the bed when some one thumped on my door, and when I answered Will said: "It's quarter past 3, and if you don't get up the other fellows will have the pick of the stands." I rolled out, tumbled into my clothes and felt my way in the dark down stairs, where the others were seated around the table eating at the rate of forty knots an hour, and in a few minutes I was not far behind.

After we were through breakfast we made a few sandwiches, got a jug of water, and started for the boats; and then commenced the race for the stands. As there was no breeze, nothing was left to do but to pole, so at it we went, or rather Will went, as the writer felt "tired" and lay off in the stern of the boat and watched the pink begin to glow in the east and the light in the Shinnecock Lighthouse fade. Finally we reached our stand, on a small island leased by Will's father, put out the decoys and got into the boxes. By and by, as the day dawned, we heard a few yelpers off to the windward, and Will tried to call them up, but I guess those snipe had pressing business on hand, as they did not show up. I settled down in the box to wait developments, when W. whispered, "Here comes a flock," ond as they swung around to alight we both cut loose and got seven birds, all small yellowlegs. Some little time after this we saw a single willet coming toward us, and as I saw it did not intend to come down to the decoys, I said I guessed I would try a shot at him. When I fired (the left barrel) the willet was almost directly over us, and, as near as we could judge, about 80yds. high in the air. At the report of my gun he dropped like a stone, with one wing badly broken and shot through the body. My gun is a 7¾lb., 32in., left barrel ¼ choke, right barrel cylinder, and the charge was 3¼drs. powder, 1⅛oz. No. 6 soft shot. I call that a good shot (it might have been all luck), and when the Bonehill goes off there usually is a bone hill in the neighborhood. High up in the air were two large cranes following the line of the shore, and far off to the left we descried the large bald-headed eagle of Shinnecock Hills floating lazily through the clear atmosphere. As the sun began to get rather hot we decided to pull up the decoys and go for the house. There was a good stiff breeze, the little catboat lay down to business, and we were soon at the dock. When I counted our morning's shoot I found we had some sixty odd birds, including willet, large yellowlegs, small yellowlegs, robin snipe, two greenback plover and dowitchers. I stayed down there two weeks, from Aug. 1 to the 15th, but never had such a good day's sport as this.

SHORE BIRD.

AUGUST 13.

DUCKING METHODS.

Editor Forest and Stream:

I beg space to enter a protest against a manner of shooting ducks practiced in some parts of Maine, and a mode, if carried out, that will do more to exterminate ducks than anything yet that I have seen; it is a deadly and more so than the battery or sinkbox. I refer to baiting ducks in September and shooting dozens at a time. I have seen forty killed by two guns at one discharge. This is allowed by Maine laws, though netting is prohibited; there is no difference between the two, barring the noise, the number of ducks taken is only limited by the size of the net or the number of guns.

What disgusts me most is that the men whom I saw shooting thus were not market shooters, but of good means and fair wing shots. But they wanted their money's worth of ducks and this was the easiest way to get them, as also was treeing partridges and netting pigeons. I do hope that something will be done in the near future to discourage this slaughter.

E. B.

Editor Forest and Stream:

I notice in your issue of April 7 that "D. M. P." asks how to get the ducks, and asks for suggestions for a practical method of shooting ducks which settle in the middle of a lake three-quarters of a mile wide; he adds that decoys and blinds made of brush stuck in the ground are ineffectual; ducks have become shy of them. Doubtless most duck shooters have had similar experience. I have used a boat invented and constructed by Mr. H. A. Hannum, of Cazenovia, N. Y., which meets the case and other wants of the shooter most effectually. The shooters lie down flat in the boat and are nicely hidden from sight of birds flying over by a canvas decking, so arranged as to be a complete protection to the hunters and their effects from rains and cold winds, which, by the way, is no very small item at times.

This boat is propelled either by one or both the shooters working with the feet a system of levers which in turn work a set of paddles, thus leaving the hands entirely free for the use of the gun at any moment. There are no motions in sight, nor is noise made. In using it nearly a hundred times I have seldom failed to get the ducks, especially when approached slowly. I have worked up in this way and bagged old honkers when the same flock about an hour before had been put to flight by a common boat, about a quarter of a mile from them, on which hunters were doing their best to work up to them. I think "D. M. P." will find this a "practical method," and a very satisfactory way of getting some of the wary ducks.

CAZENOVIA, N. Y.

A BLACKTAIL.

WHITE SULPHER SPRINGS, Mont., Aug. 15.—Pitching hay isn't much fun, and to-day I thought a holiday might be allowed me, fitly to celebrate the return of the open season. To-day I was lucky. A black-looking piny gulch on the west slope of the Castle Mountains looked inviting, and I made my pony climb clear to the edge of the timber, where I picketed him. As I picked my way up the little watercourse at the bottom of the ravine, footprints here and there punched deep into the moss showed me that I had "sized the place up" about right, and that I was entering the summer home of the blacktail.

As I proceeded, the slopes of the ravine grew very steep, and the bottom criss-crossed with fallen timber, and I moved but slowly, lest my foot slip on the jagged stones, which were easily displaced, making rattle enough to defeat my schemes. However, when less than half a mile into the timber, I heard a sound that made my heart thump a little quicker—crash! crash!—then half a minute's pause, then again crash! crash! rattle! and the animal paused in view on the rocky slope of the cañon about 120yds. distant. It was a big five-point buck, and he still wore his yellow coat.

Holding fair on the center of his left shoulder, as he stood quartering, I touched her off, only to see him leap off with his head lowered. I jerked another .40-60 into the gun and was about to open fire again when he dropped and rolled down the slope with never a kick. It was an easy matter to slide him down over the rocks to the water, but his horns suffered somewhat from contact with the flints, as they were still in the velvet and quite soft. A pretty pair they were, and of good size. He was beginning to shed his thin summer hair, and the short blue showed through in places; and as for his meat—

"* * * finer or fatter
Ne'er roamed in a forest or smoked on a platter."

When I opened him I had the satisfaction of finding my bullet hole through the thick of his heart, which accounted for his abrupt stop.

IPSARRAKA.

CAPE COD SHORE BIRDS.—Monomoy Island, Aug. 20.—The southeast storm of this week brought along a small flight of shore birds. Several flocks of black-bellied, and one of green or golden plover, and some of the last were seen in the fields about Chatham. Peeps have been here some time, and last week a few jack curlew and winter or greater yellowlegs came along. Shore birds have been very scarce so far this season. We expect a flight of grassbirds or pectoral sandpipers, also young beetleheads or black-bellied plover soon.—CHESTER.

GAME IN THE PARK.

MAMMOTH HOT SPRINGS.—In a trip made through the Park in the early part of July, our party saw deer and elk in Gibbon Meadow, antelope in Hayden Valley, and bear on Mt. Washburn, besides seeing a great number of bear tracks along the lake shore, tracks where bear of all ages and sizes had walked along the beach and trails. Elk and deer signs were seen everywhere, as the game is now scattered all over the country. They are in very small bands. A short time ago two soldiers, while on a scout in the country east of Mt. Washburn on the east side of the Yellowstone Cañon, they report, saw thirty-eight buffalo in one band, consisting of four or five bulls and the rest cows and calves. This I think is the band seen and reported by the FOREST AND STREAM'S Mid-Winter Expedition.

All kinds of venomous flies are quite numerous in the Park, driving the game to cover during the day, so that one is quite fortunate to get a glimpse of anything except early in the morning and the cool of the evening, when the game comes out to feed.

I hear of a great many elk in the southern part of the Park; though not wintering there, yet belong there and to the Park. A man who wintered at Jackson's Lake, a hunter and trapper, reports 15,000 elk as having wintered south of the Park in the valley of the Shoshone or Snake River. I believe this number somewhat exaggerated, too large by several thousand. Yet there must have been a great many. He reports that the settlers in the country were compelled to drive the elk off the range so their stock could get feed. Very few were killed, only when meat was wanted; none for hides, as the laws of Wyoming prevent the sale of untanned hides of game. He further reports that no bison were seen during the winter.

On about the 10th of July trout or salmon flies began to appear. These are the best bait to be found for taking fish; they are winged insects some two inches long when full grown. We have no angle worms in this country, but nature has kindly given us the salmon fly and the grasshopper. I have often noticed that when a "true sportsman" can't catch fish with artificial flies he will take very kindly to grasshoppers and salmon flies. One will often see a fisherman after a festive grasshopper, striking wildly at it with a hat profusely ornamented with artificial flies. The Yellowstone River is unusually full of a fish, called here, "whitefish," "stone-rollers," "suckers," and by some "grayling." They are not grayling but a sucker-mouthed fish with a projecting nose for turning small boulders and digging into the ground. They are quite gamy, will take artificial flies or bait and will fight quite as hard as trout, but are not as good a table fish. They are very fond of trout eggs and other fish eggs, which their nose or bill enables them to get from the gravel where the trout have deposited them. May their number grow less. Grayling are not found in the waters of the Yellowstone, but are in the Madison and Gallatin rivers. H.

[The "stone-rollers" are a true whitefish (*Coregonus*).]

WESTCALONG LAKE ASSOCIATION.—Middletown, N. Y., Aug. 19.—A party of New York and Brooklyn gentlemen have organized under the name of the Westcalong Lake and Delaware River Park Association, and have purchased 5,000 acres of wild forest lands in Pike county, Pa., for the purpose of establishing there a game and fish preserve and an attractive pleasure resort. The property adjoins the famous 20,000-acre tract of the Blooming Grove Park Association, and is easy of access from New York by the Erie Railroad, whose line skirts along the Delaware River front. The officers just elected at the organization of the new Park Association are: Henry E. Klugh, of New York, President; Dr. Elijah A. Maxwell, of New York, Vice-President; William Holbert, of Lackawaxen, Pa., Treasurer; William P. Holley, of New York, Secretary. The bounds of the new purchase extend back into the forest five miles from the Delaware River, and include the beautiful sheet of water known as Westcalong Lake, together with other smaller lakes and noted streams. The property is already in its natural state well stocked with deer and varieties of game birds and fish. The plans of the association provide for the improvement of the natural beauties and advantages of the tract on an extensive scale by the preservation and propagation of all suitable varieties of game and by the construction of roads and bridges and the building of shooting boxes and cottages, and of a commodious and handsome club house on the shores of Westcalong Lake. The Erie Railroad Company has agreed to establish a station at the main entrance of the new park.—*New York Times.*

ARIZONA.—Benson, Aug. 11.—Our game prospects for the coming season are excellent. Quail are very numerous and are so large now as to be beyond any danger of drowning during rainy season or being captured by the coyote. Deer and bear are reported very numerous in the mountains, with a few antelope and lots of mountain lions. The last have been so destructive among calves and colts this season that cattlemen have offered a reward for scalps, in addition to the bounty given by the county. I am more and more interested in the perusal of your excellent paper, which in my opinion hasn't its peer in the world. It seems to improve from year to year, if that be possible.—G. N. K.

MANITOBA GAME.—Winnipeg, Aug. 13.—*Editor Forest and Stream:* The duck season opens in this province on Monday, the 15th, with fair prospects of plenty of that kind of feathered game, though as the country becomes settled you are obliged to go to the back lakes to get good sport. Grouse shooting begins here Sept. 1. Numerous coveys of young birds are reported in the vicinity of the settlers' wheat fields, but a few miles outside the city. No woodcock shooting in this province, but plenty of snipe and plover.—STANSTEAD.

WILD RICE.—Nantucket, Aug. 20.—Last spring an interesting article on wild rice in your journal attracted my attention, as the plant is not known here. I wrote to the author, and he kindly agreed to gather me some this fall. I have secured control of a salt marsh and pond and desire to follow the matter up, but have unfortunately lost the gentleman's address. Perhaps if you could publish this he would see it.—F. J. CROSBY. [Wild rice seed is advertised in another column.]

SHORE BIRDS.—Nantucket, Mass., Aug. 20.—A heavy rain to-night gives us hope of the flight of the greenhead plover stopping on our island to rest. We shoot them from stands dug in the ground, over decoys; they bunch up over them and frequently repeat this after the first barrel, giving a second chance with the other. Bags of two or three dozen and as high as a hundred are got when they are plenty, but they do not stop here in plenty unless stopped by bad weather.—F. J. C.

NEW YORK GAME LAWS.—Compilations of the New York game laws are issued in pamphlet form by W. C. Little & Co., Albany (compiled by Franklin M. Danaher, Esq.), and the Eastern Fish and Game Protective Association, of Albany (compiled by E. W. Rankin, Esq.). Price of each, 50 cents. We can supply the first-mentioned on receipt of price.

SAUK CENTER, Minn., Aug. 18.—The chicken season opened Aug. 15, and good bags are being made. The game law passed last winter has had a wholesome effect on the usually lawless hunter. Ducks and geese as yet have not shown themselves, but there will be a good crop, I think, from indications, in the spring.—DELL.

Camp-Fire Flickerings.

"That reminds me."

222.

THE usual group of lawyers were gathered around the stove in Wilkin's tavern over in Springwater Valley, one evening last winter. All the topics of local interest had been exhausted and the assembly had settled down to a sort of go-as-you-please salivary match, in which the circle of tobacco-laden jaws represented the firing point and the sides of the red-hot stove the target. Suddenly a tall East Hiller, addressing the company at large, said: "Say fellers, what would you do if you was worth forty thousand dollars?" "I'd travel," said one, "go down East and see the folks, what I aint seen for more than twenty-five years." "I'd buy a bang up good farm," said another, and still another would start a store, and so on until every one present had spoken except Uncle Bill Hines, the old hunter and fisherman from down by Hemlock Lake. "Well, Uncle Bill," said the original propounder of the question, "what would you do?" "Who, me?" said the old man as he struck the bullseye. "If I wuz wuth fawty thousan' dollars? Waal, I'll tell you. I'd hunt and fish daytimes and raise Cain nights."

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

MOOSEHEAD IN FLY TIME.—II.

IN the morning we took a photograph of Joe's log residence, and then set out for Seeboomook Falls on the west branch of the Penobscot. We did not go by the regular carry road, which strikes the branch above the upper falls of Seeboomook, but took an old logging road, which would take us to the middle fall known as the Dam Pitch.

The road was pretty muddy and wet, but by taking advantage of the stones and logs we kept comparatively dry shod. Now and again we came to a fallen tree across the path which we had to clamber over or crawl under, but the natural beauties above and around us more than atoned for what disagreeable features might be beneath our feet. How green and fresh the woods were, and how sweet the balsam-laden air. How good it was to be there. The sunlight filtered down through the green foliage, and flecked the narrow way with trembling flakes of gold. The matin songs of the birds, and song birds in these woods are not very plenty, and the occasional flight of an insect alone disturbed the stillness. The ground fairly sparkeld with the showy white involucres of the bunch berries. Patches of blue violets bloomed by the wayside, and the delicate little *Viola blanda* did not on this morning at least "waste its sweetness on the desert air." The *Clintonia borealis* grew in great profusion, and though they were nearly out of bloom, we found a few specimens of the purple trillium (*Trilleum erectum*) and the painted trillium (*Trillium erythrocarpum*). We had accomplished half the distance before our eyes were rewarded with the sight of what we had been looking for all the way—the odd sac blossoms of that pretty orchid, the moccasin flower. But we found them, both pink and white, and almost at the time the Scribe stooped to pluck the first one William uttered an exclamation and said, "And here is what I have been looking for."

He pointed to a muddy place in the road and there was the sharply defined fresh hoof-print of a deer. "Ah," said he, "if it only wasn't close time." And he gazed longingly at the delicate, cloven indentation. All the way across we saw plenty of deer sign. At one place we passed the dilapidated and moss-covered ruins of an old logging camp, which had probably not been used for fifty years. After tramping about three miles we could hear the sound of falling water, and soon came out on to an open place on the bank of the West Branch, near the Dam Pitch. The stream flows over two ledges, almost as evenly as over an artificial dam, while above and below the current moves calmly along between the wooded banks. Canoes have to be lifted over this pitch.

Our first duty on coming out of the woods was to anoint the exposed portions of our anatomy with the "bug juice" as Lloyd called it, for the moment we stopped on the bank every fly and mosquito in Maine seemed aware of our arrival. While William was preparing to get a picture of the falls the others were getting their fishing tackle into working order. Pushing our way through the alders we stood on the rocks and cast into the edge of the white water below the pitch. The trout took the flies readily, and by the time the photographer had exposed his plates several speckled forms were reposing in our baskets. The black flies and mosquitoes did not give us much repose, however, and there were frequent calls for the tar oil bottle, whose contents kept them at bay. The mosquitoes soon found out that their instruments of torture would penetrate our hosiery, and at once proceeded to work on the calves of our legs. They had the advantage of the flies in that respect. Every time we opened our mouths to speak we swallowed anywhere from one to a dozen black flies; at least it seemed so. William said that when he was focusing they pattered against the focus cloth like rain drops on a roof. Coming through the woods we had seen scarcely a fly or mosquito, but among the alders on the bank their name was legion. William, who is natually a mild-tempered man and slow to anger, came very near getting excited, and once the Scribe thought—only thought—that he heard something very like a cuss word come from under the focus cloth, whence the hero of the camera suddenly emerged and frantically thrashed the air with the aforesaid cloth, at the same time executing an original *pas seul.*

The trout bit well for a while and we enjoyed very good sport before we turned up stream toward the upper falls of Seeboomook. There was no path and for a mile we had a hard tramp through the woods. The Scribe does not know whether the course we took was the original "way of the transgressor" or not, but it was certainly a "hard" way, where underbrush, fallen trees, logs, bushes and a most uneven surface all combined to retard our progress. We forced our way along and again our ears were saluted with the sound of the water, which constantly became louder, till we emerged at the foot of the upper falls. The scene was picturesque in the extreme, and worth all the toil and strength we had expended. We were below, and looking up into the wild, rocky gorge of Seeboomook—the dread of the river drivers on the West Branch—through which the water roared and rushed and swirled in its narrow channel. On both sides were great masses of jagged rock, broken and split into fantastic shapes, through which the stream forced its passage. Great patches of foam revolved in the eddies and the spray dashed in the air. Dark groups of pines and spruces stood straight and tall, interspersed with the lighter green of the hard wood trees. The *tout ensemble* of gray rock, green foliage, blue sky and white water made a picture which seemed to us to be the very poetry of nature.

Where a ledge sloped abruptly into a deep pool a large quantity of foam had collected, which covered the water with a smooth white mantle, and on to this snowy surface we cast our flies. The trout evidently appreciated its value as an awning, for there were plenty of them under it, and it was a pretty sight to see it suddenly rent as a gleaming, speckled fish came up with a rush, took the fly, and disappeared as quickly as the harlequin of a Christmas pantomime. We got a good picture from where we were, and then William clambered over the rocks and exposed the remaining plates further up stream. It was near here that James Russell Lowell went moose hunting years ago. Cy built a fire and then we cooked our trout and ate as only men in the woods can eat, with a relish not to be found within a city's walls. William added the spice of a little excitement to our repast by tumbling head first into the fire, but we rescued him before he was cremated. His white flannel shirt, though, was beautifully frescoed with streaks and patches of black. We caught another mess of trout and then retraced our steps, intending to get back to Joe's in time to paddle around to the Northeast Carry and cross over to Luce's at the West Branch end to stay over night, and then proceed to Chesuncook Lake the next morning. By taking this course we would avoid the long, hard carry around the lower Seeboomook Falls, which are about a mile and a half below the Dam Pitch.

As we went back through the woods we twice saw the tracks of deer in our own footprints, showing that they had been there since we crossed in the morning. Cy peeled a piece of bark from a birch tree, and as he walked he deftly fashioned it into a drinking cup, from which we quenched our thirst with water from a spring bubbling up near the path. How clear and cold and sparkling it was. The day was warm and we were heated after our tramp, but this pure, wholesome beverage which Dame Nature furnished gave us new strength, and we resumed our way, leaving a good portion of our fatigue behind. The birch bark seemed to add to its flavor, and we each dipped the cup into the sylvan, moss-rimmed fountain more than once. We reached Joe's in due time and his wife cooked our trout, and to the repast was added a draught of his birch beer.

The wind was blowing strongly, and there was so much of a sea on the lake that we could not get around to the other carry till it moderated, so we made ourselves comfortable in Joe's living room. Cy and Bill puffed away at their pipes; William turned into the bunk and took a nap; Lloyd and Harry listened to old Joe's stories of how the caribou and deer were killed whose antlers hung on the wall, and the Scribe prepared the moccasin flowers and other botanical specimens. We hoped the wind would go down with the sun, but it increased, and the white-capped waves ran higher and the surf beat harder on the pebbly beach. Perhaps it was well, however, for we had had a hard tramp and our enforced rest may have been a blessing in disguise. All through the night the wind blew hard, and in the morning the lake was rougher than ever, so we decided to carry the canoes across to the Dam Pitch and go down the West Branch.

Joe's son harnessed the horses to a sled, on which the canoes had been previously loaded, and after disposing of our impedimenta in the bottom of the lower canoe, we started. We carried our rods so as to go on ahead and catch trout for dinner before the canoes arrived. Bill shouldered an axe, with which to clear the road of the obstructions in the form of fallen trees, which we had encountered the previous day. His brawny arms and unerring stroke made short work of them. The sled slipped across logs, bumped over stones, grazed a tree here and stuck in a mudhole there. It went down in to hollows with a rush, and then with yell from the driver and a tug by the horses would go up the opposite slope, over the ridge and down again, rocking and pitching like a boat in a gale, in fact the canoes had the appearance, as we saw them over the bushes (the simile has been used before) of being tossed on a tempestuous sea of foliage, in which they were momentarily engulfed, only to emerge again, as the sled encountered the inequalities of the road. They rode out their rough passage in safety, for they were firmly lashed in place. The sky was lowry when we started, and before we had gone half way, the pattering of a few drops on the dead leaves warned us to put on our rubber coats and boots, and hardly had we

done this before "the rain descended and the floods came." It rained, not in drops, but in sheets and torrents of water, which transformed the already muddy road into a mire, through which we splashed along. We pinned the two rubber focus cloths around the youngster for additional protection.

When we arrived at the Branch we jointed our rods and fished below the pitch, where we had good luck the day before, but the trout were not in a biting mood, and we did not get a rise.

There was about as much water in the air as there was in the stream, and the deluge showed no signs of abating, but if the rain wet us, it also put a damper on the ardor of the black flies. We continued to cast till a shout from Bill apprised us that the rear of the procession had arrived.

We launched the canoes as quickly as possible, put our luggage aboard, shouted "good-bye" to Morris, and then, seizing the paddles, started down stream. We were a little dubious as to how our stock of dry plates and undeveloped negatives would be, but we stowed them away as snugly as possible. We were afraid they would all be wet plates, but they came out all right, as we afterward proved. The rain still continued to pour in torrents of very wet water, but we did not mind it much, as we paddled swiftly along between the wooded banks stretching away on either hand, without a break in the thick wall of vegetation which came to the water's edge. As we rounded a bend a brace of black ducks rose from the water and took a beeline down stream till they disappeared over the tops of the trees. We had about a mile of dead water before we sighted the rocks at the head of the lower falls, which are also called the "long" falls. Here we had a mile carry to make, not a pleasant prospect on such a day.

There is a winter road on the right bank, but thinking we could get down over the rocks and fish as we went along, we landed on the left bank. The guides went down to the head of the pitch to reconnoitre, as they had never been down Seeboomook when the stream was so high. The water went foaming over the first pitch and turned a sharp angle into a little cove behind a big rock. It was a risky bit of water to run, but after carefully studying the problem Cy determined to go through. Bill said "if Cy could he could." We stood on the rocks below and watched them, and it was a thrilling sight to see the frail craft leave the smooth, dead water, and boldly enter the boiling, frothing current, which, it seemed, would dash them to pieces on the rocks or capsize them, but they went through safely without shipping a drop. The guides stood up, holding the paddles with grasps of iron, and as the canoes shot into the smooth water of the cove below, we gave them a cheer of encouragement. They then went to survey the next stretch of bad water and we went on ahead, casting our flies from the rocks wherever there seemed a likely place for trout. The fish were obdurate, and our success was so poor and the traveling so difficult that the other three left the Scribe to fish alone. They signified their intention of getting around the carry as quickly as possible and disappeared in the woods. The Scribe continued down the rocks but made slow progress, as they were slippery and steep and separated by inlets, making it necessary, in many places, to go around through the woods, a vexatious thing to do with a jointed rod. Finally it became impossible to proceed in this way and he unjointed his rod preparatory to taking to the woods.

The rain still fell, but not as copiously as before, and the sun was struggling to break through the clouds. Looking up or down stream, there were rocks and rapids and falls as far as one could see. The guides were some distance above just carrying the canoes over a large rock round which the water was very rough. After going back for the luggage they paddled across a little bay to another rock from which they dropped the canoes over the next pitch. The three who had gone on ahead were nowhere to be seen.

The Scribe pushed his way through the alders, which were so thick on the banks as to be almost impenetrable, and went on through the woods. The forest was stern and savage in the extreme; wilder and rougher than we had yet seen on this trip. The trees were large and thick. There were living trees and dead trees and trees in every stage of decay. Progress was blocked by logs and fallen trunks, some of which were prostrate on the ground, while others had lodged against the standing timber at every angle and in every conceivable position. Long mossy ridges showed where some monarch of the forest had fallen years and years before, and logs apparently sound would crush under a footstep. Occasionally an abattis of tangled branches and sharp, broken limbs effectually barred the way and necessitated a detour.

The trees, living and dead, were draped with festoons of gray moss, the usnea lichen, and the foliage was so dense that the light was dim, and the eye could penetrate but a short distance into the grim, shadowy depths. The footfalls made no sound on the soft, mossy floor of the forest, and as the Scribe slowly fought his way not a sound was to be heard. It was the very incarnation of solitude—a place where one instinctively glances about him on the lookout for some unknown and unseen danger; where one would expect to meet the more savage beasts—the surly bear, the grim wolf or the crouching panther. But as Thoreau said: "The howling wilderness seldom howls except in the imagination of the traveler," and the Scribe saw no sign of life, not even a black fly. No sound was heard save the distant water, now and then. Occasionally a slap in the face from a wet branch would send the drops down my neck in streams. Thoreau characterized it as the "damp and shaggy wilderness." Damp it certainly was on this particular occasion, and the term "shaggy" is peculiarly appropriate. It was a lonesome place and a lonesome journey, but all things have an end, and I came into an old winter road, hardly distinguishable from its surroundings, leading to a small clearing on the bank just at the foot of the falls. As I emerged from the shadow of the trees I saw my three comrades grouped around a fire, which served the double purpose of drying their clothes and keeping away the bloodthirsty flies and mosquitoes, for it had stopped raining and the little pests were out again on the warpath.

We had not long to wait before Cy and Bill came down over the last pitch and we embarked for the last stage of the day's journey. "Bill," said Lloyd, "are there any more falls?" "Falls!" exclaimed the guide. "No, the water has got the life all chawed out of it coming through there, and it's dead water now all the way to Luce's," and he chuckled at his joke. We had five miles of dead water to paddle over before reaching Luce's, and we stopped but once, to inspect a logging camp on the right bank. The general scenery was the same as it had been above Seeboomook, long stretches of dark water between thickly wooded banks.

Three miles down we passed the mouth of Russell Brook; this leads up to Russell Pond, which used to be good ground for moose and caribou.

Two miles from there we came in sight of Luce's buildings and made a landing on the steep clay bank from which the road leads up to the house about a quarter of a mile. Bill and the Scribe waited to see to the canoes and luggage, while the others went directly to the house. A couple of canoes and half a dozen batteaux were on the bank, and while we were getting out the things we wished to carry to the house, another canoe containing two men, appeared, coming up stream. Its occupants, an Indian and an Irishman, proved to belong to the West Branch drive, and had come from Chesuncook Lake for some supplies. They reported having seen a moose the day before at 'Suncook, as they abbreviate the name. When the Scribe entered the room which serves as sitting room and office, his eyes beheld a spectacle which was a sight for gods and men. In a huge box-stove a rousing wood-fire was already burning, and around it were William, Lloyd and Harry, divested of everything except their drawers and shirts, and even these were soaked through. By some means they had succeeded in getting thoroughly drenched, while the guides and the Scribe came through comparatively dry. The proverbial drowned rat was dry in comparison with them. Their clothing hung steaming behind the stove, and the garments they had on clung tightly to their limbs.

When dinner was announced the clothing was not dry and the three members in *deshabille* were obliged to appear at the table as they were. Probably few people have been edified by the sight of a dignified drygoods and carpet dealer seated at the head of a table and dressed for dinner in a pair of wet drawers and a flannel shirt, which may have been white in the "days of long ago." The Scribe sat opposite such an apparition and the table was flanked by two similar ones. The Scribe did his best to furnish the requisite amount of dignity for the repast, but he wishes that William's wife might have seen her liege lord and eldest son on that occasion. The meal over, we returned to our seats around the big stove, lighted our pipes and cigars and chatted and told stories. The Scribe made an attempt to photograph the group, but could not get light enough. The account of an adventure with a bear, narrated by Mr. Luce, will warrant repetition.

"It was two years ago this spring," he began, "that we had quite an adventure here one night. I had gone to bed, and abou 11 o'clock one of the boys came up, knocked at my door, and told me to get up and come down-stairs as there was a bear in the buttery. I dressed, took my rifle and went down. Sure enough there was the bear. The door was closed but we could hear him in there eating something. We planned to attack him. I was to remain in the room and the boy was to go around one end of the house, while an Indian, who was here, was to head him off in the other direction. Then if he escaped from me through the window, one or the other of them would stand a chance of killing him. Each man took his post, but the bear became alarmed in some way and I threw open the buttery door just in time to see him disappear through the window. I yelled to them to look out for him, but it was so dark outside that they could not see his black hide. At he ran around the house he knocked over the Indian and disappeared in the darkness. I don't know which was the most frightened, the bear or the Indian. We went back indoors and discussed the probability of his returning. We didn't much think he would, but thought we would watch a while, and, sure enough, in a short time we heard him clambering in the buttery window again. He was more wary this time, and before we could get at him he again became frightened. As he went away the second time, though, he ran by the woodpile where the ground was strewn with white chips, and as his black body showed against them, the boy drew a bead on him and fired right through the window, carrying away sash and all. It was a pretty shot, and he dropped in his tracks, dead. There was some corned beef in the buttery and that was what he was after. He was probably just out of his den after his long hibernation through the winter and was hungry. He was a big fellow."

W. A. B.

THE AMATEUR FISHERMAN.

IT IS Lowell who says that we all have a trace of gypsey blood in our veins, and to its nomadic influence he attributes all the mysterious impulses toward wandering that come to us with the milder skies and greener landscapes of spring. Perhaps no man is more susceptible to this magic trace of another and earlier existence or more quick to respond to its promptings than the amateur fisherman. I have such a man in mind as I write this. His nominal calling is that of an insurance agent, but his real occupation is that of a fisherman. The dire necessity of finding constant answers to that ever-urgent, never-solved conundrum, "What shall we eat, and what shall we drink, and wherewithal shall we be clothed?" consumes the greater portion of his time. For fifty weeks in the year he deals with policies and renewals and death rates and dividends, and laboriously and uncomplainingly gathers premiums, in order that the president and directors of his company may pull down their houses and build greater, and that their wives and daughters may array themselves in foreign silks and laces. He dwells on the certainty of dying only that he may make his own living the more secure. He induces you to take out a policy by showing you the importance of providing against sudden and unforeseen contingencies, and the utter mutability of all things human in order that he may apply the commissions to carrying out certain plans which he has made for next year and the year after. And in all this he is logical, inflexible, unanswerable.

But for the other two weeks. Should you meet him on the lake or the river during the fishing season you would never know him. This man, who in one of those abstruse calculations in which insurance men delight, scrupulously exacts the odd cent where nine-sixteenths of it falls on his side, now stands ready to place anything at your disposal, even to the half of his tackle. He is bubbling over with good humor and good fellowship, his only table of expectations being that which relates to the fishing and fishing weather. The sunshine and the fresh clear water mellow and temper his whole nature till it is as pliant and elastic as a split bamboo.

But if in all this I have conveyed the impression that the man whose occupation is that of an amateur fisherman derives no real enjoyment from his calling save in the brief two weeks he filches from black Care, I have been sorely misapprehended. On the contrary, when the first sunny days of March hang out coy signals of yet distant spring, he begins to look over his box of tackle, testing his lines, arranging his flies, and satisfying himself that all the details of rod and reel are in perfect working order. He furbishes up his fishing suit, inspects his rubber boots and takes the first opportunity to drop into a tackle store where he buys a score of things which he knows he will never find any use for, but which are always "handy to have." From total indifferentism on the subject of the weather, as the season advances he becomes the most careful observer of the clouds and the winds. He plans his trip for months beforehand, and draws from it a three-fold enjoyment—the anticipation, the realization, the recollection. True, his piscatorial pilgrimage was made too late in the season last year, just as it was made too early in the season the year before.

But there is a happy faculty possessed by your true fisherman which enables him to forget whatever there may have been of the disagreeable in his experience, while his good luck is treasured up forever in his memory. The trip when he caught that terrible cold that lasted for three months afterward, the upsetting that he got into November water, and the time when he toiled all day long and caught nothing, are all conveniently blank in his memory. But he can tell you to the quarter of an ounce and to the fraction of an inch the weight and measure of his largest bass and all the particulars of his capture. And when, after a run of misfortune such as none but a true fisherman could withstand, he chances upon a fortunate day, he finds unutterable delight in all the subtle influences of air and wave and sky, and drinks in deep content. If unsuccessful, then he has so much more to hope for from the future. For so long as to-morrow hangs her glittering promise in the sky, so long will he continue to look for better luck.

There must be a moral somewhere in these pages, for I had one when I began, and now I am unable to find it. Let those who enjoy morals look it up and make the application for themselves. Meanwhile I have only to add: Blessed is the man (likewise the woman) who has some good, safe hobby of his own, a creature that will neither shy nor bolt, but one on whose broad and kindly back he can mount when the toils and annoyances of life press him too closely and for a few brief hours amble smoothly and happily away from care.

JAY BEEBE.

TOLEDO, O., Aug. 20.

A WAR STORY.

I TOOK occasion some time ago in an article on fishing to express my utter want of appreciation of the succulent qualities of that pond shark of a fish called a pickerel, and added that I had eaten cat and pickerel and preferred the former. As some of my readers may, naturally enough, think me a man devoid of taste or possessed of rather queer notions, and as I always stand ready to give a reason for the faith that is in me, "I will a tale unfold, naught extenuate nor set down aught in malice." This is a war story, though a short one; I am free to confess that war stories would probably be showered down like grapeshot on the editor's devoted head on the smallest provocation, and that there must be a strong distinction made between shooting fur and feather and our fellow creatures.

Many a long year ago, the Gardes Lafayette, or Cinquante-Cinquième, commonly called the 55th N. Y. S. V., was encamped at Tennallytown, enlisted for the war. It was supposed to be a French regiment, with a liberal element of Dutchmen, Americans and other nationalities. It was from its stunning uniform of the Zouave pattern supposed to be a regiment of officers, and as every high private had a double row of buttons running down his manly chest, sentinels were kept busy all the time saluting. Duryea's Zoos gazed at us with unqualified admiration; Ellsworth's Avengers and Billy Wilson's Pets were bursting with envy; while the Infant Purdies—*Les Enfants Perdus*—were simply nowhere.

Amid all this fascinating and brilliant array of soldiers Capt. W. and myself, simply Seventh Regiment boys, found ourselves surrounded from the beginning and heavily weighted from the outset. So it came to pass that as I in a measure understood their lingo, I was posted up as to what was going on, and it was therefore with due gravity and decorum that a French corporal made his appearance before my tent, saluted, and handed me a courteous request from the French Captain of the Skirmishers to come up to his tent and *manger le chat*. Returning a prompt acceptance of the gracious missive I went in to Capt. W.'s tent and explained matters to him, but I added that I had heard the Frenchman say "we would be afraid to come," and therefore I had accepted the invitation on sight. "My dear Lieutenant, perfectly right; the honor of the Seventh is at stake, confound it," he added in a burst of enthusiasm, "I can eat anything that Frenchman can." So we donned our accoutrements and started off. Both of us had a few days before seen an enormous Tabby cat, a sort of a tortoise shell, playing around the French captain's tent, and as we had missed him from his accustomed place, we shrewdly suspected he was to be offered up as a sacrifice.

Nerve and politeness were my captain's habitual qualities, of striking physique, over 6ft.; he was a man it did you good to look at. We saluted the little Captain of Zouaves with oriental politeness, sat down with great composure and looked, or tried to, as if dining off of cat was of every day occurrence.

"As to what part of the cat would you prefer, Messieurs?"

"C'la m'est egal!"

"Second joint, mon Lieutenant?"

"Oui, Capitaine."

"A piece of ze breast?"

W.'s face was a study. Here was a mess served up and no retreat. Internally wishing our host in a much hotter place than poor pussy had ever been in we set to work; laughing and chatting with imperturbable good humor, we feasted off of poor Tabby, washing him down with Rhine wine and regretting we had not laid in a supply of cats for a return feast. Then smoking with

them the pipe of peace we thanked them for their generous hospitality and bid them good day.

When we reached the solitude of our own tent we were obliged to confess how very much we had been disappointed. It had been remarked in my presence by President Lincoln "that if the Fifty-fifth only fight as well as they feed they will do well!" And both of us rendered honest tribute to the excellence of French cooking. Captain W. said, "I was never more deceived in my life. Tasted more like rabbit." I replied, "Yes, or a gray squirrel." There was no disputing the fact. We never should have known what we had been feeding on had we not been told.

Neither the Captain nor myself ever repeated the performance or felt any desire to do so. I have, like old Martin Luther, "a good old Protestant stomach."

But I have given my reasons for my faith, and I say with all sincerity that cat cooked by a Frenchman will "lay over" pickerel any day, cooked as that monstrous humbug of a fish generally is by a native born American.

CAPT. CLAYTON.

THE LARGEST BLACK BASS.

Editor Forest and Stream:

I see that the question of the "largest black bass" is again brought up for decision. In your issue of Aug. 18, in reply to a correspondent, it is stated that the largest small-mouth black bass on record was taken from Lake Ronkonkomo and weighed 8lbs. In speaking or writing of this fish, as I have had occasion to do several times, I have always accorded it the weight you give it, and my information was gleaned from a letter to a public print which stated under date of July 18, 1883: "I have had the pleasure of seeing to-day the largest small-mouth black bass taken from waters in this vicinity, and claimed to be the largest recorded. When caught last night at half-past eight o'clock it tipped the beam at a square 8lbs., and after it had been out of the water nearly 24 hours it was weighed at Mr. Eugene Blackford's stand and scaled over 7lbs."

The writer further states that Mr. Blackford and Mr. H. H. Thompson pronounced the fish a small-mouth bass. Under date of July 24, 1883, Mr. H. H. Thompson published a letter in regard to the same fish, in which he stated: "Placed in the scales under my own eyes, with the sparkling eyes of 'A. N. C.' in my imagination looking through mine, the weight was carefully noted at exactly 7lbs." This was at Blackford's. In 1884 Mr. Thompson in commenting upon large black bass spoke of the Ronkonkoma fish as a "7lbs. bass."

I believe I was the first to record a black bass (small-mouth) approximating 8lbs. in weight, and out of it grew a correspondence which caused Mr. Thompson to refer to me by my initials as above, for it took me about three years to convince him that the trees up here bore bass of 7lbs. and over.

The first day of August, 1877, I caught a small-mouth which at 5 A. M. weighed on steelyards 8¼lbs., but at 8 o'clock the evening of the same day weighed but 7lbs. 14oz., when placed in the scoop of three different sets of grocer's scales. The latter weight is all I have ever claimed for the fish. In September, 1884, I sent a small-mouth black bass to Mr. Blackford and telegraphed FOREST AND STREAM that I had done so and that the fish was at the disposal of the paper if it wished it, if not I desired it to go to the Smithsonian. If you can borrow a copy of FOREST AND STREAM of Oct. 2, 1884, you will find that the bass weighed 8¼lbs. I notified Mr. Thompson that I had sent the fish to Mr. Blackford and he saw it weighed. Mr. Mather wrote me that the bass weighed 8¼lbs. at the market, and was forwarded to Washington, where I presume there is a cast of it. A. N. CHENEY.

GLENS FALLS, N. Y., Aug. 21.

AN ALLEGHENY RIVER RESORT.—Creighton, Pa., Aug. 9.—In compliance with your issue of July 28, I report that the Jolly Hunting and Fishing Club was encamped last September at West Hickory, on the Allegheny River, about 27 miles above Oil City, and we caught black and yellow bass and jack salmon in abundance. They were as fine fish as I ever saw come out of the river. We used worms, minnows, mussels and crabs for bait; we did not use any flies. There is some trout in the small streams, but as we were out of season for them we did not fish for any. There are still a few deer there, and black and red squirrels are in abundance.—S. S. HUDEPOHL, Sec'y.

SAUK CENTER, Minn., Aug. 18.—Birch Lake is twelve miles east of Sauk Center on the L. F. & D. R. R. It abounds in pike, black bass, whitefish, pickerel, etc., and is one of the most pleasant little sheets of water in Minnesota. One can reach it by taking train at Sauk Center at 10:07 A. M., and can return at 4:15 P. M. on the same day, or, what is better, take tent and come out for a few days. Two gentlemen from Cincinnati are making this lake their headquarters for a while, and judging from the fine looking string of fish they brought in on the west-bound train the other night, my words are more than verified.—DELL.

TROUT AND BLACK BASS.—Winnipeg, Aug. 13.—Loon Lake is a beautiful little lake some two miles in length and located in the Nepigon region on the C. P. R. R., six miles west of Pearl River, and is, in a fisherman's way of speaking, literally alive with those two game fish, speckled trout and black bass. They seem to live harmoniously together, for the angler, when using two or more flies, often lands a trout and bass at the same time. The largest trout average about 1½lbs. each, and the largest bass 3lbs. and over. The catch in numbers is usually nearly equal.—STANSTEAD.

ST. ALBANS BAY, Vt., Aug. 18.—I inclose herewith record of small-mouthed black bass caught by H. B. Thomas and his son Orton, of Troy, N. Y., with Rodney W. Potter as guide. One hundred and fifty bass were caught by them during their stay of ten days. They fished during that time three full days and the rest of time fished only late in the afternoon. All bass of 1lb. or under were returned to the water as soon as caught; the 150 bass averaged 2lbs. each: Aug. 6th they took 11, 8th 15, 9th 25, 10th 5, 11th 4, 12th 9, 13th 13, 15th 31, 16th 25, 17th 12.—H. L. SAMSON.

A BIG RUN OF BLUEFISH.—On Tuesday morning of last week there was a great run of mackerel at Shinnecock Inlet, Long Island, driven in shore by bluefish. The beach was lined with immense schools of mackerel, which, in their endeavor to escape the preying bluefish, cast themselves ashore. Residents from neighboring towns gathered up the flopping fish by bushel-basketfuls and barrels and cartloads. The net fishermen made great hauls of bluefish, and the trolling was something that comes to a man once in a lifetime.

STATE FISH COMMISSIONERS.

[Remarks before the American Fisheries Society.]

BY R. EDWARD EARLL.

MR. PRESIDENT.—I do not intend to occupy the time of the Society with a paper, but it has occurred to me that this would be an excellent opportunity to bring to the attention of its members a matter the importance of which has been growing upon me for some time, namely: the changed condition of the duties of Commissioners of Fisheries. During the past few years it has been the one great and sole aim of all Commissioners to hatch out and plant in the waters of their respective States as many fish of the different kinds as it was possible for them to hatch and distribute, with the means placed at their disposal; but we find that the time is rapidly approaching when it will become necessary for these officials to present to their respective government, or to the appropriations committees of said governments, a clear and concise statement of all that is being accomplished with the money appropriated for fishcultural work.

There has thus far been very little effort on the part of most of the States, and until recently upon the part of the general government, to obtain definite and detailed information regarding the extent and value of the fisheries of the various localities. It is, in my judgment, especially important that each Commissioner of Fisheries should make himself, as far as possible, thoroughly familiar with the details of the fisheries of his own State. I say the fisheries; I mean more especially the commercial fisheries—that he should give special attention to the kinds of apparatus that are being introduced into the waters and to the effect of each particular kind of apparatus upon the abundance of fish. It is only by this means that he will be enabled to tell what the result of his labors in stocking the waters is proving to be; and, further, it is only by this means that he will be enabled to stand between the man who condemns all fishing for profit and the man who wants no restrictions placed upon the fisheries. We have at the present time two contending parties, on the one hand, the angler, who wants fishing only for sport, and wishes to prohibit the use of every form of implement for catching fish that will interfere with the enjoyment of his summer vacation, and on the other hand, a large class of men who derive their entire support from the catching of fish for market. Each class comes with its complaints to the legislative bodies of the country, and the one that makes the best impression upon the legislature is very apt to carry the day. We are thus coming to have a series of laws enacted, some of which are very unwise and ought never to appear upon the statute books.

It is only recently that the U. S. Fish Commission has undertaken to familiarize itself with the details of the fisheries. Through an arrangement with the Census Office in 1879 Professor Baird, as you all know, was allowed an opportunity of carrying out an elaborate scheme for the investigation of the commercial fisheries. The work was placed under the direction of Prof. Goode, and the results of that work are beginning to appear. Owing to the exhaustion of the appropriation of the Census Office, they were able to print only a very small portion of the material that was given them, but all of the manuscripts were retained by them until recently, when they were returned to the U. S. Fish Commission. Professor Goode and his associates have given much time to the preparation of these reports, the first two volumes of which have already appeared, and a large amount of additional material is now in type and will soon be ready for distribution. At least half a dozen more volumes similar in size to those already out will be published. These will describe in detail the fisheries of all the more important fishing towns, the history, methods and present extent of each of the special fisheries; the characteristics of the fishermen both at home and at sea, the character, extent and location of the principal fishing grounds, the apparatus of the fisheries, and in addition will give an exhaustive statistical review of the fisheries industries of the country.

But these reports will picture the fisheries as they were in 1880, and if they are to be available for present use, they must be kept up to date. With the desire to keep abreast with any changes that might take place, Professor Baird has frequently, since that time, sent out committees for the investigation of special subjects. It has been my privilege to be on several of these committees of investigation, and I have found how comparatively easy it is for one, even though a stranger to the locality, to get control of the details of the fisheries of any village or stretch of coast. From my experience I have been convinced that it would be entirely practicable for the Commissioners of the several States to familiarize themselves with the changes that are taking place within their own borders and to collect from year to year full and complete statistics of the fish caught in the territory under their control and to publish these for the information of the public in their annual reports.

I have been much pleased to see in the States of Michigan and Wisconsin a very commendable effort in this direction. I think the Commissioners of both of these States have so familiarized themselves with the details of the fisheries in their own waters and with the influence of each kind of apparatus of capture that they will be better able to cope with the problem of legislation than the Commissioners of other States, and also to show more clearly the influence of their fishcultural operation upon the yield of the commercial fisheries. Any one who has heard the conflicting statements of the fishermen when summoned to give evidence regarding proper legislation for the protection of the fisheries, cannot fail to appreciate the importance of a full knowledge of all important details. In the Great Lake fisheries the gill net and pound net fishermen are at swords points; one claiming that the other is using the most destructive apparatus that could be devised, while the angling element, especially in the more eastern lakes, is opposed to both. There have been frequent attempts in various States to entirely prohibit the pound net fishing, and there have been equally strenuous efforts to prohibit the use of the gill net, and again laws have been framed forbidding the use of haul seines, while fishing with pound nets and gill nets was in no way restricted. Numerous attempts have also been made to control and protect the fisheries by regulating the size of the mesh, but the utter inability of legislation to protect the small fish by this means is shown very clearly by the remark made to me yesterday by one of the gentlemen present, who claimed that if it were possible to insist upon the use of a given size of mesh, the fisherman could still regulate the size of the fish taken quite at his pleasure by simply pulling hard upon the upper cork line at one end of the net and upon the lead line at the other end, so as to draw the meshes together, and thus prevent the very smallest fish from going through.

I bring this matter to your attention because I have come to feel the importance of a definite and positive knowledge in this contest, when parties interested and parties whose interests are not apparent are clamoring for legislation. I think the time has arrived when the Commissioners of the different States should stand between the contending elements and should settle definitely in the minds of the law makers the questions which are up for consideration, and nothing, in my judgment, is more necessary to a proper understanding of these questions than a careful comparison of the yield of the fisheries of the various localities from year to year.

With a desire to obtain as reliable statistics as possible, the U. S. Fish Commission has recently, through the co-operation of the Treasury Department, established a series of reports in which I think you will all be interested. The Secretary of the Treasury has consented to require of the owner and master of each vessel engaged in the fisheries of the United States, regardless of the locality, a detailed statement regarding the size, the value and the rig of the vessel; the number of men employed; the kind of apparatus used; the locality where fishing; the quantities and values of the fish caught, and other questions of importance affecting that particular vessel. We are receiving hundreds of these reports every month from all portions of the coast, including the Pacific coast, the Gulf of Mexico and the numerous fishing ports of the Atlantic; and we are thus gathering a very large amount of information regarding the vessel fisheries, but the boat fisheries are still unprovided for, and if it were possible for the Commissioners of each of the States to arrange to get reliable estimates of the quantity of fish caught yearly within their own borders, the number of men that are dependent upon these fisheries, and the distribution of the catch, I think we would be able to show what legislation is needed, and consequently, which I consider more important, to show clearly the importance of fishculture in the commercial fisheries and the achievements that fishculture has already attained. I should be very glad if some of the Commissioners present would give us a statement of what has already been done in their waters and of the difficulties, if such exist, in carrying out the line proposed. It has been suggested this afternoon in conversation that there would be considerable difficulty owing to the fact that many of the Commissioners have only limited appropriations placed at their disposal, while others receive nothing whatever for their services, these being gratuitous, but it occurred to me that by having intelligent correspondents in each of the leading centers, men in whom they had confidence, it would be possible to get together for the State reports very valuable contributions to our information regarding the condition of the fisheries.

* * * * * * * * *

I will simply add for the information of any one here who sees no way of sending out agents to inquire as to the extent and value of the fisheries, that there is a growing prejudice among the commercial fishermen in favor of the work of the various State Commissioners and of the U. S. Fish Commissioner, and that they are now quite willing to give to the different commissions reliable information in answer to questions that may be asked. As a proof of this I will state that a circular was sent to each of the 1,600 vessels employed in the food fisheries of New England, and answers have been received from 1,560 of them, leaving only about 40 vessels out of the 1,600 that failed to respond. In the case of the fisheries of the Great Lakes inquiry circulars were recently sent to every fisherman on each of the five lakes, and more than ninety per cent. of them have been returned, and whenever, during the past two or three years, there has been an effort to obtain information by correspondence, this effort has been met with hearty co-operation on the part of those engaged in the commercial fisheries; so that even without the expenditure of any considerable amount of money it will be possible for those who are familiar with the localities and with the more intelligent resident fishermen to obtain possession of information from which very satisfactory reports can be prepared.

The Kennel.

FIXTURES.

DOG SHOWS.

Aug. 30 to Sept. 2.—Hornell Kennel Club Show, Hornellsville, N. Y. J. Otis Fellows, Superintendent.

Sept. 7 and 8.—Second Show of the Fox-Terrier Club, Newport, R. I. Entries close Aug. 27. F. Hoey, Sec., Long Branch, N. J.

Sept. 13 to 16.—First Show St. Paul and Minnesota Kennel Club, St. Paul, Minn. W. G. Whitehead, Secretary; Chas. Weil, Superintendent.

Sept. 20 to 23.—Fourth Show of the New Jersey Kennel Club, Waverly, N. J. Percy C. Ohl, Secretary, 44 Broadway, N. Y.

Sept. 20 to 23.—Wisconsin Kennel Club's Annual Show, Milwaukee, Wis. A. M. Grau, Secretary, 562 East Water street.

Sept. 27 to 30.—Annual Show of the Southern Ohio Fair Association, at Dayton, O. M. A. Nipgen, Secretary.

Oct. 12 and 13.—Third Annual Show of the Stafford Kennel Club, Stafford Springs, Conn. R. S. Hicks, Secretary.

FIELD TRIALS.

Sept. 6.—Manitoba Field Trials Club Field Trials. Derby entries will close July 1; all-aged entries Aug. 1. Secretary, Hubert Galt, Winnipeg, Manitoba.

Oct. 17 to 22.—Second Annual Meeting of the American Coursing Club, at Great Bend, Kan. G. I. Royce, Secretary, Topeka, Kan.

Oct. 31.—First Annual Field Trials of the Indiana Kennel Club, at Bicknel, Ind. Open to dogs owned in Indiana. P. T. Madison, Secretary, Lock Box 4, Indianapolis, Ind.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

Jan. 10, 1888.—Second Annual Field Trials of the Texas Field Trials Club, at Marshall, Tex. W. L. Thomas, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5296.**

"WILDFOWLER" FOUND GUILTY.—At the Committee meeting of the English Kennel Club, held July 26, charges were brought against Lewis Clement ("Wildfowler") by Mr. E. B. Joachim, for a brutal attack upon him at a dog show, and by Mr. M. Martin, for non-payment for dogs sold by him to Clement. Following is the decision of the committee which we clip from the *Kennel Gazette*: "The cases were then fully considered under Kennel Club Rule X., and it was decided unanimously that Mr. Lewis Clement had been proved guilty of discreditable conduct in connection with dogs and dog shows, and he therefore be declared incapable of competing for or winning a prize at any show or field trials held under Kennel Club rules." Clement is well known in this country by his swindling dog dealings.

THE HILLSIDE KENNELS.

ABOUT thirty miles from the city of Boston lies Lancaster, one of the prettiest villages it has ever been my lot to see. It is a village of stately mansions, pretty villas, comfortable-looking cottages, excellent roads, the greenest of green lawns, avenues of magnificent elms, and last, but by no means least, it is a village containing within its limits one of the finest collections of dogs in the world.

To the readers of the FOREST AND STREAM, the name of John E. Thayer is well known, as no report of a dog show is at all complete without Mr. Thayer's name cropping up repeatedly in the prize list with deerhounds, bulldogs and fox-terriers.

Here there are situated the Hillside Hennels, the property of Mr. John E. Thayer. When Mr. Thayer and his brother, Mr. Bayard Thayer, were quite boys, they were very fond of dogs and always kept several about the stables, but had no regular kennels.

In the year 1882 they first showed a few at Boston, including Lance, a deerhound dog; Beauty, a Gordon setter; Daisy, a pointer, and Tip, a fox-terrier, the latter bought by Mr. Bayard Thayer in Liverpool. Of this lot all are dead save Beauty, who has a fine time of it roaming about house and grounds at will. Poor old Lance died in the spring from old age, much to keeper Heald's relief, as the old dog had developed a temper of his own which, to put it mild, was anything but angelic. It was at this time that Heald took charge of the dogs. He had served all through the war, and when it was over he found employment in the gardens surrounding Mr. Thayer's mansion. Always fond of a dog he soon saw that the Messrs. Thayers' dogs were getting more kicks than attention in the stables, and after they had lost a litter or two of puppies by neglect he mentioned the fact to Mr. John. Just about this time the Ottawa show took place and the day before the dogs had to be shipped Mr. Thayer told Heald that he was to go with the following dogs, Moses, Juno, and Judy, bulldogs; Bramble a pointer, and Lance a deerhound. At this time the Hillside Kennels did not possess any dog boxes, so the five had to be taken on the chain. It so happened that Judy and Juno were always in the habit of fighting at sight, and did so on this occasion on the Worcester platform, Heald getting badly bitten in his endeavors to separate them, but a little thing of this sort never ruffles Heald's temper, as any one who saw him at the New York show some three or four years ago when Blister bit him so badly, can testify. Since this show Heald has had the entire management of the kennels, and I venture to say that for looking after such a lot of dogs, showing them in tiptop condition, besides superintending the breeding part of the business at home, there are few if any men in the country his equal.

The number of prizes won by the kennels since 1882 is 596—302 firsts, 168 specials, 98 seconds and 27 thirds; a pretty good showing for one kennel in four years.

The following will be found a complete list of the dogs at Hillside:

Deerhounds.—Dogs: Chieftain, Perth, Bras, Bran, Duncan, Robber Chieftain, Highland Laddie, King of the Forest. Bitches: Lorna II., Heatherbelle, Wanda, Berga, Thora, Countess Zina, Ramona, Theodora, Lorna Secunda.

Bulldogs.—Dogs: Tippoo, Romulus, Moses, Remus, Robinson Crusoe, Hillside. Bitches: Josephine, Rhodora, Britomartis, Juanita, Carmen.

Fox-terriers.—Dogs: Mixture, Raby Mixer, Belgrave Primrose, Raby Jack, Luke. Bitches: Jaunty, Di, Richmond Olive, Raby Susie, Shame, Raby Belle, Lady Mixture, Miss Mixture, Meersbrook Nan, Richmond Myrtle, Richmond Dazzle, Wasp II., Lyra, Shameless Mixture, Warren Lady.

This list does not include puppies.

Chieftain, 1881, dark blue, bred by Mr. Joplin, by Bevis out of Heather, by Harry (a son of Hector and Lufra II.) out of Hylda, by Torrum out of sister to Morne. It is not much use saying much about this magnificent dog, suffice it to say that he has never been beaten but once, and that was by his kennel companion, Wanda, at the Crystal Palace. The old dog looks very well with the exception of his coat, which he is just shedding. It seems a pity that so perfect a specimen did not cross the water to take part in the Jubilee show in England, and Mr. Thayer told me he was very sorry he did not send him. Perth, a blue dog, whelped in 1884 by Gillie out of Lufra, bought of Mr. Kelly, is a good dog but a long way behind Chieftain. Bras, a straw-colored dog, whelped 1884, by Bruce out of Maida, is very useful but perhaps hardly a clinker. Duncan, a white dog, whelped in 1883, by Lance out of Lorna II., is a dog with great power and substance but lacks character. Then comes a really good young dog, Highland Laddie, whelped September, 1885, by Bran out of Lorna II. King of the Forest, a straw-colored dog, whelped in 1886, by Chieftain out of Thora, is a clinker—size, length, substance, quality and coat combine to make one that with age will bother even the old dog himself. I don't like his color as well as Chieftain's, but he is certainly a wonderful young dog. Robber Chieftain, a son of Chieftain and Lorna II., is another extraordinary good one. The first of the bitches Heald showed me was Wanda, whelped 1884, by Gunnar out of Sheila, and I never saw this magnificent bitch look in such superb condition, she was indeed a picture, and it is almost impossible to find fault with her. Many people prefer her to Chieftain, and I think Mr. Thayer himself does, and as has been before stated she did beat him at Crystal Palace for the cup. Were I to try to pick her to pieces at all, the only thing I could say is that she might be a trifle deeper through her heart and perhaps have a little more bone, but again, she undoubtedly beats the old dog in ears and has a shade the most quality, in fact, to quote an old-time English poet,

"Either to t'other to prefer I'm loathe,
And he acts wisest who has most of both."

A very useful bitch is Berga, a light brindle whelped in 1883, by Bran out of Maida, and the same may be said of Thora, a fawn bitch by Thor out of Hylda. Lorna II., a blue, whelped in '81, by Bruce out of Lorna (Parke's), who was a daughter of Teeldeer, a daughter of old Torrum and Brenda, is a grand upstanding bitch and a rare breeder. Then came Heatherbelle, the same color as her mother, Lorna, by Hector. This is a very nice bitch. Lorna Secunda, Theodora and Ramona are three good-looking young bitches, the two former by Chieftain out of Thora and Lorna respectively. The last of the deerhounds I saw was a dark-blueish brindle bitch named Countess Zina, by Ross out of Lady, a rather small bitch with nothing particularly to recommend her, save her four puppies by Chieftain. Among a whole lot of puppies that were running about, here, there and everywhere, I noticed four very handsome ones, by Chieftain out of Thora, and four by the same sire out of Lorna II., one of the latter, even at this early age (10 weeks), being the picture of the old dog.

The next lot of dogs to be introduced by Heald were the bulldogs. Tippoo, a brindle dog, whelped 1880, by Gamester out of Ida, is pretty well known to all who have been in the habit of attending the dog shows, and well does the old dog look. Robinson Crusoe next came waddling up as fat as a pig, apparently very anxious to be taken notice of. This is an own brother to Britomartis, and although not such a good specimen as his sister, is certainly a very grand dog. Hillside, a white dog with tan markings on head, was whelped in 1884 by Tippoo out of Josephine, is a very useful young dog and decidedly the best ever bred in America. Hillside has improved very much since I first saw him at Newark, where, it will be remembered, he was, through error, disqualified. Moses, a white dog, whelped 1883 by Sir Bevis out of Nancy Lee, and Remus, also white, whelped in 1884, by Byron II. out of Rhodora, are a couple of fair dogs, while the same may be said of Romulus, a red smut, whelped in 1880 by Richard Cœur de Lion out of Peg. It may here be mentioned that Heald has an unfortunate habit of always pulling the best out for inspection the first, which is a mistake, as it makes some that follow his clinkers appear not so good as they otherwise would do, and sticking to this plan the first bull bitch he showed me was Britomartis. This bitch is about as well known as her keeper at all the shows in the country: however, for the few who do not know her, let me say that Britomartis is a reddish brindle bitch, whelped in '81 by Monarch out of Penzie, and that she is by long odds the best bulldog in America, and in all probability the best bull bitch in the world.

The next to be seen was the sister to Tippoo, viz., Rhodora, a very good-looking white bitch, who has done some service to the kennel on the show bench, and the same may be said of Josephine, whelped '82, by Tiger out of Sophia.

Josephine is a white bitch with a tan-colored head. When Heald first got this bitch she was a caution, as far as her temper was concerned, but under his rule she has developed into a quiet, easy-going old matron, whose only anxiety seems to be noticed, have her head scratched, and have, if she possibly can manage it, a double allowance of meat. She is at present as fat as a pig.

Carmen, a fairly good brindle bitch, whelped in '84, by Torreador out of Betsy, had five very good puppies on her, by Robinson Crusoe, about one of which, a brindle dog, Heald is already beginning to build castles in the air; in fact, goes so far as to say that he will do to send to the Crystal Palace, but his ears will have to alter considerably first.

And now for the fox-terriers. Sure enough Heald, true to his general practice, pulled old Olive out first, never dreaming, I presume, that any one would have the hardihood to come to Hillside and deny that she was the best of the fox-terriers, so just out of sheer "cussedness" I'll leave Heald and his old sweetheart Nancy, as he calls her, wait, and go on with the dog pack. First of all comes Mixture, a nice little dog, the right size, good coat and ears, fair head, not very good understanding, but a terrier. Mixture was whelped in 1880, and was bred by Mr. Luke Turner, a gentleman who shares with Mr. Henry Gibson the credit of having bred more first-class fox-terriers than any one breathing. Mixture is a white dog with black and tan head, and is by Spice out of Fairy III., by Belgrave Joe out of Tricksey, by Chance out of Ruby, by Old Jock. Now this is a rare winning pedigree, and no wonder Mr. Thayer is unwilling to allow bitches other than his own to come to Mixture. Mixture's dam, it will be seen, was an own sister to poor old Brockenhurst Joe, who was purchased by Mr. Thayer's neighbor, Mr. Prescot Lawrence, and who died at Groton soon after coming to this country. Mixture is a thoroughly game dog, and in an encounter with a cat lost one of his eyes, which does not add to his personal appearance. That Mixture is a valuable stud dog goes without saying, and I am of opinion that his bitches properly crossed cannot help proving specially so. Then came an old friend of mine, Belgrave Primrose, as good and game a little dog as a man ever clapped eyes on, and a terrier from one end to the other. Primrose was bred by Joe Foreman and is by Belgrave Jerry out of Wasp. After winning first in the puppy class and first in the open class at the Crystal Palace he was purchased by Messrs. L. and W. Rutherfurd, and was shown by them in England. He then came to America and was successfully shown several times, but as they had a good deal of his blood (including several rare good brood bitches) and had purchased Splauger as a stud dog, they sold him dirt cheap to Mr. Thayer at or directly after the show last year. Since Mr. Thayer has had him he has been repeatedly successful on the show bench. Primrose is a dog about 16lbs., with fair head, perfect ears, rare good shoulders and stands on the best of legs and feet, with great bone for a dog of his size. His coat—ahem, "What did you say, Heald? Oh, I beg your pardon, I thought you spoke." Well, his coat is not perfect, but it is much improved, decidedly improved By the by, I have it on the best authority that Heald is about to bring into the market an invaluable receipt for terriers coats, It is not called a restorative, I really forget what he calls it.

The next dog I saw was Raby Jack, whelped in '85, by Mixture out of Shame. Jack is a niceish dog, but he is such a shy, timid dog that he never makes the most of himself. And now comes the pick of the basket, the show of the shop to my mind in the shape of Raby Mixer, a white dog with black and tan head, bred by George Raper, December, 1885, by Raby Mixture out of Richmond Olive Bud, by Raby Tyrant out of Richmond Olive. Raby Mixture, by Mixture out of Nosegay, by Tory out of Nettle, by Brokenhurst Joe out of Venus. Tory was a son of Trophys and Vic. I have given this dog's pedigree somewhat at length, as he is one that eminently deserves it. Raby Mixer is, as I said before, a white dog with a black and tan head. His head and ears are perfect, while his neck, shoulders and coat are as good as it is possible to make them, and more than all, he stands on the very best of legs and feet, his hind-quarters are simply perfect, his hocks being close to the ground and his action as he trots about or when fully extended is superb. And now for his faults, or what some people call his faults. He is possibly a trifle high on the leg, but personally I don't consider this a fault, at least I would far sooner have one like this than one of the extra short-legged sort, that never can gallop through dirt. Another thing advanced against this grand dog is that he is too big. I had heard this said, so I was determined to weigh him myself, which I did, and found that he weighed barely 17lbs. Now I will ask any terrier man, who knows what terriers are for, is this too big? I say most emphatically no, because one of this size can, if he is all right in front, get anywhere a fox can. In fact, the only place I fault Mixer in is a "leetle, leetle bit" about his back ribs, and as he is a young dog yet, he will alter in this point. I am afraid, Mr. Editor, that I have said too much about this dog, but it is so long since I have seen one like him, that I can't help it.

A recent purchase from Mr. Hoey was the next to be pulled out, in the young dog Luke, a good looking though rather coarse young dog. Luke was bred by Mr. Hoey and is by Mixture out of Lyra, by Fennel out of Fay, by Terry's Bob out of Picture, by Spring out of Spitfire. Luke has much improved since I saw him at Newport.

And now I think that Heald and Olive have been waiting long enough, so we will let the old bitch on to the flags, and rare and well she looks. Richmond Olive is certainly a fine bitch and looked first-class, perhaps a trifle on the big side, but it is far easier talking about taking flesh off Olive than doing it, as she eats like a pig, and is such a favorite with every one that it is very difficult to keep her right. Richmond Olive is too well known to need much description, suffice it to say that she is a white bitch with evenly marked black and tan head, and was bred by George Raper in 1883, and is by Olive Tart out of Jess, by Jock out of Nettle, by Tackler, Olive Tart by Spruce out of Olive, by Belgrave Joe out of Tricksey. Her winnings both in this country and in England are far too numerous to particularize. Jaunty, a white bitch with an evenly marked tan head, is a nice little bitch, and a terrier all over, but she is too light of bone, she has however, been a successful brood bitch, as she has bred a number of useful dogs. Jaunty was bred by Messrs. L. & W. Rutherfurd in 1881, and is by their Joker out of Torment, who, if I am not much mistaken, is out of a bitch called Fly, by Old Rattler. Di, bred by her owner in 1884, by Raby Tyrant out of Richmond Olive, ought to be a lot better from her breeding than she is, as her ears are large and her head thick and coarse. Raby Susie, whelped in 1883, is a rather nice little bitch, also by Raby Tyrant out of Jaunty. She is, however, not straight in front. Shame, whelped in 1884, by Raby Tyrant out of Richmond Olive, is a good-looking, short-legged little bitch looking in first-rate condition, and heavy in pup to Mixer, and as she breeds well should have some good ones. Lady Mixture, whelped in 1886, by Mixture out of Warren Lady, by Brokenhurst Joe out of Swansdown, by Saracen out of Swan, by Dazzler, is a fairly good terrier-like bitch, but wants bone and substance, and has too much color, but from her pedigree should prove a valuable brood bitch. Miss Mixture, rejoicing in the poetical kennel name of "Scabby," is by Mixture out of Shame, and a nice terrier-looking bitch she is. Meersbrook Nan, whelped in 1886, by Meersbrook Ross out of Meersbrook Model, Ross being by Roysterer, the sire of Result. Meersbrook Nan is a niceish bitch, good ears and coat, common head, fair legs and feet, and is gifted with the bump of fighting in a marked degree. Richmond Myrtle was lately purchased of Geo. Raper, and is by Raby Tyrant out of Richmond Olive. Myrtle is a remarkably nice, corky little bitch, and looks a terrier, but she is not one to make a man go back two or three times to look at. A far better bitch to my mind is Richmond Dazzle, also bred by Geo. Raper. This daughter of Raby Mixture and Richmond Puzzle, by Raby Tyrant out of Walkley Nettle, by Jester II., out of Vixen, is a remarkably nice bitch, and were it not that she stands a bit wide in front, would be a good one. Wasp II., a nice daughter of Raby Tyrant and Walkley Nettle, is at present in very bad coat, but she is a good stamp of bitch. Lyra, bred by Mr. F. C. Wheeler in 1882, is a recent purchase from Mr. Hoey. She is by Fennel out of Fay, and is the dam of Luke. She is rather a nice little bitch, but is a bit pinched in under her eyes, has good ears and stands well. Warren Lady, by Brokenhurst Joe out of Swansdown, is a lightish bitch with good head and ears, a nice size, not quite right in front, but a terrier.

Besides the deerhounds, bulldogs and fox-terriers at Hillside, are a few pointers, the property of Mr. Bayard Thayer, including that beautiful small-sized bitch, champion Rue, who, it will be remembered, was the property of Mr. Orgill. Rue was one of the best pointer bitches of her size ever shown in this country, and she now looks as well as ever. With her are five puppies by Mainspring, but she is far from being a good mother, and her children do not look really healthy. Rhona, a half sister to Rue, and Rapid, by Bang Bang out of Rue, two very good looking ones; in fact, it is with many people a disputed point as to whether Rhona or Rue is the best bitch.

The kennels at Hillside are, as the name denotes, built on the side of a hill midway between Mr. John E. Thayer's new house (now in the course of erection) and Mr. Bayard Thayer's.

The principal kennel has only been built a short time and is a model of convenience. The center consists of a hallway and large office, the latter very comfortably furnished and finished in hard wood. Among other things one notices are two frames containing 155 gold, silver, bronze and Pittsburgh medals, a cabinet opposite being full of silver cups won at the various shows; above this are hung two very handsome plaques, also prize winnings. Over the fireplace hangs an oil painting of an eight-weeks old fox-terrier puppy, painted on a cigar box lid by Pope. Above the writing table is a large and very good oil painting of Argus, the well-known Gordon setter, with a woodcock in his mouth. Near this is a small colored print from the *Kennel Review* of Raby Tyrant and Richmond Olive. Turning round one is confronted with a very good oil painting of poor old Bellisima and Robinson Crusoe. A handsome bookcase containing all the American and English books and magazines on dogs, two cases of stuffed birds and a rifle, won, I think, at Buffalo as a deerhound special, complete this comfortable little room. A door leads into the kennel, where to the right are the deerhound kennels, to the left the bulldogs, and straight in front the fox-terriers.

The deerhound kennels number sixteen, each being 6x5ft., with a bench 2ft. high. The bulldog kennels correspond with these, while the fox-terriers' are less, being 4x3ft. The floors are all Portland cement, and each kennel has a trap drain. There are no less than six large taps with a great force of water, so that the whole of the kennels can be washed out, and in a very short time. The ventilation is perfect, as there is a window in each kennel with ventilation both at top and bottom, so that they are never really hot. I should have mentioned a stationary bath tub which is used for washing dogs with hot and cold water, and a large stove near by to dry them at. Near this kennel is the pupping kennel, in which are five large kennels and four small ones, at the end of which is a cook shop with a set boiler. In this kitchen are two large closets for cooking utensils, biscuits, etc. The lower or old kennel is where the cooking is actually done, and where the young puppies are kept.

The feeding consists of pudding, consisting of Indian meal, oatmeal, with vegetables and meat, while once a week they get Spratts biscuits. The dogs are all turned out into their yards each morning about 6 o'clock, where they remain until about 5, when they are fed. The deerhound yard is about 250ft. long by 60ft. wide with a large elm growing in the center, and I think one of the prettiest pictures I have seen for a long time was the group of deerhounds with old Chieftain in the center and Wanda, Highland Laddie and others, ten or twelve, grouped round him. The fox-terrier yards are of course smaller, but yards in which they can take lots of exercise.

I have seen a great many large kennels both in England and America, but I never saw one where so many dogs were kept and the hospital list so small as at Hillside. And now one word about Heald. There are very few men who can show from fifteen to thirty dogs all through a season, have so little sickness and win so much as Heald has done, and it is only by the strictest attention to details that he successfully accomplishes it. I enjoyed his hospitality for three days, and during that time I kept my eyes open and saw Heald at work, and I know that although there may be as good men there are no better.

And now in conclusion let me thank Mr. Thayer for his courtesy in allowing me to see his kennels in the way I did, and also let me thank Heald for his civility and hospitality throughout my visit.

THOMAS DAWSON.

MAJOR.—*Editor Forest and Stream:* Among the obituary notices of man's best and most faithful friends, "gone to the happy hunting grounds," it is my duty, be it never so sad, to place that of Major, the property of Supt. W. W. Worthington of the Ft. W. C. & L. R. R., killed March 28, 1887, at Montpelier, Ind. Major's frightful death beneath the cruel car wheels, while endeavoring to return to his master, was a scene not easily erased from memory's tablet. In size this noble dog was a giant, but in disposition he seemed to partake of the gentleness of woman and the harmlessness of the babe. Playful as a kitten when about the house or children, in the field he was rapid, staunch and true as steel always. Known by his extraordinary size and kindness, he was lamented by half the people of a city who knew him well. He is gone, but the record he made will live for years in the hearts of those who knew him best, and his name will not be spoken but that a tear will stand in the eye of his master, who loved him best of all. Major was a cross between Irish setter and Llewellin; color, red and white; 7 years old; length 5ft. 11in.; height 29½in. at shoulders; weight 108lbs. His size and color he took from his Irish father Rake. We think this was the largest setter in the country. Do you know of a larger? Peace to his ashes.

—HANCE (Fort Wayne, Ind.).

SPANIELS FOR BENCH AND FIELD.

Editor Forest and Stream:

Absence from home has prevented an earlier reply to Mr. H. G. Charlesworth's letter in your issue of July 21. I hardly know what reply to make to one who is so ignorant of the work a cocker should do. It may be that he does not expect his non-sporting cockers to retrieve from water, but I do, and so does any one that uses his dogs for general work; for I maintain that for general field purposes the working cocker is by far the best of all dogs. Why, the name of the dog should suggest to Mr. C. that he should retrieve from water! I said nothing about my dogs running deer. My dogs are trained as all good cockers should be to work close to the gun, and I am certain that at no time while tracking the deer were they over 100yds. from me.

I should like to ask Mr. C. why he did not reply to Mr. Fellows's letter in your issue of May 5? I suppose he thought he had an opportunity to demolish some amateur breeder, but he only has shown how ignorant he is in regard to a cocker's work. Mr. N. A. Osgood, of the State Sportsman's Association of Michigan, has used cockers for years to track wounded deer.

Mr. Charlesworth has no right to even hint that my dogs are mongrels, for their breeder, Mr. Fellows, bred cockers and prize winners for years before any one ever heard of Mr. C. as a breeder.

I do not breed or sell dogs, but I buy the best I can for my work: and when I found where I could get good ones for the field I thought it right to let my fellow sportsmen know it. As "to requiring a label to enable the public to know what breed they belonged to," I would say that the dog is by champion Hornell Dandy out of champion Hornell Dinah, and the bitch is by champion Hornell Silk out of Hornell Beauty, and surely no better bred brace was ever seen in America, combining as they do the blood of Brush—Rhea, Obo—Betty, and the true Burdette strain through Hornell Belle, by Beau—Blanche.

About "silly expressions" I would say they are not original, but are appropriate; can Mr. C. compare his long, low dog when plodding through the mud and water, to anything else but a crocodile? (but I forget, his dogs do not take to the water.) I suppose he has the blood of Beau in his kennel. Well, now, what kind of legs did Beau have if they were not dachs? What resembles a weasel more than champion Helen? Did not Mr. James Watson demonstrate to the fancy two years ago at New Haven that cockers then were long and low enough, and at that time showed the "double action Skye" movement; they are the exact words he used; true then, but at every show we see worse specimens put ahead of workmen.

Mr. C. thinks his long, low dogs more than a match for mine. Now I will meet him and any brace he owns at Stratford or Paris any time during the open season. I will run my brace against his for three days for a piece of plate, he to name the value, on woodcock, ruffed grouse, snipe, or anything called game in Canada, and for every inch his dogs are under 13in. I will allow 10 per cent. to be added to his score, so if his dogs are 11in. at the shoulder I will have to score ten birds to his eight.

If I offended Mr. Kirk I tender him an apology, but "I told the tale as it was told to me."

About the good dogs in Canada, the best they have were imported from the States. No one ever heard of a prize winner from Canada whose great grand sire and dam was bred in Canada. I know as much about spaniel pedigrees as any man in America, and I know that Mr. C. has none that have not a cross of field spaniel blood in them, which I can prove very easily. B. A. OSBORNE.

DETROIT, Mich., Aug. 10.

BEAGLES FOR BENCH AND FIELD.

Editor Forest and Stream:

Your issue of 4th inst. has just reached me and I am pleased to see therein "L. H. T.'s" article, for now we have obtained the opinion of one breeder whose length of valued experience should rightfully claim attention. It would also seem to indicate the line of policy pursued by breeders in general for the past five years.

Of course the writer is not in position to review the arguments brought out in the discussion in which "L. H. T." took so prominent a part and so thoroughly ventilated the whole matter, but if I am allowed to accept the line of defense, as evinced in his article now before me, as that used so successfully at the time mentioned, I should be led to draw the inference that it must have been just about the time when the poor unfortunate beagle was having so severe a struggle to maintain his reputation as a gentleman sportsman's dog, and was compelled to seek protection in the war of discussion from his only fit companions, whom "L. H. T." mentions as "small boys and negroes."

Yes! a new set of fanciers have sprung up I am glad to say, and I hope to see "L. H. T." the foremost among them in improving the value of the beagle in every position he may be called to fill. The new "set" cannot certainly dwarf his field qualities much below what they have been during the past thirty years.

The history of the beagle is really an interesting one. From his inception he has been overclouded with misfortune and restrictions. It reads like a fairy tale from England's history: that the brave war-like Britons wishing to immortalize in some living form the inferior qualities and valor of their enemies, conceived the idea of perpetuating it in the form of the hound whose size should symbolize its degree of usefulness and position among all sporting dogs.

A quotation from Ossian which "Corsincon" gives us in his work of "British Dogs" most aptly confirms such a superstition:

> "There is a kind of dog of mighty fame
> For hunting; worthy of a fairer frame,
> By painted Britons brave in war they're bred,
> Are beagles called, and to the chase are led.
> Their bodies small, and of so mean a shape,
> You'd thimk them curs that under tables gape."

Poor unfortunate beagle! Coming down the ages with a name signifying smallness, little, the beagle hound must have had a checkered career. But I find in following "Corsincon," Stonehenge and Markham in their writings, that he finally earned his release from bondage, and in size and form developed out from a dwarf "singing beagle" into a respectable sized dog, a worthy member of the grand old family of hounds. From a maximum height of 9in. in its earlier days, it has been allowed to attain the respectable size of 15in. and still retain its original name, although in size it has long since forfeited all just claims to its original Celtic blue-blood name.

It does seem to me a very shallow argument indeed, holding up in defense of its size the fact that its name signifies what the size proper should be. The whole history of the little hound, from time of Queen Elizabeth down, is one of controversy as to its size, and our beagle of to-day is proof of itself that gradually from 9in. they have reached an allowed height of 15in.

In the light of past history and facts let us return to "L. H. T.'s" article, and note his comments on my beagles as given in a former issue.

He asks, "are they beagles?" and after giving us the literal translation of the Celtic word "begele," he at once declares on the authority of the above definition that they are ruled out and are sailing under false colors, not being purely bred beagles. I am compelled to take issue on this point, and for the special information of "L. H. T." say that the beagles mentioned hold certificates of as good blood (beagle) as runs in the veins of any dog in this country, unless "L. H. T." has also ruled out such beagles as Ringwood, Victor, Lucy, Queen, Maida and Old Bess, in which case I have nothing more to say.

Such an argument comes to me with surprise from a breeder of forty years. The fact that I or any other owner should breed above 15in. is positive evidence that they are not purely-bred beagles is too careles a statement to come from one of such experience.

I have observed a difference of 2 to 3in. in one litter. In fact, there came to my observation at one of our late bench shows where a beagle dog measuring 15½in. was entirely ignored, whose points otherwise would have scored far beyond the best winner. He was in all respects a beauty, and, while I recognized the justice in following the law governing beagles, fully realized that an injury was being done the breed in restricting to such a size limit.

"L. H. T." admits that the 13, 14 or 15in. dog cannot keep up with the "big dog," referring to 17½in. If such is the fact, will a pack of smaller beagles run any more evenly or smoothly than a pack of 17½in.? I grant they will run more slowly, and at this rate of speed ought to last all day; but if you are after such sized rabbits as are found in this section, the chances are that the rabbit will run just about as "evenly and smoothly" as the dogs do, and a day's run would result in plenty of exercise and little game.

"L. H. T." must know, with his experience in the brush, that in close, thick work the beagle is faster and surer than the foxhound, and on cold scent is far superior. If we can obtain better work from 17in. beagles than from 14in., we have still greater advantage over the foxhound. I will even go further, and state as my belief that a beagle of 17½in. will prove superior to any harrier of 20 or 22in. We found such to be our experience the past season, and are going to experiment still further the coming fall.

The exposure of the present condition of our bench winners, as given in "L. H. T.'s" article is most deplorable, I confess, and should call forth a rigid inquiry as to field qualities of our present champions. H. H.

SPANIEL SPECIAL AT DETROIT.—Brantford, Ont., Aug. 15.—*Editor Forest and Stream:* I have waited for Mr. Charlesworth to acknowledge the Detroit spaniel special as publicly as he demanded it through your columns. He, however, has not seen fit to do so, nor has he by word or letter condescended to let me know that he has got it. The facts regarding it are as follows: When Mr. C. wrote me that it should have gone to his dog I replied that I thought the judge who awarded it was the proper person to rescind it, but I added that I had written to the secretary, asking him the value of the prize, as I had already given the original away. Although I afterward wrote two more letters to the worthy secretary with the same request, I was unable to get an answer from him on the subject, the only mention he made of the matter was "I wish you would write to him (Mr. C.) direct and settle with him." I was therefore obliged to ask the return of the prize from the person to whom I had presented it, and it was sent to Mr. Charlesworth's address on July 27, a full week before his note appeared in your paper. Although this is three weeks ago he has not even condescended to acknowledge its receipt either to me or through your valuable columns in the same manner in which he demanded it.—CHAS. M. NELLES (Brant Cocker Kennels).

WAVERLY DOG SHOW.—New York, Aug. 16.—*Editor Forest and Stream:* The following additional judges have consented to act at the Waverly show: Mr. A. H. Wakefield for beagles; Mr. T. Farrar Rackham for Dandie Dinmont, Skye, Bedlington and toy terriers, King Charles and Blenheim spaniels, poodles, rough-haired terriers and pugs; Mr. Fred Hoey, fox-terriers. The following express companies will return dogs free to the original shippers: Adams, United States, American, Erie and Baltimore. The following additional specials have been offered: $25 in cash or plate for the best pointer; $10 for the best heavy weight pointer dog, barring Peshall's Jimmie; also specials for best cocker, best brace cockers, best field spaniels, best retrieving field spaniel, best brace of field spaniels and best spaniel puppy. Additional classes have been made for champion cockers, any color but liver or black, and champion Irish water spaniels. There has been a great demand for entry blanks. Dog and bitch classes will be made for all breeds not specified in the catalogue. Mr. John Read will superintend.—HERMAN F. SCHELLHASS, Bench Show Secretary.

THE DAYTON DOG SHOW.—We have received the premium list of the fifth annual dog show of the Southern Ohio Fair Association, to be held at Dayton, Ohio, Sept. 27 to 30. The prizes for the large dogs are not properly apportioned. While Newfoundlands and Great Danes each receive $10 and $5, mastiffs and St. Bernards have but $5 and $3, and greyhounds and deerhounds are put in one class at the same rate. Champion English setters, Irish setters and pointers one class each have $10. In the open classes for the last three named the prizes are dogs $15 and $10, bitches the same, with $5 and $3 to puppies. Black and tan setters, one class, $10 and $5, with $3 to puppies. Spaniels have but one class, cockers, with $5 and $3. Nearly all of the remaining classes have the same, pugs having a champion class. Foxhounds have $10 and $5, and a few classes $4 and $3. There will be a large list of specials. John Davidson will judge the sporting and Geo. H. Hill the non-sporting classes.

MILWAUKEE DOG SHOW.—Milwaukee, Wis., Aug. 14.—*Editor Forest and Stream:* Besides premiums advertised in list we offer $25 to the exhibitor making the largest number of entries. We will also have a very nice lot of merchant prizes, medals, etc. Prospects are very good. Dogs will receive the very best of care. We will use Spratts food, which will be prepared by Mr. Murphy, an expert, Mr. Murphy having been all over England preparing food at the largest shows. All express companies entering this city will return dogs free to their owners upon the prepayment of one full rate. All railroads entering this city will allow dogs to ride free in the baggage cars when accompanied by their owners. We will try our very best to please all our friends. Kennel prize No. 27 should read $20 for best kennel of setters, four or more, and not English setters.—A. M. GRAU, Secretary M. K. C.

BEAGLES.—A gentleman going West for a few months wishes to find a good home for his team of beagles during his absence. Address, "Beagle," care of FOREST AND STREAM.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Jeppa. By David Raiff, New Philadelphia, O., for liver and white pointer dog, whelped June 22, 1887, by Trinket's Bang (Croxteth—Trinket) out of Lass's Floss (Dandy Bang—Seitner's Lass).

Maude. By Clumber Kennels, Ottawa, Can., for lemon and white Clumber spaniel bitch, whelped June 11, 1887, by Johnny (Ben—Joan) out of Bessie (Jockey—Romp).

Stonewall Jackson, Dixie and Louisette. By Woodbrook Kennels, Baltimore, Md., for white, black and tan beagles, two dogs and one bitch, whelped June 8, 1887, by Chimer (Jack—Dandy) out of Lou (Kino—Fly).

Gypsy Kate. By Woodbrook Kennels, Baltimore, Md., for white, black and tan beagle bitch, whelped April 25, 1885, by Flute Ringwood (Ringwood—Norah) out of Thurn II. (Sport—Thorn).

Susette and Careless. By Woodbrook Kennels, Baltimore, Md., for white, black and tan beagle bitches, whelped June 21, 1887, by Little Prince (Rattler III.—Betty) out of Trinket.

Lord Hector. By Woodbrook Kennels, Baltimore, Md., for dark orange tawny and white smooth St. Bernard dog, whelped March 26, 1887, by Hector (A.K.R. 4425) out of Belline II. (A.K.R. 3033).

Countess Maud. By Woodbrook Kennels, Baltimore, Md., for orange and white smooth St. Bernard bitch, whelped March 5, 1887, by Lee (Hero—Lucy) out of Maud (Dirk—Abra).

Bonny Doon. By P. B. Dean, Forestville, N. Y., for black, white and tan English setter dog, whelped May 5, 1887, by Knight of Snowden (Johnnie Faa—Swan) out of Lady Brighton (Prince Phœbus—Rosey).

Clumber Kennels. By Messrs. F. H. F. Mercer and W. B. A. Hill, Ottawa, Can., for their kennels of Clumber spaniels.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Portland Lily—Nick of Naso. Fred Harris's (Portland, Me.) pointer bitch Portland Lily (A.K.R. 4058) to Naso Kennels' Nick of Naso, June 26.

Topsey Logan—Joe. F. C. Rochester's (Logan, O.) pug bitch Topsey Logan (imported Duke—Topsey) to Geo. H. Hill's Joe (Comedy—Clytie), Aug. 7.

Daphne II.—Lodi. Essex Kennels' (Andover, Mass.) St. Bernard bitch Daphne (A.K.R. 489) to Chequasset Kennels' Lodi, June 29.

Kleine—Duke of Lancaster. Essex Kennels' (Andover, Mass.) St. Bernard bitch Kleine (A.K.R. 2044) to Chequasset Kennels' Duke of Lancaster, June 29.

Wacouta Nun—Wacouta Nap. Wacouta Kennels' (St. Paul, Minn.) mastiff bitch Wacouta Nun (A.K.R. 4262) to their Wacouta Nap (Morgan's Lion—Morgan's Bess), Aug. 9.

Lady May—Foreman. H. Pape's (Hoboken, N. J.) English setter bitch Lady May (A.K.R. 1371) to Blackstone Kennels' Foreman, Aug. 12.

Flirt—Domino. W. H. Ashburner's (Philadelphia, Pa.) beagle bitch Flirt (Ringwood—Bush) to his Domino (Rattler III.—imported Myrtle), July 1.

Hazel Obo—Black Pete, Jr. Dr. Wheelock's (Waterbury, Vt.) cocker spaniel bitch Hazel Obo (A.K.R. 4097) to J. P. Willey's Black Pete, Jr. (Black Pete—Miss Ginger), Aug. 10.

Margaret—Chimer. F. B. Donaldson's beagle bitch Margaret to Woodbrook Kennels' Chimer (Jack—Dandy), July 8.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Daisu. W. H. Ashburner's (Philadelphia, Pa.) beagle bitch Daisy (Blue Boy—Flirt), July 28, five (four dogs), by his Domino (Rattler III.—imported Myrtle).

Little Duchess. W. E. Deane's (Somerset, Mass.) beagle bitch Little Duchess (formerly Jewel) (Racer—Dolly), Aug. 16, five (three dogs), by his Rattler III. (Rattler—Music).

Myrtle. W. E. Deane's (Somerset, Mass.) beagle bitch Myrtle (Minstrel—Handmaid), Aug. 12, five (three dogs), by Woodbrook Kennels' imported Chimer (Jack—Dandy); one bitch since dead.

Cassandra. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch Cassandra (Debret—Dear Secret), Aug. 5, five (three dogs), by his Balkis (Clyto—Primrose).

Lass's Floss. L. C. Denman's (Coshocton, O.) pointer bitch Lass's Floss (Dandy Bang—Seitner's Lass), June 22, eight (three dogs), by Titterington's Trinket's Bang (Croxteth—Trinket).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Bernaline. Orange and white St. Bernard bitch, whelped July 2, 1885 (A.K.R. 3239), by Essex Kennels, Andover, Mass., to J. P. Davis, Utica, N. Y.

Cupid. Cream fawn pug dog, age not given, by Cicero out of Titania, by Essex Kennels, Andover, Mass., to Miss Ida F. Warren, Leicester, Mass.

Duke of Savoy. Orange and white St. Bernard dog, whelped Feb. 23, 1887, by Merchant Prince out of Daphne II., by Ersex Kennels, Andover, Mass., to Rev. Leverett Bradley, same place.

Victoria. Orange and white St. Bernard bitch, age not given, by Rudolph II. out of Bernaline (A.K.R. 3239), by Essex Kennels, Andover, Mass., to Miss A. B. McKean, Binghamton, N. Y.

Mr. Barker. Orange and white St. Bernard dog, whelped Feb. 23, 1887, by Merchant Prince out of Daphne II., by Essex Kennels, Andover, Mass., to E. H. Moore, Melrose, Mass.

Nan. Fawn pug bitch, age not given, by Sam out of Titania, by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Pollywog. Cream fawn pug dog, age not given, by Cicero out of Nan, by Essex Kennels, Andover, Mass., to Mrs. T. S. Snow, Leicester, Mass.

Tadpole. Stone fawn pug dog, age not given, by Cicero out of Nan, by Essex Kennels, Andover, Mass., to Mrs. W. F. Whitamore, Leicester, Mass.

Jeppa. Liver and white pointer dog, whelped June 22, 1887, by Trinket's Bang out of Lass's Floss, by L. C. Denman, Coshocton, O., to David Raiff, New Philadelphia, O.

Cicero, Jr. Cream fawn pug dog, age not given, by Cicero out of Titania, by Essex Kennels, Andover, Mass., to Mrs. Wm. Paul, Lewiston, Me.

Wacouta Baron. Fawn, black points, mastiff dog, whelped May 10, 1887 (A.K.R. 5152), by Wacouta Kennels, St. Paul, Minn., to J. Palmer Johnson, M.D., Blooming Prairie, Minn.

Tiny. Black cocker spaniel bitch, whelped Dec. 21, 1884, by Obo II. out of Gem, to Geo. L. V. Tyler, West Newton, Mass., to W. A. Small, Waltham, Mass.

Little Hal. White, black and tan beagle dog, whelped April 26, 1887, by Little Duke, Jr., out of Dixie, by W. E. Deane, Somerset, Mass., to John C. Dawes, Kingston, Mass.

Tramp and Gussie. White, black and tan beagle dog and bitch, whelped April 29, 1887 by Flute D. (A.K.R. 2389) out of Fannie, by W. E. Deane, Somerset, Mass., to W. C. Knapp, Revere, Mass.

Tita and Snub. Cream fawn pug bitches, age not given, by Cicero out of Titania, by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Butcher. Black cocker spaniel dog, whelped April 23, 1887, by Black Pete out of Fannie Obo, by H. C. Bronsdon, Boston, Mass., to J. N. Palmer, Cambridge, Mass.

Frantic. Black cocker spaniel bitch, whelped April 23, 1887, by Black Pete out of Fannie Obo, by H. C. Bronsdon, Boston, Mass., to O. N. Gilman, Dorchester, Mass.

Josephine. White and brindle bulldog bitch, whelped Jan. 29, 1882 (A.K.R. 388), by Hillside Kennels, Lancaster, Mass., to Grasmere Kennels, Manchester, N. H.

Juanita. White and fawn bulldog bitch, whelped Aug. 31, 1884 (A.K.R. 4015), by Hillside Kennels, Lancaster, Mass., to Grasmere Kennels, Manchester, N. H.

Rhodora. White bulldog bitch, whelped June 27, 1881 (A.K.R. 2596), by Hillside Kennels, Lancaster, Mass., to Grasmere Kennels, Manchester, N. H.

Tippoo. Brindle bulldog, whelped Sept. 23, 1880 (A.K.R. 390), by Hillside Kennels, Lancaster, Mass., to Grasmere Kennels, Manchester, N. H.

Bonny Doon. Black, white and tan English setter dog, whelped May 5, 1888, by Knight of Snowdon out of Lady Brighton, by Chautauqua Kennels, Sheridan, N. Y., to P. B. Dean, Forestville, N. Y.

PRESENTATIONS.

Maude. Lemon and white Clumber spaniel bitch, whelped June 11, 1887, by Johnny out of Bessie, by H. W. Windram, Boston, Mass., to F. H. F. Mercer, Ottawa, Can.

Little Prince—Trinket whelps. Beagle dogs, whelped June 21, 1887, by Woodbrook Kennels, Baltimore, Md., a white, black and tan to S. Latrobe, a tan, black and white to J. Dilworth, and a white, black and tan to J. Baevie, same place.

DEATHS.

Rose of Rancocas. Orange and white English setter bitch, whelped April 4, 1887 (A.K.R. 5099), owned by J. B. Murphy, New York.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. B. S., Fruitvale.—Could you kindly suggest some way by which canker can be cured in a dog's ear? Ans. Get the following:

R	Bromo chloral	3 ii
	Tr. opii	3 ii
	Aq.	3 ii

Mix. Sig. Let a few drops fall in the ear night and morning after cleansing and drying.

W. W., Camden, N. J.—Kindly prescribe for my eleven months cocker spaniel bitch. For some time past there has been a prolific

growth of what appears to be blue warts upon inside of her mouth, principally upon the lips, (probably ulcers instead of warts), they seem to be sore so she will not gnaw a bone. Her condition is bad, and although I have tried Fowler's solution she does not improve, although her appetite is fairly good. Ans. Get a stick of nitrate of silver (lunar caustic) and touch each wart or ulcer every morning. Get the following:

℞. Pot. iodid. ..... ℥ ii.
Syr. sarsaparill. co. ..... ℥ i.
Aq. q. s. ad. ..... ℥ iv.
Mix. Sig. One teaspoonful three times daily.

W. W. McC.—I have a valuable Irish setter 4 years old afflicted with a kidney or bladder trouble; has constant desire to urinate, reaching as many as 100 efforts daily. Is otherwise healthy, but appetite nearly gone; keeps in good flesh and spirits but is constantly fatigued. Received a blow across the back last April which crippled him for an hour, but after that until about two months ago showed no effects of the injury. Have been treating him with turpentine and pumpkin seed tea but get no permanent benefit. Ans. Get the following:

℞. Tr. nucis vom.
Tr. belladonnæ. ..... ♏ ℥ ii
Tr. opii. ..... ♏ i
Syr. simplicis. ..... ♏ ss
Aq. q. s. ad. ..... ♏ ii
Mix. Sig. One teaspoonful three times daily.

Feed mostly milk and oatmeal, little meat.

Rifle and Trap Shooting.

RANGE AND GALLERY.

PENNSYLVANIA MILITIA.

PHILADELPHIA, Aug. 18.—*Editor Forest and Stream:* The regimental team match of the Pennsylvania N. G. was shot at Mt. Gretna on the 10th and 11th inst., during the encampment of the N. G. P. at that place.

The match was open to any regimental, batallion or separate company, teams of 4 men, distance 200, 500 and 600yds., 7 shots at each distance. The First Regiment (located at Philadelphia) were the victors after a very hard struggle, with the Sixteenth Regiment only 2 points behind. The famous Thirteenth Regiment of Scranton had heretofore been the victors in this match, and this was the only time they were ever defeated. It was expected before the match that the fight would be between the Thirteenth, Sixteenth and First Regiments in the above order. At the finish of the 200yds. range the three highest were: First Regiment 117, Thirteenth 116, Sixteenth 115. At the close of the 500yds. range it stood: First Regiment 224, Sixteenth 223, Thirteenth 212. Owing to the arrangements of the targets the First Regiment were compelled at each range to wait until both the Sixteenth and Thirteenth Regiment had finished their scores. These three teams being so close all the spectators and marksmen not actually firing kept close to their firing point. After the Sixteenth and Thirteenth Regiments had finished their scores at 600yds. the score sheets showed that the Thirteenth had been downed at last, their grand total being: Sixteenth Regiment 328, Thirteenth 312.

It was now the First's time to shoot at 600yds., and the crowd surged to that regiment's firing point. The First Regiment's team to win was obliged to make a total of 105 points, or average 26 points each man, which on an entirely new ground and with no sighting shots was no easy thing. Walton and Linnan led off and put up as follows: Walton 23 and Linnan 26. Root and Coulston took their turn, knowing that they had to make an average of 28 each to win, and by good holding made one point better, thus winning the match by only two points. Below are the individual scores of the winners in their order of shooting:

	Yds.							
Private Geo R Walton...	200	5	3	4	5	4	4	4—29
	500	4	3	5	0	3	2	3—20

AMERICAN RIFLEMEN ABROAD.

LONDON, England.—*Editor Forest and Stream:* As I have no doubt many of your readers will want to know how the American rifle shots Messrs. Huggins and Cartwright have got along over here, I thought I would write through your paper and let them know. At Wimbledon they both did very poor indeed. In the first place they had just arrived after a ten day's voyage and went straight to the range, and then they were not feeling well; and they left before the tournamount finished for Geneva, Switzerland, to attend the Tir Federal. They were more fortunate there as both won good prizes, the lion's share of course falling to that phenomenal rifle shot J. A. Huggins. The distance shot was about 530yds., with open sights, rifles under 12lbs., no milking stool allowed. Several of the contests were for either offhand or from the knee, but the two American representatives shot offhand and won a great deal of praise by their fine shooting. Mr. Huggins won a very handsome gold medal for making 300 4in. cartons, there being only two others who won gold medals out of the 22,000 shooters; he also took a gold watch, a bronze medal, and 300 francs on the target of honor and two other targets. His prizes will be forwarded to him in Pittsburgh as soon as the awards have been made.

Mr. Cartwright won a silver medal and 150 francs in cash; he only shot one day, as business called him back to London. It must be understood that they had to use the Swiss rifle, using the Swiss government cartridge, which is a rim-fire bottle-necked cartridge of .41-cal. The sights were open, with a screw to alter wind gauge, set locks were allowed, but in the military match those using single locks were allowed 12½ per cent. Mr. J. C. Huguenin, of San Francisco, Cal., was present and did some good shooting, and won a fine gold cup and 250 francs in cash. A great drawback to the success of Messrs. Huggins and Cartwright was the fact that they could not speak the language, and consequently were not posted on the ways of rifle shooting in Switzerland. Some of the cracks of Switzerland were using three different rifles on the same number of targets. At Wimbledon on the 4in. bullseye at 200yds. pool target on one occasion, of all the hundreds of shots that were fired, Mr. Huggins with his Bullard Military made the only bullseye that was made all day. Bullseyes that day were worth about 56 shillings. Mr. Cartwright submitted the Bullard Military to the Wimbledon council, and theo allowed it to be used in all M. B. L. competitions. They would not allow him to use his Springfield with a Buffington sight, as they had decided against the Buffington. The Bullard rifles are taking finely with the rifle shots over here.

Miss Annie Oakley, who is giving exhibitions with the shotgun with Buffalo Bill's Wild West at the American Exhibition, is meeting with great success; her shooting is very good indeed. The Prince of Wales highly complimented her on her shooting on the occasion of his visit to the show with the Princess, the Prince and Princess visiting Miss Oakley in her tent after the performance. Miss Oakley gives a great many private exhibitions to some of the leaders of fashion over here, as it is a great thing to see a lady step up to the trap and kill bluerock after bluerock; it is something that is not often seen here. At the grounds of the London Gun Club she gave an exhibition, and the members were so pleased that they presented her with the club gold medal valued at $250. She also won at the same grounds $250 in a sweepstake at live blue rocks. The Prince of Wales on handing Miss Oakley the medal said, "I know of no one more worthy of it." Miss Oakley has had some very flattering offers to go to Monaco and Boulogne, France, and Brighton, England. It is a pleasure to go to Miss Oakley's tent and spend an hour talking to the little American wonder, and one is sure there to meet some of the best wing shots of England, and some of the nicest London people, as Miss Oakley by her ladylike ways has won hosts of friends over here, who always make it a point to visit her tent when at the exhibition. Miss Oakley is the only person to whom the London Gun Club has presented their medal. AMERICA.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

A VETERAN TRAP-SHOT.

IN last week's issue was printed a challenge from the veteran pigeon shot, Mr. Wm. King, to Dr. Carver. The challenger is well known to the older generation of trap-shooters, but to young men his record is less familiar than are those of shooters like Bogardus and Carver. William King was born in Winterslow, near Salisbury, Eng., Feb. 16, 1818, being now 70 years of age. He came to America in 1850, and in the ten years following shot 57 matches, winning 56 of them, and many were for "big money." His record is as follows:

Shortly after his arrival in the United States bet $100 that he would break to pieces 95 bottles in 100 shots, with No. 6 shot, viz., the hard, black sherry bottle. He shot this at Mount Pleasant, Charleston; hit and broke to pieces fairly in the air, 100 bottles in succession, shooting as described, with gun 14-bore, 1oz. shot.

In support of Mr. King's claim to having made the best score in 12 matches, the following records are adduced:

King v. Wells—Shot at Red Bank, N. J., 1854.—King shot at 10 double birds, killed 20; Wells killed 20. In the shoot-off at 10 double birds, each killed 19 birds, and the stakes were drawn.—*Reported by Old Spirit.*

King v. Cornell—Match for $500, shot at Germantown, Philadelphia, 1855.—King shot at 15 double birds, killed 28; Cornell killed 24. Won by King.—*Old Spirit.*

King v. Cornell—Match for $500; shot at Germantown, Philadelphia, 1855.—King shot at 15 double birds, killed 27; Cornell killed 23. Won by King.—*Old Spirit.*

King v. Cornell—Match for $500; shot at Long Island, September, 1885.—King shot at 100 single birds, killed 94; Cornell killed 93. Won by King.—*Old Spirit.*

King v. B. Duncan—Match for $5,000 a side; shot at Cincinnati, October, 1855.—King shot at 75 double birds, killed 129; Duncan killed 130. Won by Duncan.—*Louisville Courier and Old Spirit.*

King v. Tatham—Match for $1,000; shot at Bloomingdale Road, N. Y., September, 1857.—King shot at 25 double and 50 single birds; King killed 97. Won by King.—*Old Spirit.*

February, 1858, won $100 by killing 40 birds out of 25 double at Ward's, Coney Island, R. Robinson betting against 38.

King v. Shannon—Match for $1,000; shot at St. Louis, 1859.—King shot at 30 double birds, killed 55; Shannon killed 45. Won by King.—*Clipper.*

Sweepstakes shot at St. Louis, April, 1859.—20 sub., $10 each; first, second and third prizes; King shot two chances; won the first and second prizes, killing 44 birds in succession. H. Fulson won third prize, killing 43 birds out of 44. Same sweep, next day, King took first and second prizes, killing 66 out of 68. Shannon took third prize. King also killed 40 single birds in 40 shots, and 35 double birds in 36 double shots.—*Clipper.*

King v. Duncan—Match for $2,000; shot at St. Louis, April, 1859. King shot at 20 double birds (30yds. rise), killed 21; Duncan (same rise) killed 20. Won by King.—*Clipper.*

King v. Duncan—Match for $10,000; shot at Louisville, May 29, 1859; 30yds. rise, 25 double birds each. King killed 42, Duncan 24.—*Clipper.*

King v. Duncan—Match for $1,000 a side; shot at Louisville, June, 1859; 50 single birds. King killed all; Duncan, 28 out of 30.—*Louisville Courier.*

Great International Match; shot October, 1859, at Newmarket, Eng.; 50 single and 50 double birds. 250 sovereigns a side. King killed 42 of the 50 single birds, and 87 of the 50 double birds; Freere killed 39 of the 50 single birds, and 67 of the 50 double birds.—*Bell's Life.*

Oct., 1868, at Dexter's, L. I., won sweepstakes of $50 each, shooting at 8 double birds, killing 14, against R. Robinson and H. Hartshorn, shooting at 10 single birds.

At Springfield, Ill., Sept., 1869, defeated A. H. Bogardus in match at 10 single and 10 double birds each, killing 10 straight singles, and 19 out 20 doubles—total, 29 out 30. Bogardus killed 9 single and 17 out 20 double—total, 26.

At Dexter's, L. I., Jan., 1879, Mr. King won $100 sweepstakes, 10 double birds, killing 19 out 20; defeated B. West and Dr. Wynn.

At Hiram Howe's, L. I., beat S. Reading, at 25 single birds, 25yds. rise, ground traps; King killed 23, Reading 21.

Defeated C. Ditmus, same grounds, King shooting at 25 double birds, Ditmus, 50 singles.

Mr. King is of magnificent physique, and in spite of his seventy years is not yet shelved as a double bird wing-shot. If he succeeds in getting on a match with Carver there will be a notable gathering of old-time trap frequenters to see how their favorite holds his own with the new comers.

OHIO TRAP-SHOOTERS' LEAGUE.—*An Open Letter to Ohio Sportsmen:* Gentlemen—I address you as an individual and not as one interested in any particular target. Together with many others, I am desirous of seeing an Ohio State Association duly formed. An attempt in this direction is now under way. An "Ohio Trap Shooters' League" was organized in February, 1887, at Columbus. The executive committee was chosen, comprising among others Mr. J. E. Miller, the traveling representative of the American Clay Bird Co., and Mr. J. J. Wightman, agent of the Cleveland Blue Rock Co. At that meeting an attempt was made to adopt those two targets as the targets of the League. This movement was ignominiously defeated, showing that Ohio shooters do not propose to be "bamboozled" by any target manufacturers. Now the next meeting and tournament of the League is to be held at Columbus, Sept. 16, 17 and 18. In answer to an inquiry as to what targets are to be used at the tournament, the secretary writes: "The matter of targets is entirely in the hands of the executive committee, Mr. Miller is getting up the programme, etc." Mr. J. E. Miller being addressed on the subject, writes as follows: "Yours of Aug. 15; in reply will say that the executive committee held their meeting some few weeks ago, and decided to use the blue rock and American clay bird for the coming State shoot. The programmes are printed and are being distributed. In fact, the use of targets for this tournament was left somewhat to the club at Columbus, the committee acting upon their suggestion, as it was the wish of the committee to please the majority of the clubs belonging to the League and also the club at Columbus. I am only one of the committee and did not have control of the board. This is not a test of targets, as none thought of that; when it was brought up the question of targets was mentioned, and it was first thought best to use all, but it was voted down, and as the shoot was for two days the two targets used by the clubs were adopted as the targets for the tournament to the satisfaction of all. (Signed) J. E. Miller." Now, I appeal to all shooters, is this fair to you? Should not all target manufacturers been invited to attend? Should not the Peoria Target Co., the Lockport Bat, the Ligowsky Co., the Niagara Co., the Macomber Target, or at least some of them have been also used, especially in the face of the castigation received at Columbus, when a resolution was voted down to use only these very two targets? If this League is to be supported it should be managed fairly. If at any of its meetings its members see fit to adopt any particular targets, no one could object. Ohio men have a world-wide reputation as being "square." I am confident the Ohio sportsmen will uphold this good name by taking due action at their next meeting. All such associations should adopt a motto "No managers of target companies, guns, etc., or any one interested in such competing articles, shall be eligible as an officer of the association." Very respectfully, J. E. BLOOM (Cincinnati Aug. 18).

NEW DORP, Staten Island, New York, Aug. 18.—Emerald Gun Club. Match at live pigeons, ground traps, 21, 25 and 30yds. rise, 80yds. bound. Emerald Gun Club rules: four prizes. McMunn 30yds., Dwyer, Voss and John Glaccum 25yds., rest 21yds.:

On Aug. 19 an individual match between W. L. Williams and Seymour Cunningham was shot for $5 a side and expenses, 50 birds each, 30 singles and 10 pairs of American clay-birds, No. 1, 5 traps, under N. G. A. rules. Traps Nos. 1 and 4 were very erratic, throwing very low, and the bulk of the misses came from this cause. Messrs. Whitman and Collison acted as judges, with Mr. Mills as referee:

H. L. Williams.

T. J. EDWORTHY, Sec'y and Treas.

GREENSBURG, Pa., Aug. 18.—Live pigeon shooting held in North Greensburg by several members of the Greensburg Gun Club:

Chas F Ehalt	½	½	1	1	½	1	1	1—5½
W S Gessler	1	1	1	1	1	1	1—7
H F Thomas	1	1	1	1	1	0	1—6

Match Aug. 19 at live birds, 21yds., plunge traps:

Shaner	½	0	0	1	1	1	1—4½	Brunot	½	1	1	1	1	½	1	1—6
Gessler	0	1	1	0	0	½	1—3½	Berlin	½	0	0	1	½	0	0—2

Birds killed with the second barrel scored half a bird. A challenge has been issued and accepted for a match at 10 birds apiece, between the two local teams with Ehalt, Thomas and W. S. Gessler on one side, and Shaner, Brunot and John Gessler on the other, the match to take place as soon as all arrangements can be made. Eight members of the Scottdale Gun Club will visit Cleveland, where some of them will be contestants in the match for the big prizes offered by the Chamberlin Cartridge Co. The Scottdale shooters are said to be in good practice.

CAPE MAY.—The Cape May City Athletic Club was organized this summer, and on Thursday, Sept. 1, 2 and 3, one of the finest athletic grounds in the country will be thrown open to the public, when over $1,500 will be expended for prizes, fireworks, etc. Friday, Sept. 2, 10 A. M., there will be a clay-pigeon shoot (continuing all day) for the title of "Amateur Champion" and the C. M. C. A. C. $100 solid silver cup; 100 birds each. Conditions on application.—BURR W. MCINTOSH (Cape May, N. J.).

WINSTED GUN CLUB.—Annual tournament at Willowbrook range, Winsted, Conn., Wednesday, Aug. 31, commencing at 9 o'clock, A. M. Artificial targets.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE A. C. A. MEET.

AFTER four years absence from its birthplace and early home, the American Canoe Association has returned to the neighborhood of the Adirondacks for its eighth camp and meeting. Founded in 1880 at Lake George, for the two following years its meets were held on the Canoe Islands, near the upper end of the lake. The next year a long excursion was made into Canadian territory, with a large camp at Stony Lake. In 1884 the camp was held on Grindstone Island, a beautiful member of the Thousand Islands of the St. Lawrence River, a site that was so well liked that the two following camps, '85 and '86, were held on the same spot. Though the location was in many respects a desirable one, there were many who preferred to visit a new spot, and in accordance with the general wish it was decided at the Executive Committee meeting in New York last November to visit Lake Champlain. The site, as all proposed, which met with the most favor, was Bow-Arrow Point, on the south end of North Hero Island, and the verdict of all present at the meet has fully justified the choice.

Beautiful as the former camps have been, this is the equal or rather the superior of all, in natural advantages. There is more shade than at Grindstone, and none of the tents are exposed to the sun, while the ladies' camp is on higher ground. How the winds will serve is not yet known, but there has been plenty thus far, and the courses are specially good. The point is a long, narrow peninsula, joined to the main part of the island by a neck of low ground, merely a stony beach some 20yds. across. Along the southeast shore the ground, rising to a bluff some 12ft. high in front of the ladies' camp, is but 3 or 4ft. high along the front of the main camp, the beach being composed of flat pieces of slaty stone, easy to walk or beach a canoe on. From the low bank along the beach the ground rises gradually, until on the opposite shore a bluff from 20 to 40ft. high rises perpendicularly from the beach. This portion of the island is covered with a grove of straight and slender-trunked young hickory trees, with little underbrush. A rough wagon track winds along some 30ft. from the beach on the lower side of the point, and most of the tents are pitched between it and the beach, extending nearly half a mile from the little wharf on the extreme point to the end of the grove. The tents, of all sizes and shapes, from the big wall tents of the larger clubs down to the striped canoe tent pitched for the time on shore, are all comfortably and cosily furnished, as this point is better done by far than the early days of the Association. Many tents have board floors, nearly all boast a folding cot, some camp chairs, a table built on the spot, and the furnishing includes many handy little knickknacks devised specially for the camper's use. This year some genius has devised a shelf, a board hung just beneath the ridge and running from pole to pole, in all the tents high enough to permit it, on which clothing, hats, shoes, etc., are stowed out of the way. Across the wagon road are strung the large club banners, in front of each tent or group of club tents is a rough table and a stone fireplace, and on the beach is a landing stage of the usual pattern that has proved so useful at the former meets, three or four saplings laid on the beach at right angles to the shore and rough planks about 8in. apart nailed to them. As the stage has the same incline as the beach, and the outer end is below water, a canoe can be readily hauled up or launched. A wharf of logs has been built for steamboats to land at, and near it are the officers' and regatta committee's tents.

Altogether there are up to Sunday 78 tents, not including the small canoe tents, on the ground, besides some 25 in the ladies' camp and about the Point outside the main camp. There are now 125 men in the main camp. It is worth noticing that this year there is an unusual number of small wall tents similar to that used by Mr. Baden-Powell last season. These are from 6½ft. square and the same height at ridge, to 8ft. square and high. The ladies' camp has a number of new visitors besides those who have visited Squaw Point for so long. This year the Canadian contingent, which has been represented at every meet since 1881 by some of the most earnest workers in the Association, has but one man, Mr. Leys, Toronto C. C. C. The meet of the Northern Division at Stony Lake, which has lately closed, has naturally attracted the Canadians. This year for the first time the far West is repre-

sented by Com. W. W. Blow, Oakland C. C., of California, while from nearer home comes Mr. Kritzer, of Michigan, and Messrs. Shiras and Warder, of Ohio, all A. C. A. members. The weather in camp has been very pleasant, with but one rainy day, the nights being cool and the days only warm and by no means sultry.

The first week has passed very quietly with cruising, sailing and fishing, the latter very good. On Saturday a large party made a trip to Port Kent by steamer, and thence to Ausable Chasm, returning late in the evening. The glorious sunsets and the view from the hill at Grindstone are missing here, as the island is lower, but still the scenery is very fine. Opposite the camp are the wooded hills of South Hero, while small islands are scattered about, and the shores of North Hero, broken into beautiful little bays, offer unusual inducements to the paddler.

The natural advantages are very great, but the transportation is worse than at any previous camp. Only two trains per day from Albany and New York, the first due at 5:30 P. M., frequently arriving at Plattsburgh so late as to miss the only boat to the camp, the steamer Maquam, which makes a single daily trip each way. The second train arrives at 7:35 P. M., so that in any case the traveler has a fair chance of being kept at Plattsburgh over night unless he can find a sailboat, of which there are very few. Launches there are none; the Association chartered a small one, but the captain would not run when the wind blew, so the boat was given up. Coming from Burlington or from the Eastern States, the matter is just as bad. The actual distance is less than from New York to Clayton, but the man who left New York at 7 P. M. on one day was sure of reaching camp without trouble by 11 A. M. of the next, but here he may lose hours searching for a boat and then have to spend the night at a hotel. A number of canoeists have cruised up from Lake George or Albany, the Brooklyn C. C., Essex C. C., of Newark, N. J., and some smaller parties. One advantage of the camp is that thus far few unwelcome visitors have troubled it, and the staring crowds that have previously proved such an annoyance have been entirely absent.

It is too soon as yet to speak of the boats, as the racing has not begun, but among the large number of canoes on the beach some striking features are noticeable. First, the influence of Pecowsic and her victories last year is very evident in a cutting down of bilge and depth, a change that is certainly not for the better, as there are a number of new boats that show a departure in this direction from the older and bulkier models. Secondly, as to the centerboard, the light brass plate with a trunk 6 or 8in. high, and almost in the center of the boat, is in the majority this year. Some of these plates are hung from the fore end of well on a pin, so as to drop in the usual manner, and at the same time to be lifted out; while others, as in the Blanches, are merely square plates of metal, dropping vertically through the trunk. All of these boards are raised by handles of thin brass strips, and are held up in one of three or four positions by a spring catch on the after side of trunk and several notches in the board itself. Few heavy boards are seen, and very few folding ones.

Some of the Ruggles boats have a low trunk of sheet brass, the bottom having a flange of ½in. all around it. This flange fits down on a rubber packing on top of the keelson, being held in place by small chain fastenings, ten along each side. The trunk can easily be removed and a flat piece of brass substituted. In the Notus and some other canoes the same end is attained by a wooden trunk fastened by brass screws, so that for a river cruise the trunk may be removed in a few minutes. In the majority of cases the single plate board is so placed as to monopolize the best part of the boat, leaving little room for the crew, a very bad feature from a cruising point of view.

In sails the change is very marked, few Mohicans or balance lugs are seen, but the favorite rig has all sail abaft the mast. The new sails are mainly of two kinds—a gunter rig, with sliding topmast, and horizontal battens with reef gear; and a single light, tall mast, with sail laced to it, the latter extended by horizontal battens, radiating battens, or a sprit. These sails are, as a rule, very light, and sit flat, but cannot be reefed or stowed during a race. The large sprit sails have the lower end of the sprit stepped on the boom, thus holding it down, the consequence being that one must go ashore to lower or change the sail. When a boat is just properly canvased for the wind and the latter is steady, the rig is unequalled; but as soon as the wind increases and reefing is necessary, it is of little use. Of course, with no weight of spars or gear aloft, the canoeist's weight acts directly on the hull, and nice balancing may be carried further than in the heavier boats with much weight aloft.

The Pecowsic and Lacowsic, sailed by Messrs. Barney, father and son, have a large box of sails, each the perfection of lightness, and of all sizes, so that any needed amount may be carried in one, two or three sails.

Sunday passed quietly, with service in the morning under a great tree. On Monday morning there was no wind, so the sailing races were postponed. The clubs now represented are the New York, Knickerbocker, Brooklyn, Mohican, Rochester, St. Lawrence, Brockville, Toronto, Litchfield (Conn.), Paterson, Cincinnati, Ianthe, Essex, Worcester, Lake George, Trenton, Springfield, Amsterdam, Pittsburgh, Ottawa, Roudout, Lawrence (Mass.), Hartford, Harvard, Na-wa-ga, Dinawinsta (Rome, N. Y.), Shattemuc, Winchester, Vesper, Washington, Newburgh, Pequot, Oswegatchie, Hudson, Newton, Oakland (Cal.), and Jabberwock. The latest number on the A. C. A. roll is 1159. The review takes place on Monday afternoon, and the torchlight display on Tuesday night. The famous cruiser Atalantis is anchored off the camp.

NORTHERN DIVISION MEET.

FOR the following report of the meet of the Northern Division of the A. C. A., at Stony Lake, Ontario, we are indebted to the Toronto *Globe*, through the courtesy of Mr. Robt. Tyson:

CAMP OF THE NORTHERN DIVISION, A. C. A., }
STONY LAKE, Aug. 4.

Once more the A. C. A. is at Stony Lake. Canoeists from a distance who were at the 1883 meet are glad to see again the well-remembered islands of those beautiful waters. The meet of 1883 was a general one of the whole A. C. A., and many United States canoeists were present. The present meet is of the Northern Division only, the general A. C. A. meet being at Lake Champlain this year. Therefore but few United States canoeists can get here, they having their own division meets and the general A.C.A. gatherings to attend. Commodore Wilkin, the head of the A.C.A., is expected here this week; and there are now present the late secretary of the A. C. A., Dr. Neidé, his father, the Rev. Mr. Neidé, and Mr. Elliott, of Rochester, N. Y. The camp is under the command of Col. H. C. Rogers, who is the head of this Northern Division by virtue of his rank of vice-commodore. The places most largely represented here are Lindsay and Peterboro. Lakefield and Bobcaygeon are also well represented. Hamilton sends Mr. Kirwan Martin and Mr. Alexis Martin, sons of Edward Martin, Q.C. Besides the A. C. A. men there are a large number of camping parties on the surrounding islands, many of which have been recently sold. To supply the wants of this island population there are two or three stores, ice-cream and refreshment saloon and perambulating venders of milk, eggs and other provisions. The perambulating is of course done in a canoe or punt. Frequent paddling excursions are made by canoeists to the fine spring of pure water at McCracken's Landing, a mile or more from camp, as the water of these lakes is not good for drinking, although suitable for cooking purposes.

Several of the comfortable institutions, known as "cribs," are moored at different points on the rocky shores of Juniper Island. These cribs are floats of square or round timber, on which are built two little frame rooms with a roofed dining room connecting the two. At Ladies' Bay is the portion of Juniper Island set apart for the "fair sect." Here is moored a crib, occupied by a party of ladies who came together from Peterboro. Needless to say how neat and pretty are the arrangements of their little wooden house. Another crib is occupied as the A. C. A. headquarters; another, belonging to Mr. J. M. Irwin, the lumberman, is tenanted by him and his two sons and Judge Weller, with Mr. Harold Morrow, of the Royal Military College C. C., Kingston. Three others of the R. M. C. C. C. are here. Another crib, vacant at present, is used by the Bobcageon men as their landing. The A. C. A. camp store is on a crib. Mr. E. B. Edwards is at his house on the hill. He says the Royal C. C. of England gave him a right royal reception on his recent visit to England. They treat Canadian canoeists well over there, as the writer knows by experience. Mr. J. G. Edwards, of Lindsay, is here in command of the Lindsay contingent.

The camps of the various clubs and unattached members are not concentrated as at Grindstone Island and Lake George, but are scattered about among the various islands, so that communication has to be by canoe, and the place resembles a canvas Venice.

Aug. 6.—Last evening a very heavy rain and thunder storm drove all the camp to their tents. The steamer Cruiser this morning brought to camp Commodore Robert Wilkin, the head of the A. C. A. He was received by all the canoes in camp drawn up in two lines, paddlers on one side, sailors on the other. Hearty cheers were given as the Commodial canoe passed, paddled by the Vice-Commodore and Mr. E. B. Edwards, who had met Mr. Wilkin at the steamer's dock. The canoes afterward filed past in review order. A special sailing race came off this morning, distance three miles, being twice over the regular sailing course. Seventeen started and the following finished:

Aurora, Samuel Britton, Lindsay	1
St. Herbert, C. A. Neidé, New York	2
Una, Colin Fraser, Toronto	3
Dawn, W. A. Leys, Toronto	4
Wawa, Wm. Lister, Lakefield	5
Isabella, Robert Tyson, Toronto	6
Ripple, Jas. D. Graham, Lakefield	7
Polly Ann, Jas. Gedward, Lindsay	8

A squally, fresh breeze from the northwest caused three or four upsets and made the racing very lively.

In the afternoon two paddling races came off. Classes 2 and 3, 1 mile with a turn; 3 entries:

George Fitzgerald, Peterboro	1
Arthur Blade, Peterboro	2
H. S. Greenwood	3

The finish was a close one. Time, 11.30, 11.35, 11.40.

Half-mile paddling races; single blades; wide canoes; classes 4 and 5:

H. F. McKendrick, Galt	1
J. N. McKendrick, Galt	2
Allan Burgess, Norwood	3
Colin Fraser, Toronto	4

H. F. McKendrick broke his paddle in starting, but his brother threw another to him amid applause from the shore.

The hurry-scurry race followed, in which the men ran 50yds., swam to their canoes, got into them and paddled to the finish.

D'Arcy Strickland, Lakefield	1
Harry F. McKendrick, Galt	2
James D. Graham, Lakefield	3

This was funny—very funny.

Aug. 8.—Thomas Starr, aged 21, and a companion came from Norwood yesterday afternoon, and shortly after 7 o'clock paddled out in a canoe from Eagle Mount. Only a few rods from shore they upset the canoe in deep water. Starr sank to rise no more. The other man was saved. They had no sail and the water was calm. The deceased was not a member of the A. C. A. or in any way connected with it.

Judge Dartnell, of Whitby; Mr. Wm. J. White, of Montreal; Col. J. Z. Rogers, of the Ontario Canoe Company, Peterboro; Mr. W. A. Leys, of Toronto; Mr. Geo. Hatton, of Peterboro', and others are among the arrivals not hitherto noted. Sunday was a quiet day in camp. Mr. E. Cayley, of Trinity College, conducted church service on Sunday morning. Members of the Anglican Choir of Lakefield conducted the singing, which was heartily joined in by the congregation. In the evening sacred songs were sung around a large camp-fire in the main camp. Both morning and evening the scene and the occasion were solemn and impressive. The canoes which brought the congregation were counted as they lay around headquarters, and the total was 101. Most of them brought more than one occupant. To-day has been a most successful racing day. The races were witnessed by a large number of spectators, many of them ladies, and both the sailing and paddling events were remarkable for the closeness with which they were contested, as will be seen from the time given.

Sailing race for decked canoes, sail and ballast unlimited, course three miles:

Dr. C. A. Neidé	1 08 37
W. A. Leys, Toronto	1 09 45
S. Britton, Lindsay	1 11 00
Robert Tyson, Toronto	1 14 30
S. J. English, Peterboro'	1 14 35

The wind was light and fitful. There were ten starters and the others came in in this order: H. A. Morrow, J. G. Edwards, Wm. Lister, Darcy Strickland, J. Z. Rogers.

Sailing race for open canoes, sail and ballast unlimited, course three miles. Started seven minutes after the last race and sailed simultaneously:

Colin Fraser, Ubique Club	1 13 35
W. Reid, Bobcaygeon	1 15 39
J. S. Hawkins, St. Louis Club	1 40 00
H. F. McKendrick, Galt	1 45 00

The others finished in this order: Jas. D. Graham, Lakefield; John N. McKendrick, A. J. Wright, McGochan,, of Lindsay; W. A. Fraser.

The buoy was fouled by Reid, Hawkins and H. F. McKendrick, who will be ruled out therefor. The first five in each of the above races are to sail against one another to-morrow in another race.

Paddling race—One mile, any blade, classes 2 and 3:

Dr. Douglas, Lakefield, double blade	1
A. Blade, Peterboro', double blade	2
H. S. Greenwood, Peterboro', double blade	3
Percy Strickland, Lakefield, double blade	4
D'Arcy Strickland, Lakefield, single blade	5
Geo. W. Strickland, Lakefield, single blade	6

Time—10.40.

A disgraceful state of things prevails on some of the islands near the A. C. A. camp. Intoxicating liquor is openly sold, and the shouts and curses of the noisy rowdies who consume it disgust the sober A. C. A. men and shorten their hours of needful sleep. Several cases have occurred in which drunken men have upset canoes.

Aug. 9.—Messrs. W. A. Cooke and W. H. P. Weston, of the Toronto C. C., arrived at the A. C. A. camp on Monday afternoon, having cruised from Lindsay with their canoes. They made excellent time on the cruise. They are camped on Otter Island with the T. C. C. and the Ubiques. The programme of the canoe races is being carried through very smoothly and successfully under the management of the following officers: Regatta Committee, Roland C. Strickland, Lakefield, chairman; Jas. G. Edwards, Lindsay, and John M. McKendrick, Galt; Referee, Dr. Douglas, Lakefield; Judges, Judge Weller, Peterboro, and George W. Strickland, Lakefield; Starter, James Graham, Lakefield; Clerk of the course, Wm. M. Graham, Lakefield; Timekeeper, J. L. Hardstone, Lindsay.

The following races were concluded yesterday after my despatch was sent: Combined paddling and sailing race, six alternate half miles of paddling and sailing. Wind light, 12 entries. W. A. Leys, of Toronto, won it after a very close tussle with Britton and Colin Fraser. The order of arrival at the home buoy and the time was:

W. A. Leys, Toronto	1 01 00
Colin Fraser, Toronto and Ubique	1 02 00
Samuel Britton, Lindsay	1 03 45
W. J. A. Read, Bobcaygean	1 07 10
J. G. Edwards, Lindsay	1 07 40

J. G. Millan, Lindsay; J. N. McKendrick, Galt; Darcy Strickland, Lakefield; J. K. Fee, Lindsay; Harry F. McKendrick, Galt, Speers and W. A. Fraser did not finish.

Paddling race, two men in a canoe. Class 4 and 5. Open canoes, single blades; decked canoes, double blades. Five starters. All open canoes. This was a magnificent race, and elicited the greatest enthusiasm from the large crowd of spectators. Distance one mile, with a turn. The time was very fast.

P W Strickland, Lakefield, and H. S. Greenwood, Royal Military College, Kingston	7 00
J. N. McKendrick and H. F. McKendrick, Galt	7 03
Samuel Britton and A. F. D. Macgahen, Lindsay	7 04

F. K. Fee and J. A. McMillan, Lindsay, Kirwan Martin, Hamilton, and W. J. White, Montreal.

Man-overboard race, half a mile under sail. At a signal each skipper lowers his sail, jumps overboard, regains his position, and sails to the finish. Seven entries, four finished.

Harry F. McKendrick, Galt, canoe Doubtful	1
Robert Tyson, Toronto, canoe Isabel	2
Samuel Britton, Lindsay, canoe Aurora	3
W. A. Fraser, canoe Enid	4

The canoes carried only mainsails, so as not to lose time in lowering the mizzens. They came bowling along before a stern wind with booms to starboard and the shore on the left. The expectant silence of the spectators was broken by a loud bang of the chairman's gong, followed by a great splash as seven men leaped overboard. Colin Fraser upset his canoe in trying to get in, and she lay right across the bows of W. J. A. Read's canoe and prevented Read from finishing, though he had got back very quickly into his craft. Burgess' canoe got away from him, and he had to swim for her. The tournament closed the day's sport. Ten canoes, each containing a spearsman and a paddler, were ranged in two lines of five facing one another. The spears had stout bamboo shafts and large stuffed heads like a large boxing glove. At a signal the lines advanced. As the canoes passed one another the spearsmen standing up forward engaged in fierce thrust and parry. If each escaped the canoes wheeled, returned, and the combat continued until one or other was knocked into the water or his canoe capsized. The survivors then engaged one another till only one was left. That one was John McKendrick, of Galt. Cheer after cheer broke from the spectators as his last antagonist went swimming. Following are the competitors in the order of survival. The first named is the spearsman:

John N. McKendrick and W. A. Fraser, Ubique Club	1
W. J. Read and W. Boyd, Bobcaygeon	2
Darcy Strickland and W. A. Lister, Lakefield	3
J. A. McMillan and G. P. Martin, Lindsay	4
H. F. McKendrick and Colin Fraser, Ubique Club	5
Robt. Tyson, Toronto, and Richard Lees, Ubique	6
S. Britton and A. F. D. Macgahen, Lindsay	7
John Speer and James Barr, Lindsay	8
D. A. Burgess, Ubique, and W. A. Leys, Toronto	9
A. J. Wright and George W. Strickland, Lakefield	10

In the evening an illuminated procession of canoes took place. Twenty-eight canoes gaily lit by Chinese lanterns were gliding over the calm waters, forming line, wheeling about, moving in single file and executing other manœuvres at the command of Vice-Commodore Rogers, whose ringing voice gave orders from the right flank. The sight was a most beautiful one, moving lights in endless variety reflected in long glimmering lines on the dark water, accompanied by the gentle dip of the paddle, the song and laughter subdued into harmony with the quiet beauty of the scene. When the red moon rose over the eastern hills the picture was complete.

Aug. 10.—Officers of the Northern Division of the American Canoe Association were elected for the coming year at a general meeting held at headquarters Crib yesterday evening, as follows: Vice-Commodore, A. T. D. McGachen, of Lindsay; Rear-Commodore, Wm. G. McKendrick, Toronto; Purser, Sam L. Britton, Lindsay. Executive Committee, Wm. Graham, Lakefield; John N. McKendrick, Galt; John Miller, B. A., Peterboro; Kirwan Martin, Hamilton; Wm. J. A. Read, Bobcaygeon. The first three of these are members of the Executive Committee of the general A. C. A., and the other two are members of the Division Board only. Some discussion took place about the financial relations of the A. C. A. and its divisions, resulting in the passing of the resolutions recommending that the initiation fees of new members should go to the divisions, and that the general secretary of the A. C. A. should receive no fees except through the division pursers. A new constitution is to be proposed at the general A. C. A. meet at Lake Champlain, and if that is passed the annual fee will be $1, and all the funds will go to the divisions excepting enough to print the A. C. A. Year Book and distribute it. The programme of paddling races was finished yesterday. There was not enough wind for the sailing races either yesterday or this morning.

Paddling classes 4 and 5, open order, any blade, 5 start:

H. F. McKendrick, Galt	1
W. A. Leys, Toronto	2
D'Arcy Strickland, Lakefield	3
J. McKendrick, Galt	4
Colin Fraser, Toronto	5

The lead from the start was kept by Harry McKendrick, who won with but little difficulty. There was a close struggle for third place.

Paddling, any sailing canoe decked and fitted with a centerboard, 2 entries:

W. A. Leys, Torronto	1
W. Lister, Lakfield	2

Three paddlers in a canoe, any canoe or paddle:

P. W. Strickland, H. S. Greenwood and Arthur Blade in canoe Junebug	1
D'Arcy Strickland, R. C. Strickland and Dr. Douglas	2
J. N. McKendrick, H. F. McKendrick and W. A. Fraser	3

The winners used two doubles and one single blade; the second men one double and two singles, and the third all double blades, paddling badly.

Gentleman's tandem; any canoe or paddles:

Dr. Douglas and Mrs. Wright, Lakefield	1
H. McKendrick and Miss Topsy Hall, Peterboro'	2
D'Arcy Strickland and Miss Bloomfield	3

Portage Race; the paddlers to carry three canoes over a rock during the race, launch them and finish:

H. S. Greenwood, R. M. C.	1
Percy H. Strikeland	2
Arthur Blade fouled.	

Catch-the-duck race came next. In this a little fellow named Allan Bell was sent out and five canoes chased him. It they held him for five minutes they won, but if he kept free for five minutes he won. Amid great laughter the boy succeeded in eluding his pursuers for the five minutes and won the prize. In the course of the struggle he upset some by diving under their canoes and raising himself against the bottom.

Special Boys' Race for two belts given by Judge Dartnel, of Whitby, half a mile. This was a splendidly contested race and elicited great enthusiasm among the spectators, especially the ladies. The boys paddled a fine, long, sweeping stroke:

Edmund Tait and Fred Lefever, Lakefield	1
Wm. Cox and Fred Tanner, Lakefield	2
Jack Fairbairn and Sandford Smith, Peterboro	3
Fred Anderson and Bert Jaffray, Toronto	4
Fred Cox and Gus Sawers	5
Archie Reid and Frank Roseburgh	6

Aug. 11.—The races closed this morning. The first was a sailing race between the first men in the open and decked races of Monday. Cook, of Toronto, was also allowed to compete. The wind was strong and squally, and there were some narrow escapes from capsizing at the jibe. On the second round Colin Fraser took the lead from the first and kept it. He sailed a splendid race and finished a long distance ahead of the others. Seven started but only four finished.

Colin Fraser, Toronto and Ubique	1
Samuel Britton, Lindsay	2
Wm. Cook, Toronto	3
Robert Tyson, Toronto	4

The last event was a sailing race, each canoe ballasted with a passenger weighing at least 125lbs. There were ten starters as in the last race. Colin Fraser took the lead and beat every one else badly. His passenger was Mr. Richard Lees, of the Ubique C. C. The wind had died away considerably:

Colin Fraser	1
Dr. Neidé	2
J. G. Edwards, Lindsay	3

The five flags for five men making the best all-round record in the race programme, were given to W. A. Leys, Toronto; Colin Fraser, Toronto and Ubique; S. Britton, Lindsay; J. N. McKendrick, Ubique; H. F. McKendrick, Ubique.

A. C. A. MEMBERSHIP.—Applicants to date: N. M. Bingham, Rome, N. Y.; H. C. Holt, Winchester, Mass.; W. W. Holt, Winchester, Mass.; Geo. W. Johnson, New York city; Geo. A. Warder, Springfield, O.; W. F. Spencer, Boston, Mass.; R. S. Blake, Brooklyn, N. Y.; E. Harvey Platt, New York; Arthur Amory, Boston, Mass.; Dr. Jarvis, New York; Schuyler Schieffelin, New York; J. Melvin Thomas, C. G. Belman, Amsterdam, N. Y.; F. R. McCreery, Belleville, N. J.; W. W. Blow, Oakland, Cal.; C. E. Barber, Washington, D. C.; W. H. Crawford, Dayton, O.; C. S. Parker, H. Parker, Boston, Mass.; A. S. Gould, Lowell, Mass.; J. H. Van Buskirk, Rouse's Point, N. Y.; R. W. Richards, Springfield, Mass.; T. E. Allen, Lawrence, Mass.—WM. M. CARTER, Sec.

Yachting.

FIXTURES.

AUGUST.

25. Great Head.	27. Beverly, Open, Mon. Beach.
25. Bar Harbor Open, Bar Harbor.	27. South Boston Club.
26. Quincy, 3d Championship.	27. Monatiquot, Club, Weymouth
27. Great Head, 4th Cham.	30. Hull, Cham., Hull.
	30. Cor. Cham., Marblehead.

BRIDGEPORT "POST" CUP, Aug. 13.—Course, triangular from Bridgeport Light to and around Point No Point buoy to and around Fairweather Island buoy, to point of starting, distance 10 miles. Weather fine, wind S.E., flood tide.

Name.	Length.	Start.	Finish.	Elapsed.	Cor.
Anna, J. H. Jennings	19.11	1 41 30	3 23 08	1 41 38	1 39 27
Number 4, E. W. Smith	21.08	1 41 00	3 23 48	1 42 48	1 42 48
Tripoli, Geo. Frederickson	19.07	1 41 10	3 27 42	1 43 56	1 43 56
Hornet, Chas. M. Winston	20.02	1 41 50	3 29 10	1 47 20	1 46 28
Leo, Frank I. Hitchcock	18.05	1 42 22	3 30 12	1 47 50	1 43 46
Grace L., David Connors	20.04	1 42 08	3 32 13	1 50 05	1 48 25

First prize, Anna, second prize, Leo. Regatta committee and judges, Jay L. Clarke, C. M. Foster, O. R. Beers.

MONATIQUOT Y. C., AUG. 15.—The second championship regatta of the Monatiquot Y. C. was sailed at Weymouth on Saturday, Aug. 13. Start at 2 P. M.; course, 9 miles first and second classes; 6 miles third class. The race was simply a drifting match over four-fifths of the course, the first class barely finishing within the four hours' limit. The Secret won in first class. Second and third classes did not finish.

SHINNECOCK BAY.—On Aug. 9 Bonita beat Marion 2m. 39s. On Aug. 13 a very pretty race was sailed by amateurs. Vinitia won in first class, Music second. A flag was the prize for each class. Course was about seven miles, to windward and return. An amateur race was sailed on Aug. 6, Vinitia winning.

THISTLE'S PROPORTIONS.

Editor Forest and Stream:

There seems to be an impression in some uninformed quarters that Thistle represents a new departure in British yacht design, and is a sort of compromise between the American sloop and the regular cutter. This is an error arising from want of familiarity with the actual state of yachting abroad. A glance at Lloyd's Register will show a great majority of British yachts to have proportions very much the same as those of the Thistle. She is really a much more truly representative British cutter than the narrow boats which have hitherto occupied public attention. Yachts like Galatea, or even Genesta, are exceptions to the general run of British yachts. They were built to meet special racing conditions, just as our sandbag jib-and-mainsails are built to meet shifting ballast. There is no more good reason for taking exception to the Thistle as a cutter than there would be in refusing to class our cabin boats as sloops because they differ from the out-and-out sandbag machine. If the Thistle is destined to win, let us take defeat like men, as our British cousins have done so often, and not seek to console ourselves with self-deception. Should Thistle win on her merits, it will mean nothing more nor less than a triumph of cutter principles, for upon such principles she is built, in strong distinction to those represented in the genuine American sloop. COMING BOAT.

THE CRUISE OF THE NEW YORK Y. C.

THOUGH it is but four years since the fleet of the New York Y. C. joined forces with that of the E. Y. C. for a cruise around the Cape and a race off Marblehead, the united fleet that then followed the tug Luckenbach into the harbor had so little in common with that which this year made the same cruise, that it is hard to realize that the interval is not far greater. Montauk and Fortuna, who then led the schooner fleet, were absent this year, the former not racing, while the latter is on a cruise across the pond, but their absence was hardly noticed, the honors of the two-stick class all going to a younger rival. Then the "first class" had at its head Mischief, Gracie and Julia, while the cutters were represented by Wenonah, Vixen, Maggie, Rover with Halcyon and some old schooners making up the balance of the fleet. The new class was then not even dreamed of, Wenonah, Bedouin and Oriva were only beginning to teach the lesson of outside weight, Gracie was sailing under her old rig, Mischief then carried a single jib, and then, as again this year, New York had started out to astonish the East, not by something new and original and abreast of the times, but by galvanizing a mummy into life in the old Julia, restored to her original sloop rig. The contrast between the sturdy tug that then did duty as a tender, and the elegant vessel that bore the commodore's blue pennant this season is hardly greater than that between the two fleets.

In accordance with usage we should, in reviewing the present fleet, take the schooners first; but they are now out of fashion and must take their turn in the wake of the great singlestickers in print as well as over the racing courses. This year, as twice before, the class is headed by a new Burgess boat that beats her predecessor as she in turn defeated her older sister. For three years the sequence has continued, longer, deeper, more lead and faster, until the next step must be to a full keel boat and the abandonment of the board. Puritan naturally stands as a basis of comparison for all her class, and judged by her the new boat, Volunteer, is deeper in body and draft, longer for about the same beam, stiffer and abler as far as she has been tried, a step nearer to the cutter in rig, as she has abandoned the fixed bowsprit, and not so handsome in appearance afloat; her stern, which is certainly not a copy of anything English save in length, retains nothing of her good looks. Of the next in rank, Mayflower, little need be said just now. She is in the hands of a new owner and skipper, who have not yet had time to learn her ways, and who have added nothing to her old record. Added to this she has been unfortunate in wrecking her centerboard during the races. This has been repaired and she will soon swing a new suit of canvas with 4ft. more boom and 2ft. more gaff; but unless better handled than she has been thus far, neither longer wings nor the ugly coat of pot-lead that has spoiled all her beauty will bring her near the front in the trial races next month. Puritan, with a pair of new Lapthorne headsails, is apparently up to her old form, but her size places her out of it with Volunteer and she will not enter the trial races. Atlantic has sailed very well on the cruise, showing nearer to Puritan than we ever expected to see her, but the work has been mainly reaching. In the Marblehead race she did very well to windward, but in the only other beat of the cruise she was absent, withdrawing altogether after the E. Y. C. race, though with the fleet. Priscilla has failed to win a better place than last in the quintette.

Of the schooners Sachem naturally claims first notice by her wonderful work, leading the fleet, large and small, not only under time allowance, but when she doubled the time allowance she gave the smaller boats and resigned that due her by the larger ones. Next to her comes Iroquois, a handsome craft of the new type, but designed for a cruiser and too small to give her time to such a flyer as Sachem. Both are alike in color and general appearance and hard to distinguish at a distance. Palmer makes her reappearance this year after a long retirement, a handsome boat in a new rig, stern and bowsprit, that make her look like an importation from the other side. She and the other big ones need more wind than they have had or will ordinarily get to save their time of Sachem. These "second rates" have no business now beside such a modern "despatch boat" as Sachem. There is no reason, however, why they may not find plenty of sport among themselves if all would race, but the trouble is that so few owners care to risk a beating, even where the odds are small as shown in the E. Y. C. race, where only half a dozen out of the large fleet of schooners entered. Norseman, Palmer, Mohican, Fleetwing, Republic, Gitana, America, Troubadour, Phantom, and Resolute, should make a very fair field of entries, and it is a pity that they do not turn out oftener. Resolue too is out this year with a lengthened bow and a new rig, but though she has tried her luck in all the races up to and including the E. Y. C. it has been without kites and with a foul bottom, so that no judgment can be fairly formed as to her place in her class. Marion Wentworth too has been in the racing, though no one would recognize her save near at hand in the clean, white-hulled Troubadour. The old Magic too has cut in for a try this season; but none of the latter boats have been up in first-class racing shape. America too has been sailing with the fleet with a huge excursion barge streamer aloft bearing her name, but she has done nothing remarkable.

At the head of the second class still stands Bedouin, leading the others easily in all the sailing and a fair proportion of the drifting. Never has she sailed better than in the Goelet Cup race and the first leg at Marblehead, on both occasions being miles ahead of her own class and well up to the big ones. Her mishap at Marblehead threw her out of the latter races, but she has shown that she is yet far from *passé*, and that the new *débutante*, Titania, will have to hurry very much to catch her. The latter boat has had a full share of misfortune, losing two topmasts, breaking her gaff and jamming her board; but when at her best she has been nowhere alongside Bedouin. The old sloops have shown up very well in numbers this year, Gracie, Fannie, Mischief, with a double head rig, Vision, Mystery and the famous Pocahontas. Gracie and Fanny have had some good racing between the two, but it is more plain than ever that neither has any business with Bedouin, and in the Marblehead race they more than had their hands full with the little cutter Huron, both being beaten flat by the latter. Huron is in build a cruising boat, her cabin and even the ceiling being panelled with mahogany, while she is heavy in build throughout; but she has sailed wonderfully well on the cruise and promises to make a record yet under her new owners. Mischief and Vision did a little racing, but only cutting in at times, and neither added to her old record. The cruise is noteworthy for one thing, if for nothing else—the reappearance of the renowned Pocahontas, whose advent was heralded by the papers last winter as one of the events of the coming season. That she has not succeeded is not for want of talent, as she had enough aboard to navigate her to Hong Kong or Honolulu, including Captain Samuels; but she did nothing better than whipping in the rear, being 23m. astern of Bedouin on the first leg, 19 miles, of the Brenton's Reef race; an hour astern on the run to Vineyard Haven, and beaten by the third class boats from Vineyard Haven to Pollock's Rip, after which she did not race.

In the third class were only Cinderella and Clara, whose doings we have noticed in the previous reports. Fanita came in for the last race, and at Marblehead Vixen and the new Zigeuner were in the class, but only the latter requires further attention. The last addition to the class, Mr. John G. Prague's wide sloop Anaconda, was sailing about Newport, but not being in the fleet did not enter. As yet she has shown no indications that she will ever find a place beside Clara or Cinderella. The following list includes the principal boats taking part in the cruise, not including the Eastern yachts at Marblehead: Puritan, Volunteer, Bedouin, Wave Crest, Bertie, Thistle, Dare, Cinderella, Pocahontes, Eclipse, Vision, Magic, Sachem, Regina, Atlantic, Grayling, Gracie, Medusa, Titania, Gitana, Republic, Mayflower, Mystery, Harbinger, Crusader, Iroquois, Troubadour, Phantom, Halcyon, Wanderer, Huron, Athlon, Espirito, Palmer, Maggie, Speranza, Lydia, Nonpareil, Mischief, Princess, Agnes, Norseman, Viking, Resolute, Fleetwing, Whileaway, Madeline, Mohegan, Æolus, Priscilla, Clara, Iseult, Concord, Ulidia, Stranger, Fanny, Varuna, Dreadnaught, Nokomis.

With the fleet at times were several steamers that deserve a longer notice than we can give here. Susquehanna is a new steel boat from Harlan & Hollingsworth's yard, designed by her builders and giving promise of something far better than the old boxes that are commonly rated as yachts, in the near future. She is a very trim looking boat with English quarters and a clipper stem, with short bowsprit. Her arrangements below are much better than common, being on a plan original with her builders. The Sheerwater, Mr. Burgess's latest effort in the steam line, is quite a handsome boat, making no pretensions to anything elaborate, but substantial, businesslike and shipshape, in marked contrast to many of the toothpick rigged nondescripts that ape the importance of a man-of-war. The Now Then was with the fleet at Newport, showing her speed as usual.

The following abstract of the races shows in a more compact and convenient form the work done by the leading boats. In order to rate all correctly it is necessary to consider their size as given in the following table. The lengths given are calculated according to the formula employed by the New York and Eastern clubs, twice the loadline plus the square root of the sail area, divided by three:

	Length.	Allows.		Length.	Allows.
SCHOONERS.					
Norseman	110.12		Varuna	87.50	9.19
Palmer	104.17	1.51	Troubadour	87.47	9.19
Mohican	104.01	1.51	Phantom	86.01	9.51
Fleetwing	101.52	2.45	Crusader	84.50	10.58
Republic	97.40	4.32	Grayling	83.28	11.33
Gitana	96.23	4.58	Iroquois	81.74	12.25
America	91.44	6.16	Halcyon	81.12	12.43
Sachem	88.47	8.47	Magic	80.60	13.02
FIRST CLASS SLOOPS.					
Volunteer	89.20	—	Priscilla	85.97	1.51
Mayflower	87.99	0.46	Puritan	83.85	2.59
Atlantic	86.31	1.35			
SECOND CLASS SLOOPS.					
Titania	73.58	9.17	Stranger	68.87	14.29
Gracie	71.62	10.40	Huron	66.31	14.52
Bedouin	71.45	11.03	Vision	66.00	15.16
Pocahontas	70.95	11.25	Mischief	64.79	16.05
Fanny	70.00	12.10	Mystery	60.50	19.48
THIRD CLASS SLOOPS.					
Cinderella	55.45	24.50	Ulidia	43.93	38.43
Clara	54.28	25.52	Vixen	48.60	32.05
Concord	51.23	28.35	Dream	42.50	40.40
Zigeuner	45.00	36.57			

In the following summary the distances are all in nautical miles, taken from the Coast Survey charts, the times are corrected except in the first part of the race for the Morgan cups. The races and runs of the cruise are given in order and numbered, each run which was timed being included, whether prizes were given or not.

I. Aug. 4. Run from New London to Newport, no prizes, 52 miles.
Wind very light northeast at 10 A. M., light from southeast at noon, increasing to finish. Drifting and fluky race. Smooth water.

Volunteer beats Puritan 3.22 corrected time, Atlantic 7.40, Mayflower 55.43. Priscilla did not enter. Gracie beat Titania 5.33, Bedouin 17m. Sachem beats Grayling 16.22. Race unsatisfactory and inconclusive. Many flukes.

II. Aug. 5. Goelet Cups. Sow and Pigs course, 40 miles, 19 miles to windward, 4½ miles free and 16½ miles wind abaft beam. Wind southeast and moderate all day. Water smooth.

Volunteer beats Mayflower 8.42, Atlantic 10.33, Puritan 10.53, Priscilla 18.44. On first leg Volunteer beats Mayflower 4.16, Puritan 9.11, Atlantic 11.09, Priscilla 16.56. The free leg was too short for a test, but Volunteer gained 2.38 on Puritan, 2.15 on Mayflower, Atlantic gains 54s. on Volunteer and Priscilla gains 4.44 by the times given. Bedouin beats Stranger by 51s. on the whole race, Titania 1.32, Huron 7.30, Gracie 9.07, Mischief 16.42. Pocahontas and Fanny were not measured, but Bedouin beat them 19.08 and 29.17 respectively. Sachem beats Iroquois 3.38, Palmer 5.17, Magic 23.07. Volunteer and Sachem take the Goelet Cups. A good light weather race with no flukes.

III. Aug. 6. Run from Newport to Vineyard Haven, 38 miles.
Wind moderate to fresh S.E. to S.; water smooth. Course mostly reaching with a little spinaker work at finish.

Mayflower beats Puritan 2.3, Volunteer 5.33, Priscilla 26.6, Atlantic not entered.

Bedouin beats Fanny 2.04, Gracie 10.46, Titania 18.11, Pocahontas 53.43. Cinderella beats a lot of old sloops, all larger than she, on even time.

Sachem beats Norseman 3.23, Gitana 14.47, America 15.21, and a fleet of others so far astern that times fail to be of value.

The race was very uneven and unsatisfactory; Volunteer led Mayflower and Puritan at the end of the first long reach of 20 miles, but finally lost by going outside the Middle Ground Shoal into a strong tide. The times show some hard fluking among the schooners.

IV. Aug. 8-9. Morgan Cups, Vineyard Haven to Marblehead.
Wind fresh N.E. at start, falling during day with calms and drifts after first third of race. Distance 110 miles.

The times were not worth considering, as there was too much fluking, but the leaders should be counted in the final summing up. Volunteer heads her class, Bedouin takes the prize in hers. Sachem is winning schooner, and Clara leads the third class in. The race really concluded at Pollock's Rip Lightship, a distance of 32 miles from the start, where the leaders were timed. Here Volunteer led Puritan by 11.10, elapsed time, Mayflower 14.59, Priscilla 18.10, Atlantic 20m. Bedouin led Gracie by 7m., Titania 30m. Sachem led Palmer by 3.45 and America 9.55. The race thus far had been under very fair conditions, a long reach and a little easy windward work, with only moderate to light winds and perfectly smooth water.

V. Aug. 11. E. Y. C. Race, Marblehead. Triangular course, 36 miles, water smooth, wind fresh, S.W., with puffs at times.
First leg, dead to windward, second leg, wind on starboard quarter, third leg, wind partly on port beam, hauling ahead.

Volunteer beats Puritan 3.53, Atlantic 6.02, Priscilla 7.06, Mayflower 11.05. Huron beats Gracie by 4m. and Fanny 5m., Bedouin, Titania and Stranger breaking down. Sachem beats Iroquois 3.54, Troubadour 25.26, America 26.59.

The weather work on the first leg, almost the only work of the kind on the entire cruise, is unfortunately of little value, as the leaders sailed different courses. To sum up, Volunteer beat her class, leading the nearest boat, Atlantic, by 7.45. As she and Atlantic had sailed the same course, the figures may be taken as correctly showing her gain; but it was evident that had Puritan not sailed a totally different course, she would have been second boat. We have no desire to disparage Atlantic or to rob her of any of the laurels which she fairly won here, but what all want to know now is, how much faster is Volunteer than Mayflower and Puritan. The former, unfortunately, must be left out of the calculation, but Puritan can fairly be placed several minutes ahead of Atlantic, judging by all the sailing between the two this year and last, for Puritan's power to windward is known to all, while Atlantic's best sailing has been off the wind. Puritan then may be placed at least midway between Volunteer and Atlantic, which would make her about 4m. slower over a 12-mile leg to windward in a clubtopsail breeze and smooth water than Volunteer.

Volunteer wins *Herald* Cup and $250, Puritan $50, Huron wins $100, Gracie $50, Zigeuner $75, Sachem $250, Iroquois $50.

VI. Aug. 15. Vineyard Haven to Newport, Providence cups, 38 miles. Fresh S.W. wind, smooth water, reach at start, beat of 15 miles down Vineyard Sound; one leg of 20 miles, close-hauled, to finish.

Volunteer beats Puritan 7.14, Mayflower disabled, Atlantic and Priscilla not in. Sachem beats Magic 24.36, Palmer 24.59 on regular allowance, not counting handicap given by Sachem for this race.

Volunteer and Sachem each take $250 cups.

On the beat of 15 miles Volunteer and Puritan were not accurately timed, but the former gained about 5m.

VII. Aug. 16. Newport, Sow and Pigs course, Newport cups, 40 miles. A drifting match with bad flukes.

Volunteer beats Puritan 12.02, Mayflower 31.28.

Sachem beats Magic 3.46.

Volunteer wins $650, Gracie $350 on walkover, and Cinderella $200, beating Fanita. Sachem wins $650.

A casual glance over the above table shows several important points. First, the work of Volunteer, like all such series the majority of the races are unsatisfactory, the first was a drift, the second was better but with no windjamming and little spinaker work, the third was marred by Volunteer's fluke off the middle ground, the fourth a drift, etc., but still the amount of test racing is up to the average, and we must make the best of it. So far it shows one thing, that Volunteer was always ahead, under any conditions, and that she is a very fast boat, especially when new sails, new bottom, and sailed by her skipper for the first time are taken into account. How much faster than Mayflower in her old form no one knows, as all comparisons are worthless, for reasons before given. With Puritan she may be compared more closely, Volunteer beats Puritan by 3.22, 10.53, 3.53, 7.14, 12.02, and before the calm in race No. 4, the time of which is not included, she beat her about 8m. corrected. On the other hand, in No. 3, Puritan beat Volunteer by 3:30. To fairly average these results is a difficult matter, but they certainly do not show the new boat to be more than 7m. faster, corrected time, than the old. On the occasion that Puritan was beaten by 10:53, she was not sailed by Captain Crocker, a fact to be considered; and the beat of 12:02 was in a drifting match. In the E. Y. C. race Puritan lost, as shown before, in the windward work, but Volunteer too wasted some of her lead later on in hunting for the second mark. Altogether she probably should have beaten Puritan nearly 7m. in the 36 miles of the course. This estimate of 7m. is less rose-colored than many that have been made, but we ask no one to accept our opinion. The figures given are mostly official, and we believe, correct to a matter of a few seconds; the attendant circumstances of each race are stated as fairly and fully as possible, and our readers can make their own calculations from the data. We do not place much faith in such computations, especially in comparing boats that have never met, as Thistle and Volunteer, through the medium of one or two other boats; for unless a man is thoroughly familiar with the boats and all conditions of their sailing, he can form no idea. Here is a specimen of the mass of stuff spoken and printed of late, taken from the *Tribune*:

"The Puritan beat Sir Richard's cutter 16m. 19s., and unquestionably proved that she was better by 12m. at the least. This year the Puritan is in much better form than she ever was before, and yet in a race of forty-three miles sailed by the Volunteer in less than four hours and four minutes, she was compelled to yield to the new sloop by 7m. 14s. If there is any meaning in comparative tests, therefore, the clear significance of the races in which the two new champions have sailed is that the Thistle needs to be more than 8m. faster than the Genesta in order to beat the Volunteer. However, whether she be victor or vanquished, we extend her all the same a right hearty welcome."

The facts that in the only real race they sailed Puritan beat Genesta but 1½m., and also that Genesta is sailing far better this year, with different rig and ballast, than she did in America, find no place in the calculation. The *Sun* makes a similar blunder; Volunteer beats Mayflower 2h. 23m. over a course of 110 miles, equal to about 50m. over a course of 38 miles. Now Thistle can beat Genesta or Irex not more than 10m. over the same course, hence Volunteer is 40m. faster than Thistle.

The trial races should tell more accurately the difference between Volunteer and her fellows, though Puritan will not be in, but there is little to be gained by such speculation in any case, unless for betting purposes. It is enough to know that Volunteer is a success from the start, and that all her sponsors have to do is to learn her ways and perfect all details, as thus far no radical fault is apparent.

Sachem's superiority over her class stands out in the record of every race, and Mr. Burgess may well be proud of her. Certainly nothing that floats in the entire fleet can touch her, and she is not only fast but handsome.

From the above abstract it is evident that in so far as the choice of a defender goes there is no necessity for trial races, Volunteer's racing thus far has proved that, but the races will be sailed, and very properly; as they serve a good purpose in the opportunities they afford for practice.

There is one point in the record, an unpleasant one in many ways for a New York man to deal with, which we would prefer not to touch on in connection with a cruise that has been so well managed and successful in many ways, but it is written in every line of the official times and is patent to all who do not wilfully close their eyes. Look at the list of winners and then say who dances and who plays the piper. The following list of winners of first, second and third places in each class and race tells the story. The Boston yachts are in full-faced type, the New York boats in roman. We have placed each boat not according to present ownership, but by nationality, so to speak, and the result is easily seen. The prizes, the *Herald* cup, the Morgan cups, the Goelet cups are not shown, we are not talking now of mugs but of honors; were they added the record would show but one cup and two purses for New York, one of the latter a walkover.

No. of Race.	Schooners.	First Class.	Second Class	Third Class
I.	1. **Sachem.** 2. Grayling. 3. ———	**Volunteer.** **Puritan.** Atlantic.	Gracie. **Titania.** Bedouin.	Cinderella. ——— ———

VII.	1. **Sachem.** 2. Magic. 3. ———	**Volunteer.** **Puritan.** **Mayflower.**	Gracie. ——— ———	Cinderella. Fanita. ———

In the schooner class Sachem takes first place in every case, New York coming in for the second berth. In the large class New York has no place at all, Boston takes first, second and three third places. As yet Boston has but one new boat, Titania, in the second class, and she has done nothing on the cruise. The little Huron, however, a genuine Boston production, very fairly thrashed both Gracie and Fanny in the best race of the cruise. Thanks to the cutter Bedouin, New York's record in this class is not so bad as it might have been. In the third class New York shows better, simply because Boston has not any boats in the class. What she may do soon was only too clearly shown in the E. Y. C. race, where a small Burgess cutter, a cruising boat and under-rigged, new, with rough bottom as she came from the builders, and stiff gear and unstretched sails, made a good race with New York's old favorite, Vixen, a larger boat, and finally saved her time on such a crack as Cinderella. In this latter she was favored by a fluke near the finish, but still the performance was a remarkable one and may well set New York to thinking. Zigeuner is a veritable cruiser, but what if Boston puts a racer of the same type in the class? What of her inches is there in New York that can face Pappoose in the next lower class to-day? What will the record of next year's cruise show at this rate?

We do not wish to stir up jealousies or sectional feeling, the united fleet that races at New York in the spring and at Newport and Marblehead in the summer should be one in friendly feeling and only fair and amicable rivalry should exist among its members, but we cannot, as friends of New York and New York yachting, sit quietly by without an effort to waken her yachtsmen from the apathy into which they have fallen. Our warning of last spring has borne little fruit, but its truth is confirmed by the races just sailed, in which New York cuts such a sorry figure. Who takes all the schooner prizes? not New York's old boat with long records, but Boston's new flyer with a modern hull and rig. Who tops the great singlestick class? Boston's latest achievement, conceived and built while New York was pacidly calculating how much slower than Puritan Thistle's sailing showed her to be. Where is New York in the same class? This year New York leads the second class, but that is partly through a cutter that she has frequently disowned and partly because Boston has not taken up this size of boat in earnest. What has Pocahontas done to help the class? Has her resurrection brought credit or the reverse to New York yachtsmen? The keynote of Boston's yachting is Progress; that of New York is the Past. What she has done, what she is to do some day, and in the meanwhile she sits quietly and contentedly and lets Boston sail her races and win her cups, even to the defense of the long prized trophy the first great emblem of New York's supremacy in yachting.

To pass to a much pleasanter subject, the management of the cruise has been creditable both to the club and the officers to whom it was intrusted, and while the fleet has held together longer, the racing has also been better and there has been more of it than usual. No better leader for the fleet could be found than the

Electra, fast enough to start all the laggards and then time the leaders, with accommodations for a large party, with two swift Herreshoff launches at her boat booms, with fires alight by the time the anchor is down, with an electric search light to guide through fog and darkness, and with numberless minor conveniences, not the least of which is a cyclostyle, by which orders were quickly printed in quantity and the official times of each race printed and distributed within a few minutes after the last boat finished. The Commodore must be credited with much of the success of the cruise—wide awake, alert and full of energy, he succeeded in taking a larger fleet than ever before around the Cape, and in holding it together longer than usual, while all the programme races were sailed. His aids, Messrs. Kortright and Peabody, of the regatta committee, did their work well and there was plenty of it, for with a fleet of fifty to be started and timed on the daily runs, as well as several important races to run, the position is no sinecure. Both races and runs passed off successfully and with far fewer hitches than were to be expected. The promptness with which the times were completed deserves special mention, as on one occasion the printed table of official times was distributed within 12m. after the finish.

The advantages and convenience of a large steam yacht at the head of such a cruise are obvious, but there is a danger, too, which it is as well to point out in time. On board a steam yacht a man can wear a linen collar and patent leather shoes all day, and when the anchor is dropped at 5 P. M. the natural thing to do is to dress for dinner. Seated comfortably at table he is apt to forget the sailing contingent, pegging along miles astern. In the larger schooners the case is not so bad; but in the second class and under, manned, be it said to their credit, largely by Corinthians, it means a great deal of hard work on the part of all to keep up with the fleet, especially when led by steam. When anchor is down and sails stowed, at 8 o'clock, perhaps, and often later, few feel like turning into dress coats and high collars; a service jacket and woollen shirt is far more convenient and comfortable. One great feature of the cruise is the sociability which prevails, the visits each evening, and the constant friendly intercourse among members; but there is no doubt but that this would be promoted if the claw-hammer were allowed to take its annual vacation in quiet retirement while the cruise lasts. This certainly would be the unanimous verdict of that part of the fleet whose interests should be first considered—the working yachtsmen who sail themselves the smaller boats, whose wardrobe and sail locker are very often in one for economy of space. Running from port to port with a level deck and at a 15-knot gait, one is apt to forget the work entailed in alternate racing and making passage under sail. With so much to be done in a limited time, it is not always easy to arrange suitable runs; but the needs of the racing fleet should be the first considered. This year the runs were very good, but the mishaps of Thursday prevented a large part of the fleet from joining in the return cruise or the last races, and made the ending far less brilliant than the start. Electra left Marblehead at 10 A. M. and anchored at Vineyard Haven at 6:50 P. M.; but the second and third classes, many disabled and with crews tired out after a hard race on the previous day, were unable to follow her.

The cruise this year has made still plainer a fact evident since the revival of the Cup races, that the racing is becoming keener and sharper each season, and that the old and slipshod methods, depending on the whims or greater or less experience of regatta committees, must give way to a newer and better system. The first requirement is that all starts, in each of the clubs, shall be the same. Any one who has tried will recognize the fact that printed directions as to intervals, preparatory guns and flags and similar details, while they seem perfectly clear when read ashore, become most confusing when looked over at the start, and mistakes are constantly occurring. This is not to be wondered at when one race has a preparatory interval of 10 minutes and a 5-minute limit to cross the line, while next day the interval is 15 and the limit 10, and so throughout. The arrangements for starting an open race should be the same in all clubs and cases, an end by no means difficult to attain.

Of all the methods we prefer the "one gun" start as the simplest and best. This was tried in the race for the Morgan Cups, and with perfect success, a large fleet getting away quite as well as in any of the other races. The objections have been raised that it promotes crowding and danger of collision at the line, and also that it is unfair to the late boats, but neither of these have any weight. In all races to-day the main effort is to get a good start, no matter what the limit may be, and the best handled yachts are always seen huddled together at the line when the gun fires, the chances of collision being no greater in one case than the other. As to the laggards, there will always be some in any case, and the general experience is that the sharper the start and the more rigid the rule, the higher the general standard of the fleet in this respect. The days when the fleet could straggle across the line at any time within an hour, the last sailing in a different wind and tide from the leaders, have passed away. Thousands are watching the records of the first class now to compare the boats, and to this end it is necessary that all should start and as far as possible sail, under the same conditions. On the side of the one gun start it may be urged that it is simpler and less liable to be misunderstood than any other method, while it is far easier to secure accurate timing. The timing of large fleets is now well done in most cases, but it is at best a difficult matter. With twenty boats or so going over in a pack there are often three or four in line during the same minute, and the matter of seconds, which often decides a race, is nothing but a hasty guess by the timer. In one of the races of the cruise a yacht was down as starting which was not seen during the race, while another which sailed the course does not appear in the record, the two probably having been confused at the start. As the one which did race came in last no trouble resulted, but, suppose she had won, and was not in the list of times at start?

Further, the one gun start would be welcomed by racing men because they would then know their exact starting time, a thing always in demand during a race, and so be able to estimate their lead or otherwise at any mark, as well as at the finish. The work of the committee in calculating the times would also be lessened, as the start would be on an even 10 or 5 minutes, and the odd minutes and seconds done away with. Of course, this is a small matter, but it would shorten and simplify the calculations, of which there are already enough, and so reduce the chances of error.

To make the one gun start a success two things are necessary; the line must be long enough and all the watches in the fleet must have official time. This latter is necessary in any case, and may be easily done; at any time prior to the start the committee may give the half hour by imitating the bells with the steam whistle, first calling the attention of all by some signal which shall indicate that time is about to be given. By the second signal all watches will be set. The preparatory interval, say 10min., should be the same in all races, with a special call to denote it and prevent confusion where much general whistling is indulged in, as is usually the case. With such simple details fixed and constantly followed, those on each boat will have the official time and 10min. warning, and if they are late at the line it will be their own fault. Of course each yacht will have a timekeeper with a stop watch, a careful and reliable man, who will count minutes and half minutes aloud to the helmsman as the time shortens.

Numbering the fleet has now become universal, but like everything else it is done carelessly and without plan or system. The numbers are of all sizes, generally so small as to be useless, as in the present fleet, and placed anywhere. The size should be at least 50in. in height, as in the E. Y. C., as smaller numbers are not readily discernible. Further, the racing fleet has now reached a point where each vessel should have an official number awarded, to be carried in all races. The number of boats in actual racing is not great enough to carry the list above two figures; we are speaking now of yachts large enough to make such a cruise and that race regularly outside of their local waters. The official number should be a permanent affair, on stout drill and with grommets about the edge, and the sailmaker should put small grommets in the sail when made, by which the two numbers, one on each side, could be quickly laced in place. It is now a familiar sight before each race to see the numbers hurriedly distributed, some boats getting none and some the wrong ones, while the industrious tie labors hurriedly with palm and needle to sew them on in the wrong place and upside down, his companions waiting impatiently at the throat and peak halliards. This is only a small matter, but it is on many small details that the success of racing depends, and all of these might, with a little careful labor and co-operation, be done properly and uniformly throughout the fleet.

The matter of timing, not only at the start and finish, but at the intermediate marks, is now a very important one, and not always so well attended to as it should be. Our attention has been called to one case where of two yachts the leader was timed some seconds later than the following boat, and we have already noticed an error by which a boat was not timed. The times at start and finish are most important, and above any question of error. Of late too the intermediate times have assumed an importance they never had before. It is not enough to know who won, but yachtsmen and outsiders, too, ask who did the best work. To this end the reaching, running and beating must be separated; for instance, the question just now is, how much faster is Volunteer to windward than Puritan. The corrected times do not tell this, and only carefully timing over each leg can show it. It is not possible for the committee boat, however fast, to time all the boats at each mark, but there are alway tugs and launches about —employed by the daily papers—some of which would willingly take times at the intermediate marks. Of course such times are not important as are the finish times, no prize depends on them and an error of a few seconds would not matter, but they are far more interesting and instructive than the official summary. On the New York course for instance, the best and fairest bit of sailing is often from Buoy 5 out around the Lightship and back, and yet this time is never accurately taken. In the races and runs of the cruise the general observance of the rules was very good, but there were several cases where the rules of the road were deliberately infringed by racing yachts which failed to give way when on port tack, a proceeding which should be dealt with summarily. The matter of signals too was not observed always as it should be, racing signal at the peak, a miscellaneous lot of bunting being shown.

THE CUTTER PAPPOOSE WINS AGAIN.

THE 123d match of the Beverly Y. C., postponed from Aug. 20, was sailed Tuesday, Aug. 23, in moderate wind from southwest. First class, over 30ft. long, sailed a course of 20 miles. Second class, over 25ft., sailed 16 miles. Third class, over 21ft., sailed 10 miles and fourth class 8 miles. The Pappoose made a late start, but speedily overhauled the leaders, including the famous Shadow and won as she liked, beating Shadow no less than 30m. 34s. actual time. This brilliant victory will probably remove the last vestige of prejudice against cutters and keels in the East. The Pappoose is the first good representative in American waters of the modern Itchen "wine-glass" type of cutter introduced in Southampton waters by C. W. Clayton and other English designers. She has a combination of features which are certain to recommend her kind to American yachtsmen in the East, where very few centerboard sloops are now built, and the moderate or "normal" cutter seems destined to prevail. New York will no doubt follow the lead of the East a few years hence. In second class keels, the cutter Prince Karl added another win to her list for the season.

HALIFAX JUBILEE RACES.

OWING to the "surfeit of racing" supplied by recent events in home waters, and the extension of the N. Y. Y. C. cruise to the eastward, as well as the near approach of the America Cup trial matches, scarcely any American yachts found it possible to make the voyage to Halifax to participate in the Jubilee races, set for Aug. 19 and 20. This was unfortunate, as the prizes offered were well worth a serious effort. There still lingers a disinclination on the part of most yacht owners to risk their vessels at sea, even for the comparatively short run to Halifax. No doubt this stay-at-home feeling will wear away in the future as the owners of large vessels become more experienced and plucky, and tire of the small work in sheltered stretches. It is to be hoped the Haligonians will not relax their praiseworthy efforts to draw the American fleet around Cape Sable, through the disappointment of their first attempts. Halifax should and will in time become one of the regular ports of call in the summer "round" of American clippers and staid cruisers. The brave old schooner Dauntless was on hand, almost as a matter of course, for upon Dauntless and a few others we have to depend for representation abroad. She had returned from her extensive European cruise and was under Captain Haig. Lieut. Henn, whose example as an active racer and cruiser might be followed by scores of American yacht-owners were they animated by the same love for the sport and pluck characteristic of British yachtsmen, pitted the bold Galatea against the New York schooner. The cutter Stranger, with Mr. Warren on board, a sort of Anglo-American representative, was the only other foreign craft to start in Halifax waters.

The first race, Aug. 19, was for the cup offered by the Royal Nova Scotia Y. C., with a second prize, valued at $100, contributed by New York and Boston gentlemen. Course 41 miles. Stranger was the only starter in second class for a cup presented by Mr. A. B. Sheraton, of Halifax. Entries in first class were Dauntless and Galatea. There was a good breeze from southwest. Dauntless took the lead down wind, but Galatea weathered on her easily in the windward work, and won by nearly 10min. on allowance. Official times:

	Start.	Finish.	Elapsed.	Corrected.
Galatea	10 30 25	3 05 04	4 34 39	4 24 28
Dauntless	10 30 45	3 04 12	4 33 27	4 33 27
Stranger	10 37 46	3 52 55	5 15 09	5 15 09

In third class eleven local yachts started for a $500 cup presented by New York and Boston gentlemen. This was easily won by the schooner Wenonah, Mr. James Stairs with the Pastime half an hour later, and Hebe third.

The second day, Aug. 20, Galatea, Dauntless and Stranger raced for the $1,000 Jubilee Cup, in company with the Halifax yachts Halicia, Pastime, Wenonah, Lenore and Guinevere. Wind variable, but settling into the southwest. The big cutter Galatea soon worked into the lead and rapidly left the fleet. Stranger carried away her topmast and the smaller craft were quickly out of the hunt. Galatea finished at 5.16.20 and Dauntless at 6.11.55; Stranger at 6.37.48. Galatea takes Jubilee Cup and Dauntless the American cup offered for second.

BAYHEAD Y. C.—The first race for the Bayhead championship pennant was sailed on the 11th over the Bayhead course, the yachts going over the course twice, making a distance of ten miles. The pennant is to become the property of the yacht which first wins it three times, the races to be sailed every Thursday. Considerable interest is felt in these races as the boats entered are considered to be the fastest ones in their class in the northern part of Barnegat Bay. The wind blew hard from the south during the race, Lee Spray and Foam carried double reefed sails and the others singled reefed:

	Length.	Start.	Finish.	Actual.	Corrected.
Edith	20.09	3 39 25	5 09 26	1 30 01	1 30 01
Spray	18.04	3 40 05	5 13 36	1 33 31	1 31 06
Foam	18.00	3 39 39	5 13 35	1 33 56	1 31 11
Rowena	16.08	3 40 15	5 16 08	1 35 53	1 31 48
Effie	16.08	3 40 42	5 21 11	1 40 29	1 36 24

Edith beats Spray 1m. 5s., Foam 1m. 10s., Rowena 1m. 47s., Effie 6m. 23s.

CORINTHIAN Y. C.—Thirteenth regatta, Aug. 17. Nos. 2 and 4 club courses, distance 6 and 10 miles, weather fair, wind moderate, tide young flood. This was "ladies' day" with the members of the Corinthian Y. C. at Marblehead. All the conditions of wind and weather were excellent. By "ladies' day" in this case is meant more strictly ladies' race, for ladies sailed on the boats, although none of them were at the helm in charge, as was expected. One or more of the fair sex sailed on every one of the two dozen white-winged messengers. The ladies' dresses of blue and white flannel, with bright-colored ribbons, made an exceedingly pretty picture. All in all it was a unique regatta, and a most successful one. There was a light breeze from southeast to south, and the sea was in prime condition. The breeze held evenly throughout the race. Prizes of silver were awarded to the winning yachts in each class, and to each lady sailing on the winning boat. The first named boat in the summary in each class is the winner. The summary:

OYSTER BOATS RACING.—The annual contest of oyster boats, under auspices of the Larchmont Y. C., was sailed Aug. 20. The competing boats were classified as cabin sloops, open sloops and cat-rigged boats. Sails restricted to jib, mainsail, and working gafftopsail for sloops, and mainsail for cat-rigged boats. Each boat allowed one man for every 5ft. of load waterline or fraction thereof, in addition to captain. Time allowance for Classes I. and II. was 1¼m. to the foot, and for Class III. 1½m. to the foot. The prizes for Class I. were $75 for first and $35 for second; for Class II., $50 and $30, and for Class III. $40 and $25. The following were the judges and regatta committee; Harry B. Willard, F. C. Griffiths, George L. Foreman, Commodore W. S. Alley, Augustin Monroe and F. S. Greacen. Wind southeast, fresh. Course from Larchmont around Execution Reef, thence to buoy off Matinicock and return.

SIPPICAN Y. C. RACE, AUG. 20.—Marion, Aug. 21. Courses for first three classes were from judges' boat, off Gull Rock Buoy to Southeast Ledge buoy, thence to judges' boat, 15 miles. Fourth Class, Bow Bell instead of Nye's Ledges, otherwise as first class, 9 miles. Fifth Class, from judges' boat to Seal Rock buoy, thence to stakeboat off Planting Island, thence up to boat, going around twice, 7 miles. All classes left turning point on port hand. Wind light from east. Cloudy day. Flood tide. The prizes were silver cups, two in each class:

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

MUNGIN, Savannah, Ga.—Rip Bang is by Bang Bang (champion Bang—Princess Kate) and out of Peggy (Rush—Tina).

J. H., Brooklyn, N. Y.—We know of no one in this vicinity who makes a specialty of teaching dogs to retrieve. Send $1 for "Training vs. Breaking" and teach him yourself.

B., Hartford, Conn.—Will you please advise me through your valuable paper as to whether a Scotch collie dog should have dew claws as one of its points for bench show.—Ans. No.

L. H. J., New Haven, Conn.—Steaford was by Whitehouse's MacGregor (Sancho—Blanche) and out of Nina (Hamlet—Lorr's Sal). Whisky was by Dr. Strachan's Flash (George—Peg) and out of Schleiffin's Juno, imported from the Marquis of Westminster's kennel.

L. L. H., Bethlehem.—The fly is said to have been introduced in England by D. & W. H. Foster, an Ashbourne (Eng.) firm of tackle makers, in 1883, and was exhibited at the Fisheries in that year. It was called the reverse-winged fly, and did not go under the name of "fluttering fly."

G. A. T., Halifax, N. S.—What measurements are given in a custom house certificate of measurement as is understood in the conditions attached to the America Cup? Ans. Length for tonnage, breadth and depth for same, according to the rules of the country from which the challenger hails.

NEW YORK CITY, May 1887.

The U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I wish to thank you for the very excellent shell you are putting on the market. I refer to the "Climax." *I swear by it*, not at it, as I have had to do with other makes. It has given me unqualified satisfaction ever since I first began to use it, and that is since its introduction. Don't allow it to deteriorate, and sportsmen will call you "blessed." Very truly yours.

—*Adv.* (Signed) C. W. CUSHIER.

CHAMBERLIN CARTRIDGES!

The Only Genuine Machine-Loaded Cartridge in the Market.

UNEQUALLED IN QUALITY AND CONVENIENCE.

The superior quality of these cartridges is not the result of chance, but arises from the fact that the Chamberlin Cartridge Machine is so constructed that every charge of powder and shot is measured with mechanical accuracy, and the wads, which are made especially for use in these machines, are of uniform thickness, and placed upon the powder and shot with a suitable and unvarying pressure, an advantage which cannot be secured by any other method of loading cartridges. Every trap shooter understands the advantages of uniform velocity of shot in wing shooting; this cannot be obtained except the charges of powder and shot are alike in each cartridge, and the wadding placed upon each with the same pressure. This is accomplished in the Chamberlin Machine by means of graduated rammers, which are adjustable to any desired pressure, from five pounds to one hundred pounds. Thorough experiments have been made by which it is found that thirty-five pounds' pressure upon the powder wads gives the best results in Black Powder cartridges, and seventy-five pounds the best results in Wood Powder cartridges. Previous to the invention of the Chamberlin Cartridge Machine, experiments in this direction could not be made, for the reason that no means for ascertaining the pressure that was applied to the wads had been devised. A blow of the mallet was an unknown quantity, and no two blows were alike, and the same can be said of hand pressure upon the rammer.

The following *REMARKABLE SCORES* were made with Chamberlin Cartridges: Match at Cincinnati, Ohio, June 20. Conditions, 50 singles and 25 doubles:

J. R. Stice	94	out of possible	100
B. Teiple	90	"	"	100
McDuff	88	"	"	100
A. Meaders	86	"	"	100

On July 11, same place and conditions:

J. R. Stice	broke 90	out of possible	100
McDuff	" 90	"	"	100
A. Meaders	" 87	"	"	100

This, we believe, is the highest average ever made at 700 clay-pigeons, one-half being doubles, and shows the superiority and uniformity of the Chamberlin Machine-Loaded Cartridges.

PRICES OF CHAMBERLIN CARTRIDGES.

12-Gauge, Club or Climax Shells, loaded 3 1-4 drams powder, 1 1-8 oz. shot,	Per 100, $2.50
With 3 1-2 drams powder,	" 2.60
10-Gauge, Club or Climax Shells, loaded 4 1-4 drams powder, 1 1-8 or 1 1-4 shot,	" 2.75
With 4 1-2 drams powder,	" 2.85

Same loads Wood Powder, 12-Gauge, per 100, $3.50; 10-Gauge, per 100, $4.00.
Loads for Trap Shooting, " " 2.60; " " 2.85.

Send for Illustrated Price List. Liberal Discount to the Trade.

In order to secure the lowest cost of transportation, and insure speedy delivery, factories have been established to supply each locality as follows:

The Atlantic Ammunition Co., 291 Broadway, New York,
Supplies the New England States, New York, New Jersey, East Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, North and South Carolina.

The Chamberlin Cartridge Co., Cleveland, O.,
Supplies all the Middle and Southern States not elsewhere named.

The Western Arms & Cartridge Co., 108 Madison Street, Chicago, Ill.,
Supplies Illinois, Iowa, Wisconsin, Minnesota, Nebraska and Dakota.

Selby Smelting and Lead Co., San Francisco, Cal.,
Supplies the Pacific Coast and Colorado, Arizona, New Mexico and Wyoming Territories.

Trade in Georgia and Florida
May be supplied either from New York or Cleveland.

All the above named companies operate Chamberlin machines, under the Chamberlin patents. **Beware of all imitations.** "Chamberlin Cartridges" printed on all our labels.

Blue Rock Pigeons and Traps
Supplied from all above named depots.

Sportsman's Library.

We will forward any of these Books by mail, postpaid, on receipt of price.

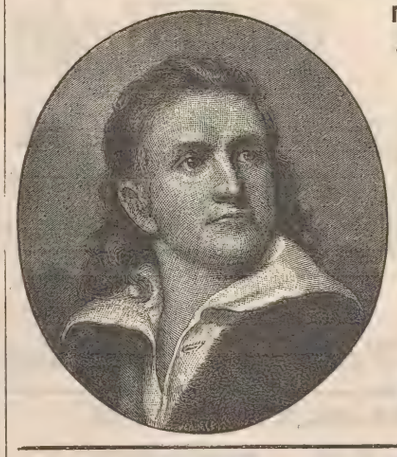
This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.

Large crown 8vo, 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.



FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

FOREST AND STREAM PUBLISHING CO., 39 Park Row, New York.

Yacht Race Supplement.

FOR 1887.

The Forest and Stream Yacht Race Supplement now on sale at all news stands, or sent postpaid on receipt of price (10 cents) from this office, has a review of international yacht racing, illustrations drawn by C. P. Kunhardt, of Volunteer, Thistle, America, Puritan and Mayflower; lines of Vanduara, America, Arrow, Galatea, Atlantic and Genesta; comparative sections of large yachts; map of the N. Y. Y. C. course, etc., etc. It makes a complete record and is the best thing in print to give one an accurate and comprehensive review of the subject.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

Cloth, 370 pages of type and illustrations, and 70 plates. Size of page, 14½x12½. Price $7.00.

THE AUDUBON BADGE

Is a brooch pin in coin silver with the motto and monogram of the Society.

Chaste in design and tasteful in execution, it presents an attractive appearance, and is protected from tarnishing by a slight blush of oxydation on its surface.

We are now in a position to execute orders for these badges to any extent. Wherever they have been sent they have met general approval, and every member of the Audubon Society should wear one as a reminder of the pledge and an open declaration of principles.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 96 pages. Price $1.00.

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 1, 1887.

VOL. XXIX.—No. 6. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

BUTCHERING UTES.

ALL advices up to the present time confirm the view expressed last week in these columns that the trouble between the Utes and the white settlers is wholly of the latters' seeking. Within the past few days a "battle" has taken place in which several bucks and some Indian women and children were killed and wounded.

It appears now that the Indians were betrayed by means of the basest treachery. The person in command of a small body of scouts on August 24, had a meeting with the Ute chief under a solemn flag of truce, and it was agreed between them that Colorado and his followers should return to their reservation unmolested. This agreement the white man who made it calls justifiable strategy, but it appears instead to have been abominable lying. His characterization of it shows that he intended to break the agreement when he made it. The following morning, the Colorado militia and some cowboys attacked the Indian camp, surprising the Indians and killing and wounding a number of them, among whom were at least two women and a baby. The Indians made what defense they could under the circumstances, and succeeded in killing three or four of the attacking party. If any confirmation were needed of the fact that the Indians had no intention of fighting, it may be found in the valorous killing of the women and child in this "battle," for it is a well-known fact that when Indians are prepared for a fight, their squaws and pappooses are always removed to a safe distance from the scene of the combat.

In addition to the slaughter of these wholly innocent people, the white outfit captured 300 horses and about 2,000 sheep and goats, and this number is now being divided up among the marauders. The United States Government has been requested by the Agent to recover this stock for the Indians, and steps have been taken by Assistant Secretary Muldrow and Commissioner Atkins to have it restored.

The whole affair is one of the most shameful, brutal and unprovoked attacks on an unoffending people that has ever disgraced the soiled pages of the history of our treatment of the Indians. The foulest treachery was used to lull into security the Utes, who were conscious of no wrong, and then they and their wives and babies were butchered. In all the miserable, heart-sickening business there is but one redeeming feature. That is that the press of the whole country—of Colorado as well as of the East—unites in stigmatizing the outrage as it deserves. The Utes ought to have a heavy claim for damages against the United States Government, but the Indians can never hope for justice.

THE ROCKS REMAIN IN THEIR PLACE.

IF it be true, as an eminent public man has recently declared, that "the soil remains in its place," it is equally susceptible of demonstration that the rocks remain in their place. Recent blundering complications of the executive department of the American Kennel Club and their results afford a striking illustration of this grand truth. For after it all, the rocks (that is to say the shekels) remain in their place.

The selection of Mr. Charles H. Mason as a judge at the last Waverly dog show was so obnoxious to the Gentleman of the dog world, though the classes assigned to Mr. Mason were not those in which the Gentleman was interested, that the Gentleman refused to enter any of his dogs in the show. Subsequently, after the entries had closed, the Gentleman became reconciled to the inevitable; and it being thought desirable that his pointers should meet Beaufort, the Gentleman's kennel partner, Mr. Charles Heath, handed to Mr. C. J. Peshall $50 to be given as a special pointer prize. As his express purpose in this was that Beaufort (entered in the show not for competition) and the Graphic pointers (not entered in the show at all) should be brought together for a comparison of merit, Mr. Heath enjoined upon Mr. Peshall to make the conditions of the special so comprehensive as to provide for the entry of all these dogs. This was done. So far so good. The meeting of the giants was a sure thing, barring accidents and possible whims of the Gentleman. And that is just where it was not sure. The Gentleman had a whim, a whim so severe that, after all, the Graphic pointers were not entered for this special prize given by the owners of the Graphic pointers in the hope that one of the Graphic pointers might win it. The three entries actually competing were Beaufort, Nick of Naso and Patti M. Beaufort won, and "the rocks" went into his owner's pocket.

Then Patti M.'s owner, Mr. Munhall, forgetful of the great truth that "the rocks remain in their place," conceived a notion that he could remove them from Mr. Mason's pocket into his own. He protested the award; the show committee refused to sanction the protest; and the rocks remained in their place. He appealed to Local Delegate Peshall; the delegate refused to sustain the protest; and the rocks remained in their place. He appealed to the American Kennel Club; the club refused to sustain the protest; the rocks remained in their place.

Mr. Munhall did not give it up. He had great faith in President Elliott Smith's stupidity and Secretary Vredenburgh's subserviency. His faith was well founded. Mr. Smith's administration had been marked by one stupid blunder after another. He could with great confidence be relied upon for a fresh exhibition of the same nature. Secretary Vredenburgh is one of the intermittent products of the superfluity of dogdom. It is a characteristic of these creatures, their superfluousness being a burden to them, that they are always on the lookout for some opportunity to "catch on." At that particular time little Vredenburgh was scheming for a salaried position as the club's secretary, and he was eager to make himself useful to any one who had any use for him. If there was a round hole to be filled he would be a round stick of timber to fill it; if the hole were square and a square piece were required, he would be as square as he could be. Counting on official stupidity and subserviency, at a subsequent meeting of the club Mr. Munhall tried it the fourth time. The tool Vredenburgh moved a reconsideration of the first final decision of the club, and President Smith, who appears on that particular occasion at least to have been adventitiously and temporarily obtuse, failed to recognize the absurdity of the motion itself and the grounds given for it, and the impertinence of Vredenburgh, who was not entitled to any voice whatever in the meeting, in presuming to make such a motion. The first final decision was reconsidered, and by a second final decision Beaufort was declared to have been ineligible to compete for the prize.

The next step in the process of rock moving was exceedingly simple. Mr. Munhall appointed himself Waverly Special Pointer Judge, *ex post facto*, and ignoring the claims of Nick of Naso, awarded the prize to his own entry, Patti M., and made requisition on the New Jersey Club for the prize money. Their reply was in effect that the money had already been paid over to Mr. Mason, and "the rocks remain in their place." Then Mr. Munhall wrote to Mr. Peshall for the money. That gentleman returned a like reply; "the rocks remain in their place." Whether Patti M.'s owner wrote in a similar strain to Mr. Mason we are not advised. The rare delicacy which had prompted Mr. Munhall, as a member of the board of arbitration, to vote in his own favor in the case where his dog was concerned, and which had prompted him to jump to the conclusion that Patti M. would have beaten Nick of Naso for the prize, and to demand from the New Jersey Club a prize he had never won—this delicacy might not have proved an insurmountable barrier to his making a demand on Mr. Mason for "the rocks." But, whether or no, "the rocks remain in their place," that is to say, in the pocket of Beaufort's owner. The latest development in this interesting case is the reconsideration of final decision No. 2, by the vote recorded in our kennel columns. Final decision No. 1 is sustained by this final decision No. 3, and "the rocks remain in their place."

The end is not yet. The Hornell Kennel Club delegate has announced his intention of instituting another reconsideration, or of having the club declare final decisions Nos. 2 and 3 and all the proceedings in connection therewith null and void, on the ground that the superfluous Vredenburgh's motion was illegal, unparliamentary, impertinent and not in any way binding on the club. Such action will not affect the "rocks;" they will "remain in their place."

FISH COMMISSIONER GOODE.

AS was predicted last week in the FOREST AND STREAM, Prof. G. Brown Goode has been appointed United States Commissioner of Fish and Fisheries in the place of Prof. Spencer F. Baird deceased. The office was tendered to Solicitor of the Treasury McCue, of Brooklyn, and to Acting Secretary of the Treasury Thompson, and by both of them declined. It was understood that they were designated to fill the vacancy temporarily, pending the permanent appointment, and for financial reasons only, in order that the work of the department might not be interrupted. By the terms of the law providing for a Fisheries Commissioner both Judge McCue and Gov. Thompson would be ineligible to fill the office permanently. The statute provides that the appointee must be "a civil officer of the Government of proved scientific and practical acquaintance with the fishes of the coast;" and this scientific knowledge is possessed by neither of these gentlemen, however well qualified they may be in other respects. When this law creating the office was enacted its provisions were made especially to fit Prof. Baird; and just as there was at that time no one else who would have been eligible to the office, it may be said that now in this second case no person would be eligible except Prof. Goode.

The new incumbent is most admirably qualified to fill the position. By his scientific attainments, his training, his long residence in Washington, and above all his years of close association with Professor Baird, he is preëminently fitted to receive the mantle let fall by his distinguished chief. Prof. Goode has been connected with the Commission since its inception; his scientific attainments are of the very highest order, and his executive ability is shown by the admirable manner in which he has managed the National Museum. The public has every reason for confidence that under the control of Prof. Goode the work of the Fish Commission will be prosecuted without any impairment of the efficiency which has placed this bureau foremost among like institutions of the world.

The terms of the law respecting the Commissionership have been shown to be defective and they should be amended at the first opportunity. There is something anomalous in the demand for exceptional qualifications on the part of the incumbent and the absence of any salary whatever to reward the possessor of these qualifications for the arduous work demanded of him.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co

A TWO WEEKS' OUTING.—I.

"Great spaces yet untraveled, great lakes whose mystic shores
The Saxon rifle never heard, nor dip of Saxon oars."

"THE Northern Wilderness." It is indeed difficult for the most of us fully to take in all that is implied in this familiar phrase. Unlike the great tracts to the westward of the Mississippi, whose agricultural and grazing capabilities have, in connection with their mineral resources, invited such vast immigration that a generation has seen the practical subjugation, by an army of settlers, of the great Northwest; the cold and comparatively sterile regions of the North, though traversed for centuries by priest and soldier, trapper, miner and lumberman, have to a great extent maintained their distinctive characteristics; and the fostering care and liberal promises of Government have been needed to induce settlement and permanent occupation of the frozen North.

There is a little strip of land, forming part of this wilderness, and lying south of Lake Superior, which is called the Northern Peninsula of Michigan. This region is visited by many people, but few of them seem to go far from the railroads, or other well-known routes of travel and resorts of tourists; and strange it is how many difficulties lie in the way of attaining an accurate knowledge of any portion of this territory which does not lie along or near these routes.

I had some years before made a visit or two to the western portion of this "neck of timber," and a conversation, which I chanced to overhear between two lumbermen of my acquaintance, reminded me that there was a goodly portion of the peninsula which I had not yet seen.

I said as much to Konan the Tall, and we agreed that the tract of country under consideration had not been thoroughly explored. Said he:

"I reckon we'd orter go up there 'n' look around a little. Bill B. and Jack M., they was a tellin' inter my place how 't they see a most an all-fired lot o' trout inter a kind o' deadwater crick, when they was up there in the fall a lookin' fer a loggin' job. They hadn't nothin' ter ketch 'em with, tell Bill he sairched his pockets, 'n he found a hook, 'n Jack he rousted out a twine string some way, 'n 'fore they got through they ketcht thirteen—reg'lar old sockers."

"Do you believe the story?"

"Well, I d'no; guess so though. They ain't much at lyin', neither on 'em, 'n everybody 't 's been there says the 's trout 'nuf in them woods 'f you c'n only find out where they be. Yes, I guess they ketched 'em fast enough."

"If we took a cruise up that way about deer time we ought to have meat in camp, enough to keep the thing going."

"Well, we'd orter."

This was the first of a series of confabulations which led me at last to say to the good genius who rules over my family circle, "What shall we call the new boat?"

"Shall you build a new boat?" said she.

"I think so. The Kelpie is too small, and I've put a keel on the oomiak and converted her into a sharpie. She wouldn't do to run a rapid. This may likely prove a rough old trip, and, as I have not been quite well this summer, I want to have everything in good shape for a comfortable cruise."

"Suppose you call it the Outer—no—people might think that you meant 'Otter,' and didn't know how to spell. Better call it Otter at first, I think."

"All right," said I, "Otter it shall be;" and it was.

Then followed grave consultations and much research of Konan and myself among the various receptacles of our implements of forest warfare, for, although we were going less to get shooting or fishing than to have a look at the country, we are each in a manner lost when we find ourse ves "under the boughs" without the means at hand of "living off the country." "Hunting without a gun" was never a favorite pastime of my own, and certain experiences have confirmed me in the feeling that when roused in a midnight camp by a strange sound, there is comfort in the ability to lay hand on rifle.

True it is that the forest is safer than the town, but at times each has its dangers. So far well; but when it comes about that two old fellows who for years have mainly devoted themselves to the elucidation of the various intricate problems connected with the bread-and-butter question, set about collecting their camping tools to prepare for a few weeks' outing, there is apt to be a degree of mistiness concerning the whereabouts of the said tools and their fitness for active service, which is the reverse of encouraging.

There are different ways of getting ready for a cruise, of which the most striking is the Lord Ipsden method:

"Saunders, take books and clothes and violins and things, and meet me at the station in an hour."

Similarly my lord might say to Squires or Conroy, or other of those wonderful fellows who make ready the multitude for lake or forest:

"Please have at the station a complete outfit for the Michigan woods. Five o'clock train." And the things would be there on time—too many of them, perhaps, for old campers, but not for tenderfeet.

How Konan managed I do not know, but for myself I can say that when I had collected such of the débris of my hunting traps and fishing gear as remained to me after the onslaughts of my posterity, the room looked like an old junk shop. The collection would have edified those who never handled gun, save of a modern pattern.

Breechloaders, muzzleloaders, knives, rods, reels and creels; packs, floats, hackles and haversacks; fly-books, spurs, quirts and chaparejos; gaffs, landing nets, squids, shells, wrenches, jiggers and killdevils; with a few flints and a priming wire and brush brought to the surface at the last desperate dip into the dubious depths of an illusive past. An antiquary might there have found abundant material illustrative of the many changes in sporting implements since I whipped the Rangeleys thirty years ago.

Well, I went at it, selected and oiled the best of the reels, overhauled rod and fly-book, loaded ten shells and wiped my gun. My favorite hunting knife had disappeared—mislaid, doubtless, in some of the "corridors of time," and as it is not easy to find a good one ready made, I looked out a thin old blade, stamped with a crown, and of the reign of William IV. With the butt of an antler suitably attached, I soon had a "mutchika" meeting all requirements.

Konan, who seldom uses shotguns, was to take his rifle; I a double fowling piece, and, thus prepared for the extermination of birds or beasts, as we might see occasion, we proceeded to put the finishing touches to the Otter, which had meanwhile been constructed under our supervision. She was 17ft. long, of thin cedar boards, and in two detachable sections, with a bottom of ¾in. pine. She was 3ft. wide amidships, and sharp at bow and stern, and for obvious reasons was painted a foliage green. We carried both oars and paddles.

If there was one thing more than another which Konan wished to meet on the trip, it was a bear. During the last few decades he had slain pretty much all sorts of game which can be killed with a rifle this side Pike's Peak; but the bears had always missed him, and as he gave his Winchester a last rub and drew a bead on a slumbering tomcat lying under a piazza about eighty yards off, he expressed his conviction that it would just suit his complaint to have an "old he" show up in some blackberry patch along the river, within easy range of his weapon. "But," said he, "I reckon the shotgun 'll git the most game."

Well, one Saturday evening at about 6 o'clock we—that is, Konan, the Otter and myself—were safely deposited near the end of a long lumber dock which projects for some distance into the pellucid waters of Grand Traverse Bay.

We had come by appointment to take passage on an excursion steamer to Mackinaw, and as the daily trips of this craft were made on another route, she had to return to her anchorage on the following Monday morning.

She was expected at our dock at about 7 P. M., and a motley crowd of excursionists had collected in anticipation of her coming.

There might be seen the farmer with his wife and buxom daughters, the newly married couple, pervaded by an atmosphere of affectionate endearments, not too carefully concealed from view when the shades of evening had settled over the bay; the never-failing lumberman, red-shirted and brawny, and bent on receiving with serenest satisfaction whatever good the gods might send; and a variety of faces and costumes such as are seldom seen except under similar circumstances.

Most of these prospective voyagers bore baskets, as the steamer furnished no provisions. The cabin being of small extent, I was puzzled to see how the large number of ladies present was to be accommodated; but this was not our affair, and spreading my blanket on the dock, the wash of the waves soon lulled me to repose.

I was aroused about half-past 12 by a steam whistle, and perceived the expected craft coming alongside the dock. It was a sleepy-looking company which boarded her, and the little cabin was filled with girls before you could say Jack Robinson.

Cots were ranged along the decks, and occupied as fast as placed; and after prospecting in the hold I deposited myself and blanket on the deck, under the lee of a coil of rope, and as far astern as possible, and once more courted the drowsy god.

By a singular good fortune I was stepped upon but four or five times during the night, and the morning found our craft rapidly nearing Waugoshanee Light. There is said to be a ghost of unusual activity hovering about the reef at this point, but we didn't see it, and in due time arrived at Mackinaw.

Knowing the place of old, I left Konan to look about for sights and at once proceeded to escort our boat and sundries to St. Ignace, and being a stranger at this place, I went to the first hotel I saw—the Bay View House. The place was clean, the fare sufficiently good, the charges $2 per day.

The weather was rainy, which was to me very satisfactory, as the recent drought had filled the newspapers with reports of forest fires. I have had a good deal of experience both in forest and prairie with this sort of thing and am free to say that I do not like it.

The worst scrape of the kind that I was ever in was in the woods of northern Wisconsin in October, 1871, when, with my family, I was surrounded by fire, and single-handed fought it through one night. This was about fifteen miles from the village of Peshtigo, which at the same time was completely destroyed and many lives lost. And I remember that on one occasion some years before, I started with a friend from Sarcoxie, in southwestern Missouri, to drive about twenty miles to Diamond Prairie. Our way led through an extensive belt of woodland, and we saw that there was a good deal of fire in the forest, but not appreciating the danger therefrom, trusted to luck and drove on.

When about half way through the wood we observed that the south wind had freshened and was sending the flames before it too rapidly to suit our convenience. Fast as we went the fire came faster still. It so chanced that I had purchased a five-pound keg of powder, which was under the wagon seat, while my friend had a pound of the same lively explosive wrapped in brown paper and deposited on the south side of his army blouse.

On came the flames, their long tongues flickering left and right through the smoky haze, and their line advancing through the brushwood with fearful speed. Fortunately, the team was good, the harness new, and the wagon staunch and strong. The horses knew their peril, and the stout wheels bounded from root and rock as they swept the ground in their tearing trot, faster and faster, and the pace became terrific.

In advance the wind was hurling the sheets of fire like rockets through the trees, and beneath, the lurid line of flame at one point reached the road, and this point we must pass. With the long whip whistling through the smoke, I gave what must have been a most unearthly yell, and dashed the horses straight against a broad banner of flame, that sent its fierce breath in my face, as I lashed the flying steeds.

"Tech 'n' go, that was," said John, when, five minutes after, the pace of the panting horses had subsided into a walk, and through the trees in advance we could see the welcome shimmer of the sunlight over the beautiful Diamond Prairie.

"I think so," said I, "with six pounds of powder in the wagon."

Up to that moment neither of us had thought of the perilous nature of the load we carried, though, most fortunately, we had escaped with but a general scorching. The side of the coat in which the powder had been placed was completely singed, as were our hair and beards, and the coats of the horses. The woods behind us were a mass of flame when last we looked that way, and had anything about our outfit parted at the wrong moment we should never have left those woods.

I learned at St. Ignace that but little danger was to be apprehended from fires in the peninsula, though had the drought been two months later, the conflagration would have been far more extensive.

Monday morning, at 6:50, found us in one of the cars of the D., M. & M. Railroad, and on our way to Munising, which is nearly across the peninsula, being about one hundred miles from St. Ignace, and four from "Old Munising," on the shore of Lake Superior. This was formerly a point of importance both to Indians and whites. From it once led the great trail across the peninsula, by way of Indian River to Manistique, one of the principal thoroughfares used by the natives in their day of occupation.

While the train was thundering on, I was enabled to note the fact that when a man has seen five miles of the country along the line of this railroad, he has for most purposes of observation seen it all. A dreary flat, flame-scarred, tamarck-tufted, its monotonous horizontality stretches away on either side, unbroken for the most part by any object which might relieve eye or soul from the effect of this unending sameness.

Weary indeed must be the work of those who, like the pioneer surveyors of this railroad, are first to trace lines of travel in torpid swamps like these, thus to blaze the future path of empire through the land.

The man of merchandise approached as usual, and sought to sell his wares. He had fancy jack-knives, with a variety of cork-screws and things attached, and he had cheap pocket compasses and dandy match boxes, and many similar articles of "bigotry and virtue," wherewith the tenderfoot is persuaded to burden himself, before trusting his future to the mercies of the forest deities, as represented by his guide.

At this merchantman I queried, had he that which cures a cold, for I had brought from home an affliction of this sort; to which he made answer that a sovereign remedy therefor was what he called "lemon drops," exhibiting at the same time a sample thereof, contained in a small wooden barrel which, however, I did not purchase.

Having been able to learn but little about the streams of this region, I pictured them to myself as likely, before we had traced any one of them across the peninsula, to give us a lively cruise, such as elsewhere I have many a time enjoyed. Among the more notable among my recollections of these was that of the time when Ferrand and I ran the Bristol Rapids on the Pemigewasset River.

In the summer of 1864 we one day launched our boat above Squam Falls, N. H., at a point where, four years before, I had taken out our canvas canoe and portaged into Squam Lake, after having traced the stream from near its source under old Moosehillock (I prefer the ancient way of spelling the name of this mountain).

This time we had carried over from Squam, to which lake we had come from Winnipesaukee, where we had lived on trout and tested the quality of the waters of the springs, from Red Hill to the Gunstock Mountains. We now proposed to run down the Pemigewasset until we reached a point whence we could ship our boat by rail.

In getting our craft around the falls we attempted to take advantage of a sort of side issue in the river, and thus let the water do part of our work. It did, and at the same time managed to get some of its own well in. It poured over the stern for about three seconds only, but in that space of time effectually cleaned and cleared it of sundry movables, which, being of light weight, we had incautiously left therein.

That night the river gods smoked our pipes, read our books and wore our dusters, complacently sitting the while upon the slippery rocks and waiting the arrival of the next victim. They may have waited long, for, except one birch, my canoe was in those days the sole representative of this class of craft which I saw at any time upon the Merrimac or any of its tributary waters.

Concerning the river below Squam Falls, we had only been able to learn that logs were floated down its channel in the spring. All of whom we inquired concerning the feasibility of our proposed trip agreed that, so far as they knew, no boat had ever attempted to brave the force of the foaming stream.

We decided, however, to try it; and, having breakfasted on a trout taken near the mouth of a little brook and a wood duck which had incautiously ventured too near our camp, we "tied in" and floated down the river.

The cruise from Squam to Bristol Falls remains in my mind as one of the very toughtest pieces of river navigation within my experience.

Our boat, the Juanita, was a wherry about 15ft. long, and though staunch and well-built, a little too heavy for this sort of work. We could not always sheer in time to clear the points of rock which often showed their heads above the stream, but managed nevertheless to avoid a capsize, though Ferrand's setting pole was in frequent requisition to fend off, and the copper at the stem showed unmistakable signs of collision with the rough granite boulders strewn so liberally along our watery path.

At noon we lunched by a bright clear spring at the river's side, and pushing onward came, toward evening, to the head of a rapid, smooth and glassy enough in places, but elsewhere flecked with foam and so steep that the tops of the tall "first growth" trees near the river, where some distance ahead it curved to the southward, were far below our level, and in advance, through waving boughs, we saw a gleam like the ominous glance of a foeman's eyes through steel-barred aventaille. For now the mighty Kühleborn, weird ruler of the rushing streams, had lowered visor and laid lance in rest and summoned all his water sprites to repel this rash intrusion within the precincts of his ancient realm. His hosts were mustering fast, and the thundering tramp of their battle-steeds arose in muffled volume from the gorge.

We had that day met and passed so many perils that we would not stay our course, and paddle in hand, I braced myself in the stern, while Ferrand gripped by the midst his setting-pole and sat astride the prow. "A jolly good figurehead you make, my boy," said I. He looked around for an instant and nodded, his fine face flushed with excitement, and down we went in our headlong course, whatever might betide.

An eminent authority "over the pond" has formulated a maxim which on such occasions it is well to remember: "When the wessel ain't got no way on her you can't steer her." This I now called to mind, and plied my long rock-maple paddle while the shadowy hemlocks flitted past, and the locks of the bowsman streamed backward in the evening breeze as we raced with the cloudy foam.

"By Jove," quoth Ferrand, "there's the fall," and this was all he said, but in advance the river narrowed to less than half its width, and rushing on past walls of rock, hurled itself downward from our sight, how far we could not tell, but well could see that on either side was a ragged reef, while ahead was a mass of foam. I held her straight for the middle of the channel: a moment more and the bowsman was bathed to his chest in foam, as the boat pitched down the fall. Had old Kühleborn aforesaid bethought him to plant a rock at the point where we plunged into the basin, Juanita's cruise had ended there and then, but as it was, we rounded to in an eddy and bailed out; not the first time that day.

In one of the rapids above I had caught my gun from its beckets for the better acquaintance with a flock of ducks which whistled past us on their way up stream; but the caps were wet, and when we landed, not far below the fall, we should have to put up with "no meat in camp," only that just at the right time my companion secured a brace of plump grouse with his revolver.

A rousing supper we ate that night and the next morning took the train at Bristol.

We learned some years afterward that two young men had been drowned in an attempt to run these rapids. For myself, I may say that I should not care to try their passage again with the boat we had that day, though I doubt not that in these days of canoeing the success of our "trial trip" has been repeated.

And where now is the staunch companion, whose war whoop made the forest ring as the boat glanced down that fall? For since the day in the long ago when from the bluffs I watched the far gleam of the sails of the sea-rider, the white gulls hovering in his wake; no word of him has reached my ear—his fate is to me unknown.

KELPIE.

MOOSEHEAD IN FLY TIME.—III.

HAVING lost two days by having to lie over at Joe Morris's (who, by the way, formerly kept this place of Duce's), and coming around Seeboomook, we gave up the plan of going as far as Chesuncook on this trip, and sent word by a man going to Kineo for the steamer to come for us the next night.

We were up bright and early, and after breakfast started for Lobster Lake. In a swampy place near the landing we plucked a number of specimens of the wild calla (*Calla palustris*). The purple iris was very common and in full bloom.

From Luce's to the mouth of Lobster Stream is two miles, and it is two miles more up to the lake of the same name. The West Branch along here is deep and sluggish; dead water all the way, but between Lobster Stream and Chesuncook there are some seven miles of rough water in a total distance of sixteen miles. There is no fishing along here, a few chub being all the reward the angler is likely to get for his pains.

We paddled silently along, hoping to get a glimpse of some deer, but saw nothing. The people at Luce's had seen two swim the branch a few days before, and we were in a good deer country. As we turned the bend into Lobster Stream, there were two canoes bottom up on the grass, and near them were three or four steel bear traps, but whoever owned them was not visible, so we did not stop.

The scenery of Lobster Stream presents the same general aspect as that along the dead water of the West Branch, except that the forest is not as dense. In several places we could see that back from the stream the country was open, as if it had been burnt over. Tall elms drooped over the water and the white trunks of birches were reflected in it. Lobster Lake is a lonely but pretty sheet of water, a little tarn nestling among the hills. Directly opposite the mouth of the stream rise the Lobster Mountains, and from the lake the two Spencers are seen to the left of them. Looking eastward we were standing—

"Where through clouds are glimpses given
Of Ktaadn's sides.
Rock and forest piled to heaven,
Torn and ploughed by slides."

The noble mountain presents the same profile we saw from Moosehead. From the mouth of the stream the Scribe took a picture of the lake with the Lobster and Spencer peaks beyond, and landing on a rocky ledge in the middle of the lake, which barely afforded a foothold for himself and the tripod, he exposed another plate which took in Ktaadn. After landing for a few minutes on a pretty little beach, which would have been a good place for a camp, we paddled back toward the outlet.

We fired a number of shots at a loon, but the wary bird was too quick for the bullets and before they struck the water we would see the splash made by his webbed feet as he dove.

When we got back to the junction of the stream with the branch we saw two men standing near the canoes we had noticed there, and when near enough to hail them we recognized the taller as John Quilty, a guide and hunter. It was "Hello, John," and "Hello, boys." We landed and John explained that he and his partner had a camp back in the woods about a quarter of a mile, which he invited us to visit. He and his companion were bear hunting and had a number of traps set within a radius of a few miles. He was a picturesque looking fellow as he stood there leaning on his rifle. He had on a blue flannel shirt, over which his suspenders were crossed in front, so as to prevent the black flies from getting down his neck. His overalls were rolled above his knees and between them and his stockings was about a foot of scarlet underwear. A slouch hat and stout shoes completed his costume. The camp was situated in the pine woods and consisted of a tent and a small shanty before which the fire was burning. John, who is something of a wag, had tacked a sign to a tree which bore the legend: "Camp Bruin. John Quilty and Joseph Lebree. We are after the bears and the flies are after us."

Inside the tent two bear skins were rolled up and a lot of musquash pelts were strung on a pole. We took a photograph of Camp Bruin and its owners and then bade them good-bye. They said they had seen a buck come down to the water on the opposite shore while we were gone up Lobster Stream; so we paddled silently along, keeping just outside the lily pads, and eagerly scanned the banks. We may have gone a half a mile, when, as we turned a bend, a warning "Shh!" from William caused us to stop paddling, after running the canoes under some overhanging bushes. There, a few rods ahead, stood a noble buck, all unconscious of the proximity of his enemies. We were to leeward of him, and he neither saw nor scented us. A grand sight it was to see the beautiful, wild creature stand there, drinking his fill of the liquid element which reflected his shapely form, whose tawny color harmonized so well with its emerald background, and we gazed absorbed till he turned and leisurely entered the bushes and disappeared. He presented a magnificent mark and the guns were within grasp, but the law was on his side and we let him go in peace. He never saw us at all.

The Scribe made one more landing to take a view of a pretty bend in the stream, and he had scarcely set foot among the alders before he was literally covered with black flies and mosquitoes; but he managed to make the exposure and then got away as quickly as possible.

Arrived at Luce's, the canoes were loaded on a large wagon and we all climbed in and drove across to Moosehead. The carry is two miles across, and a good road all the way, beside which are the remains of the old log tramway over which Thoreau made the carry thirty years ago. The car was drawn by an ox walking between the timbers, which served as rails. On the way over we passed an individual who must be the prize lazy man of Maine. He was cutting bushes by the roadside, and, being too lazy to use tar oil to protect him from the flies, carried a smudge pot, which he would carefully place near the bush he was cutting, and then, standing in the smoke, he would leisurely hack away.

We had supper at the hotel at the Moosehead end of the carry and then embarked on the steamer which was waiting for us. William asked the waitress to whom he should pay the bill, and she replied, "To the Colonel; he's out there," but failed to see any military appearing person among the men assembled in the office. "Can you tell me who is the Colonel?" asked William of a young man. "Why, yes, that's him," and he jerked his thumb at a little, red-faced, red-headed young man, who stood sleepily leaning against the wall. "I would like to pay my bill," said William to the sleepy young man. "All (hic) right, how (hic) many?" said the Colonel, who evidently did not find Maine to be as much of a prohibition State as it is popularly supposed to be. "Six," answered William, handing him a five-dollar bill. The Colonel took it, and after some fumbling managed to get the money drawer open. He returned one dollar and a half to William, who said, "About half a dollar more will make us square, I think." "Guess not," said the redoubtable Colonel, "Si (hic) hix of you, fifty cents apiece, three fifty." "Six times fifty cents is three dollars where we came from," said William. The Colonel pondered over this mathematical problem for a time and then handed out another half dollar, and we left him evidently undecided as to whether we had cheated him or not. As we went out the lazy man came in, carrying his smudge pot. "Wall," he drawled, "I haint got bit much to-day and I haint tarred up nuther."

Cy and Bill enlivened the journey down the lake with accounts of their hunting adventures, and the former rolled a piece of birch bark into a moose call and imitated the calling of the cow moose, and explained the manner in which the bull moose are enticed within gunshot. Twenty years ago deer were scarce about Moosehead, though there were moose and caribou, but at the present time there are plenty of deer too, and they are increasing. The five years continuous close time for moose, which ended in 1880, has made a perceptible increase in their numbers. It is a shame, however, that many are killed every winter for their hides. We talked with an old Indian who said he tanned over one hundred hides last winter for men who had hunted them for their skins. We reached Kineo about 10 o'clock. Our programme for the following day was a trip to Moose River and Brassua Lake.

We paddled across to the mouth of the river in the morning, but found it full of logs, and the logs were also running thickly all the way down from Brassua; so we left the canoes and went overland. It was a four-mile tramp to Brassua, but the road was in tolerable condition, and most of the way through the woods.

We climbed a steep hillside on which the wild strawberries were ripening, and from the top, where the road entered the woods, we got a good picture of the river, with the Blue Ridge beyond. About half way to Brassua is the wing dam, where we stopped to fish, but with poor success. William got a couple of good instantaneous views of the logs in the rapids below and above the dam, and of a jam of logs which the river drivers were trying to break. The drivers appear to be amphibious; they are in the water and out of it, and wet or dry it is all one to them. They run over the floating, turning logs in a manner which proves them to be experts in the art of balancing, and we noticed that when the men up stream came down to the camp to dinner, instead of tramping through the woods each mounted a log and were borne down by the river, which they speak of "driving" as one would speak of driving a horse. When the logs reach the mouth of Moose River they are made into rafts and towed around to the East Outlet, where they are sent on their way down the Kennebec.

The logging camp was just beyond the wing dam, and we found the cook preparing dinner for the crew. He also had a keg of birch beer, but it was not as good as Joe Morris's. At Brassua we got several good views. One looking up the lake along the shore, with Bald Mountain in the distance, and another looking across the lake toward the mouth of Miseree Stream, with the Miseree Mountains beyond, were especially good. William, who is an ardent admirer of the picturesque in any form, took the portrait of a festive lumberman who sported a bright red shirt, which he did not wear in the conventional manner, but had belted it around his waist, while the lower portion of it floated in the breeze outside his trousers. Brassua is a pretty sheet of water, some six or seven miles long, and there is usually some fishing to be had near the mouth of Miseree Stream, which is in the southwest corner, opposite the outlet. On our return we stopped at the camp and sampled the cook's biscuits and baked beans. We paddled about the lake and fished till sunset, and then returned to Kineo.

"Well," said William, as we sat on the piazza after supper, "we have one day more and we must make the most of it. What do you say to climbing the mountain?" We voted unanimously for the mountain, and in the morning we took the cameras and started for Kineo.

Mount Kineo is a solid mass of hornblende, or American flint, and is the largest mass of this substance in the world. The Indians of all parts of New England used to come here to procure material for their arrowheads and other implements. Until within a year the approach to the mountain was made by rowing around the peninsula and then climbing the path up the long slope on the northern side, but now a flight of steps has been built part way up the cliff, and above them chains have been stretched from the ledges and trees, so that by hard climbing and taking advantage of fissures and projecting points of rock, the precipice can be scaled on the southern side. We found it a hard pull, hampered as we were with the cameras and tripods, and one needed a sure foot and a steady head.

In the woods at the foot of the mountain we noticed the delicate white stars of the *Trientalis americana* and the pretty little twin flower. *Linnæa borealis*, and nodding from the face of the cliff were the fairy blossoms of the harebell. At the top we went along the path near the brow of the precipice, the outlook unfolding new wonders at every step. The woods are dense and fragrant, and the path wound through thickets of mountain laurel (*Kalmia augustifolia*), and Labrador tea (*Ledum latifolium*); the three-toothed cinquefoil (*Potentilla tridentata*) bloomed everywhere in the open places and one of the prettiest plants we saw was the pale corydalis (*Corydalis glauca*), with its pink and yellow flowers. We stopped to rest at an open spot among the cedars and as we sat on the crisp, dry moss, a wonderful picture was spread before us. We were near the verge, 700ft. above the lake, into which we could have leaped. The mountain rises 763ft. above the lake and 1,958 above the sea level. Below us were the hotel buildings looking like toy houses, and far down the lake a steamer slowly towed her raft of logs and scarcely seemed to move. We could see Brassua gleaming in the sun beyond the treetops. Big Squaw confronted us, a great black mass on the northern horizon. We could see beyond wooded points and headlands into distant bays where, from the base there appeared to be a continuous shore; and mountain, lake and forest combined to make a perfect picture.

High in the blue ether above us a hawk was circling, and we wished that, for the time being, we might have had his piercing eye and broader range of vision. We exposed four plates at this point, and then followed the path to the summit, stopping by the way to drink from the spring. At last we stood on the highest point of Kineo, and if the view was grand before it is almost beyond description now. We stood on a ledge of moss-covered rock which rose among the stunted cedars.

All around and far below us was the shimmering surface of the lake, which glowed in the sunlight like polished metal, with here and there a wooded island like an emerald set in silver.

"Holy depths of stainless crystal,
Sown with islands out of dreamland."

Beyond the water—stretching away in every direction as far as the eye could see, unbroken except by the few clearings by the shore, covering the mountains and filling the valleys—was the forest. The vast, illimitable wilderness, the home of the moose, the caribou and the deer, in whose remote depths the beaver still builds his dam and the bear and panther have their lairs. The distant tree tops presented a surface apparently as smooth as a lawn and of a peculiar mottled appearance, caused by the contrast of the black growth, as the pines and spruces are called, with the lighter foliage of other trees. As we stood there our thoughts went back to the old, aboriginal days when the Indian pursued his game through these woodlands and paddled his birch canoe over these waters. We thought of the first white man whose eyes beheld these scenes; of the old French régime and the early labors of the Jesuit missionaries: of the tragic death of Père Rasles, at Norridgewock, and of the Baron de St. Castine who gave his name to the quaint town on the Penobscot. We spoke of the changing scenes of history since those days, and of the great flood of civilization which, while sweeping over this great land, has hardly cast a ripple on these primeval shores. We recalled the legends and traditions with which the red man has invested the mountain with a halo of romance. We pictured to ourselves the grim chief Kinneho, standing alone by his solitary camp-fire and gazing with straining eyes through the darkness of the night, at that other fire whose flickering gleam came to him through twenty miles of gloom.

The legend of Kinneho and his squaw mother, Maquaso, is this: Kinneho from boyhood had a gloomy disposition, and as he grew to manhood this characteristic developed more and more, and as a man he was possessed of more than usual Indian taciturnity. Maquaso watched the forming of her son's character with great solicitude, but he neglected and avoided her and held himself aloof from the warriors of his tribe.

One day Maquaso disappeared, and her undutiful son was suspected of foul play. He was a brave warrior, but from that time he was denied participation in the tribal councils. He too disappeared, and for many moons he was seen no more. In the midst of a great battle, however, in which the enemies of his people were apparently winning the day, he suddenly reappeared and his efforts turned defeat into victory. He again disappeared in the same mysterious way, and again nothing was heard of him for a long time.

From the top of a mountain near his village a light was seen night after night, but no one dared investigate the mysterious beacon. The sides of the mountain were almost inaccessible, and the red men stood in awe of its frowning face and of the dread inhabitants with which their superstition peopled it. The misanthrope lived on in exile, remorsefully thinking that he was the cause of his mother's disappearance. Night after night he gazed through the darkness and kept his lonely vigil. Why, he knew not, but a power stronger than his own will impelled him. At last one night he saw miles away to the south against the side of another mountain a glimmering light, and the thought possessed him that his mother was there. Then began his wild flight through the forest toward it. The next night he again beheld it shining through the trees, and as he approached it he beheld his mother, to whom he had denied all filial affection, seated beside it. He folded her in his strong arms, and as he

did so, with one loving glance at him whom she still held dear, her troubled spirit passed to the great hereafter, peaceful in the knowledge that her son had come back to her.

The mountain on which Kinneho built his fire was Kineo, and the one on which he found Maquaso is known as Big Squaw. Another legend is that Mount Kineo is the body of a big cow moose which was slain by a mighty Indian hunter and afterward became stone. Her calf was killed among the islands of Frenchman's Bay.

There is a tradition, too, of a great battle between the Mohawks and Penobscots, which was fought in the narrows between Sugar Island and the mainland, and in which the former vanquished their enemy. We had become so absorbed in the prospect that we almost forgot that we had nearly a dozen plates yet unexposed. William brought us all down from the sublime to the ridiculous by declaring that he could see the sun shining on the Colonel's red head up at the Northeast carry, but the Scribe's opinion was that if the glistening spot which we saw was any part of the Colonel's physiognomy it was his nose.

We never could find out what the Colonel was colonel of. Likely he was a colonel of the Kentucky variety. We exposed our plates and then packed the cameras and went back down the path. William regretted that he had not procured the photograph of a black fly, but he had reminders enough of them on his person. The next forenoon saw us all on the steamer, homeward bound. Bill and Cy accompanied us to Greenville, and in a smoothly shaven, neatly dressed man, who came on to the boat with a bear skin under his arm, we almost failed to recognize our friend John Quilty, our host at Camp Bruin. The boat stopped once in mid lake to take aboard a woman and little girl who were brought out in a canoe from a clearing on the shore.

As we stepped ashore at Greenville William brushed the last black fly from the end of his nose; we took a farewell look at the lake, shook Cy and Bill and John by the hand and secured our seats in the train.

The morning after we were back in Boston.

As the Scribe takes his pen to indite the last words of this chronicle, his eyes rest on the wall above his desk, where are arranged the head of a buck, from whose branching antlers are suspended shot pouches and powder flasks, and the horns of a caribou, on which hang a creel and an old fishing hat wound around with leaders and decorated with gaudy flies. Below them are guns and rods, a landing net and the camera tripod, and a paddle whose blade is inscribed with the names of lakes and streams in whose waters it has many a time been dipped and over whose surfaces it has propelled the light canoe.

As as the Scribe gazes on these souvenirs of many happy days, the rustle of the trees outside changes to the voice of the wind in the forest, and the rumble of the vehicles over the pavement becomes the sound of the falling water. The smoke of his cigar rises about him and he is lost in revery, in which the fancies begotten of the nicotic influence of the tobacco blend with the reminiscences of the past, and his retrospection is as if the god of the woods and the waters had cast his spell about him, and transported him by magic from the streets of the city to the green aisles and shady banks of forest and stream.

Cambridge, Mass.

TOUGH LUCK IN THE TUCKISEEGEE.

TWO Government scientists, Dr. C. Hart Merriam, of the Division of Economic Ornithology, and Dr. Gannett, of the Geological Survey, are spending their vacations in the mountains of Tennessee and North Carolina, where the floods rage, the moonshiners hold each his fort, and fleas and rattlesnakes break the monotony. In a recent letter to his father, Dr. Merriam gives this account of one night's adventure:

"If I can keep my hands off my flea bites long enough, I will tell you what an exciting time we had yesterday. After leaving the moonshiner's cabin in the morning, we reached the junction of the Tuckiseegee and the Little Tennessee, and began working up the latter, right in the midst of mountains. We went along all right on the western banks of the Tuckiseegee about five miles, when our horses were suddenly frightened and plunged madly into the roaring river, here more than 300ft. wide. The bed of the river was very rocky, with the narrows just below where it rushes through with great fury, and where man or beast would be dashed to instant death. The horses plunged over the rocks and swam the deep places above the rapids and finally reached the other side. Finding a steep mountain slope with no place possible to climb up, they turned down stream toward the cascade. I forgot to say they shook us off on the banks of the river before entering the water. I undressed at once—quick work, as I had on nothing but trousers and a flannel shirt. The buckboard turned over and caught against a large rock about two rods above the rapids. By this time I was in the river, working hard to cross in spite of the fearful current. I saw a man rushing bareheaded down the opposite bank, but could not hear what he said. Finally I got across and reached the horses. The man said he lived in a log cabin at the head of the river, and was afraid I would be sucked down by the current and drowned; that more people were drowned in this river than in any other he knew of. We freed the horses and with great difficulty got them ashore on the steep slope, then picked up the things from under the seat that happened to catch on the rocks. I lost my coat, money, etc. We tore tore off the top of the buckboard, and with great effort turned it right side up. Luckily, our three valises were still on behind the seat, where we had fastened them by clothes lines.

"It was getting dark very fast, so we hauled the buckboard up the river about ten rods and fastened it to a tree on shore lest the river might rise still more in the night—as it did. We then led the horses along the steep slope through a dense thicket of rhododendrons over large logs and sharp rocks—a lovely place for a naked man after dark! The man told me I ought to have on boots, as this steep rocky bank was alive with rattlesnakes and that he killed one here this morning. Comforting information! The horse stumbled and fell and got up and plunged ahead in the tangle of grape vines, bushes and fallen trees.

"At length we reached the path leading to his cabin and modesty kept me from going further. He said he would take care of the horses for the night and I took to the water again, taking with me a pole to help in the swift current which I was not long in entering. I was very tired and had a hard fight for a long time. When in the middle of the swiftest place my pole broke, and for a while it seemed as if I could not hold out any longer, but I worked up stream and finally crept up on a rock to rest. I was very thirsty and took a deep drink, then slipped off into the water again and pushed ahead in the darkness. For a long time it was hard to say whether I would get across or not. It required all my strength to keep from being washed down into the cascades below. But I climbed upon another rock, so exhausted that I trembled all over and my knees knocked together. I shouted to Gannett, but the roar of the river drowned my voice. Then I struck out again and finally got into the stiller, deeper water nearer shore, climbed up among the bushes and got into the road.

"My feet and ankles were badly cut by the sharp stones and my body scratched by the stiff branches of the thicket on the other shore. The road was all sharp stones, which made me double up to walk on. I had been in the water two hours and a half. Not only was it dark, but it now began to rain and I began to feel sick, for I had not eaten anything but half a biscuit and a few prunes and crackers for two days. I could not find Gannett, could not find my clothes; but when I started up the road over the sharp stones and met Gannett, he had taken my gun and clothes up to the bend where he could see the light in the cabin across the river where he thought I had gone. It was so dark he could not see across, and the river roared so loud he had not heard me. I leaned on his shoulder and hobbled away to my clothes—*i. e.*, shirt, pants and shoes; then we walked on and on in the rain and darkness for a mile and a half, when we reached a small log cabin occupied by a man, his wife, a cat and a baby—the latter was only two weeks old.

"We told them our trouble and asked to stay for the night. The man said his wife was not able to get us anything to eat and he had but one room, but he would not turn us out in the rain, so we stayed. We found some good, cold spring water here and filled up on it, as our crackers and prunes had gone down the river. There were two beds in the room, side by side. Gannett and I got into one and the man, wife and baby in the other. The fleas were not long in discovering that we had brought a colony from down the Tuckiseegee, so they began visiting, and as all were hungry and grew hungrier as they visited, they made themselves at home and lunched on us freely all night long. The rain pattered on the shingled roof, the baby cried, the fleas marched up and down and gnawed our weary persons, and we had a splendid time. Our host remarked that this rain would raise the river and we would lose our buckboard unless it was lashed fast to the bank, which luckily it was. In the morning they gave us pork and potatoes, the first potatoes I had tasted since we began our journey in the mountains.

"After breakfast we walked down the river to the scene of the disaster. The water had risen about 20in., and the man on the other side motioned us not to try to cross, but to go up the river and go round. We could see that he and another man were chopping a roadway for the buckboard, and were trying to rescue it and our baggage from the fierce and muddy Tuckiseegee. So we walked to the cabin where we had spent the night, and found there was a bridge eight miles above. We filled up with good cold spring water and started. My feet were cut and swollen and very tender, but we pushed on and crossed the bridge about noon."

NOTES FROM THE BUNK HOUSE.

SUPPER was over, and the boys strolled down to the bunk house. This edifice stands about forty yards from the ranch house and is where the hands—*quorum pars sum*—sleep.

The bunk house, although it is a joy to many of its inhabitants, is not a thing of beauty, but it is built of hewn logs, is well daubed with mortar, and has a board floor. It is thus tight, warm and dry, and these are solid advantages which—in our minds at least—make up for the absence of paint, plaster, paper and other luxurious fittings of a house. The bunk house is about twenty feet deep by thirty long, and is eleven logs high at the eaves and only twelve at the ridge pole. A door and window in the front give light, air and entrance, and through the west end of the house is cut another door, low and small, which leads into the ranch storeroom, in whose dark and cobwebby recesses are hidden the grub and all sorts of necessary supplies.

The roof of the bunk house is very unlike the roofs of your Eastern houses. Its ridge poles are two stout pine logs nine inches in diameter and thirty-five feet long. These lie side by side, supported at their ends by the walls and in the middle by another stout log whose lower end passes through the floor and stands on a great flat stone on the ground. Across its upper end rests a short squared log, long enough to support both ridge poles. The foundation for the roof consists of slender straight fourteen-foot poles, lying at right angles to the ridge pole, and projecting beyond the walls of the house a foot or two. One series of these poles extends from the front ridge pole to the front wall, and one from the back ridge pole to the back wall. After these straight poles have been laid as close together as possible over the whole length of the house, a lot of hay is pitched upon the roof and spread evenly upon it. This is to keep the dirt from shaking down between the poles. When the hay is in position, the roof is covered to a depth of from four to eight inches with dirt well packed down. In old times, we used to think that a good dirt roof would turn any rain that ever fell, but of late years we have had springs when the rains were so heavy and continuous that the dirt got wet all the way through, and when this takes place little muddy torrents come trickling through the roof in a dozen different places. To keep dry under such circumstances one needs a tent inside the house, and a tent on stilts at that. Our bunk house, however, is always dry.

From this description you will have but a very sketchy idea of the interior of the bunk house. Let me see if I can improve it by telling what it contains. The furniture is useful rather than ornamental, but the walls have plenty of adornment, such as it is. Behind the door—to the left as you enter—is a shelf on which rest a couple of water buckets and the wash basins used by the men. Another shelf runs across the west end of the building, loaded with a varied assortment of bottles, kegs, cans and boxes, which I know of my own knowledge contain horse medicine, axle grease, ammunition, nails, matches, wolf poison, small tools, and a good many other things. Beneath this shelf is a row of nails driven into the logs and extending across the west end and half across the north side. These nails are made useful in a variety of ways: Number 1 supports a couple of cross-cut saws; 2, a couple of lanterns; 3, more lanterns al ariat and a tin funnel; 5, a bridle and a pair of spurs; 6, a blacksnake whip and a string of gopher scalps; 7, a rope and a dried muskrat skin; 8, an old pair of buckskin breeches; 9, a horse collar and a cotton shirt; 10, a horse collar and a sack, contents unknown; 11, a couple of dried coyote skins and a coat; 12, a side saddle; 12, 13 and 14, coats, trousers and slickers in various stages of dilapidation. Then comes a pair of elk horns, from which hang ropes, straps, hats and an inflatable rubber bed; on another pair of elk horns are four or five rifles and a couple of shotguns, hair ropes, ammunition belts, butcher knives and six-shooters. Between the door and windows are two small mirrors, and below these, two or three cigar boxes, screwed to the wall, or supported by rough brackets, contain the simple toilet articles—they are not many—belonging to the hands. On the floor against the walls stand three beds with hay mattresses, on which are the blankets of the men who occupy them. Three or four trunks are to be seen; there are three chairs, and a rough bench defaced by much whittling. All the hands and many a stranger cowboy and chance guest have carved their initials here in rough monogram. On it branding irons have been tried. The stove, wood-box and a small table complete the furniture of the room. A Western man might say that it wore an air of rough comfort; an Eastern man would probably agree that it was very rough. But we get along with necessaries here; Down East I suppose you have luxuries. But if we do not have much luxury or elegance in the bunk house, we have at least freedom and lots of comfort. And freedom is worth more than style. I tell you after one has been riding after horses all day, say from 3 o'clock in the morning till 8 or 9 at night, or has been pitching hay or riding a mowing machine for ten or twelve hours, he feels like stretching out and taking it easy from supper till bed time. Style is all very well, but give me comfort, and that's what we have in the bunk house.

After we get to the bunk house, of course, the first thing done is to fill the pipes. Then after supper I generally sit on the door step and look out over the little valley. There is almost always something to be seen that is worth looking at; at least I think so. It's pleasant even to watch the young calves at their foolish play, but nowadays there are always lots of birds, and jacks, and prairie dogs, and somehow I like to watch them. The dogs are always busy, getting grub and visiting round, and calling to each other from the tops of the little piles of dirt that they heap up at the mouths of their holes. The jacks hop around very busily in the dusk of the evening and appear to be all legs and ears. The black birds chatter to each other and seem to have a great deal to say, but they go to bed early.

Less than a mile to the west of us rises a high mountain, and after the sun has disappeared behind it, we can see the shadows creep along over the level land to the eastward, and then up the sides of the opposite bluffs twelve miles away. It is almost dark with us when the last lingering rays give their good-night kiss to those distant hills. Then on the mountains near us it is pretty to watch the play of the light. After the wall of rock behind the house has hidden the sun from us, a dozen peaks are bright with the sunshine. To the southwest is a deep gorge through which pours a wide sheaf of light, and I never tire of watching the shadows climb up the red granite precipice on the further side of this. Each detail of the outline of the shading mountain is distinctly visible, and when the shadows have increased so that only the highest pinnacles of rock are tipped with flame, I always hold my breath a little, and then sigh as the light goes out.

Even after the sun is hidden from us, the air for a long time is full of swallows and night hawks, and I like to watch them. They fly so easily that you can well understand their traveling thousands of miles to get away from the winter. Sometimes the night hawks, after soaring about, squeaking somewhat like an English snipe, will dart down nearly to the ground, and as they turn to go up again utter a curious booming cry. The swallows, of which we see so many, are now trying their wings for their southern flight. During the greater part of the day they are scattered far and wide, hunting for food, but at the approach of sunset they collect near their home—for they build their nests and rear their young in crevices in the great red precipices behind the house—and spend an hour in seemingly aimless flights hither and thither through the upper air. At such times they do not seem to fly as individuals, but in a body, or, perhaps it is more true to say, in a loose flock, which appears to obey the signal of some leader. At all events, the members of the flock never leave it, but all continue to perform their graceful evolutions until it is too dark to distinguish them any longer.

These swallows, besides being so airy and swift-winged, are most beautiful in their colors. I once found one lying by the side of the road to the stable, after a very heavy rain and hail storm, and took it into the bunk house with me. It had probably been knocked down and hurt by the rain and hail, but though it was disabled, it was still alive. Its under parts were all pure white, and its back was a most beautiful green and purple and black, shining in some places like a peacock's neck and in others like a cock pigeon's. I put the little fellow on a chair by the stove when we went to bed, and the next morning he seemed to be all right again and began to fly around the room, and at last when the door was opened out he darted and we saw no more of him.

Last night I was sitting on the step of the bunk house after supper, smoking and watching the light as it faded from the valley, though the highest peaks on the western mountains were still bright. It was getting dusky where I sat when I saw through the bars of the fence about the ranch house some yellow animal come trotting down the

valley by the house. For a few seconds the bars hid all of it except a streak of its body, but in a minute I saw that it was a buck antelope. When he came opposite the door where I was sitting he stopped, took a look around, and then putting his nose to the ground began to paw the dirt, somewhat as a bull does when he is beginning to get mad and wants a fight. He did not seem to mind the houses a particle, and after he got through pawing, began to feed. I suppose he was 50yds. from the ranch house and perhaps 60yds. from our door. One of the boys suggested shooting him, but we had plenty of meat and I said no. It seemed to me that as he had trusted us, although unconsciously, by coming right up to the door-step, it would be taking a mean advantage of him to shoot him then. We got down a rifle and sighted at him to see whether in the fading light we could see the sights. I could not, and to see to shoot at the animal would have been obliged to hold a foot under him. The buck staid there feeding until it grew so dark that we could not see him except when he moved. Several times we whistled at him and clapped our hands together, but he would not budge from his meal, though now and then he would lift his head and look when we became too noisy. Presently, however, one of the men had occasion to go up to the ranch house, and the buck saw his light shirt moving through the darkness and took fright. In a moment, with a snort of alarm he had turned and trotted swiftly back toward the mountains, and that was the last we saw of him.

The growing moon was high in the heavens and was flooding the valley with its soft light, and over the black mass of the mountains in the western heavens hung a blazing star. I felt like sitting out there quietly smoking until daylight, but there was lots of work to be done on the morrow, so I presently rolled into my blankets.

JOSÉ.

BLACK AND SILVER FOXES.

McDAVIES CREEK, Cassior, B. C., July 25.—*Editor Forest and Stream:* In the 7th of last April issue of the FOREST AND STREAM appears an article written by "Stanstead" on black and silver foxes. He believes in and advances the theory that black and silver foxes are simply a freak of nature and that they belong to the red fox family. He also says that Mr. François Mercier, of the Alaska Commercial Co., asserts that a female black or silver fox is a thing unknown. I am an old fur-trader and traveler from Hudson's Bay to within the Arctic circle in the McKenzie and Youcon basins, and my experience teaches me that I can't agree with these two gentlemen on this point. There are two men here, each has trapped a silver fox, skinned it and declares it to have been a female. Their names are Albert Egnell and John LaMountague; and they can testify to this. My opinion is that the silver fox is a distinct species. I doubt whether it is generally known that the silver fox is black before it gets its full fur and that the silver tips come when it is becoming what is called thoroughly prime. An interesting question, however, is whether the black fox is a distinct species from the silver. The theory of black and silver foxes belonging to the red fox family does not hold good, for more reasons than one. Red foxes are numerous in Sweden and there is not a black or silver fox to be found there. The black or silver fox is a much more delicately formed animal than the red, its feet and ears alone distinctly marking a different species. The cross fox is a breed between the black or silver fox and the red, and it would be an interesting thing to be able to decide whether it is a non-producer like the mule.

K. N. L. McD.

CONFIDING QUAIL.

ON the 19th of July last I set a boy at work carting stone for the cellar of a house; he had a common dray with one horse attached and usually walked alongside the animal while going to and fro. At 6 P. M. the boy quit work, and, thinking to get one more load in for the day I drove down to the cellar with one. As I turned from the main road into the new one made that day by the boy—who had taken a short cut to where he unloaded—I put up a quail which started almost from under the horses' feet. I stopped the team at once and began to look for a nest, which I found only one step ahead of the horse and just half way between the wheel tracks. Of course I turned off and was as much surprised as the bird herself to think that four or five loads had gone over the nest and neither boy nor horse had trodden on it or even seen it. If I had not seen the bird fly I too should have driven on. On going back I stuck up a lath by the nest and the next day told the boy to drive around it and also asked him if he had seen the bird. He said he had seen a partridge fly up but could find no nest. I had stones carted by it for several days, and the bird finding that she was not to be molested, would sit on the nest when the teams went by, only 4ft. off, and the boy or man—for I put on another team—walked on the same side.

On the 24th, which was Sunday, I went down to look at the work and to see if my quail had hatched; she had, and I went up to the nest and began counting the shells to see how many there were. I took them up one by one and found fourteen. While counting them I discovered the mother bird sitting on the young not 4ft. from the nest. She did not fly, and I left her there, since which time I have never seen her.

About 200yds., from this nest is another, which was built right in the middle of a small piece of English meadow; when this meadow was mowed the grass was cut off smooth, so it was a wonder the quail's head was not taken off with it. In this nest were sixteen eggs, and while the hay was being made the bird would be kept from sitting. This nest, I may explain, was found two weeks before the one first mentioned. After the hay was carried off the bird returned to the nest and continued sitting and did sit until last Saturday, a period of some forty-two or three days, when the land owner, fearing he would dry up on it, took the eggs out and threw them away. This was a male, and although I went often to see, I never saw the female bird on it, while on the other nest only the female was seen. Is it possible that the female made a new nest and left those eggs to the care of the male? That they did not hatch was not the bird's fault; he was as constant as any sitting hen, and on only two occasions was he absent when I passed. Of all birds' eggs I have knowledge of, quail's eggs are as sure to be fertile as any I have seen, and the reason these did not hatch was the exposure while the hay was being raked, turned and carted off. I saw in FOREST AND STREAM some time since an article which bore on the fact whether the male bird sat on the eggs, and this case would seem to show that he did and did it faithfully, too.

Quail are late with us this season, but fairly plenty. They are so tame and confiding that I wish Oct. 15 meant no harm to them; we have no bird who is so much man's friend every day in the year. No bird of my acquaintance—and my list is long—will repay kindness and watching like little Bob White. Let a man who loves a true friend or loves a cheerful voice stand on his doorstep on a July evening when Bob is whistling his vespers. Hark! he is sitting on yonder fence—"Ah-Bob White"—note the trifling difference in accent between this one and that fellow in the meadow. Four at one time, as I heard them a few nights since, just after sunset, made a quartette worth listening to. Happy is the man who owns a small lot that is visited day after day by a flock of quail. When a man says, "There is a flock of quail around here, I wish you would not shoot them," I know how he feels.

WALTER B. SAVARY.

EAST WAREHAM, Mass.

NESTING OF THE ENGLISH SPARROW.

SHARPSVILLE, Pa.—*Editor Forest and Stream:* I have just read in your issue of July 7 Mr. J. L. Davison's report of a large nest built by English sparrows in an apple tree near Lockport, N. Y.; and of the finding of eggs of the same bird in a hollow tree in woods far from any house.

My son, Ned W. Goodwin, a lad of fifteen only but a careful observer, says in effect: "I have this season seen, in a fir tree, near a residence about two miles out of town, six nests of the English sparrow. The branches of the tree, radiating from the trunk in series, quite closely disposed one above another, droop downward; and thickly fringed with long sprays of foliage as they are, afford the nests ample shelter from the weather. Each of the nests in question was situated upon the drooping portion of a branch and upon the convex upper surface of the leafage of the branch. The bird had made first a foundation mat of straw, on which it built up a structure nearly spherical in form, and about one foot in its greatest diameter, of straws quite neatly woven together. Inside this ball is the nest proper, which is thickly lined with the downy feathers of barnyard fowls. The entrance to the nest is an ascending cylindrical tunnel, lying along and directly above the supporting branch. One of the nests is on a branch, the extremity of which is not more than seven feet above the ground. Drawing this branch downward I closely examined the nest. It contained six eggs. One nest was situated about twenty-five feet above the ground; the others lower down. The tree affords good shelter at a height considerably greater than twenty-five feet. I saw also an English sparrow's nest in a small maple near a dwelling house in town; it was, in material and form, like those in the fir tree. It was placed upon a branch, at the crotch made by the branch and the stem of the tree."

English sparrows built this spring under the shelter of the porch of my house. The nest was composed of dry grass, and contained an interior chamber lined with downy feathers. The outer structure was about fourteen inches long by ten inches wide; it was built into the angle formed by the ceiling of the porch and the inside of the face of the cornice of the porch. The nest, after entire completion, was destroyed. The birds did not attempt to rebuild. In this they were unlike a pair of robins, which persisted, for about a week, in placing material for a nest on the transom of a doorway opening upon the porch, notwithstanding a correspondingly persistent sweeping away of their building material.

Commenting upon Mr. F. C. Browne's statement of the killing, by an English sparrow, of a breeding swallow, Master Ned says that he has seen, twice within three years, a crow blackbird seize in the nest the unfledged young of the robin, and bear them away in its talons, despite the attacks of the parent birds.

J. M. G.

A BLACK-BILLED CUCKOO.—Brooklyn, N. Y. Aug. 22.—Kindly identify (if possible) the bird owning the inclosed head and wing. Would have been happy to have supplied its entire anatomy, but unfortunately a .45-cal. bit of lead prevented. For years I have desired to get a specimen, as there have been many friends disagreeing as to the identity of the bird, some insisting that it is the brown thrasher or thrush, while others hold that it is the rain crow, a species of the cuckoo. A long slim bird, a half larger than a robin, brown above, with dull white on throat and belly. Is often seen and heard on the outskirts of our city. Its notes are most peculiar, at first somewhat resembling the hammering of a large woodpecker on a hollow log, but much louder, and afterward approximating the cooing of a wood dove.—A VETERAN READER. [Your bird is not a brown thrasher, but is a black-billed cuckoo (*Coccyzus erythrophthalmus*). For an account of its habits see any work on North American ornithology. A short, pleasant account of this species is given in the July number of the *Audubon Magazine*. The bird is a common one, but keeps well out of sight.]

BLACK SKIMMER IN NEW JERSEY.—Ardmore, Montgomery county, Pa., Aug. 18.—I saw on Monday the 1st two shearwaters or black skimmers in Atlantic City Meadows, a bird I have not seen since '67, when a flock of about a dozen were at the upper end of Brigantine Beach. I have been pretty often on the shore, sometimes every week. Bay snipe are very scarce this season, but that is only what they have been for some years, getting less every year. I also saw on the 13th a great white heron in Grassy Bay, another scarce bird in this region.—I. N. D. HASON.

DUCKS WILD AND TAME.—Zilwaukee, Mich.—Saginaw River has a great many sawmills on its banks and dwelling houses. On each side of the river are a great many bayous and marshes; and most all the people that live on the banks of the river have a great many tame ducks. Wild and tame ducks are hatched together, and people cannot tell whether they are wild ducks or tame ducks. Since our game wardens have been appointed most all the people take an interest in protection of the ducks and other game.—H. C.

Game Bag and Gun.

MICHIGAN SEASONS.

THE open seasons in Michigan are as follows: Partridge, snipe, woodcock, duck and other wild waterfowl, from Sept. 1 to Jan. 1. Prairie chicken, Sept. 1 to Nov. 1. Wild turkey, Oct. 1 to Jan. 1. Quail, Nov. 1 to Jan. 1. Deer, Upper Peninsula, Oct. 1 to Nov. 15; Lower Peninsula, Nov. 1 to Dec. 1. The use of dogs to hunt deer prohibited. Trout over 6in. long may be taken with rod and line only, from May 1 to Sept. 1, and grayling from June 1 to Nov. 1.

MISCOU.

THIS island, which is situated at the southern entrance into the Bay of Chaleur, forms part of the county of Gloucester, in the Province of New Brunswick. It has long been known as one of the best places for sea fowl shooting in America. Here from September until November are to be found geese, brant and ducks of various kinds, while in August and September curlew, plover and other small birds which love the vicinity of the sea are to be met with. Miscou is now made more accessible to the sportsman by the completion of a railway from the line of the Intercolonial to Caraquette, which is about twenty-five miles distant by water from the Miscou shooting grounds.

The peninsula of Gloucester is in general flat, the rock which underlies it is of millstone grit, the decomposition of which produces the fine sand which forms its shores, which, especially about the lower part of the county, are very shoal. Shippegan and Miscou islands attain even a less elevation above the ocean than does the rest of the peninsula, and they are covered by a more scrubby growth of trees.

The favorite shooting grounds for geese and brant in Miscou is Mal Bay, reached by passing around Shippegan Island through Miscou harbor. There are, indeed, two bays, North and South. These are about three-quarters of a mile apart. The entrance to them is through a narrow and tortuous channel. The passage can be attempted only when the tide is well up, since at low water on either side and all around are hundreds of acres of light green grass left exposed by the receding tide. These are the favorite resting and feeding places of the wild geese as they pass from the dreary shores of Labrador to a climate where winter has no terrors. Their food is the tender root of this very grass. When the tide rises so high that they can no longer reach it with their outstretched necks, they take their flight to a fresh water lake which is situated between the two bays, and the chief shooting is done while this passage is being made, the sportsman taking up his position near the margin of the lake and killing the birds as they fly over. They usually fly low, as the distance between the feeding ground and the lake is short. Indeed, if there be a good stiff breeze blowing, they must fly low to alight in the lake, which is a small body of water whose circumference hardly exceeds a mile. They always fly against the wind when they intend to light on the lake.

Only a portion of the birds go back to the feeding ground, some seeking the bay of Chaleur, while others wing their flight to the south, there is often good shooting at those which return to the feeding grounds.

In fine weather large numbers of geese fly to a moss barren at the head of the lake and there enjoy themselves in the sun; they are said to be very fond of the little speckled cranberry which grows on low swampy barrens.

Brant are also very abundant in Miscou, and the points adjacent to the channel leading into South Mal Bay are said to be among the best brant shooting stands on the continent.

There are also ponds on the island where wild ducks of various kinds can be had abundantly. About Oct. 10 is the best time for securing the brant, as they arrive later than the geese.

EDWARD JACK.

FREDERICTON, Canada.

THE UPLAND PLOVER.

WHILE we have been reading about almost all kinds of bird shooting, there has been nothing said lately about plover. They tell about their snipe and woodcock shooting, and how they traveled all day in the marshes and swamps, the most of their time knee-deep in mud, and sometimes taking a header in some deep hole that they did not know was there until they made the exploration, and both men and dogs tired out, and sometimes empty bags and more times empty than full ones. And then the partridge or grouse hunter, how he will travel from morning till night and have to be satisfied with the few he gets by hard work. No doubt it is a very good thing for the health to get the exercise if you do not get the birds.

I like to shoot snipe, woodcock, partridge and grouse, when I do not have to work too hard for them, but to my notion plover is the best of all. In plover shooting you neither tramp it nor need a dog, but you do need a horse that is not afraid of a gun; then with a good gun and good plover ground you are fixed. If you get plenty of shots well and good, but if you fail to find the birds you have no doubt enjoyed the ride, especially after working all day; one can take horse and gun at 5 o'clock and get a half dozen birds by dark. In plover shooting you are not bothered by trees and bushes, but have a clear open field, and you can either shoot from the wagon or step out and take your bird as he goes away from you, and they fly nicely. They are not much afraid of the report of a gun, as I have known them to stay in the field after shooting once; but you must not leave the wagon until they go or you will not get another shot. It is essential to have a quiet horse, or you might fare like my friend Mac. The farm boys came to him one day and told him there were plover in the oatfield, and he should go along with them. He said he would if they did the driving and let him do the shooting; but he allowed one of the boys to take his gun with him. They found the plover very soon, and one of the boys became very much excited, and, without waiting for Mac to shoot or stop him, took aim at a plover that was on a line with the horse's head and blazed away. Mac says the only thing he remembered was a feeling of flying in the air and then of finding himself on the ground hardly able to get on his feet. Mac weighs over 200lbs., and he made a hole in the ground where he struck. He had a lame shoulder for several weeks, and he says the worst of it all was the boy missed the plover.

DOYLESTOWN, Pa.

PHASES OF SPORT IN TEXAS.

Editor Forest and Stream:

The following accounts of such sports as we have to amuse us down here may interest the readers of the FOREST AND STREAM. We have no game law in this county, but the continued rains discourage from hunting. I have to creep and crawl on deer, and when it is wet it is most too disagreeable to derive any pleasure hunting. One day last January I went out back of our house to look for our mules, and as there were a good many geese on the prairie I slung my rifle on the saddle, thinking that I might kill one if it was not too much trouble. Here there are always geese, ducks and sandhill cranes in the greatest plenty. I could not find the mules, and I had not bothered with any small game, when all of a sudden as I was riding along, say a mile or so from home, my mule came to a sudden stop. I knew in an instant that the mule saw or smelt deer, so I slid right off without looking to see. After getting down I looked around to learn what it was, and after a little while saw a wolf four or five hundred yards off running like a prairie fire. I took out my opera glass and commenced to look more carefully around. After a little while I saw an object that looked like a deer standing in some very high grass. While I was trying to make it out another got up and then another until there were five of them, and they having moved around a little I knew they were deer. They were about 500yds. off. When I saw it was deer I slipped my saddle off, took out my gun, looked around to get the bearings so as to come back for my saddle, and started toward the deer which had not noticed me.

We use here a pair of sticks called props, two pieces of wood 30in. long and fastened together at the top 4in. from the end with a nail or bolt as a rivet, so that it will open and shut like a pair of scissors with the handle broken off. We stick it up in the ground and lay the gun in the fork, and so have a dead rest. I went on at an angle with the deer, and they paid no attention to the mule as they could not see me. I stopped once or twice to rest and to fool the deer; they are used to associating with the cattle and horses on the prairies, and if you move toward them slowly you never excite their suspicion. We keep the mule between us and the deer by placing the forked end of the props in the bridle bit and shoving the mule ahead, while we walk by her front legs. It takes some practice on the part of the mule or horse before it becomes accustomed to the work. My mule understands it as well as I do and watches the deer all the time; should they run or move she comes to a halt at once.

I got up to within about a hundred yards of the deer, and the grass being so high, having seen a mound or ant hill, about a foot higher than the level of the land around, I left the mule and crawled eight or ten steps off to it. I was then 90 or 100yds. from the deer, which is very close for prairie hunting. I stuck the props up and laid the rifle in the fork before looking. The grass being high, there was no danger of being seen, as my head was only an inch or two above the grass (my sandy hair does not make much of a show). I had left my hat tied to the mule. I saw that the deer were feeding sideways from me, and it came into my head to try and kill two at one shot, so I watched until I got two in the right position, and taking good aim I fired. I heard the ball strike and saw one running like the devil with his tail winding. He ran some 200yds. and turned a somersault. I kept my eye on the others which were following the wounded one. As they passed one of them stopped and remained with it. I kept my eye on the other three, thinking to see another drop out. They stopped about half a mile off and looked back. After watching them for some time and none of them showing any signs of being wounded, I turned my attention to the one that was down and the one that had remained with it. I knew it was not hurt, because if it had been it would have gone away from around there. I crept up as near as I thought advisable and then crawled right up to both of them. They were not more than five feet apart, one was dead; the other got up not more than ten steps from me and started off. I let it have a couple of balls and at the second shot it tumbled over. I went to it and cut its throat.

Then I went to see what had become of my first ball, and, after examing, found that my first shot had failed to pass through; and so, of course, had hurt but one deer. The others were still in sight, having run away a little way at my second shots, but stopped again and remained there looking at me until I left. Had I killed the first deer on the spot, his mate, and most likely the whole bunch, would have stopped and given me the second shot without moving. I have seen a friend kill four out of a bunch, with a Winchester rifle, before they moved, the hunter lying low in the grass; in that way they never see you, but become puzzled, and will only jump off a few steps at each shot.

Again, one day in this August, notwithstanding the extreme heat I was out hunting. Leaving home about three in the evening, I went as far as the last water, about five miles from home, when I got water for myself and mule and remained until half an hour before sundown, thinking that we could do without anything more to drink until noon the next day. I went on seven miles further, on the vast prairie, to where I thought the deer ought to use at this time of the year. Having determined my position by some gullies, it then being dark, I struck camp. In my spring wagon I had blankets, corn for the mule, gun, saddle, etc. I spread my blankets, staked the mule so that she could eat grass, then lay down and went to sleep. In going out, I had seen several wolves, plenty of plover, prairie chickens, a skunk or two, jack-rabbits, and several thousand head of cattle.

I waked up about 3 A. M., fed my mule and made a little fire with some sticks I had brought along to warm some coffee. Then, having finished my very simple breakfast of coffee and bread, saddled the mule, slung my rifle, rode about a mile, and waited for day to break. I am not able to do justice to a sunrise on the prairie; and besides, all the beauties were obliterated by the fear of the heat that is to follow, though our nights are always pleasant in this latitude—I have slept under a blanket all summer. When it got light enough to see anything, I could see several bunches of grazing cattle. This was a good sign.

After carefully scanning the ground I discovered a number of smaller animals that I knew were deer, about a half mile away. While observing them through my glass, I saw one and then another get up and go to grazing until there were eleven. This was a relief, as I did not intend to kill anything but the bucks; they are very fat at this time of the year. Our county is exempt from any game laws; we can kill anything whenever we please; but it never gives me any pleasure to kill any kind of game out of season. Had there been no bucks in the bunch of deer first seen, I should not have fired a shot at them, although I might not have seen any more until evening. They lie down all day and only get up once in a while to turn over. Well, as soon as I had taken a good look and counted them and taken my bearings to know when to come back, I commenced operations, as I was close enough for preliminaries. First, unsaddling my mule, I made a flagstaff of my ramrod and a flag of my handkerchief, so as to come back to it quickly. I then simply led my mule along by the bridle until about 400yds. from the deer, when I got back by the side of the animal, placing the forked end of the sticks that I use for a rest in the ring of the bridle bits, and shoved the mule along, while I walked beside her, going in an oblique direction, stopping once in a while to rest and to let the mule graze, thereby keeping up appearances. The deer were looking their prettiest. There were only two bucks that had horns; one of them did not wish the other one to come near, and every now and then would chase him off and then gallop back. When I was within 200yds., I hobbled my mule and crawled up to 100yds. of the deer. Having set my rest, I chose the larger of the two bucks, and taking careful sight, fired. At the crack of the rifle my buck tumbled over. The others stood for an instant, which gave me time to throw another cartridge in place, when the other buck trotted off. Taking careful sight at him I let fly a ball, which struck him low down in the shoulders, breaking the one nearest to me and passing out near the neck. But he did not give it up; rather he led the band for several hundred yards, when he slackened his pace, and after trailing along for a few yards, stopped and lay down.

Having two deer down, I chose to go to the nearest one first. Laying my rest down so that they would point toward the last one shot, I went to the first one and found him struggling with his back broken, a dead shot, the best place I could have hit him. Having cut his throat, I stuck my rifle in a crack, so that it would stand up for a sign to come back to, and then brought up my mule and then went down after my saddle, put the deer on the mule and then went to my sticks, noting the direction carefully, stuck them up and tied the handkerchief so that in case I should miss my second deer I could come back and take a fresh start. Well, for the life of me I could not find my deer. After repeated fruitless trials I had recourse to tracking him up by finding his trail by the blood. It was a very slow process, as care had to be taken lest he should move off and I should not see him in time to fire again. Finally, after quite a while I looked and saw him lying in the grass, much to my relief, for by this time, the excitement having produced thirst, I was beginning to get uneasy. Firing at his head I walked up to him, put him up in front of saddle, then went back after my stake and flag—a wise precaution, otherwise I could never have found him, as one spot looks very much like another. Got home about sundown and gladdened the eyes of my friends with the two fat bucks. TINK.

NEW ENGLAND GAME.

BOSTON, Mass., Aug. 29.—Before these lines have caught the eye of the reader of the FOREST AND STREAM, the game bird season in Maine and New Hampshire will have opened. The legal opening day in these two States is Sept. 1, though the open season on ruffed grouse in Massachusetts does not begin till one month later. On woodcock the Massachusetts season opens on Aug. 1. So far as Maine is concerned, the law is pretty well obeyed. The boys in many parts of the State have in a way taken the enforcement of the law into their own hands, as far as partridges are concerned. They have come to watching the flocks from the little chicks up to the first day of September in the morning, and woe be to the other boy who should presume to break in upon a flock with shotgun in hand before that day. As to the prospects for partridge shooting in Maine this year, opinions and reports are rather conflicting. It is a fact that the birds wintered well in most parts of the State, but since that time the progress that they have made is a little uncertain. In the western part of the State, in the sections about the settlements, there are fewer birds than last year, or at least fewer have been seen. But at the same time blackberries have been and are still very plenty, which condition is favorable to the growth of the birds, and at the same time keeps them from roving; and hence they are less likely to meet the eye of the hunter. One thing is certain, and that is, that the partridge is rapidly growing shy in the more settled parts of Maine. In the old woods in the northern portions of the State a good many broods have fallen under the eye of the fisherman, the tourist and the guide this season. One old guide in the region around Rangeley Lake says there are four broods to one last year on the grounds that he is familiar with. On the other hand, very few broods have been seen in the vicinity of the lower Androscoggin lakes. From the eastern part of the State the report of broods is good. There is considerable complaint of poaching from the Machias region. It is claimed that there are gunners in that section who shoot either deer or partridge in utter disregard of the game laws. They belong in settlements where all are breakers of the laws, and hence it is very hard to find evidence to convict. On the whole, it looks as though the grouse season in Maine would be fully up to the last.

In New Hampshire protection seems to be doing a good work for the game birds, particularly the partridge. The non-exportation law, passed two years ago, has stopped the gunning for the Boston market, which had come to be so great an evil as to threaten the utter destruction of that best of game birds. The borders of the State are so extensive that doubtless a great many birds find their way to the Boston market as killed in Massachusetts, but the great traffic in them by way of the lines of travel is stopped. The reports from that State, so far as I have been able to obtain them, indicate a good showing of broods. In the old woods on the borders of the State next to Maine, the birds have been observed to be abundant—that is for these times of depleted game.

In eastern Massachusetts the outlook for grouse shooting is very poor. The local gunners about Boston report very few partridges seen, and those chiefly old birds and very wild. It is a fact that too much hunting with dogs is driving the ruffed grouse from the State. The hunting of the birds with dogs in the open season is not so bad in itself as the fact that the dogs are taken to the woods for exercise and training, even in the months of June and July. What chance is there for a brood of partridges under such circumstances? Indeed there are numerous cases of the destruction of the birds of this State from the reason that the law permits the hunting of woodcock after the first of August. It is a young partridge that the dogs start, and what are the chances that he has to escape? How many woodcock shooters are honest enough to let the partridge pass with its life when once the dog has flushed it?

Again the great wisdom (?) of Beacon Hill put on the finishing touches when it changed the game laws last winter to permit the snaring of partridges by the farmers' boys. Such a law will be very likely, with the help of dog hunting, to terminate the existence of ruffed grouse in the State in a very few seasons. But one thing it is curious to note. The increase of interest in shooting is rapid, especially among merchants and business men in our New England cities, and the question as to where the game to shoot is to come from is a very important one. Will the interest die away in a year or two, as the game birds draw toward extinction, or will the interest beget a more sensible love of the sport, and lead toward a conservation of the game by better respected game laws?

SPECIAL.

SUCCESSFUL UNSUCCESSFULNESS.

"I SHALL not let Rob Roy go off gunning with you next fall," said his mistress, as we were "fixing" for a day's shoot in Middleboro. "O, yes you will," we said, "Roy will live to hunt for some years yet." We doubt it, though, as he is twelve this spring.

Having loaded shells enough to kill all the quail we were likely to see, at noon Charlie was harnessed to the open wagon, and going over to the home of our youth we took in Roy's son Mack, and then started on a twelve-mile drive up to the home and farm of our genial friend Frank S. Part of the way the dogs rode, and when we were going through woods both were allowed to run behind the wagon. On some parts of the road the woods were so tempting to Mack that he would stray off a little way and had to be called in with a whistle. While going through Wareham village, we kept both dogs in the wagon and had hard work to hold them in; Roy fell out once, and Mack, who is only six months old, was determined to see ahead and could not be easily kept down. He would run about so much more when on the ground that he got tired much sooner than Roy, who followed the wagon closely and did not mind either tempting tracks or cover, but kept straight ahead. When Mack was tired he would cry to get in, then we let Roy run alone. When within a quarter of a mile of Frank's we took both dogs in, and soon drove up to the door of our kind and hospitable friend.

After putting up the horse, our host's oldest son and I took our guns and went down into the neck below the mill hoping to find some grouse. Roy struck a scent and Mack followed too fast, and we had to check him continually. Somehow this grouse eluded us among the cedars and as it was sunset when we found him, it soon grew too dark to shoot. We went back to the house and put up our guns and shells, then took the dogs to the barn, where I had a great time explaining to Roy the reasons for tying and leaving him out there. Roy has been much petted and humored at home, and has his lounge with a pillow on it, both near the sitting-room stove. His mistress takes a great deal of care of him, which he repays at times with rather a surly manner, as he unfortunately inherits a bad disposition with his pure Irish blood. He soon understood that he was to sleep with Mack, and we wrapped him in a blanket and left him to his reflections.

On reaching the house we found a bountiful supper awaiting us, and were soon discussing its merits. The honey was genuine, for it had been taken from the tree by our host himself, who is a most successful bee hunter. Many think that the wild bee and the Indian move toward the setting sun together, a few of both are left, however, in Massachusetts. Perhaps though neither are full blooded, as the Indian is mixed with the negro and the wild bee has his numbers kept good by escaping swarms from the hives of the husbandman.

After supper we discussed the prospects for a successful hunt on the morrow, and Frank said that the quail were not very plenty, but ruffed grouse were as numerous as ever. He thought that we should have no trouble in finding them if the weather, which threatened to be cold, was not too severe and windy. He had started a good covey of quail on the road which we had come, about a mile back from the house.

Taking our way to the barn, we found the dogs all right and ready for a run. We let them loose and then started for the "river field," down a road which we were familiar with and which brought back to mind many fond recollections of years gone by, never to return, except to memory. The sun was rising as we reached the field, and leaping over the bars we crossed to where a wood road led by a roundabout way to the meadows back of our host's place. The air was chilly and the sky was filled with dark gray clouds which a stiff northwest wind was driving across it at a fearful rate; this looked discouraging to begin with and the ground was dry and beginning to crust. The dogs scampered around among the leaves on either side of the road, but in vain, we did not see a single bird during the time we were away from the house. We found it real cold on coming out of the woods into the open meadow back of our friend's house.

Breakfast was ready when we got back, and that over, we gathered up our arms, put bells on the dogs, and started out down toward Harlow's, where Frank had seen the quail the day before. We hunted all over the fields and woods between the river and main road, but not a bird could we start till we got down to Hobill's; there, in a dense thicket, we struck a scent and soon got up three quail—only three. I did not see any, but Frank and his son Allie fired at them, he did not kill any though. We marked and followed on. The noise of our guns brought another hunter to the scene, John A., who joined in with us, and we hunted on through the thickest growth of briers and vines that the birds could select. We put up two of them again, and after hunting around killed one and left the rest. Then we began to tramp the woods down between the river and main road, up hill and down

hill, through swamps and swales, but not a bird nor trace of a bird rewarded our industry. In the tops of various trees we found squirrels' nests, and the writer fired into one in hopes of starting out one or two squirrels, but none came out and we kept on down by the pond at Cushing's mill, and then out back of Austin Atwood's. No birds, nothing to shoot at in any field or wood we had traversed. On we went after a brief rest by a fence. This time we crossed the main road and hunted through and along the edge of the South Purchase. We did start one grouse in a bunch of pines near the South Middleboro road; he treed, and we tried to sight him but could not, and all at once he flew right across the road, and Allie fired and scored a miss. We went on in the direction which he flew but never saw him again.

Two hours later we stood around the cheerful fire in the dining room; tired, discouraged and hungry. We ranged ourselves around the table and tried, while eating, to explain why we had not found more birds. All sorts of reasons were advanced and none seemed very reasonable after all. A little while before sunset we went down the road toward the mill and turned into the neck. Here we found a covey of partridges and one fell to Frank's gun; it was only winged, however, and we called Roy to find; he struck the track and was out of sight in a swamphole before we could get up. In a few minutes he came back, bringing the bird. Frank also killed a rabbit which he kicked out of a clump of brush. We called in the dogs and started back, reaching the house at dusk. The next morning we started out on the road beyond the mill and went through the fields by Pape's Point brook; here in an isolated clump of woods we found a covey of grouse. Allie got a shot and missed. Another came out from the tree-tops right over my head, he went within ten feet, I turned and gave him a shot from my left barrel and he dropped with a broken wing, I caught him just as he reached the woods on the other side of the meadow. We put up two or three more but did not get a shot at them. We took a long stroll around by the Weantic meadows, where in times past we had started and shot snipe; but none were there that day, and we went home without seeing anything larger than a chippy. In an hour we were on our way home with both dogs chained in the wagon and two grouse, one rabbit and one quail in the game bag. Not much for show, but still we had enjoyed the society of our friends very much, and the game was of little consequence in comparison. It was, on the whole, one of my most successful hunts without finding. MERGUS.

MASSACHUSETTS.

SHOOTING NOTES.

THE ruffed grouse (partridge) season opens to-day in New York State under the most favorable auspices. The breeding season was a good one, and there is a large crop of birds in consequence. Still, for some reason the broods are smaller in Orange, Ulster and Sullivan counties than usual, the number of birds to each hatching appearing not to exceed ten or a dozen. These young birds are now nearly full grown, and the shooting promises to be excellent, although hundreds of partridges have been killed in the three counties named by the August woodcock shooters.

Although it is not generally known, the best woodcock shooting, both summer and fall, is along the west shore of Lake Champlain. There are excellent covers bordering the foothills of the Adirondacks, and the few sportsmen that are posted make big bags for these days. Owing to the deep snows in April, the summer woodcock shooting in both this State and New Jersey was much inferior to that during the past five years, especially so when compared to that of 1885, which was so excellent in the last named State that it reminded the sportsmen of old times. The young birds having been killed this year, either in the shell or in the down, only the old birds were found to shoot at. To illustrate how universal the destruction of the young birds was, it may be said that out of sixty-seven cock killed along the Wallkill, in Sussex county, New Jersey, and neighboring mountain swales, by the shooters who reside in that district, the writer discovered but two young birds in the lot and they were twins of one hen, who probably hatched them out under some shelving rocks high up on the side of Pochuck Mountain. The nests of all the birds that were located on the islands in the "Drowned Lands" were destroyed—either submerged by the high water or covered with late snows and ice. This occasioned the parent birds to resort to the hillsides on the east side of the Kill, where many of them proceeded to try their luck again at raising a family. Just as they were taking a second start, the laws of New Jersey turned the shooters loose. This was on July 1. Fortunately, owing to the wet condition of the ground, the birds were widely scattered and hard to find. The heat, too, of July was so intense, and the mosquitoes so thick, that city sportsmen gave up shooting in despair and left the longbills to be mown down by the rhinoceros-hided country shots of the vicinity. On July 9 the writer killed seven birds, five of which contained eggs. On July 15 thirteen birds more were shot on the same beat, and of these four had eggs. Had a close season prevailed these eggs would now be hovering birds. The stock in trade having been killed off it will be a long time before the Wallkill swamps are replenished. So much for Jersey summer woodcock shooting.

In the Pequot district the law breakers and market-hunters had a bad time of it. The swamps were submerged, and there were but few birds except on the large tract preserved by Mr. Franklin Satterthwaite, of Newark. Even there the birds were very scarce as compared to former years. With the exception of poacher Bill Grandin, of Danville, and a rag-and-bobtail following from Easton, who sneaked on to the preserve on the morning of the 1st, and then got fired off, there were but few guns fired. Mr. Satterthwaite killed thirteen birds there one morning and four copperhead snakes of assorted sizes, and then fired himself off. Seven of these birds and three of the snakes were young ones. Since then the birds and snakes have been religiously preserved.

During July several breeding English snipe were killed by woodcock shooters. On July 4 one was killed on Flat Island on the Wallkill, on July 16 one at Allamuchy, N. J., and several more were reported to have been shot on the Newark, Hackensack and Elizabethtown meadows. Altogether the snipe have been acting very strangely this season. Perhaps this is due to the fact that many of the islands on which they breed, located in the mouth of the St. Lawrence and along the coast of Labrador, were submerged. The Indians on the north shore reported to the writer that such was the case. This undoubtedly occasioned many old birds to turn their bills southward much earlier than usual. On the Newark meadows scattering birds were shot as early as Aug. 10. At Pine Brook, N. J., there was a flight on or about the 15th of the same month. Reports vary as to the numbers. Mr. Speath, of Newark, says he saw five hundred on that day, and Mr. Sam Castles and Mr. C. M. Hedden, both veteran crack shots, did kill a bag on the "Big Piece" a few days later. The Newark *Sunday Call* estimated it at 63. Mr. Castles himself says he saw fourteen birds in one flock besides many yellowlegs. Mr. Frank Class, of Pine Brook, also has killed some early English snipe. The ground in this section is in excellent condition this season for waders of all kinds. The meadows have been continually flooded, even to such a depth that the farmers have been unable to cut their grass. This has prevented the parching of the grounds and destroying the worms and other food that snipe get fat on. From the present outlook it is safe to say that the English snipe shooting will be fairly good in New Jersey this fall.

The Long Island grass plover shooting thus far has proved a fizzle. There have been but very few birds killed on Montauk. Mr. Arthur Duane, however, killed 19 near Southampton, L. I., and some few birds were shot near Mecock Bay and in the pastures east of East Hampton. It seems as if the wary plover were giving Long Island the pass-by in these times for the purpose of concentrating in New Jersey. They bred in this State in goodly numbers this year, especially in Salem and Somerset counties. The crop of plover in the first-named county was immense, and large shipments of these delicious birds found their way to Robbins & Coy's stalls in Fulton Market. The great flight of these birds from their northern breeding grounds passed over Newark on the nights of Aug. 22, 23 and 24. They could be heard calling from sundown to dawn.

On the Jersey coast the bay bird shooting was poor up to last accounts. I interviewed Bill Chadwick one day last month and he talked common sense. He said there was a row of houses now from Sandy Hook to Cape May, just in the old track of the birds. That the shooting at Barnegat was no longer on the beach, but mainland side. The meadows were in good order around Chadwick's famous stand, but the birds were scarce. Mr. Frank Endicott was summering up at Bill's and indorsed all the old gunner said. What few birds were being gathered in were falling to Mr. Endicott's gun. He had one yelper the day I saw him. It was regarded as a curiosity. Down at Egg Harbor there were some birds, and small flocks could be seen passing Mantoloking (which is three miles north of Chadwick's); far out to sea these birds were trading up the beach and were mostly little yellowlegs. Mr. Howard Hays, of Newark, in company with Mr. T. H. Powers Farr, of Orange, did some shooting south of Mantoloking with but small results.

From Port Elizabeth (N. J.) on the Maurice River, where for some years past the largest number of rail have been boated in this country, comes word that the meadows have filled in and that it will take an unusually big spring tide to go over them. The rail shooting in New Jersey begins to-day. J. L.

NEW YORK, Sept. 1.

THE WILD RICE HARVEST.

A FEW days ago I went with a friend from New Orleans to pay a visit to Mr. Charles Gilchrist, the Fishery Inspector at Rice Lake, a very old-time school fellow of mine, who met us with radiant smiles at the station at Harwood, glad to welcome us to his hospitable quarters situated on the lake shore. We had with us rods, reels and landing net, as became fishermen. This water has been long famed, not more for its extensive rice fields than for the quantities of mascalonge, bass and wildfowl which inhabit it. The lake is twenty-four miles long, from three to four miles wide, and studded with twenty-two islands of various sizes and shapes, making a pleasing landscape. The Otonabee River enters at its western extremity, and at its eastern it flows into the River Trent. Mr. Gilchrist has begun to take in the present rice crop from the Indians to cure for market. It is used principally for planting in waters frequented by waterfowl. It finds its way to England and the States. Mr. G. hopes to secure 100 barrels this season.

It may interest some of your readers to know how it is harvested. This is the modus operandi. An Indian kneels in the bow of his 15ft. canoe and paddles through the rice. His squaw in the stern holds in each hand a light stick 2½ft. long tapering from the butt to a sharp point. With one of these she draws the rice plant over the edge of the canoe, amidships, while with the other by quick strokes knocks off the seed which drops into the canoe. When the canoe is filled, the squaw joins in with her paddle and they make for the granary, where Gilchrist awaits them. The grain is then bagged and weighed. The squaw wears a black veil over her dusky face while at work, not to save her complexion but to protect her nostrils from the broken rice spears floating about. It is an odd sight to see these people paddling and hammering away in all directions by the hour in silence. This crop is also used for human food, and excellent it is boiled and eaten with milk. For this purpose it has to be tramped and winnowed after drying. The Indians parch it in kilns, using it both cooked and raw. With a couple of pounds of this in his pocket, an Indian is good for twenty-four hours' work he chews away at it all day long, now and then moistening his mouth from the blade of his dripping paddle silent and content. After the rice has been garnered Mr. Gilchrist has to turn it five times daily until thoroughly dried, when it is barreled.
